other commonwealth on the globe; only one in two hundred of her people are unserved by them, while within her borders the civic piety of her sons and daughters has reared more than six score library buildings. The library commission of the state is another model in its kind; its powers are in the main advisory, but when a struggling community desires to establish a library, and contributes to that end, the commission tenders judicious aid. The population of Massachusetts is chiefly urban, an exceptional case, for taking the Union as a whole, notwithstanding the constant drift to the cities, much more than half the people are still to be found in the country. For their behoof village libraries have appeared in thousands. Still more effective, because linked with one another, are the travelling libraries, inaugurated by Mr. Melvil Dewey in New York in 1893, and since adopted in many other states of the Union, and several provinces of Canada. All this registers how the democracy of letters has come to its own. Schools public and free ensure to the American child its birthright of instruction; libraries, also public and free, are rising to supplement that instruction, to yield the light and lift, the entertainment and stimulus that literature stands ready to bestow. The old-time librarian, who was content to be a mere custodian of books, has passed from the stage forever; in his stead we find an officer anxious that his store shall do all the people the utmost possible good. To that end he combines the zeal of the missionary with the address of a consummate man of business. Little children are invited to cheery rooms with kind and intelligent hospitality; teachers and pupils from the public schools are welcomed to classrooms where everything is gathered that the library can offer for their use; helpful bulletins and consecutive reading lists are issued for the home circle; every book, magazine and newspaper is bought, as far as feasible, with an eye to the special wants and interests of the community; infor-

ination desks are set up; and partnerships are formed with expositors of acknowledged merit, with museums of industry, of natural history, of the fine arts. Not the borrowers only, but the buyers of books are remembered. The Standard Library, brought together by Mr. W. E. Foster, in Providence, is a shining example in this regard.

The sense of trusteeship thus variously displayed has had a good many sources; let us confine our attention to one of them. During the past hundred years the treasure committed to the keeping of librarians has undergone enrichment without parallel in any preceding age. We have more and better books than ever before; they mean more than in any former time for right living and sound thinking. A rough and ready classification of literature, true enough in substance, divides it into books of power, of information, and of entertainment. Let us look at these three departments a little in detail. Restricting our purview to the English tongue, we find the honor roll of its literature lengthened by the names of Wordsworth, Tennyson and Matthew Arnold, Carlyle and Ruskin, Emerson and Lowell. And not only to authors such as these must our debt be acknowledged. We owe scholarly editors nearly as much. In Spedding's Bacon, the Shakesperean studies of Mr. Furniss, and the Chaucer of Professor Skeat, we have typical examples of services not enjoyed by any former age. To-day the supreme poets, seers and sages of all time are set before us in the clearest sunshine; their gold, refined from all admixture, is minted for a currency impossible before. In their original, unedited forms, the masterpieces of our language are now cheap enough to find their way to the lowliest cottage of the cross-roads.

It is not, however, in the field of literature pure and simple that the manna fell most abundantly during the past hundred years. Mr. Alfred Russel Wallace, the last of the great students who took all natural history for their province, declares that the advances in discovery, invention and generalization during the nineteenth century outweigh those of all preceding time. Admit this judgment, and at once is explained why the records and the spirit of science dominate the literature

of the last ten decades. And let us note that while books of knowledge have increased beyond measure, they have appeared with a helpfulness and with merits wholly new. For the first time in the history of letters, men and women of successful experience, of practised and skilful pens, write books which, placed in the hands of the people, enlighten their toil, diminish their drudgery, and sweeten their lives. Cross the threshold of the home and there is not a task, from choosing a carpet to rearing a baby, that has not been illuminated by at least one good woman of authority in her theme. On the heights of the literature of science we have a quality and distinction unknown before these later days. The modern war on evil and pain displays weapons of an edge and force of which our forefathers never dared to dream; its armies march forward not in ignorant hope, but with the assured expectation of victory. All this inspires leaders like Huxley, Spencer and Fiske with an eloquence, a power to convince and persuade, new in the annals of human expression and as characteristic of the nineteenth century as the English poetry of the sixteenth, in the glorious era of Elizabeth. The literature of knowledge is not only fuller and better than of old, it is more wisely employed. In the classroom, and when school days are done, we now understand how the printed page may best direct and piece out the work of the hand, the eye and the ear; not for a moment deluding ourselves with the notion that we have grasped truth merely because we can spell the word. To-day we first consider the lilies of the field, not the lilies of the printer; that done it is time enough to take up a formal treatise which will clarify and frame our knowledge. If a boy is by nature a mechanic, a book of the right sort shows him how to construct a simple steam engine or an electric motor. Is he an amateur photographer, other books, excellently illustrated, give him capital hints for work with his camera. It is in thus rounding out the circle which springs from the school desk that the public library justifies its equal claim to support from the public treasury.

In the third and last domain of letters, that of fiction, there is a veritable embarrassment of riches. During the three generations past

the art of story-telling culminated in works of all but Shakespearian depth and charm. We have only to recall Scott and Thackeray, Hawthorne, George Eliot and Thomas Hardy, to be reminded that an age of science may justly boast of novelists and romancers such as the world never knew before. No phase of life but has been limned with photographic fidelity, no realm of imagination but has been bodied forth as if by experience on fire, so that many a book which bears the name of fiction might well be labelled as essential truth. Within the past decade, however, the old veins have approached their bounds, while new lodes do not as yet appear. Of this the tokens are the eager sifting of the rubbish heap, the elaborate picturing of the abnormal and the gross. Pens unable to afford either delight or cheer have abundant capacity, often with evident malice, to strike the nerves of horror and of pain. If at the present hour high achievement in fiction is rare, if we hear more echoes than ever and fewer voices, quantity abounds to the point of surfeit. With an output in America alone of 616 works for 1900, all fears of famine may well be allayed.

The main fact of the situation then is that the librarian's trust has of late years undergone stupendous increase; this at once broadens his opportunities and adds to his burdens. Gold and silver, iron and lead, together with much dross, are commingled in a heap which rises every hour. Before a trust can be rightly and gainfully administered, its trustees must know in detail what it is that they guard, what its several items are worth, what they are good for. And let us remember that literature consists in but small part of metals which declare themselves to all men as gold or lead; much commoner are alloys of every conceivable degree of worth or worthlessness. There is plainly nothing for it but to have recourse to the crucibles of the professional assayer, it becomes necessary to add to the titles of our catalogs some responsible word as to what books are and what rank they occupy in an order of just precedence.

This task of a competent and candid appraisal of literature, as a necessity of its trusteeship, has been before the minds of this Association for a good many years. A notable step toward its accomplishment was taken

when Mr. Samuel S. Green, in 1879, allied himself with the teachers of Worcester, Massachusetts, that they and he together might select books for the public schools of that city. The work began and has proceeded upon comprehensive lines. Such literature has been chosen as may usefully and acceptably form part of the daily instruction, there is a liberal choice of books of entertainment and inspiration worthily to buttress and relieve the formal lessons. The whole work goes forward with intent to cultivate the taste, to widen the horizons, to elevate the impulses of the young reader. Mr. Green's methods, with the modifications needful in transplanting, have been adopted far and wide throughout the Union. Already they have borne fruit in heightening the standards of free choice when readers have passed from the school bench to the work-a-day world.

Thus thoughtfully to lay the foundation of the reading habit is a task beyond praise; upon a basis so sound it falls to our lot to rear, if we can, a worthy and durable superstructure. It is time that we passed from books for boys and girls to books for the youth, the man and the woman. And how amid the volume and variety of the accumulated literature of the ages shall we proceed? For light and comfort let us go back a little in the history of education, we shall there find a method substantially that of our friend, Mr. Green. Long before there were any free libraries at all, we had in America a small band of readers and learners who enjoyed unflinching pilotage in the sea of literature. These readers and learners were in the colleges, where the teachers from examination and comparison in the study, the class-room and the laboratory were able to say that such an author was the best in his field, that such another had useful chapters, and that a third was unreliable or superseded. While literature has been growing from much to more, this bench of judicature has been so enlarged as to keep steadily abreast of it. At Harvard there are twenty-six sub-libraries of astronomy, zoology, political economy, and so on; at hand are the teachers who can tell how the books may be used with most profit. Of the best critics of books in America the larger part are to be found at Harvard, at its sister

universities and colleges, at the technological institutes and art schools of our great cities. We see their signed reviews in such periodicals as the *Political Science Quarterly* and the *Physical Review*; or unsigned in journals of the stamp of the *Nation*. Fortunately, we can call upon reinforcements of this vanguard of criticism. It would be difficult to name a branch of learning, an art, a science, an exploration, from folk-lore to forestry, from psychical research to geological surveys, whose votaries are not to-day banded to promote the cause they have at heart. These organizations include not only the foremost teachers in the Union, but also their peers, outside the teaching profession, of equal authority in bringing literature to the balances. And the point for us is that these societies, through their publications and discussions, enable these laymen to be known for what they are. Because the American Historical Association is thus comprehensive, its membership has opened the door for an initial task of appraisal, important in itself and significant for the future.

Drawing his two score contributors almost wholly from that Association, Mr. J. N. Larned, of Buffalo, an honored leader of ours, has, without fee or reward, acted as chief editor of an annotated Bibliography of American History. The work is now passing through the composing room of Houghton, Mifflin & Co., of Boston; its contributors include professors of history at Bowdoin, Bryn Mawr, Columbia, Harvard, McGill, Toronto, Tulane and Yale, as well as the Universities of Michigan, Wisconsin and Chicago; our own Association is worthily represented by Messrs. James Bain, Clarence S. Brigham, V. L. Collins, W. E. Foster, J. K. Hosmer, E. C. Richardson and R. G. Thwaites. As a rule the notes are signed. Where for any reason a book demanding notice could not be allotted to a contributor, Mr. Larned has quoted the fairest review he could find in print. He has included not only good books, but such other works as have found an acceptance they do not deserve. All told his pages will offer us about 3400 titles; a syllabus of the sources of American history is prefixed by Mr. Paul Leicester Ford; as an appendix will appear a feature also of great value. In their "Guide

to American history," published in 1896, Professors Channing and Hart, of Harvard University, recommended such collections of books as may be had for \$5, \$10, \$20, \$50 or \$100. Professor Channing is kind enough to say that he will revise these lists and bring them down to date as a contribution to Mr. Larned's work. Professor Channing may, we trust, name the books in each collection in the order in which they may be most gainfully read.

In times past our bibliographies have begun to need enlargement the moment they left the bindery; in the present case that need is for the first time to be supplied. Mr. Larned's titles come to the close of 1899; beyond that period current literature is to be chosen from and appraised with the editorship of Philip P. Wells, librarian of the Yale Law Library, who will issue his series in card form. We hope that he may be ready with his cards for 1900 at the time that Mr. Larned's book appears. Thereafter Mr. Wells' series will probably be published quarter by quarter. Beginning with 1897, Mr. W. Dawson Johnston, now of the Library of Congress, has edited for us a series of annotated cards dealing with the contemporary literature of English history. Both the form and substance of his series are capital. In so far as his cards go directly into catalog cases, where readers and students must of necessity see them, they render the utmost possible aid. If subscribers in sufficient array come forward, Mr. Larned's book may be remolded for issue in similar card form, with a like opportunity for service in catalog cases. In the Cleveland Public Library and its branches useful notes are pasted within the lids of a good many volumes. It is well thus to put immediately under the reader's eye the word which points him directly to his goal, or prevents him wasting time in wanderings of little value or no value at all.

With Mr. Larned's achievement a new chapter is opened in American librarianship; he breaks a path which should be followed up with a discernment and patience emulous of his example. If the whole working round of our literature were sifted and labelled after his method, the worth of that literature, because clearly brought into evidence, might well be doubled at least. Every increase in the

availability of our books, every removal of fences, every setting-up of guide-posts, has had a heartening public response. So it will be if we proceed with this effort to bring together the seekers and the knowers, to obtain the best available judgments for the behoof of readers and students everywhere. Economics and politics, so closely interwoven with American history, might well afford the second field for appraisal. A good many libraries still find aid in the "Reader's guide" in this department, although it appeared as long ago as 1891. Next might follow the literature of the sciences pure and applied, together with the useful arts. Among useful arts those of the household might well have the lead, for we must not be academic, or ever lose sight of the duties nearest at hand to the great body of the plain people. Mr. Sturgis and Mr. Krehbiel, in 1897, did an excellent piece of work for us in their "Bibliography of the fine arts"; their guide might profitably be revised and enlarged in its several divisions, not omitting the introductory paragraphs which make the book unique in its class. These tasks well in hand, we might come to such accessions of strength and insight as to nerve us for labors of wider range and greater difficulty, where personal equations may baffle even the highest court of appeal, where it is opinion rather than fact that is brought to the scales. I refer to the debatable ground of ethics, philosophy and theology; and, at the other pole of letters, to the vast stretches of fiction and belles lettres in our own and foreign tongues. With regard to fiction and belles lettres, one of Mr. Larned's methods has a hint for us. In some cases he has found it best to quote Mr. Francis Parkman, Mr. Justin Winsor, or the pages of the *Nation*, the *Dial*, the *American Historical Review*, and similar trustworthy sources. With respect to novels and romances, essays and literary interpretation, it does not seem feasible to engage a special corps of reviewers. It may be a good plan to appoint judicious editors to give us composite photographs of what the critics best worth heeding have said in the responsible press.

It is in the preponderant circulation of fiction, and fiction for the most part of poor quality, that the critics of public libraries find

most warrant for attack. They point to the fact that many readers of this fiction are comparatively well-to-do, and are exempted by public taxation from supporting the subscription library and the bookseller. The difficulty has been met chiefly in two ways; by curtailing the supply of mediocre and trashy fiction; by exacting a small fee on issuing the novels brought for a season to a huge demand by advertising of a new address and prodigality. Appraisal, just and thorough, may be expected to render aid more important because radical instead of superficial. In the first place, the best books of recreation, now overlaid by new and inferior writing, can be brought into prominence; secondly, an emphasis, as persuasive as it can be made, ought to be placed upon the more solid stores of our literature. "Business," said Bagehot long ago, "is really more agreeable than pleasure; it interests the whole mind, the aggregate nature of man more continuously and deeply, but it does not look as if it did." Let it be our purpose to reveal what admirable substance underlies appearances not always seductive to the casual glance. Lowell and Matthew Arnold, Huxley and John Fiske, Lecky and Goldwin Smith are solid enough, yet with no lack of wit or humor to relieve their argument and elucidation. A New York publisher of wide experience estimates that the average American family, apart from school purchases, buys less than two books a year. Newspapers and magazines form the staple of the popular literary diet. What fills the newspapers is mainly news; their other departments of information are often extensive and admirable, but within the limits of the hastily penned paragraph or column they cannot rise to the completeness and quality of a book carefully written and faithfully revised. The plain fact is, and it behooves us to reckon with it, the average man, to whom we bear our credentials as missionaries, looks upon a book as having something biblical about it. To sit down deliberately and surrender himself to its chapters is a task he waves away with strangely mingled awe and dislike. So he misses the consecutive instruction, as delightful as profitable to an educated taste, which authors, publishers and librarians are ready and even anxious to impart.

We hear a good deal in these days about the need of recreation, and not a word more than is true, but let us remember that the best recreation may consist in a simple change of work. Behold the arduous toil of the city lawyer, or banker, as on a holiday tour he climbs a peak of the Alps or the Adirondacks, or wades the chilly streams of Scotland or Canada a salmon rod in his hands. Why does he undergo fatigues so severe? Partly because they are freely chosen, partly because they are fatigues of an unwonted and therefore refreshing kind. So in the field before us to-day. Truth is not only stranger than fiction, it is more fascinating when once its charms are recognized and entertained. Our public schools throughout the land prove that a true story of exploration, of invention or discovery, of heroism or adventure, has only to be well told to rivet a boy's attention as firmly as ever did Robinson Crusoe or Treasure Island. When readers take up from instinctive appetite, or wise incitement, the best books about flowers or birds, minerals or trees, an art, a science, a research, they come to joys in new knowledge, in judgments informed and corrected, unknown to the tipplers and toppers whose staple is the novel, good, bad and indifferent. And why, if we can help it, should public money ever be spent for aught but the public good?

With a new sense of what is implied in the trusteeship of literature, if we endeavor in the future to ally ourselves with the worthiest critics of books, we must bid good-bye to the temporary expedients which have cramped and burdened our initial labors. The work of the appraisal of literature requires a home, a Central Bureau, with a permanent and adequately paid staff of editors and assistants. The training of such a staff has already begun; in addition to the experience acquired by those enlisted in our present bibliographical tasks, instruction is now given in advanced bibliography at the New York State Library School at Albany, and doubtless also at other library schools. And at the Central Bureau, which we are bold enough to figure to ourselves, much more should be done than to bring books to the balances. At such a home, in New York, Washington, or elsewhere, every other task should proceed

which aims at furthering the good that literature can do all the people. There might be conducted the co-operative cataloging now fast taking form; there should be extended the series of useful tracts begun by that of Dr. G. E. Wire on "How to start a library," by Mr. F. A. Hutchins on "Travelling libraries." At such a center should be exhibited everything to inform the founder of a public library; everything to direct the legislator who would create a library commission on the soundest lines or recast library laws in the light of national experience; there, moreover, should be gathered everything to arouse and instruct the librarian who would bring his methods to the highest plane. Thence, too, should go forth the speakers and organizers intent upon awakening torpid communities to a sense of what they miss so long as they stand outside our ranks, or lag at the rear of our movement. In the fulness of time such a bureau might copy the Franklin Society, of Paris, and call into existence a needed book, to find within this Association a sale which, though small, would be adequate, because free from the advertising taxes of ordinary publishing. To found and endow such a bureau would undoubtedly cost a great deal, and where is the money to come from? We may, I think, expect it from the sources which have given us thousands of public libraries, great and small. Here is an opportunity for our friends, whether their surpluses be large or little. When a gift can be accompanied by personal aid and counsel, it comes enriched. It is much when a goodly gift provides a city with a library, it would be yet more if the donation were to establish and maintain an agency to lift libraries everywhere to the highest efficiency possible, to give literature for the first time its fullest acceptance, its utmost fruitage.

In a retrospective glance at nineteenth century science, Professor Haeckel has said that the hundred years before us are not likely to witness such victories as those which have signalized the era just at an end. Assume for a moment that his forecast is sound, and that it applies beyond the immediate bounds of science, what does it mean for librarianship? It simply reinforces what in any case is clear, namely, that it is high time that the truth and

beauty of literature known to the few made its way to all the people, for their enlightenment, consolation and delight. If the future battles of science are to be waged less strenuously than of yore, if scholarship has measurably exhausted its richest mines, let us give the broadest diffusion to the fruits of their triumphs past. In thus diffusing the leaven of culture the public library should take a leading, not a subordinate part. Its treasure is vaster and more precious than ever before. The world's literature grows

much like the world's stock of gold, every year's winning is added to the mass already heaped together at the year's first day. In the instruction, entertainment and inspiration of every man and woman there is a three-fold ministry, that of art, of science, and of letters. Because letters bring to public appreciation, to popular sympathy, both art and science, and this in addition to their own priceless argosies, may we not say that of art, science and letters, the greatest of these is letters?

### THE TRUSTEESHIP OF LITERATURE.—II.

BY RICHARD T. ELY, *Director School of Economics, University of Wisconsin.*

IT is my purpose to speak plainly and, if possible, forcibly, concerning what seems to me a grave menace to the progress of science, but in all that I shall say, I would have it understood that I have only the friendliest feelings personally for the gentleman who has brought forward what seem to me dangerous proposals. I appreciate his zeal for progress and his self-sacrificing efforts for human advancement in various directions, but I think that in this particular case—namely, the evaluation of literature, or the establishment of a judicature of letters, my friend is working against his own ideals.

I admit freely that the readers in our public libraries very generally need help in the selection of books, and that great assistance may be rendered them by judicious advice. Much time is wasted by those who read scientific and serious works which do not present the results of recent investigations: furthermore, as another consequence effort is misdirected and instead of producing beneficial results may do positive damage. The question may be asked: "Shall I read Adam Smith's 'Wealth of nations?'" I hear it mentioned as one of the great works in the world's history." Probably many a librarian has had this precise question asked him. In giving an affirmative answer it will be most helpful to offer a few words explaining the circumstances under which it appeared one hundred and twenty-five years ago, and its relation to

the subsequent development of economic schools and tendencies. Doubtless this work is frequently perused as if it were fresh from the press and were to be judged as a work appearing in 1901.

I further admit the harm which has come to individuals from the study of the so-called "crank" literature in economics and sociology, as well as in other branches of learning. Doubtless many a man is working vigorously in a wrong way and attempting to force society into false channels who might be doing a good work had his reading been well directed in a formative period.

But the magnitude of the interests involved in the proposal which greets us requires caution and conservatism in action. We must take a long, not a short, view of the matter, inquiring into remote and permanent results.

It is proposed, as I understand it, to have so-called expert opinions expressed concerning books, new and old; to secure as precise and definite estimates of their value as possible, and then by means of printed guides, and even card catalogs, to bring these opinions and evaluations before the readers in our libraries.

Let us reflect for a moment on what this implies. It means, first of all a judicial body of men from whom these estimates are to proceed. Have we such a body? Is it in the nature of things possible that we should have such a body? I say that so far as contem-

porary literature is concerned, the history of knowledge gives us a positive and conclusive negative answer—a most emphatic “No.” Let anyone who knows the circumstances and conditions under which reviews are prepared and published reflect on what the attempt to secure this evaluation of literature implies. Many of us know a great deal about these circumstances and conditions. We have written reviews, we have asked others to write reviews, and we have for years been in contact with a host of reviewers. We may in this connection first direct out attention to the general character of the periodicals from which quotations are frequently made in the evaluation of literature. I say nothing about my own view, but I simply express an opinion of many men whose judgment should have great weight when I say that one of the most brilliant of these periodicals has been marked by a narrow policy, having severe tests of orthodoxy along economic, social and political lines, and displaying a bitterness and vindictiveness reaching beyond the grave. I mention no names, and the opinion may or may not be a just one; but it should be carefully weighed whether or not, or to what extent, the evaluations of such a periodical ought to be crystallized as it were: that is, taken from the periodical press and made part of a working library apparatus, to last for years.

Another periodical, an able magazine, which makes much of reviews is under the control of a strong body of men, but they stand for scarcely more than one line of thought among many lines. And sometimes very sharp and very hard things are said about those who believe that scientific truth is moving along one of these other lines. Indeed, the discreet person, knowing personally the reviewer and the reviewed, will not be convinced that there is always in the reviews, here as elsewhere, an absence of personal animosity. Let us for a moment reflect on this personal element in reviews, as it has surely fallen under the notice of every man with wide experience in these matters. As a rule, the reviewers are comparatively young and inexperienced men, frequently zealous for some sect or faction. Sometimes great leaders of thought write reviews, but generally they are unable to find the time to do so. As a result in our reviews

in the best periodicals it will frequently be found that an inferior is passing judgment on a superior, and furthermore, reviewers share in our common human nature, and the amount of personal bias and even at times personal malignity found in reviews and estimates of books is something sad to contemplate. An unsuccessful candidate for a position held by an author has been known to initiate a scandalous and altogether malicious attack in a review.

In the next place, I would call your attention to the absence of objective standards. Necessarily are the standards personal and subjective; particularly and above all in economics, but in high degree in sociology, ethics and philosophy in general, and religion. Biological reviews have displayed in marked degree the subjective personal element. Chemistry, physics, astronomy and mathematics probably are best of all fitted for evaluations free from personal bias.

It may be asked what damage will result from evaluation. Passing over grave injustice to individuals, we observe that they must lead to the formation of what Bagehot aptly called a crust, preventing the free development of science. We have been laboring for years to obtain scientific freedom, freedom in teaching, freedom in learning, freedom in expression. For this end many a battle has been fought by noble leaders of thought. Indeed, every new movement of thought has to struggle to make itself felt, and to struggle precisely against those who control the most respectable avenues of publication; against the very ones who would be selected to give expert opinions and make evaluations of literature. Call to mind the opposition to Darwin and Huxley—although they were especially and particularly fortunate in early gaining the adherence of scientific men—also the opposition to Adam Smith, Malthus, Ricardo and John Stuart Mill—and to the last named, even now, some would on a scale of 100 give an evaluation perhaps of 50, others of 65—still others 80 and 90. Recently an economic book appeared of which one widely quoted periodical said that it illustrated a *reductio ad absurdum* of false tendencies, while another expert opinion inclined to place it among the great works of the age. It would seem

to me that if we are to have formal evaluations, they should at least be restricted to works which have been before the public for a period of fifty years.

We have in this proposal, as I take it, an attack on liberty, proceeding from one who would not willingly attack it, but illustrating the truth of the saying "Eternal vigilance is the price of liberty." It is proposed to publish virtually an *index librorum prohibitorum* and an *index expurgatorius*. And of all efforts ever conceived along this line, this is precisely the worst because of its apparently impersonal character. Let the ordinary reader go to a guide and find a book described as unscientific and superficial, and what weight can it have for him. The authority has spoken. It is well enough for librarians personally to guide and direct their constituencies, and one review may be weighed against another review. The old methods even must be

used by librarians cautiously, and they are ample for the purpose to be attained. The great point is that there should be a fluid current of opinion, and every facility for a revision of judgment should be maintained. Reviewers themselves change their views. I, myself, remember reviews which I wrote of works by two distinguished American authors, which I now regret, as my estimates were, I believe, not altogether sound and did an injustice to the authors, namely John Fiske and Lester F. Ward. But after all, I suppose no special harm was done, but if extracts from these reviews had been made part of a system of evaluation it would have been different.

Librarians as librarians must watch with impartiality the struggles among tendencies and schools of thought, and above all things, endeavor to keep open a free way for new truth.

## BOOK COPYRIGHT.

BY THORVALD SOLBERG, *Register of Copyright, Washington, D. C.*

IN order to keep within the time limit provided in the program I have been obliged to refrain from even touching upon many points, but have endeavored to present certain general principles governing copyright in books. I shall, therefore, only attempt to make clear, as briefly as possible:

1. What is copyrighted, *i.e.*, what can properly be designated as a "book" in order to secure copyright protection thereon;
2. What is the nature of the protection secured under the copyright law;
3. The limitation in time during which the protection applies, and its territorial limitations;
4. Who may obtain protection — the difference between an "author" and a "proprietor";
5. International copyright;
6. What conditions and formalities are required to be complied with in order to secure copyright;
7. The functions of the Copyright Office; and
8. Possible copyright law amendment.

### 1. *What is copyrighted?*

The copyright statutes enumerate the articles or classes of articles subject-matter of copyright, and first in the list stands "book." The first consideration is, therefore, What is to be understood by the term "book" as thus used? or, in other words, What is a "book," as that designation is employed in the copyright law?

The answer is indicated in the provision of the federal constitution upon which our copyright legislation is founded. This paragraph of the constitution (section 8 of article 1) grants to Congress — "in order to promote the progress of science and useful arts" — the right to enact laws to secure "to authors . . . the exclusive right to their . . . writings . . ." This provision is, of course, to be broadly interpreted, but, using the exact wording of the law, it is the *writing* of an author — his literary composition — the prose or poetical expression of his thought — which makes his "book," as the term is used in the copyright law. In order to be a "book," sub-

ject to protection under the copyright law, the author's production must have this literary characteristic. The *quality* of the literary ingredient is not tested, but its presence is requisite. Hence not everything which may ordinarily be called a book is fitly so nominated, in order to indicate the subject-matter of copyright; while some productions not ordinarily designated as "books" may properly be thus classified in order to be registered as a preliminary to copyright protection.

That an article possesses the corporeal characteristics of a book is of little consequence. The *literary* substance, not the material form, primarily determines the matter. An article contributed to a newspaper or a periodical—although but a few paragraphs in length—is a "book" under the copyright law, while a bookkeeper's ledger, to all outward appearance answering the description, is not a "book" so far as registering its title to secure copyright is concerned. A calendar whose main features are literary may doubtless be properly registered as a "book," but a pack of playing cards with pictures on the backs, even though each card may be furnished with a linen guard and all bound up, with a plausible title-page, so as to resemble a book, is not a "book" in the meaning of the copyright law.

Orderly arranged information produced in a form which would commonly be termed a chart cannot be registered under that designation which in the copyright law is applicable only to a cartographical work, but may properly be called a "book"; while a so-called book of coupons, or railway tickets, or of blank forms, cannot be thus entitled.

In brief, it should be a book in the ordinary understanding of a work of *literature* or art, and may not include a production whose main feature is some original idea, however ingenious or fanciful its form may be, or is of the character of something invented. Invention must look for protection to the patent law.

## 2. *The nature of the protection secured.*

What is the nature of the protection secured? Copy-right, *i. e.*, the right of copy—the right to make copies. According to the words of our own statute, the author of a book "shall have the *sole* liberty of printing, reprinting, publishing, completing, copying,

executing, finishing and vending the same."

The *exclusive* liberty of reproducing his work, and the restriction of the liberty of every one except the author to multiply copies constitute the literary property. It is a much-discussed question whether the author's privilege of copyright is a natural right or was created by legislation. Granting the production a proper one, it would seem that the author of a literary creation has a natural right to the unrestricted use and enjoyment of it. As Professor Langdell recently put it: "he has the right of use and enjoyment, because he can exercise such right without committing any wrong against any other person, and because no other person can prevent his exercising such right without committing a wrong against him." The author's creation is his own, and he has a natural right to the use of it without interference. The state does not create this right, but recognizes it and protects it. Protection is secured by restricting the liberty of other people in the use of the author's creation. Just how far this restriction should go is still a moot question. The law says, however, that you may not reproduce in whole or in part an author's book without his written consent, signed in the presence of two witnesses. It does not say that you may not read the book, nor are you forbidden to read it in public, even for profit, although in the case of musical and dramatic compositions public performance or representation for profit without the author's special—not implied—consent is not only directly prohibited, but is punishable by imprisonment. The International Publishers' Congress, which met in Paris in June, 1896, passed a resolution to the effect that the reproduction of a literary work by means of public readings, in case such readings were held for purposes of profit, ought not to be permitted without the consent of the copyright proprietor. By the Act of March 3, 1891, the exclusive right to translate or dramatize his book is reserved to the author. In this unrestricted and unlimited exclusive right of translation and dramatization our law has exceeded the usual trend of legislation in regard to the author's control over his work in these directions. Foreign legislation usually only reserves to the author the exclusive right to translate or

dramatize for a limited fixed period of time, and if he has not himself produced a translation or dramatization within that period, another person may.

It has occasionally been intimated that the efforts made by the public libraries to secure the constant circulation of the same book is a trespass upon the rights of the author, as he is presumably thus subjected to the loss of readers who would otherwise also become purchasers of his book. A case has just been decided to test an author's right to object to having copies of his own copyright editions of his books sold in a manner not indicated by himself as volumes of a so-called collected edition of his works. The decision, on first hearing, was adverse to the author's contention.

It is the *literary expression* of the author's thoughts and ideas which is the subject-matter of the protection, and not primarily the thoughts and ideas themselves. These last may or may not be original with the author, but once he has made public a thought or an idea he has given it away; he cannot control its use or application. The author of a translation of a book—the original work being in the public domain—may obtain a copyright upon his own translation, but doing so will not debar another from producing an original translation of his own of the same work and obtaining copyright registration for the same.

Copyright does not give to any one monopoly in the use of the *title* of a book, nor can a title *per se* be subject-matter of copyright. It is the book itself, the literary substance which is protected, the title being recorded for the identification of the work.

### 3. *Time and territorial limitations of copyright.*

A few countries still grant copyright in perpetuity, but usually the term of protection is limited either to a certain number of years, or to a term of years beyond the date of the author's death. This last provision is the more general, and the term varies from seven years after the author's death in England, for instance, to eighty years after the author's death in Spain. The two most common terms are thirty years to fifty years beyond the life of the author. Our own legislation

provides for two possible terms of protection. The first being for twenty-eight years from the date of the recording of the title in the Copyright Office, and the second, an extension of fourteen years from the expiration of the first term.

Besides the time limit, copyright—especially as far as the authors of the United States are concerned—is limited territorially, not extending beyond the boundaries of the United States. Whether the protection which follows registration and deposit shall extend so as to include Porto Rico, Hawaii and the Philippines is a matter of some question. Probably as regards the Philippines the answer would be in the negative, but as concerns Porto Rico, since the passage of the "Act temporarily to provide revenue and a civil government for Porto Rico" (April 12, 1900) and Hawaii, since the taking effect (June 14, 1900) of the "Act to provide a government for the territory of Hawaii," the response would be in the affirmative.

The obtaining of copyright protection by a compliance with the United States statutory requirements as to registration of title, deposit of copies, and printing of notice of copyright, does not secure extension of this protection in the territory of any foreign country, the United States not being a member of the International Copyright Union. An American author must comply with the requirements of the copyright laws of a foreign country, just as if he were a citizen or subject of that country, in order to obtain copyright protection within its borders. Presumably, however, the obtaining of valid copyright protection in one of the countries of the International Copyright Union, England for example, would secure protection throughout the various countries of that Union.

### 4. *Who may obtain copyright.*

It is the *author* of the work who is privileged to obtain copyright protection for it. As I have already pointed out, the constitutional provision enacts that Congress is to legislate to secure to *authors* the exclusive right to their *writings*. When, therefore, the law states that the author "or proprietor" of any book may obtain a copyright for it, the term "proprietor" must be construed to mean the author's assignee, *i.e.*, the person to whom he

has legally transferred his copyright privilege. It is not necessarily transferred by the sale of the book, *i.e.*, the manuscript of the author's work, as the purchase alone of an author's manuscript does not secure to the proprietor of the manuscript copyright privileges. Prior to July 1, 1891, no foreign author could obtain copyright protection in the United States, hence the purchase by a publisher of one of Dickens's novels in manuscript, for example, would not enable the buyer to obtain copyright on the book in this country. No author who has not the privilege of copyright in the United States can transfer to another either a copyright or the right to obtain one. He cannot sell what he does not himself possess. Under the United States law copyright comes through *authorship* only. It is not a right attaching to the thing—the book—but is a right vested in the creator of the literary production, hence does not pass to a second person by the transference of the material thing, the book, and evidence must be offered showing that the transference of the book carried with it the author's consent to a conveyance of the privilege of copyright.

This same principle is embodied in the provisions of the law as to renewal of the copyright. The second term of protection must also start with the author, or if he be dead, with his natural heirs, his widow or children, but not with his assigns, the "proprietors." The right to the extension term is in the author if he be living at the period during which registration for the second term may take place, *viz.*, within six months prior to the expiration of the first term of twenty-eight years. If the author be dead, the privilege of renewal rests with his widow or children. Whether the author may dispose of his right of renewal so that the transference may be effective for the second term, even though the author should have died before the date of the beginning of that term, is a question upon which the authorities differ. The language of the statute would seem to give to the author an inchoate right which reverts to his widow or children should he be married and die before the expiration of the first term of the copyright.

##### 5. *International copyright.*

The idea of nationality or citizenship gov-

erned our copyright legislation for more than a century, from the earliest American copyright statute of 1783 to July 1, 1891, so that until the latter date copyright protection in the United States was limited to the works of authors who were citizens or residents. By the Act of March 3, 1891, commonly called the international-copyright law, which went into effect on July 1 of that year, the privileges of copyright in this country were extended to the productions of authors who were citizens or subjects of other countries which by their laws permitted American citizens to obtain copyright upon substantially the same basis as their own subjects. The existence of these conditions is made known by presidential proclamation, and up to this time ten such proclamations have been issued extending copyright in the United States to the citizen authors of Belgium, Chile, Costa Rica, Denmark, France, Germany, Great Britain and her possessions (including India, Canada, the Australias, etc.), Italy, Mexico, the Netherlands, Portugal, Spain and Switzerland. The privilege of copyright in the United States is extended only to authors who are subjects of some country in whose behalf a presidential proclamation as to copyright has been issued.

It is well to point out, perhaps, that these copyright proclamations are not equivalent to copyright treaties, but are only notices that certain conditions exist. Only in the case of one country, *viz.*, Germany, has anything been entered into approaching a convention or treaty. Under date of Jan. 15, 1892, an "agreement" was signed with that country to issue a proclamation extending copyright in the United States to German subjects upon an assurance that "Citizens of the United States of America shall enjoy, in the German Empire, the protection of copyright as regards works of literature and art, as well as photographs, against illegal reproduction, on the same basis on which such protection is granted to subjects of the empire."

In order to obtain copyright abroad, therefore, an American citizen must ascertain the requirements of the law of each country in which he desires to protect his book or other production and comply explicitly with such requirements. He can, of course, only avail

himself of the legal protection accorded, so far as it is within his power to thus comply, and therein lies the difference between the privileges secured under the present international-copyright arrangements, and such as would be obtainable under copyright conventions or treaties. A citizen of the United States may find himself unable to meet the obligations or conditions of the statutes, just as a foreign author may find it practically impossible to comply with the requirements of the United States law, and in either case there would be a failure to secure the protection desired. In the case of a photograph, for example, the English law requires that the "author" of the photograph must be a British subject or actually "resident within the Dominions of the Crown," and the United States law requires that the two copies of the photograph to be deposited in the Copyright Office "shall be printed from *negatives made within the limits* of the United States," two sets of conditions difficult of fulfilment. By means of a copyright convention exemption could be obtained in either case from these onerous conditions.

6. *Conditions and formalities required by the copyright law.*

Two steps are made prerequisites to valid copyright by the laws now in force in the United States. The first of these is the recording of the title in the Copyright Office. For this purpose the statute requires the deposit of "a *printed copy*" of the title-page, "on or before the day of publication in this or any foreign country." For a number of years it has been the practice of the Copyright Office to accept a typewritten title in lieu of the *printed* title-page, but in this, as with all other requirements of the law regarding copyright, the preferable course is a strict compliance with the letter as well as the spirit of the law.

The clerical service for thus recording the title requires the payment of a fee, which should accompany the title-page when transmitted to the Copyright Office. The fee for this, as fixed by law, is 50 cents in the case of the title of a book whose author is a citizen of the United States, and \$1 in the case of a book whose author is not an American but is a citizen or subject of some country to

whose citizens the privilege of copyright in the United States has been extended, under the provisions of the Act of March 3, 1891. If a copy of the record thus made of the title (commonly called a certificate) is desired, an additional fee of 50 cents is required in all cases.

In order to have this essential record of title properly made, in the form exactly prescribed by the statute, it is necessary to furnish the Copyright Office with certain information, namely:

- a. The name of the claimant of the copyright. (This should be the real name of the person, not a *nom de plume* or pseudonym.)
- b. Whether copyright is claimed by applicant as the "author" or the "proprietor" of the book.
- c. The nationality or citizenship of the *author* of the book. (This is required to determine whether the book is by an author who is privileged to copyright protection in this country, and, also, the amount of the fee to be charged for recording the title.)
- d. The application should state that the title-page is the title of a "book."
- e. A statement should be made that the book is or will be "printed from type set within the limits of the United States."

The second prerequisite to copyright protection is the deposit in the Copyright Office of two copies of the book whose title-page has been recorded. These copies must be printed from "type set within the limits of the United States," and the deposit must be made "not later than the day of publication thereof, in this or any foreign country." The stipulation as to American typesetting applies to works by American authors as well as to those written by foreign authors.

The statute provides, as regards both the printed title and the printed copies, that the articles are to be delivered at the office of the Librarian of Congress, or "deposited in the mail, within the United States, addressed to the Librarian of Congress, at Washington, D. C." Just what would be held to have been secured under the latter provision in case the deposit in the mail were made and the book failed to reach the Copyright Office has not been determined by judicial decision. The law provides for the giving of a receipt by the postmaster in the case of the title and the copies, if such receipt is requested.

The third step required for obtaining a defensible copyright is to print upon the title-page or the page immediately following it in each copy of the book the statutory notice of copyright. The form of this notice must be either "Entered according to Act of Congress, in the year —, by A. B., in the office of the Librarian of Congress, at Washington;" or, "Copyright, 19 —, by A. B." The name printed in this notice must be the real, legal name of the proprietor of the copyright, and must be the same as that in which the entry of title has been made; the date, also, must be the year date of the record of the filing of the title-page. A judicial decision is on record to the effect that printing the year date in this notice one year later than the date of actual recording of title barred the defence of the copyright. A penalty of \$100 is imposed on "every person who shall insert or impress such notice, or words of the same purport in or upon any book . . . whether subject to copyright or otherwise, for which he has not obtained a copyright."

An American author may obtain for his book copyright protection in Great Britain, by a compliance with the official instructions as to publication, deposit of copies and registration. The protection, under English law, dates from the day of *first* publication, but such first publication must be on English territory, and registration may follow, but cannot precede publication. The term of protection in the United States, on the contrary, dates from the day of registration of title in our Copyright Office, which must precede publication, and be followed by deposit of copies made "not later than the day of publication thereof in this or any foreign country." The point to guard, therefore, is *simultaneous publication* in this country and in Great Britain. Registration in England is a secondary matter. As stated in the official circulars of instructions issued by the English Copyright Office, "Copyright is created by the statute, and does not depend upon registration, which is permissive only, and not compulsory, but no proprietor of copyright in any book can take any proceedings in respect of any infringement of his copyright unless he has, before commencing his proceedings, registered his book."

Under existing legal conditions, in order to secure valid copyright on a book in this country and in England, the following steps should be taken, and in the order stated. 1. Record title in the United States Copyright Office. 2. Print book from type set within the limits of the United States. 3. Deposit two copies of such book in the United States Copyright Office. 4. Send sufficient copies to London to

a. Place copies on sale and take such usual steps as are understood, under English law, to constitute "publication" on a prearranged day, on which same day the book is published in the United States.

b. Deposit copies: one copy of the best edition at the British Museum, and four copies of the usual edition at Stationers' Hall for distribution to the Bodleian Library at Oxford, the University Library at Cambridge, the Faculty of Advocates Library at Edinburgh, and the Trinity College Library at Dublin.

c. Register title of book and day of first publication at Stationers' Hall, London.

7. *The United States Copyright Office.*

One frequently hears the expressions "has obtained a copyright," "issued a copyright," etc., giving the impression that copyrights can be granted somewhat after the manner in which the Patent Office issues letters-patent. But Congress has established no office authorized to furnish any such guarantee of *literary* property as is done in the case of patent monopoly. The Copyright Office is purely an office of record and simply registers *claims* to copyright. The form of record prescribed by law being the effect that A. B. "hath deposited the title of a book the right whereof he *claims* as author or proprietor in conformity with the laws of the United States respecting copyrights." The Copyright Office has no authority to question any claim as to authorship or proprietorship, nor can it determine between conflicting claims. It registers the claim presented in the prescribed form for a proper subject of copyright by any person legally entitled to such registration without investigation as to the truthfulness of the representations, and would be obliged to record, not only the same title for different

books, but the same title for the same work on behalf of two or more different persons, even against the protest of either one, were such registrations asked for. No examination is therefore made when a title reaches the office as to whether the same or a similar title has been used before. As I have already stated, the title *per se* is not subject to copyright, and no one can secure a monopoly of the use of a title by merely having it recorded at a nominal fee at the Copyright Office.

If any one, wishing to use a given form of title but desiring to avoid possible duplication of one previously used, writes to the Copyright Office asking whether such a title has already been recorded, an answer is made stating what is disclosed by the indexes of the office. It must be frankly explained, however, that an absolutely conclusive statement as to whether a given title has been previously used cannot always be given. The copyright records of entries of title previous to July 10, 1870, are but indifferently indexed and rarely by title, usually only under names of proprietors of the copyright. The copyright entries since July 10, 1870, to May 31, 1901, number 1,217,075. The index to these entries consists of more than 600,000 cards, many of which contain a number of entries. These cards index the entries primarily under the names of the proprietors of the copyright, and this proprietor's index is understood to have been kept up continuously and to be complete, so that under the name of each copyright proprietor there is a card or cards showing the titles of all articles upon which copyright is claimed. In addition to the proprietor's index there are cards under the titles of periodicals and under the leading catchwords of the titles of other articles, besides cards under the authors' names for books. Unhappily there are periods of time when what may be called the subsidiary index cards were not kept up.

In addition to cards under the proprietors' names, cards are now made: for *books*, under the names of their authors; for *anonymous books*, *periodicals* and *dramatic compositions*, under the first words of the titles (not a, an, or the), and for *maps*, under the leading subject words of the titles, *i.e.*, the names of the localities mapped. It is doubtful if an absolutely complete index of all copyright entries

by the *title* of the book and other article—in addition to the cards at present made—could be justified by even a possibly legitimate use of such an index. When it is remembered that the copyright entries last year numbered 97,967, the magnitude of the task of making several cards for each entry is easily conceived, and it is a question whether it could be rightfully imposed upon the Copyright Office under the present provisions of the law and so long as the registration of a title does not secure the use of that title to some one person to the exclusion of all others.

#### 8. *Amendment of the copyright law.*

The possible amendment of the copyright laws is a subject which my time does not permit me to consider in detail, even were that deemed desirable. The law now in force consists of the Act of July 8, 1870, as edited to become title 60, chapter 3 of the Revised Statutes, and ten amendatory acts passed subsequently. Naturally there is lacking the consistency and homogeneousness of a single well-considered copyright statute. It is possible that Congress will presently be willing to take under consideration, if not the re-codification of the copyright laws, then, at least, some amendment of them. An increase in the period of protection has frequently been urged, with some advocacy of perpetual copyright. As the Federal constitution, however, distinctly provides that the protection granted the writings of an author is to be for a *limited time*, an amendment of the constitution would be necessary before Congress could enact perpetual copyright, and such alteration of the fundamental law of the land is not probable.

Much might be said for an increase in the period of protection. It is for a shorter term of years than that provided by most modern copyright legislation, and the trend of such lawmaking has been in the direction of an increase in the length of time during which the author or his heirs could control the reproduction of his work. It should be borne in mind that for books of little value the length of the term of protection is of no great consequence. "Dead" books are not affected by the length of the term of copyright. In the case also of popular new books, the great sales

and consequent disproportionate remuneration comes within a short period of time after publication, and are not likely to continue during a long term of copyright. On the other hand, many books of great and permanent value not unfrequently make their way slowly into popular favor, and are not fully appreciated until many years after publication. For such books—the results, perhaps, of long years of study and labor—an equitable return cannot be secured except by a long term of protection.

Perhaps the most urgently desirable forward step in respect to copyright is the adhesion of the United States to the Berne convention, thus securing the inclusion in the International Copyright Union of our country, the leading one of the three great states not yet members of this admirable association of nations. Were the United States a member of the Berne Union a compliance with the statutory provisions of our own laws alone would secure copyright protection not only within the limits of the United States, but practically throughout the whole book-reading world—Great Britain, all Europe (except

temporarily Russia, Austria, and Scandinavia), Canada and Australia, India, Japan and South Africa—thus increasing the possible reading public of American authors many fold. It would seem that considerations of justice to our large and constantly increasing national contingent of literary and artistic producers requires this advance of such great practical importance. It is the easier of accomplishment because it involves the adoption of no new principle, but only the extension of the principle embodied in the Act of March 3, 1891, namely, reciprocal international exchange of copyright privileges, and in return for the advantages which would accrue to our own citizens, only obligates the extension of copyright in the United States to the subjects of such countries as are members of the Union. Of the members of the International Copyright Union, all the great nations already enjoy copyright in the United States, and it would only remain to extend this privilege to the citizen authors of the six minor states that are members of the Union, namely, Hayti, Japan, Luxembourg, Monaco, Norway and Tunis.

## THE RELATIONSHIP OF PUBLISHERS, BOOKSELLERS AND LIBRARIANS.

BY W. MILLARD PALMER, *Grand Rapids, Mich.*

IN accepting the president's suggestion to give "expression of the *business* side of the subject rather than the theoretical or sentimental," I wish at the outset to recall certain functions performed by publishers, booksellers and librarians, and to acknowledge my indebtedness to Mr. J. W. Nichols, secretary of the American Booksellers' Association, for material along this line.

Casual observers have come to regard publishers as bookmakers or manufacturers, who merely put the product of authors into merchantable form, and distribute it to dealers, for sale to the reading public. If this were the only function of the publisher, his task would be an easy one; indeed we might soon expect to see all publishers supplanted by one great co-operative factory, to which authors might take their manuscripts, and have them

transformed into books and distributed through the ordinary channels of commerce, like any other commodities. Some superficial observers have recently made bold to conjecture that this will be the final outcome of the present troubled state of the general trade of publishing and selling books. But, alas! the actual making of the book—giving to it an appropriate, artistic and really attractive form—is perhaps the least of the publishers' trials, though this, in itself, is a difficult task, requiring an artistic taste, well trained and skilful judgment, and much technical knowledge.

To one who has had an insight into the publishing business, the enormous mass of manuscript that is annually submitted to each of the great publishers is simply appalling. They are compelled to employ a corps of

"readers" to cull out that which is worthy of consideration by an intelligent and skilled publisher. Much that come to hand has been hastily prepared by persons who lacked the time, experience or special training necessary to enable an author to prepare an acceptable manuscript, while the great majority of young authors have really no message to tell that is worth recording. Here comes the most difficult and trying task of the successful publisher—the selection of proper material for publication. It often happens that a rejected manuscript contains some good work—a promise of something better to come. Then the publisher points out the best features and encourages the incipient author to try again.

Thus books are made, not after a given pattern, like certain fabrics, but each is a creation in itself. The responsibility of the publisher, for the character of the creation, is by no means unimportant. He acts as arbiter of the standard of excellence that must be attained by an author before he is introduced to the public. The publishers' criterion is simply a question of cash. "Will the public buy the book and pay for it?" Nor can any other standard be adopted with safety. The whole question of supply must always depend upon public demand.

But the publisher is not infallible. He often makes mistakes. Between him and the readers is the dealer. The retail bookseller stands closest to the reading public. He acquaints himself with the essential character of the new book, points out to his customer enough of interest to cause him to glance through it, and finally sells it to him; for the intelligent bookseller knows the taste and reading habits of his customers. He has his leading customers in mind from the time he orders a new book till he has shown it and sold it to them. If they are pleased with it, and recommend it to their friends, who call at the store for it, the bookseller re-orders it, and, if he is so fortunate as not to be restrained by unfair local competition, he advertises the book and pushes its sale with energy, so long as interest in it can be kept alive.

Thus the retail booksellers in every city and hamlet throughout the country, standing close to the reading public, knowing what their cus-

tomers will buy, are the real monitors of the publishers.

When the publisher considers the advisability of bringing out a new book, he cannot undertake to look beyond a few hundred booksellers. It is through them, and only through them, that he has learned to gauge the taste of the reading public. The paramount question for him to decide is, "How many copies of this particular book can I sell to dealer A, dealer B and dealer C; how many copies of this book can I hope with certainty to sell to all of my customers in the trade?" The publisher well knows that the dealer is governed by the same criterion as himself: "Will it pay; will this book be a ready seller, or will it cost me all of the profit I make on it to sell it?"

Thus the product of the author is subject to the immutable laws of supply and demand from the time he submits his first immature manuscript until he makes two, three, four or more trials, and finally has a manuscript accepted. But even then the publishers prepares only a small edition for a new author, and the dealers are very conservative in ordering a new book—especially by an unknown author. The conscientious bookseller awaits the verdict of certain patrons, knowing that, if the book is commended by one whose judgment is respected by local readers, he can safely re-order a goodly number.

Thus the author is dependent upon the publisher for the standard of excellence he must attain in order to achieve success; the publisher is dependent upon the dealer, not only in forming his judgment of the character of books that will sell, but also for the number that he may safely print; while the dealer is dependent upon his best and most critical patrons. Hence the relation of author, publisher and dealer is so close—indeed they are so mutually interdependent—that one factor could not be removed without vitally crippling the other.

A distinguished librarian, who has been a pioneer of progress in the library movement, has recently suggested the propriety of abolishing book stores (*see Publishers' Weekly*, May 11, '01, p. 1149) and allowing public librarians to receive orders and forward them to the publishers. If the distinguished gentleman did not have in view visions of personal

gain for public librarians, he should have carried his philanthropic suggestion farther, and proposed to abolish both booksellers and librarians, and to allow the public to procure their books directly from the publishers, thus saving that moiety of gain that would be made by either in return for the service rendered. It cannot be supposed that so able and conscientious an administrative officer ever contemplated maintaining an extra corps of assistants, at an extra expense to the municipality or to those liberal benefactors who have endowed public libraries, in order that opulent citizens may still further indulge their tastes by purchasing larger private libraries, without paying the small commission or profit that is usually allowed to retail booksellers. On the other hand, if this proposal was made for the purpose of allowing libraries maintained by taxing the municipality, to engage in gainful occupation, this is carrying the socialistic idea farther than even our populist friends have ever yet proposed.

However, inasmuch as this question has been raised, we are bound to treat it from an economic point of view. The question is, "Shall the bookseller be abolished and his office merged into that of the librarian, and can the librarian perform the offices of the bookseller?"

No one has ever questioned the value of the public library from the burning of the Alexandrian Library to the present day. The value of a library, as a *librarium*, or storehouse for the permanent preservation of books, has always been manifest.

Again, the public library gives a larger opportunity and a wider range than is possible in the private collection; and scholars, historians and students of all classes are daily made grateful to the trained, professional librarian, who has so classified the contents of the library as to make the whole available at a moment's notice.

Still another inestimable feature of the public library is that it maintains a public reading room for children as well as adults.

Finally, the library furnishes reading at home to those who are not yet in a position to become owners of books. The benefit derived from reading of this character is often of questionable value. The *habitué* of the cir-

culating library makes his selections from misleading or sensational titles. Little care and less intelligence is exercised in choosing either title or author. As a result librarians are constantly complaining that only the trashiest and most worthless books are read.

The circulating department of the public library is now supplemented by others that are conducted for cash profit. These have sprung up in many cities. And now we have the "Book-Lovers' Library," a corporation with capital stock, engaging in business for profit. It has the advantage of certain trust features. It proposes to organize branches in all of the principal cities and towns in the country. For five dollars a year it proposes to supply fifty dollars' worth of reading to each subscriber. An automobile is employed, with an attendant to deliver the books to subscribers each week and take up those that have been read. Having paid five, ten or more dollars, at the beginning of the year, the subscriber can read from morning till night, while the new books come and go with the lightning speed of the automobile.

As in many other circulating libraries, new copyrighted fiction is the chief staple supplied by the "Book-Lovers' Library"—the sweetest pabulum automatically administered.

After a season of such dissipation call in a neurologist to diagnose your patient, and he will advise you that by continuing the treatment the mind will be reduced to a sieve, if not ultimately to absolute imbecility. Having abandoned the more serious literature that calls into use all the faculties of the mind, the reader of nothing but fiction converts what would otherwise be a healthful recreation into dissipation, that is enervating and permanently debilitating to all the faculties of the mind, when carried to an extreme. Had the reader been denied the use of this automatic machine, and been compelled, as formerly, to browse through the book store in search of something to read, more serious books would have been selected—history, travel, descriptive writing or popular science, with an occasional novel by way of recreation.

But to continue the argument, suppose we abolish the bookseller, as has been proposed. This would not be a difficult matter. Most of them would gladly be "abolished" if they

could sell out their stock for anything near what it cost them. Their profits have been so reduced by unfair competition that they are not sufficient to pay the cost of doing business. They have been compelled to carry side lines, as stationery, newspapers, periodicals, sporting goods, *bric-a-brac*, wall paper, etc., in order to make a living. By this means they have learned that other lines of merchandise yield a better profit than books. As a result most of them have greatly reduced their book stock, or entirely abandoned the sale of books, and put in more profitable lines of merchandise.

The causes that have led up to this result are manifold: 1st. They were strenuously urged, and they finally consented to allow discounts:

- (a) To ministers of the gospel, since they are public benefactors.
- (b) To school teachers, since they are public educators and benefactors.
- (c) To public libraries, since they are for the most part eleemosynary institutions, and hence entitled to charity.

Indeed, when I recount the charitable benefactions that have been exacted and received at the hands of the retail bookseller, he seems to me to have been the most saintly character that has lived in my day and generation. And right here it is of interest to note that these ministers, these teachers, these physicians, these public librarians were actually receiving out of the hands of the public stated salaries that exceeded by far the annual net profit of the average bookseller.

2d. Having secured from the local dealer a discount equal to the best part of his profit, many librarians have gone behind him and appealed directly to the publishers for a larger discount. This has been granted in most cases, so that most librarians have recently been receiving as large a discount as local dealers.

3d. Commission agents have purchased complete editions of popular-selling books from the publishers, and re-sold them at a slight advance:

- (a) To dry-goods stores, where they have been put on "bargain counters" and sold at less than cost, to attract customers to their stores.
- (b) To publishers of local newspapers, who

give the books away as premiums or sell them at cost prices, to increase the local circulation of their papers.

- (c) To mail-order agencies, who advertise the books at less than they are usually sold for by dealers.

4th. Many publishers have been advertising and mailing their books directly to retail customers at reduced prices, or at the same price they recommended local dealers to ask for them, and they have prepaid the postage, thus *competing directly with their distributing agents, the booksellers, in their own field.*

5th. Finally, some local librarians, who a few years ago were appealing to local booksellers for a discount, having been granted the discount, have recently been supplying books "at cost prices" to other patrons of the local booksellers. Thus our friends, the librarians, having inverted the good old practice of returning good for evil, having helped to rob the local bookseller of his livelihood, now propose to abolish his office.

To carry the proposition to its conclusions, suppose we abolish the bookseller. Can the librarian take his place and send the orders in to the publishers? If so, if this is all there is to the bookselling business, why should the publisher pay a commission to the librarian for doing what the people could as readily do for themselves? But a general business cannot be carried on in this way. Publishers have tried it for years, yet only comparatively few people are willing to order books that they have not had an opportunity to examine, and of this class librarians are the most conservative. They, too, want to know what they are buying before they place their orders. Hence, this postulate: If the librarian is to succeed the bookseller, he must become a merchant; he must order stocks of books and take the speculative chance of selling them. But the librarian has had no experience or training in merchandising. Can he afford to hazard his own capital in an untried field; can he induce his friends to supply him with capital to invest in a business of which he confessedly has no knowledge? It would manifestly be a perversion of the funds of the institution in charge of the librarian, to invest them in a gainful occupation.

From what I have said, it must be apparent that booksellers, as well as librarians, have a

province of their own, and perform a service that cannot be delegated to another. And hence it is desirable that we live and dwell together in peace and amity.

But in these days of combinations, reorganizations and revolutions in the conduct of business, the publishers have looked farther, in their quest for more economical purveying agents. For the past ten years they have been trying to induce the dry-goods merchants to carry books. But, after all this time, not more than half a dozen department stores carry fairly representative stocks of books. They confine themselves, for the most part, to new copyrighted fiction, and of this they handle only that which is widely advertised.

Of late, department stores and dry-goods stores have met severe competition in clothing stores, that make no pretext of carrying a book stock. They simply buy an edition of a popular-selling book and advertise it for less money than it actually cost. They do this simply as an advertising dodge, to attract customers to their stores. Then, too, the mail-order agencies have cut the price of the most popular books so low that it is no longer profitable to handle them. The result of this has been that many of the most promising new novels have been killed before they were fairly put on the market; for *as soon as they ceased to be profitable no one could afford to re-order them.*

The effect of this recent drift of the trade has been to stimulate the frothy side of literature to an extreme degree. The more serious literature is being neglected. The latest novel is the fad. Its average life is reduced to little more than one year, though the copyright lasts for twenty-eight years, and with a renewal it may be extended to forty-two years.

This shortening of the life of books has had a baneful effect:

- (a) Baneful to the bookseller, since it frequently leaves him with a dead stock of books on hand that cannot be turned without loss.
- (b) Baneful to the publisher, since the book stops selling and the plates become valueless before he has had time fairly to recoup himself for the expense of bringing it out, advertising it, and putting it on the market.
- (c) Baneful to the author, since by shorten-

ing the life of his books the value of his property in them is reduced.

But perhaps the most baneful effect of this craze for ephemeral literature is upon the people themselves. As the standard or degree of civilization for a given age is marked by the character of the literature the people produce and read, we cannot hope for a golden age in American letters, unless the present system is reversed. Work of real merit is never done by accident, nor is it the product of mediocre talents. If we are to develop a national literature that shall fitly characterize the sterling qualities of the American people in this, the full strength of the early manhood of the nation; at the time when the nation has taken its place in the vanguard of civilization; at the time when the consumptive power of the nation is equal to one-third of that of the entire civilized world; at the time when men of talents and genius are annually earning and expending, for their comfort and pleasure, more munificent sums than were ever lavished on the most opulent princes; I say, if we are to produce a literature that shall fitly characterize this age of our nation, we must hold forth such rewards for the pursuits of literature as will attract men of genius, men of the most lustrous talents, men who are the peers of their co-workers in other walks of life. But this will not be possible so long as the present strife to furnish cheap literature to the people continues.

It should be observed that the bookseller has not suffered alone in this cheapening process. The publisher has suffered. Within the past few months two names that for half a century were household words, synonyms of all that is excellent in the publishing world, have met with disaster, and others were approaching a crisis.

Fortunately one firm stood out so prominently, as a bulwark of financial strength and security, that its president, Mr. Charles Scribner, of Charles Scribner's Sons, could afford to take the initiative in calling for reform. He invited the co-operation of other publishers, and a year ago this month they met in New York and organized the American Publishers' Association. Their organization now includes practically all of the general publishers who contribute anything of real value to current literature.

The publishers canvassed thoroughly the causes that had led to the decline of the trade, and they appointed a committee to draft reform measures.

In reviewing the decline of the trade, two facts stood out so prominently that it was impossible to disassociate them as cause and effect. The three thousand booksellers, upon whom, as purveying agents, the publishers had depended a generation ago, had shrunk in number until only about five hundred could be counted who were worthy to be called booksellers. The other fact, which doubtless made quite as deep an impression upon the minds of the publishers, was that the long line of books, on each of their published catalogs, was practically dead. Those books of high standard character, by eminent authors, books that for years had had a good annual sale, no longer moved. These standard books have been a large source of revenue to publishers and their authors for many years. But now so few of them are sold that it hardly pays the publishers to send their travellers over the road.

Few dry-goods merchants, druggists, news-dealers and stationers, that have recently been induced to carry a small number of books, feel sufficiently well acquainted with salable literature to warrant their carrying anything more than the most popular-selling new copyrighted novels and cheap reprints of non-copyrighted books that sell for twenty-five cents or less. As stated above, there are a few large department stores that carry a more general stock, but they are so few that the support received from them is not sufficient to compensate, in any measure, the loss sustained through the sacrifice of the regular booksellers. Moreover, the regular booksellers that still remain in the business have not been buying many standard books of late. Seeing their profit in fiction sacrificed by unfair competition, many of them have ordered only enough of the new copyrighted novels to keep alive their accumulated stocks of standard books, until they can sell them out or reduce them to a point where they can afford to abandon the book business.

From the character of the reform measures adopted by the American Publishers' Association, which went into effect on the first of May, it is evident that the publishers have de-

termined to restore the old-time bookseller. This can be done only by the publishers enforcing the maintenance of retail prices, the same as is done by the proprietors of the Earl & Wilson collar, the Waterman fountain pen, the Eastman kodak, and many other special lines of which the retail price is listed.

When dry-goods stores and clothing stores bought these special lines and retailed them at or below the cost price, in *contrast to the list price* asked in the special furnishing stores, in order to attract customers to their stores because of their wonderful "bargain counters," the manufacturers realized that the dry-goods stores were simply using up these wares to advertise their other business. They cut off the supply of their goods to these price-cutting dry-goods stores, and refused to supply any more goods, except under a substantial undertaking on the part of the dry-goods stores to maintain the full list price.

This, in a word, is the substance of the publishers' plan. They have agreed to cut off absolutely the supply of all of their books, net, copyrighted and otherwise, to any dealer who cuts the retail price of a book published under the net-price system.

On the other hand, the nearly eight hundred members of the American Booksellers' Association have entered into a mutual agreement to push with energy the sale of the books of all publishers who co-operate with them for the maintenance of retail prices, and not to buy, nor put in stock, nor offer for sale, the books of any publisher who fails to co-operate with them. This is substantially the same system that was adopted in Germany in 1887, in France a few years later, and in England in 1900.

The effect of this system in Germany has been to lift up the trade from a condition even more deplorable, if possible, than that into which it has fallen in this country, and to make it a prosperous and profitable business. It has proved beneficent and satisfactory, not only to dealers and publishers, but also to authors and to the reading public, for every city, town and village in Germany now sustains a book shop that carries a fairly representative stock of books, so that the people are able to examine promptly every book as soon as it comes from the press, and the authors are sure of having their books

promptly submitted to the examination of every possible purchaser.

The results in France and England are equally encouraging, and it is believed that as soon as the American system is fully understood, and as soon as enough books are included under the net-price system, so that a bookseller can once more make a living on the sale of books, many of the old-time booksellers will again put in a stock of books and help to re-establish the book trade in America.

Having tried to define the present relation of publishers and booksellers, I beg leave to say frankly that I know of no reason why publishers and booksellers should maintain any different relations with librarians than they maintain with any other retail customers.

For example, let us take the new "Book-Lovers' Library," so called. Their plan is to sell memberships, and to deliver to each member one book a week for five dollars a year, or three books a week for ten dollars a year. They take up the books at the end of each week and supply new ones.

If this plan could be carried out successfully, it would result in making one book do the service now performed by ten or fifteen books. In other words, this circulating library proposes to furnish its members with ten or fifteen books for the same amount of money they now pay for one book by simply passing the book around from one to another.

The effect of this scheme, if carried into all cities and towns as proposed, would be to reduce the number of books manufactured and sold to about *one-tenth* of its present magnitude. From a business point of view, publishers and dealers cannot be called upon to make special discounts to encourage such an enterprise.

The encouragement and support given to authors, by patrons of literature, would be reduced by this scheme to about one-tenth of the present amount. The effect of this withdrawal of support to American authors can easily be imagined.

But I do not believe that real book-lovers, intelligent and conservative readers, will be carried away by this passing craze. On the contrary, they have studiously avoided forming that careless, slipshod habit of reading that characterizes patrons of circulating li-

braries. The real book-lover selects his books, like his friends, with caution, and with discriminating and painstaking care.

From a bookseller's point of view, the "Book-Lovers' Library" is not founded on practical lines. However, as the plan also includes the selling of capital stocks to its patrons, it is probable that the money received from subscriptions, together with the annual membership fees, will be sufficient to keep the enterprise going for some time. But since this is a corporation organized for the purpose of making money, a failure to earn money and to pay dividends will discourage its patrons, cause them to feel that they have been deceived, and finally to withdraw from membership. When the members realize that they are paying five or ten dollars a year for privileges that can be had free at the local library, in most cases they will withdraw their support.

Thus, while in some respects I regard this enterprise as an evil factor, it contains, I think, inherent weaknesses that will finally compass its own end.

But what is said of the relation of publishers and dealers to the Book-Lovers' Library is true in a measure of all circulating and other public libraries. They do not increase, but they positively contract the number of sales that are made in the interest of authors, publishers and dealers.

Under the German system, of which I have spoken, public libraries were at first allowed ten per cent. discount; but recently this has been reduced to five per cent.

Under the English system, profiting by the experience of German publishers, no discount is allowed to public libraries, schools or institutions.

The American system, however, is modelled largely after the German, and it permits the dealers to allow a discount of ten per cent. to local libraries. In doing this local dealers are protected from competition by the publishers, in that the publishers have agreed to add to the net price the cost of transportation on all books sold at retail outside of the cities in which they are doing business. Thus public libraries can buy net books cheaper of the local booksellers than they can buy them of the publishers by just the cost of transportation.

## LIBRARY BUILDINGS.

By W. R. EASTMAN, *New York State Library, Albany, N. Y.*

A BUILDING is not the first requisite of a public library. A good collection of books with a capable librarian will be of great service in a hired room or in one corner of a store. First the librarian, then the books and after that the building.

But when the building is occupied the value of the library is doubled. The item of rent is dropped. The library is no longer dependent on the favor of some other institution and is not cramped by the effort to include two or three departments in a single room. It will not only give far better service to the community, but will command their respect, interest and support to a greater degree than before.

The following hints are intended as a reply to many library boards who are asking for building plans.

The vital point in successful building is to group all the parts of a modern library in their true relations. To understand a particular case it will be necessary to ask some preliminary questions.

1. *Books.*

- Number of volumes in library?
- Average yearly increase?
- Number of volumes in 20 years?
- Number of volumes to go in reference room?
- Number of volumes to go in children's room?
- Number of volumes to go in other departments?
- Number of volumes to go in main book room?
- If the library is large will there be an open shelf room separate from the main book room?
- Is a stack needed?
- Will public access to the shelves be allowed?

By answers to such questions a fair idea of the character and size of the book room may be obtained.

*Rules for calculation.* In a popular library,

outside the reference room, for each foot of wall space available 80 books can be placed on eight shelves. Floor cases having two sides will hold 160 books for each running foot, and in a close stack 25 books, approximately, can be shelved for each square foot of floor space. But the latter rule will be materially modified by ledges, varying width of passages, stairs, etc.

The above figures give full capacity. In practical work, to provide for convenient classification, expansion, oversized books and working facilities, the shelves of a library should be sufficient for twice the actual number of books and the lines of future enlargement should be fully determined.

2. *Departments.*

- Is the library for free circulation?
- Is the library for free reference?
- Are special rooms needed for
  - high school students?
  - children?
  - ladies?
  - magazine readers?
  - newspaper readers?
- How many square feet for each of the above rooms?
- Are class rooms needed as in a college library?
  - Club rooms?
  - Lecture rooms?
  - Museum?
  - Art gallery?
  - Other departments?

3. *Community.*

- In city or country?
- Population?
- By what class will library be chiefly used?
  - School children?
  - Students?
  - Mechanics?
  - Reading circles?
  - Ladies?

4. *Resources and conditions.*

- Money available?

Money annually for maintenance?  
 Size of building lot?  
 Location and surroundings?  
 How many stories?  
 Elevators?  
 Heat?  
 Light?  
 Ventilation?

5. *Administration.*

Is library to be in charge of one person?  
 How many assistants?  
 Is a work room needed?  
   unpacking room?  
   bindery?  
   librarian's office?  
   trustees' room?

By careful study of these points a clear conception of the problem is gained and the building committee is prepared to draw an outline sketch indicating in a general way their needs and views. They are not likely to secure what they want by copying or even by competition. The best architects have not the time nor the disposition to compete with each other. A better way is to choose an architect, one who has succeeded in library work if possible, who will faithfully study the special problems, consult freely with the library board, propose plans and change them freely till they are right. And if such plans are also submitted for revision to some librarian of experience or to the library commission of the state, whose business and pleasure it is to give disinterested advice, so much the better.

The following outlines taken from actual library buildings are offered by way of suggestion.

*Square plan.*

An inexpensive building for a small country neighborhood may have one square room with book shelves on the side and rear walls. A convenient entrance is from a square porch on one side of the front corner and a librarian's alcove is at the opposite corner leaving the entire front like a store window which may be filled with plants or picture bulletins. With a stone foundation the wooden frame may be finished with stained shingles.

*Oblong plan.*

A somewhat larger building may have a wider front with entrance at the center.

Book shelves under high windows may cover the side and rear walls and tables may stand in the open space.

It will be convenient to bring together the books most in demand for circulation on one side of the room and those needed most for study on the opposite side. One corner may contain juvenile books. In this way confusion between readers, borrowers and children will be avoided. Each class of patrons will go by a direct line to its own quarter. This is the beginning of the plan of departments which will be of great importance in the larger building.

The number of books for circulation will increase rapidly and it may soon be necessary to provide double faced floor cases. These will be placed with passages running from the center of the room towards the end and that end will become the book or delivery room and the opposite side will be the study or reference room.

*T-shape plan.*

The next step is to add space to the rear giving a third department to the still open room. If the book room is at the back the student readers may be at tables in the right hand space and the children in the space on the left. The librarian at a desk in the center is equally near to all departments and may exercise full supervision.

The presence of a considerable number of other busy persons has a sobering and quieting effect on all and the impression of such a library having all its departments in one is dignified and wholesome. It may be well to separate the departments by light open hand rails, screens, cords or low book cases. It is a mistake to divide a small building into three or four small rooms.

*Separate rooms.*

For a larger library these rails must be made into partitions, giving to each department a separate room. Partitions of glass set in wooden frames and possibly only eight feet high may answer an excellent purpose, adding to the impression of extent, admitting light to the interior of the building and allowing some supervision from the center. With partitions on each side, the entrance becomes a central hallway with a department at each

side and the book room at the end. This is the best position for the book room for two special reasons. Overlapping the departments in both wings it is equally accessible from either, and at the back of the house a plainer and cheaper wall can be built admitting of easy removal when the growth of the library requires enlargement.

Sometimes the angles between the book room and the main building may be filled to advantage by work room and office. These working rooms though not large and not conspicuous are of vital consequence and should be carefully planned.

We have now reached a type of building which, for lack of a better word, I may call the "butterfly plan," having two spread wings and a body extending to the back. Others call it the "trefoil." This general type is being substantially followed in most new libraries of moderate size. From one entrance hall direct access is given to three distinct departments, or perhaps to five, by placing two rooms in each wing.

#### *Modifications required by limited space.*

If we have an open park to build in we shall be tempted to expand the hallway to a great central court or rotunda. Perhaps the importance of the library may justify it, but we should be on our guard against separating departments by spaces so great as to make supervision difficult or passing from one to another inconvenient. We should aim to concentrate rather than scatter.

More frequently the lot will be too narrow. We must draw in the wings and make the narrower rooms longer from front to back. With a corner lot we can enter on the side street, leaving a grand reading room on the main front and turning at right angles as we enter the house pass between other rooms to the book room at the extreme end of the lot. Or again, we shall be obliged to dispense entirely with one wing of our plan, and have but two department rooms instead of three on the floor. Every location must be studied by itself.

#### *Other stories.*

Basement rooms are of great service for work rooms and storage. A basement direct-

ly under the main book room is specially valuable to receive the overflow of books not in great demand.

A second and even a third story will be useful for special collections, class and lecture rooms or a large audience hall. In a library of moderate size it will often be found convenient to build a book room about 16 feet high to cover two stories of bookcases and wholly independent of the level of the second floor of the main building.

#### *Extension.*

To meet the needs of a rapidly growing library it is important at the beginning to fix the lines of extension.

A building with a front of two rooms and a passage between may add a third room at the rear, and at a later stage, add a second building as large as the first and parallel to it, the two being connected by the room first added.

This is the architect's plan for the Omaha Public Library.

#### *Open court.*

When a library is so large that one book room is not enough, two such rooms may be built to the rear, one from each end of the building with open space between, and these two wings may be carried back equally and joined at the back by another building, thus completing the square around an open court.

This gives wide interior space for light and air, or grass and flowers. Such is the plan of the Boston Public and Princeton University libraries. It will be the same in Minneapolis when that library is complete. In the plan of the new library at Newark, N. J., the central court is roofed over with glass becoming a stairway court with surrounding galleries opening on all rooms. In Columbia University, New York, as in the British Museum, the center is a great reading room capped by a dome high above the surrounding roofs and lighted by great clerestory windows.

If the street front is very long there may be three extensions to the rear, one opposite the center and one from each end, leaving two open courts as in the plan for the New York Public or the Utica Public; and this general scheme may be repeated and carried still farther back leaving four open courts as in the

Library of Congress. This plan can be extended as far as space can be provided.

When the general plan of the large building is fixed, passages will be introduced, parallel to the front and sides, and departments will be located as may be judged most convenient, always having regard to the convenience of the patrons of each department in finding ready access to the books they need and providing for supervision and attendance at least cost of time, effort and money. Extravagance in library building is not so often found in lavish ornament as in that unfortunate arrangement of departments which requires three attendants to do the work of one or two.

#### *Light.*

Natural light should be secured if possible for every room. Windows should be frequent and extend well up toward the ceiling terminating in a straight line so as to afford large supply of light from the top. Windows like those in an ordinary house or office building, coming within two or three feet of the floor are more satisfactory both for inside and outside appearance than those which leave a high blank wall beneath them. From the street a blank wall has a prison-like effect; on the inside it cuts off communication with the rest of the world and the impression is unpleasant. The proper object of library windows six or eight feet above the floor is to allow unbroken wall space for book shelves beneath them. There is no serious objection to this at the back of the room or sometimes at the sides of the house where the windows are not conspicuous from the street, but every room of any size, if it is next to the outer wall, should have windows to look out of on at least one side.

A book room at the back of a building may secure excellent light from side windows eight feet above the floor with lower windows at the back.

The lighting of large interior rooms is often a difficult problem. Light will not penetrate to advantage more than 30 feet. Skylights, domes and clerestory windows are used. In the case of the dome or clerestory the room to be lighted must be higher than those immediately surrounding it. The clerestory plan

with upright windows is most satisfactory when available, being cheaper and giving better security against the weather than the skylight. In a large building with interior courts, the lower story of the court is sometimes covered with a skylight and used as a room.

This appears in the plans for the New York Public and the Utica Public libraries. Skylights must be constructed with special care to protect rooms against the weather.

The problem of light is peculiarly difficult in the crowded blocks of cities. A library front may sometimes touch the walls of adjoining buildings so that light can enter only from the front and rear. If extending more than 40 feet back from the street, it will be necessary to narrow the rest of the building so as to leave open spaces on each side, or to introduce a little light by the device of light wells. Occasionally a large city library is found on the upper floors of an office building, where light and air are better than below, and the cost of accommodation is less. The use of elevators makes this feasible.

#### *Shelving.*

The general scheme of book shelves should be fixed before the plan of the building is drawn. Otherwise the space for books can not be determined and serious mistakes may be made. Between the two extremes of open wall shelves and the close stack a compromise is necessary. The large library will put the bulk of its books in a stack and bring a considerable selection of the best books into an open room. The small library will begin with books along the walls and provide cases for additions from time to time as needed. Its patrons will enjoy at first the generous spaces of the open room without an array of empty cases to offend the eye and cumber the floor. When walls are covered with books a floor case will be introduced and others when needed will be placed according to plan, till at last the floor is as full as it was meant to be, and the basement beneath having served for a time to hold the overflow, a second story of cases is put on the top of the first. This process should be planned in advance for a term of 20 years.

For public access passages between cases should be five feet wide. Cases have some-

times been set on radial lines so as to bring all parts under supervision from the center. This arrangement, specially if bounded by a semi-circular wall, is expensive, wasteful of space and of doubtful value, except in peculiar conditions. It is not adapted to further extension of the building.

#### *Size of shelf.*

For ordinary books in a popular library the shelf should not be more than eight inches wide with an upright space of ten inches. Eight shelves of this height with a base of four inches and crown finish of five inches will fill eight feet from the floor and the upper shelf may be reached at a height of 81 inches or six feet nine inches. Ordinary shelves should not exceed three feet in length. A length of two and a half feet is preferred by many. A shelf more than three feet long is apt to bend under the weight of books. For books of larger size a limited number of shelves with 12 inches upright space and a few still larger should be provided. The proportion of oversize books will vary greatly according to the kind of library, a college or scientific collection having many more than the circulating library. Any reference room will contain a large number of such books and its shelves should correspond.

#### *Movable shelves.*

Much attention has been given to devices for adjustment of shelves. Some of these are quite ingenious and a few are satisfactory. No device should be introduced that will seriously break the smooth surface at the side. Notches, cross bars, iron horns or hooks or ornamental brackets expose the last book to damage. If pins are used they should be so held to their places that they cannot fall out. Heads of pins or bars should be sunk in the wood and the place for books left, as near as possible, absolutely smooth on all sides. It is at least a question whether the importance of making shelves adjustable and absolutely adjustable has not been greatly overrated. As a fact the shelves of the circulating library are very seldom adjusted. They may have all the usual appliances gained at large expense but there is no occasion to adjust them outside the reference room. They remain as they

were put up. It is probably well to have the second and third shelf movable so that one can be dropped to the bottom and two spaces left where there were three at first. But all other shelves might as well be fixed at intervals of 10 inches without the least real inconvenience and the cases be stronger for it and far cheaper. A perfectly adjustable shelf is interesting as a study in mechanics, but is practically disappointing. Its very perfection is a snare because it is so impossible to set it true without a spirit level and a machinist. All shelves in a reference room should be adjustable. Bound magazines might have special cases.

#### *Wood or iron shelves.*

Iron shelf construction has the advantage of lightness and strength, filling the least space and admitting light and air. Where three or more stories of cases are stacked one upon another iron is a necessity. It also offers the best facilities for adjustment of shelves and is most durable.

On the other hand it is more difficult to get, can be had only of the manufacturers in fixed patterns, and costs at least twice as much as any wood, even oak, unless carved for ornament, and four or five times as much as some very good wooden shelves. This great cost raises the question whether the advantages named are really important. Few village libraries need more than two stories of shelves in a stack. If iron is more durable we can buy two sets of wooden shelves for the cost of one of iron—and when we buy the second set will know better what we want. The importance of shelf adjustment has been exaggerated.

A more important consideration, to my mind, is that iron is not so well adapted to the changing conditions of a growing library. It is made at a factory and to be ordered complete. It is bolted to the floor and wall at fixed intervals. But we have seen that a gradual accumulation of bookcases is better than to put all shelving in position at first.

Wooden cases are movable. You begin with those you need and add others as you have more books, you can change and alter them at any time with only the aid of the village carpenter, and enjoy the wide open spaces till the time for filling them comes.

Iron with all its ornaments belongs in the shop. It is not the furniture you prefer in your home. The item of cost will usually decide the question. For libraries of less than 30,000 volumes, where close storage is not imperative, wood has the advantage.

*Miscellaneous notes.*

A floor of hard wood is good enough for most libraries. Wood covered with corticene or linoleum tends to insure the needed quiet. Floors of tile, marble or concrete are very noisy and should have strips of carpet laid in the passages.

On the walls of reading rooms it is neither necessary nor desirable to have an ornamental wainscot, nor indeed any wainscot at all, not even a base board. Book cases will cover the lower walls and books are the best ornament.

Small tables for four are preferred in a reading room to long common tables. They give the reader an agreeable feeling of privacy.

Do not make tables too high. 30 inches are enough.

Light bent wood chairs are easy to handle

Steam or hot water give the best heat and incandescent electric lamps give the best light.

Be sure that you have sufficient ventilation.

Windows should be made to slide up and down, not to swing on hinges or pivots.

Without dwelling further on details let us

be sure 1, That we have room within the walls for all the books we now have or are likely to have in 20 years; provide the first outfit of shelves for twice the number of books expected at the end of one year and add book-cases as we need them, leaving always a liberal margin of empty space on every shelf. We must plan for the location of additional cases for 20 years with due consideration of the question of public access.

2, That all needed departments are provided in harmonious relation with each other and so located as to serve the public to the best advantage and at least cost of time, strength and money.

3, That the best use of the location is made and the building suited to the constituency and local conditions.

4, That the estimated cost is well within the limit named, for new objects of expense are certain to appear during the process of building and debt must not be thought of.

5, That the building is convenient for work and supervision, a point at which many an elegant and costly building has conspicuously failed.

Make it also neat and beautiful, for it is to be the abiding place of all that is best in human thought and experience and is to be a home in which all inquiring souls are to be welcomed. Since the people are to be our guests let us make the place of their reception worthy of its purpose.

## THE RELATION OF THE ARCHITECT TO THE LIBRARIAN.

BY JOHN LAWRENCE MAURAN, *Architect, St. Louis, Mo.*

THE public library, as we understand the name to-day, has had but a brief existence compared with the mere housing of collections of books which has gone on through countless ages.

With the change from the old ideas of safeguarding the precious books themselves to the advanced theory of placing their priceless contents within the easy reach of all, has come an equally important change in the character of the custodian of the books. The duties of the modern librarian are such that he must be not only something of a scholar, in the best

sense of the word, but he must be capable also of properly directing others in the pursuit of learning, and, withal, combine executive ability with a highly specialized professional facility. The result of carefully conceived courses of training is apparent in the wonderful results achieved through the devoted and untiring efforts of the members of this Association towards a constant betterment of their charges, and a closer bonding, through affection, between the masses of the people and that portion of the books which lies between the covers.

My purpose in recalling to your memory the wonderful advance made by training in your profession in a comparatively short time, is to give point to an analogy I wish to draw, showing a corresponding advance in the profession of architecture. Not so very many years ago there were ample grounds for the recalling by Mr. David P. Todd of Lord Bacon's warning against the sacrifice of utility to mere artistic composition in the following words: "Houses are built to Live in, and not to Looke on: Therefore let Use bee preferred before Uniformitie; Except where both may be had Leave the Goodly Fabrickes of Houses, for Beautie only, to the Enchanted P'allaces of the Poets; Who build them with small Cost": but to-day, thanks to the munificence of the French government and the untiring energy of some of those who have profited by it, in fostering the growth of our own architectural schools, there are few sections of this broad land which have not one or more worthy followers of Palladio and Michael Angelo. Hunt, Richardson and Post were among the first to receive the training of the Ecole des Beaux Arts, and they, moreover, had the rare judgment to take the training only, adapting their designs to the climatic and other local conditions rather than attempting the importation of French forms as well as method of design. Their example and the impetus they were able to impart to the technical schools have been potent factors in the development of the talent of American architects. While it is true, and more the pity, that some students return from Paris with the idea that because Paris is a beautiful city architecturally, the simple injection of some of their own masterpieces into our diverse city street fronts, is going to reincarnate our municipalities, the major portion are sufficiently discriminating to realize that Paris owes much of its charm to a symmetry under governmental control which we, free born Americans, can never hope to attain, and leave behind them the mere forms and symbols of their alma mater to use that which is best and most profitable in their training; that is, a breadth of conception of the problem and a logical method of sequential study of it which ensures a creditable if not an ideal solution. The modern architect, to be

successful, must be conversant with a vast amount of information which is apparently outside his chosen profession — such as the minutiae of hospitals, churches, libraries, railroad stations and the like. As a case in point I recall the address of a certain railroad president at the dedication of a large terminal depot, in which he said: "while we have had the co-operation of engineers and specialists in every branch of the work, I must give great credit to our architect who is responsible for the conception of the entire system of the handling of passengers, although he was employed solely to enclose the space designated by our engineers." It is not my purpose to laud the profession of architecture, but rather to show its preparedness to *co-operate* with you in achieving the best in library construction and design.

May I add to Mr. Todd's advice to library boards about to build, "first appoint your librarian," the suggestion that second, in consultation with him, *appoint* your architect. It is not disbelief in competition which has led the American Institute of Architects to advise against competitions, for the former is a constant condition, while the latter they believe to result in more evil than good. It is a popular notion among laymen that a competition will bring out *ideas* and mayhap develop some hidden genius, but in answer to the first I can say, I know of but one building erected from successful competitive plans without modification, and for the second, the major portion of American originality in building designs is unworthy the name of architecture. Aside from the needless expense and loss of time entailed on library board, as well as architect, by the holding of competitions a greater evil lies in the well proven fact, that in their desire to win approval for their design, most architects endeavor to find out the librarian's predilections and follow them in their plans rather than to submit a scholarly solution of the problem studied from an unprejudiced standpoint. It is not often the good fortune of competitors to have their submitted work judged with such unbiased intelligence as that which permitted the best conceived plan to win in the competition for the new library in New York City. Few men would have dared in compe-

tion to remove that imposing architectural feature, the reading room, from their main façade and put it frankly where it belongs, in direct touch with the stacks which serve it, as Carrere & Hastings did.

Not long ago a member of a certain library board of trustees wrote to us that we were being considered, among others, as architects for their new building, and he suggested that we send to them as many water colors as we could collect and *as large as possible*, to impress the board; for, as he added, "some of us appreciate your plans, but most laymen are caught by the colored pictures, the larger the better."

As a rule librarians have very decided ideas as to the plan desired in so far as it relates to the correlation of rooms and departments, and it, therefore, seems manifestly proper that having selected a librarian on account of merit, the next step should be the selection of an architect on the same basis, to the end that in consultation the theory of the one may either be studied into shape or proved inferior to the theory of the other. Under the discussion of two broad minds, the wheat is easily separated from the chaff with the much to be desired result of the assembling of a well ordered plan to present to the board, which has had such study that few criticisms cannot be answered from the store of experience gathered in the making. This ideal crystallization of ideas, this development of the problem working hand in hand precludes the need of such advice as is found in the following quotation from a paper on library buildings:

"Taking into account the practical uses of the modern library it is readily seen that it needs a building planned from inside, not from without, dictated by convenience and not by taste no matter how good. The order should be to require the architect to put a presentable exterior on an interior having only use in view and not as is so often done to require the librarian to make the best he can of an interior imposed by the exigencies of the architect's taste or the demand of the building committee for a monumental structure."

Such an anomalous relationship between interior and exterior is absolutely opposed to

the fundamental training of the architect of to-day. Often have I heard my professor of design, a Frenchman of rare judgment, fly out at a student caught working on his exterior before the interior was complete: "Work on your plan, finish your plan, and when that is perfect, the rest will *come*."

Architects of experience, who have been students of library development in its every branch, who have followed the changes in the relations of the library to the people, have reached the same conclusions along broad lines, as have the librarians, with respect to lighting, access, oversight and administration, as well as the general correlation of universally important departments, and it is therefore my purpose to state our relationship rather than attempt the raising of issues on details of library arrangement, and to show if possible, that the skilled architect's method of procedure tends to settle mooted points by weighing values and considering relations of parts in a logical and broad minded study of the particular set of conditions pertaining to his problem.

Either owing to the size, shape or contour of the site, its particular exposure, local climatic conditions, the particular character of the library itself or the people whom it serves, the problem presented to an architect by a library board is *always* essentially a *new* one. Certain fundamental rules may obtain through their universal applicability, but every step in the working out of a successful plan must be influenced by the particular conditions referred to, and here the co-operation of the librarian is of inestimable value to the architect, no matter how wide his experience may be.

Desired correlation, like most results, can be achieved in divers ways, and in most cases nothing of utility need be sacrificed to secure a dignified plan, which is as much to be desired as a dignified exterior. Realizing the importance of accomplishing successful results, a scholarly architect will strive to mould his plan with an eye to symmetry, without losing sight for an instant of the conditions of use, and never sacrificing practical relationship to gain an *absolutely* symmetrical arrangement of plan.

The French architect will, if necessary, waste space or inject needless rooms into his

plan to secure perfect balance, while his American student will gain all the value of the *effect* without diminishing the practical value of his building one iota.

Along with symmetry, the logical development of the plan in study keeps in mind something of the rough form of the exterior design, with particular reference to the grouping of its masses to secure the maximum of air and the best light for the various departments. With the best designers, it is an unwritten law, that the next step after completing a satisfactory plan, is to sketch a section through the building, not only to ensure a proper proportion in the enclosed rooms, but most important of all to secure a system of fenestration, allowing wall space where needed and introducing the light as near the top of the rooms as the finish will permit. Having settled then all the details of plans and section, wherein are comprised all of the matter of greatest moment to the practical librarian, it only remains for the architect to prepare a suitable exterior and I certainly agree with my old preceptor that "it will come." The American people believe that education is the corner stone of manhood and good citizenship, and next to our public schools, if not before them, the most potent educational factor is our public library. The librarians are respon-

sible in a great measure for the good work which is being accomplished in the dissemination of knowledge and culture among the people, but let me ask, are we not as responsible for our share, as co-workers with them, to perpetuate in lasting masonry the best which in us lies for the same great cause of the education of the people?

What renaissance has failed to find literature and architecture quickened alike? The awakening of a love of the beautiful brings a thirst for knowledge concerning the beautiful; as the records will show, the interest excited by that marvellous assemblage of architectural masterpieces at the Chicago Fair, created a demand on the libraries almost beyond belief for books on architecture and the allied arts.

Every conscientious architect must feel his responsibility to his clients as well as to the people and strive he must, to combine the ideal in convenience with simple beauty in design; my one plea is that such a combination is not only *possible*, but in intelligent hands, should be universal, and if my beliefs, hopes and expectations find sympathy with you, I shall feel repaid in the security of a harmonious co-operation between architect and librarian in the great work which stretches ahead of us into the future.

### THE DEPARTMENTAL LIBRARY.

By JAMES THAYER GEROULD, *University of Missouri, Columbia.*

THE recent discussion of the departmental library system at the University of Chicago and the consequent restatement of the position of that university in reference to such libraries, together with the consideration of the problem in the annual reports of Dr. Canfield and Mr. Lane, have called up anew the question of the expediency of the system. Is the departmental library to be a permanent feature of the university library? Is the highest effectiveness of a library to be secured by a policy of decentralization?

The public library has answered the question, finally, it seems, in the affirmative. Do the arguments which have induced the public librarian to establish branches and delivery

stations apply in the case of the university library? Is the university library of the future to be housed in a single building, or is it to be scattered about in class rooms and laboratories? To my mind, there is no more important question of administration before those of us who are trying to render the university library an efficient instrument of instruction than this.

With many librarians there is an element of necessity entering into the question. Mr. Lane is facing a condition where the library has altogether outgrown its building, and some place must be found where books can be stored and used. The situation is much the same in many other places. Shall the facili-

ties of the library be enlarged by building or shall the books be transferred to the various departmental libraries? Mr. Lane, speaking for his own library, says of the latter alternative: "It would commit the library to an entirely different policy from what it has pursued hitherto, and such a change would be little short of a revolution for this library."

At the University of Missouri we are expecting in the near future to begin the construction of a library building, but, before adopting any definite plans, we are trying to work out the problems that have just been stated, and to make ourselves reasonably sure that we are right before we go ahead.

There are arguments enough on all sides of this question, of which Dr. Canfield says that it has not two sides only, but a dozen. We must premise that no two departments use their books in exactly the same way, and that, consequently, methods of administration must differ. It is generally for the advantage of all, for example, in a university where there is a law school, that the books on private law should be separated from the main collection and treated as a branch library. Similarly medicine, theology and possibly a few other subjects may be withdrawn and administered separately.

In some of our universities one or more of the departments are several miles away from the main body of the institution. It is obviously necessary that the books most used in those departments should be near enough so that the students can have access to them without too much inconvenience and loss of time. In the ordinary institution, however, most of the buildings are grouped in a comparatively small area, and it is seldom more than five minutes' walk from the most remote building to the library. In a condition such as this, and with the exceptions noted above, I am inclined to the opinion that the university is best served by a central library containing the main collection, and small, rigidly selected laboratory libraries comprising books which from their very nature are most useful in the laboratory as manuals of work.

The arguments generally advanced in favor of the system are these:

1. The instructor needs to be able to refer,

at a moment's notice, to any book relating to his subject.

2. The system enables the instructor to keep a more careful watch over the reading of his students.

3. The best interests of the library demand that each division of the library shall be directly under the eye of the men most interested in it, that is to say, the instructors in the various departments; that they should direct its growth and watch over its interests.

That the first and second of these arguments have great weight cannot be denied, but with a properly constructed library building and most careful administration the requirements of both instructor and student can be met quite as well by a central system.

It is, of course, quite impossible for each instructor to have in his office all the books necessary for his work. The duplication necessary for this purpose would be impracticable even for the most wealthy university. He must, therefore, go from his office or class room to the department library and search for the book himself. With the confusion which generally reigns in a library of this sort, and with the lack of effective registration of loans, this is quite often a matter of some difficulty.

At Columbia University the office of each professor is in telephonic communication with the central library. When a book is wanted the library is notified by telephone, the book is found and sent out at once. Within ten minutes from the time that the request reaches the library the book is generally in the instructor's hands. He may lose two or three minutes' time, but the amount lost is more than compensated by the readiness with which others can use the books of the department, and by other advantages to be considered later. At Columbia, too, the system of stack study rooms provides in a very satisfactory way for the second objection. There, as many of you have seen, the stacks are distributed through a series of small rooms, the light side of which is supplied with tables and used for study rooms and for seminar purposes. If the instructor can use the departmental library for his work room, he can certainly use this room to as good advantage, for

here he has the entire collection and not a selected few of his books. I believe fully that an instructor who is sufficiently interested in the reading of his students to watch over it carefully in his departmental library, will find that he is able to keep just as close a relation to it, if his students are working in a central library. He may be obliged to make slight changes in his methods, but the result ought to be the same.

The third argument in favor of the departmental library system is of a different nature. Is the librarian or the professor best qualified to direct the growth and watch over the interests of the different departments of the library? So far as I know, this argument is given more consideration at Chicago than anywhere else. It may be true, in certain cases, that the professor has the greater qualification for this work, but when this is the case it argues that the professor is an exceptional one or that the university has been unfortunate in the selection of its librarian.

It is quite needless to say that the librarian should be in constant conference with the teaching force regarding purchases, but that he should delegate all of his powers of purchase in any given field, admits of the gravest doubt. Laude, in his recent work on the university library system of Germany, attributes a great deal of the success of those libraries to the fact that they are independent and autonomous institutions, enjoying a much greater measure of freedom than is accorded to any similar American institution. Too many professors are apt to buy books in their special field and slight other lines of research in their own subject. For example, a zoologist, who is doing research work along the lines of embryology, is very apt to overload the collection at that point and neglect other equally important lines.

Again, very few instructors, even granting them the qualifications necessary for the work, have the time or patience for it. If the amount appropriated to the department is at all large, a considerable portion of the sum is quite frequently unexpended at the end of the year. Some interesting tables, prepared by Mr. Winsor for his report for the year 1894-95, show that in seven selected depart-

ments the amount of books ordered, including continuations, was only about 50 per cent. of the appropriation, plus one quarter, the allowance for orders not filled. While this proportion would probably not hold good in all departments or in all places, it exhibits an almost uniform tendency and a tendency which must be corrected if a well-rounded out library is to be secured.

The system of departmental control is very sure to create a feeling of departmental ownership, a feeling that the books, bought out of the moneys appropriated to a particular library, should remain permanently in that library, and that any one from outside who wishes to use the books is more or less of an intruder. Pin any one of these men down, and they will admit that the books are for the use of all, but the feeling exists, notwithstanding, and is the cause of constant friction.

The departmental library renders the books difficult of access. If the library is large enough to warrant the setting apart of a separate room for its use, this room can seldom be open for as large a portion of the day as the central library, and when it is open the books cannot be obtained as readily by the great body of the students as if they were in a central building. Most students are working in several lines at once. They are compelled, by this system, to go from one room to another, and to accommodate themselves to differing hours of opening and to varying rules for the use of the books. Then, too, it frequently happens in the case of small libraries that the books are kept in the office of the head of the department, and can only be consulted when he is in his office and at liberty. The difficulty is here greatly increased. I know of cases where even the instructors in the same department have found difficulty in getting at the books, and the library was, in effect, a private library for the head professor, supported out of university funds. If instructors cannot use the books, how can the student be expected to do so?

There is a sentiment, false, perhaps, but nevertheless existing in the minds of many students, that any attempt to use the books under these circumstances is an endeavor to curry favor with the professor. This feeling

does not exist in connection with the use of the books at a central library.

If a book in a departmental library is needed by a student in another department, he must either go to the department and put the custodian to the inconvenience of looking it up for him, or he must wait at the central library while a messenger goes for the book. His need of the book must be very pressing before he will do either.

If the different fields of knowledge were sharply defined, the departmental system might be a practicable one, but such is not the case. The psychologist needs books bearing on philosophy, sociology, zoology and physics, the sociologist gathers his data from almost the whole field of human knowledge, the economist must use books on history and the historian books on economics. The system hampers him exceedingly in the selection and use of his material, or it compels the university to purchase a large body of duplicate material, and restricts, by so much, the growth of the real resources of the library.

The system, it seems to me, induces narrowness of vision and a sort of specialization which is anything but scientific. Trending in the same direction is the separation of the books, in any given field, into two categories. The undergraduate may need some such selection, but any student who has gone beyond the elements of his subject should have at his command the entire resources of the library. The needs of the elementary student can be met by direct reference to certain books, or by setting aside the volumes required as special reference books and allowing free access to them.

A large amount of our most valuable material is found in the publications of scientific and literary societies and in periodicals. In many cases these must be kept at the central library. They will be much more frequently read if the readers are using the central library and availing themselves of the information given in the catalog.

From the administrative point of view, there is nothing impossible in the organization of the departmental system, provided that finances of the library admit of the increased expenditure. As Mr. Bishop has pointed out in a recent number of the *Library Journal*,

the element of cost seems to have been utterly left out of consideration in the recent discussions at the University of Chicago. It is possible that, with the immense resources of that institution, they may be able to ignore that factor, but most of us are compelled to reduce administrative expenditures to the lowest point consistent with good work.

Aside from the cost of the duplication of books already noted, necessitated by the division of the books among the different departments, there are the items of space and labor to be considered. It needs no argument to show that there is a great economy of space gained by the consolidation of all libraries, with the exceptions previously referred to, into one central building. An entire room is frequently given up to a departmental library of three or four hundred volumes, when a few extra shelves and possibly a slight increase in the seating capacity of the reading room would accommodate it in the central library. The cost of maintenance, of heating and of lighting is also undoubtedly greater under the departmental arrangement.

The greatest increase in expense is, however, in the item of service. In order properly to control a branch of this sort, an employe of the library must be in constant attendance. The duties and responsibilities of such a position are so small that only the lowest paid grade of service can be employed with economy. The amount necessary to pay the salaries of such persons could, with much greater advantage to the whole institution, be used for the employment of a few specialists, highly trained in different lines, who would act as reference librarians in their respective fields. Our American libraries are, as a class, compared with those of foreign universities, singularly deficient in this quality of assistance. Sooner or later we must supply this lack, and every move which tends in another direction must be examined with care.

The university library exists for the whole university — all of it for the whole university. In an ideal condition, every book in it should be available, at a moment's notice, if it is not actually in use. This should be our aim, and it should be from this viewpoint that we should judge the efficiency of our administration and the value of any proposed change.

SUGGESTIONS FOR AN ANNUAL LIST OF AMERICAN THESES FOR THE  
DEGREE OF DOCTOR OF PHILOSOPHY.

BY WILLIAM WARNER BISHOP, *Polytechnic Institute, Brooklyn, N. Y.*

GRADUATE instruction and the degree of doctor of philosophy as its reward are not so novel and recent in America as to call for either explanation or definition. Neither are they so old as to require a history. Most of us can well remember when it became a common thing for American universities to have numerous candidates for the doctorate. At the present time there are several hundred students in our universities who are candidates for the doctor's degree and the number is increasing rapidly.

A degree implies a dissertation, or, as it is more commonly and less correctly termed, a thesis. I need not here express any opinion as to the merits or defects of these documents as a class. What I wish to speak of is their value to university and college libraries, and the difficulty of discovering what dissertations are produced annually, and, for reference libraries, of procuring them when discovered. I presume the librarian who knows the specialist's insatiate greed for dissertations, *programmen*, and small pamphlets generally will need no words of mine to bring home to him the need of procuring as many of these documents as he can. Whatever we may say in derogation of doctors' dissertations—and they have their faults—they at least represent long-continued and careful investigation under supposedly competent direction, and the specialist must have them.

It is a comparatively easy task to get him German and other foreign dissertations. The new ones are listed annually and the old ones load the shelves of the second-hand stores of Europe. But to find what is being produced here in this country is by no means a simple undertaking. And it behooves us, unless we tacitly admit that our American dissertations are not worth having, to take some steps toward bettering the present situation.

In order to ascertain the exact condition of things I have selected fifteen representative institutions which confer the degree of Doctor of Philosophy and have studied their requirements and conducted some correspondence with their librarians. These institutions have been selected purely as representing various geographical and educational conditions, and omissions from the list are not to be taken *in malam partem*. They are: (1) Brown, (2) Bryn Mawr, (3) California, (4) Chicago, (5) Columbia, (6) Cornell, (7) Harvard, (8) Johns Hopkins, (9) Michigan, (10) Nebraska, (11) Pennsylvania, (12) Princeton, (13) Stanford, (14) Wisconsin, and (15) Yale.

The majority of these universities require that before the degree is conferred the thesis shall be printed and a fixed number of copies, ranging from 50 to 250, shall be deposited with some officer of the university or in the library. The statistics are as follows:

California requires 150 copies.

Chicago requires 100 copies. "Accepted theses become the property of the university."

Columbia requires 150 copies.

Cornell requires 50 copies.

Michigan requires 150 copies.

Nebraska requires 150 copies.

Pennsylvania requires 250 copies.

Stanford requires 100 copies.

Wisconsin requires 100 copies.

Two institutions, Bryn Mawr and Princeton, require the printing of the thesis, but make no requirement, so far as can be ascertained from the catalogs, that there shall be any deposit of copies.

Johns Hopkins and Pennsylvania allow the thesis to be either written or printed; if printed, Johns Hopkins requires the deposit of 150 copies, Pennsylvania of 250, except under certain conditions which will appear later.

Brown makes no requirement for deposit

or for printing. Harvard provides that one copy either printed or written must be deposited in the library. Yale requires that the "thesis must be deposited at the library for public inspection not later than May 1st" of the year in which the candidate expects to receive the degree.

Of these universities two only, Brown and California, print the titles of theses in the university catalog.

The foregoing statements are taken from the annual catalogs for 1899-1900 of the universities named, except in the case of Pennsylvania, where the statement made in the catalog is supplemented from a letter received from the Dean.

Although I presumed that most of the copies deposited in the libraries of the universities were used for exchange, I wrote to the librarians of those universities which require the deposit of a number of printed copies, making inquiry regarding their systems of exchange and provisions for the sale of copies not exchanged. I received replies from almost all. [These letters were read, the common condition being shown to be that most of the copies received by the libraries were exchanged with foreign institutions and other American universities. Varying conditions ranging from a refusal to sell any copies to a free distribution of copies not exchanged, was found to exist with regard to sale of theses by the libraries.]

It will be seen from these replies that, if a library does not happen to be on the exchange list of the university in which a thesis is written, and if the thesis is not printed in some journal or in the proceedings of some learned society, such a library stands very little chance either of learning of the publication of a thesis or of procuring it from the author or from the university. That this is not much of an affliction in most cases I cheerfully admit. Still the small colleges which deliberately refuse to attempt graduate work—and, be it said to their honor,

there are not a few of these—and the large reference libraries which do not publish, have as much need of certain theses as the large universities, and they have no means of getting them easily.

It appears to me, and I trust to you, that, if our American dissertations are worth anything, if they are valuable enough to preserve, if they are real contributions to knowledge—and I believe that they are all of these—then it is worth while to secure the publication of some list which will tell librarians and specialists where to go to get copies, either from the author or from the university. It should not be difficult to secure co-operation in this matter. The number of theses printed and deposited in any one university in any one year is not large, and it certainly would not be a burden of alarming proportions to send titles to some central bureau. The difficulty will be to secure an editor and the funds for publishing the list. It would seem to me that some one of the large institutions whose libraries publish bulletins and other matter, or possibly the Library of Congress might assume the expense as a matter of patriotic service to learning in the United States. And it might not be out of place for this section, should it care to follow up the matter, to enter into communication with them on the subject. It might be also, that some enterprising publisher would be glad to undertake the task of both editing and publishing, if it could be shown him that he would thus do a favor to American libraries.

One final word should be said before closing. The inevitable delays incident to the publication of such a list would be more than offset by the delays in publishing theses. Many a man is called "Doctor" who has never received his diploma for that degree because his thesis remains unpublished. The laxity in this matter in some quarters is very great. It may be that such a publication of titles as I have proposed might perceptibly hasten the publication of theses.

## OPPORTUNITIES.

BY GRATIA COUNTRYMAN, *Minneapolis (Minn.) Public Library.*

IF I were to sum up in these short moments the opportunities which lie before library workers, it would have to be an epitome of all that has been said at this conference and all previous conferences, and of all that has been written on library extension and influence. Even then the opportunity which lies before you might not even be mentioned.

I will not even try to enumerate the almost endless ways in which library usefulness may express itself, for these various ways are, after all, only different directions in which to use our one great opportunity of service to mankind.

May we not think of a library as a dynamic force in the community, to be used for lifting the common level. There are so many forces at work in the nation pulling down and scattering; but the hundreds of large and small libraries dotted over the country stand for social regeneration, stand for the building up and perfecting of human society, stand for the joy and happiness of individual lives. And no matter how limited seems our own small field, it is a piece of the great domain of helpful activity.

It is not always easy, after a hard and tiresome day of small and perplexing duties, to see beyond our wall of weariness. Yet nothing is more restful than to feel that we are contributing our part to a great work, and that we, in our place, are a part of one of the great building-up movements of the century.

I will not soon forget what Mr. Lane said in his president's address at the Atlanta conference. I would like to quote largely, but this sentence serves. He said: "What a privilege that we are always free to place ourselves at the service of another. Most professions are so engrossed by their own work that they have no time to serve the needs of others, but it is the *business* of the librarian to serve. He is paid for knowing how."

It is peculiarly true that the librarian's business is to put himself and the library under his custody at the complete disposal of

the people. It is his *business* to watch their interests and to think in advance for their needs.

The librarian must have, in Mrs. Browning's words,

" . . . both head and heart;

Both active, both complete and both in earnest."

Our opportunities, then, are not something which lie to one side, to be especially thought of, but are the very heart of our business—of our profession.

I have been wondering if there is not an element of discouragement to the librarian of the small library, in such a conference as this, or even to us who fill subordinate places in large libraries. We get so many new ideas, we get so many plans which other libraries are putting into operation. We know we cannot put them into practice, we know well enough that we shall go home and do just what we have been doing, with small quarters, with cramped revenues, with possibly unsympathetic trustees who take unkindly to our new-born enthusiasm. There seems to be the possibility of so much, but the opportunity for doing so little, and then our limitations seem more apparent than our opportunities. The assistant in the larger library says, "I wish I could be the librarian of a small library, they have so much better an opportunity for coming into close contact with the people," and the librarian of the little library who does her own accessioning, cataloging, record keeping, charging, reference work, etc., with one brain and one pair of hands, says, "Oh, if we were only a little larger library, with more money, and with more help, I might do so many things that other libraries do."

Carlyle says, "Not what I have, but what I do, is my kingdom," and I take that to mean in library work that my opportunity is not what I could do if I held some other position in some other library, but what I can do under present conditions with present means. Success does not lie with those who contin-

ually wish for something they haven't got, but with those who do the best possible thing with the things they have. "It is not so much the ship as the skilful sailing that assures a prosperous voyage." It is not so much a great collection of books and a fine technical organization as the personal character of the man or woman who stands as a bridge between the books and the people. Your opportunity and mine does not lie in our circumstances, but in ourselves, and in our ability to see and to grasp the coveted opportunity. We are reminded of the pious darkey who prayed every night just before Christmas, "Dear Lord, send dis darkey a turkey." Christmas came dangerously near, and there was no prospect of a turkey. So the night before Christmas he grew desperate, and prayed, "Dear Lord, send dis darkey to a turkey." That night the turkey came. Even so it is with our opportunities.

There are three classes of people toward whom the library has a special mission: the children, the foreigner, and the working classes.

1. As to the children, we have been hearing considerably about them in this conference. Mr. Hutchins in the Wisconsin meeting said that a good book did more good in a country boy's home than in the city boy's. When the country boy takes a book home he and all his family devour it, but the town boy reads his book and exchanges it, and no one in the house perhaps even knows that he has read it. Well, that is a subject for thought. If his family or teachers do not watch his reading, it becomes a serious thing for the librarian who chooses and buys his books for him. Perhaps the library is not large enough to have a children's department or to send books into the schools, or to do any specialized children's work, but it can make judicious selection of books, and being small can know individual cases among the children. It is not so hard to find out the children one by one who need some care and interest, to learn their names and to find out something about their families. They say that letters cut lightly in the bark of a sapling show even more plainly in the grown tree. A boy whom no one has reached comes into your library. By a little watchful care he reads some wonderful life, learns some of the marvellous forces

in God's creation, opens his eyes to the glowing sunsets or to the springing blades of grass; suddenly knows the dignity of human nature and his own growing self. His aspirations are born, his ambition is awakened, his life is changed. Library records have not one, but many such cases.

The home library is a method of reaching children which is not used enough by the smaller libraries. Branches and stations may not be practicable, but a group of 15 to 25 books taken into sections of a town by some friendly woman, on the plan of the home libraries, could be carried out in almost any town. The librarian might not have time, but she could find people who would do it, if she set the work to going.

2. As to the foreigners, Europe has used us for a dumping ground for considerable moral and political refuse. We have the problem of making good citizens out of much wretched material, and next to the children there is no greater opportunity for the library. Even the smallest library ought to study ways and means of getting at the foreign element. It would almost pay to make a canvass of the town, to see that these people are reached and that they know about the library. If books in their own language are necessary to draw them, then it is the best investment you can make.

3. But in reality the library does its great work among the mass of common working people. It is the quiet side which makes no showing, but it has always been the telling side. From the common people spring most of our readers. They do our work, they fight our battles, they need our inspiration. For them you make your libraries attractive, for them you make careful selections of books—the student does not need your pains—for their sake you identify yourself with every local interest. You fix your hours for opening and closing to accommodate these working people. You make your rules and regulations just as elastic as possible, that they may not be debarred from any privilege. They do not ask favors, but after all this great mass of common people whose lives are more or less barren and empty are the ones to which the library caters in a quiet, unadvertised way. It is the great opportunity which we scarcely

think of as an opportunity at all. It is just the daily routine. Millions of people know little more than a mechanical life, what they shall eat, drink and wear. Many can touch their horizons all around with a sweep of their hands, so narrow is their circle. They live in the basements of their spiritual temples, and never rise to the level of their best ability. They have no joy of life, of abundant life. The library performs a great service to society when it has furnished information to the people, when it has been an educational factor, but it has performed a greater one when it has awakened a man and put him into possession of his own powers.

Well, this is not a very specific setting forth of the ways in which we can extend the work of a small library. The way must vary greatly with the conditions, but the spirit of the work runs through all conditions. If I should name the qualifications of a good librarian, I would give them in the following order, according to importance:

1. Genuine character, with broad natural sympathies.
2. Courteous, kindly manners.
3. Education, general and technical.

Any such librarian, with only a fairly equipped library, will find her opportunity at her hand.

### SOME PRINCIPLES OF BOOK AND PICTURE SELECTION.

BY G. E. WIRE, M.D., LL.B., *Worcester County (Mass.) Law Library.*

1. *Books and pictures should be suited to the constituency.*—This may seem so trite, so self-evident as to need no statement, much less any argument to support it. But on sober second thought, all will agree that it needs constant reiteration and appreciation. All of us are familiar with libraries—of course not our own—in which we detect glaring inconsistencies in book selection. The story used to be told of one library commission that in its first epoch it used to send the books on agriculture to the sea-coast, and books on fish curing to the hill country. This is now strenuously denied but there may be more truth than poetry in it after all.

In the case of large, 50,000 v. libraries and over, less care need be taken, both on account of expenditure of money and on account of worthlessness of the book itself. A few hundred dollars' worth of rubbish, more or less, does not count and almost any book no matter how poor comes in use some time. But in the case of the small, 5000 v. library or under, with little money to expend and the whole realm of knowledge to cover, it is different. Of course the covering will be scanty and thin, but it will do for the first layer. They should buy but few books in philosophy and religion, more in sociology, only the latest and most popular in the arts and sciences, comparatively fewer in literature and more in history, biography and travel.

Of course fiction, adult and juvenile, must also be bought and at first a disproportionately larger amount in many cases. Too much reliance should not be placed on what some larger library has or on what the neighboring library has.

Avoid imitation and duplication, especially the latter. Now that inter-library loans are coming in, each small library in the more thickly settled portions of the country may be able to supplement its neighbor. Travelling libraries should also help out the smaller libraries which can ill afford to sink a large part of their annual book-fund in evanescent fiction, which soon moulds on the shelves.

As the commissions become better organized, they should also be able to send expensive reference works for the use of study clubs, and so help the small libraries all the more.

The needs of the constituency should be carefully studied and the most pressing should be attended to at first, others can wait. As to buying technical books for those engaged in manufacturing, I think a more conservative policy is now favored. Better wait a while and feel your way before spending much on these high priced books which rapidly go out of date. Theoretically the operatives of a cotton mill should be much interested in all that relates to cotton, but practically when their hours of drudgery are over they are

more inclined to a novel, if inclined to read anything. And how much encouragement have they to read in most factories? Better begin with the owners, who may be on your board, or the superintendent, who may live on your street. As liberal purchases as possible should be made in reference books—always selecting the latest and freshest to start on. For example Seyffert's "Antiquities," Bulfinch's "Age of fable," and Murray's "Mythology" will serve better than Smith's books, now out of date and expensive beyond all return for the money invested in them. More will be said along this line under head of cost. Of course in a library of this size, no foreign books should be bought other than perhaps some fiction.

I thoroughly believe in America for Americans. Foreigners would not buy our books under the same circumstances and why should we buy theirs? Reciprocity is good policy. Even in the case of English books most of those on geology, botany, zoology, on fishing and hunting, are valueless to us, by reason of climatic, or other local conditions. Their local history and antiquities are quite as unprofitable for most of our public libraries.

2. *As to the matter of outside experts.*—Most of us have seen bad examples of the work of outside experts, in fact I think we are safe in saying there are more bad than good examples. In the case of arts and sciences it is quite the fashion to refer the book list to the nearest high school or college professor, with the idea that in his line he knows all there is to be known about these books. In some cases he is practically given *carte blanche* and his selection is bought without a murmur. The natural consequence is that in many libraries are to be found high priced technical works of momentary interest, fit only for class-room or laboratory use, too deep for general reading and soon out of date. Most of these so-called experts are not even competent to select works for their own department, let alone the public library.

Personal bias, the quarrels of investigators, loyalty to instructors, jealousy of other workers in the same lines are powerful factors which far outweigh the question of real merit. In New England many of the libraries are overloaded with good, blue, orthodox the-

ology, bought on the suggestion and for the sole use of the dominie who was on the library committee. It was a glorious opportunity for him and it has rarely been neglected. These libraries are now really addicted to this habit; it has become a species of intoxication with them and they continue the pernicious practice.

3. *Choice by committee.*—One of the latest fads is selection by voting or by committee. This usually results in a mediocre selection, all the really good books or pictures being left out, or else a preponderance of votes for a few favorites. Voting choice is seen in the list of books sent out each year from New York State Library as a result of voting by members of the New York State Library Association. This is a list of the 50 best books for a village library from a list of 500 books, including fiction, adult and juvenile. Of course fiction takes a large per cent., while the remaining few books make a most patchy lot. The first list is too large and the last list is too small. Another publication by the Regents of the State of New York is a list of pictures for schools—not so much selected as neglected by a jury of 75 persons. Between religious prejudice, prudishness, peace policy and finical art criticism only the husks of architecture and stately ruins are left for the youths of the Empire State to gaze upon. Think of leaving out the "Sistine Madonna," "1807," "Christ in the Temple," "Queen Louise" and the "Horse fair." Some of these were omitted in cold blood because they were "poor and popular" and "pupils would like them and should not." Most of us, however, have gotten beyond the idea of trying to make people read George Eliot when they want Mary Jane Holmes. Nothing I have seen in the nature of criticism is so cold, hard and repelling as this. It is to be hoped no other state will follow this example, but that is just the perniciousness of such lists made out by people who are supposed to be experts, but who too often fail worse than common mortals. This whole matter of selection by committee is virtually begging the question of individual responsibility.

4. *Choice by librarian experts.*—This seems to be the most satisfactory solution of the problem. It is true that many if not most

of the existing small (5000-10,000) libraries have not or can not afford a trained librarian. But it is also true that more and more are employing trained people as organizers and an increasing number are retaining their organizer as librarian. It is their study and their business to know what books are best suited to the needs of the community. Even should we go beyond that into the larger public library, the reference library or the college library I still hold that the librarian is the best judge of books for the library. His taste is sure to be more catholic, wholly unbiassed and he makes a more even and better rounded selection on the whole. In the small public library he is able to carefully study the constituency and then knowing what books are standard in other places he makes the necessary allowances for the case in hand. The time has, I trust, wholly gone by when the local editor, local clergyman, and local schoolmaster have the pleasure of picking out their favorite books, or of ordering "standard sets" or the "classics" in history and literature at the public expense. Most of these books are on the shelves to-day faded but not worn, the leaves not even cut and usually only the first volume slightly used.

Of course books in useful art and sciences were largely overlooked. Nowadays library committees are turning more and more to the librarian, knowing that he has made a study of book selection and that they will get better results to leave it with him. This is as it should be and the librarian should not lower himself by going outside for assistance on any line. I count it as slipshod and a confession of ignorance for any librarian to tag around after outside "experts." Let him study up his subject and master it himself. There are only a few in which he cannot easily surpass outsiders, and profiting by his knowledge of the many, which enables him to do that part quickly and easily, let him pay more attention to the hard and less familiar subjects. The librarian who delights in religion, philosophy or folklore says of lists on biology, botany, steam-engineering or sanitation—"I leave all that to Professor So and

So—of course he knows all about it." Why should he, more than the librarian? What is the librarian for, if not to know things? Is it not time to turn from the material things and concern ourselves more with a higher standard of scholarship and more outside work in our profession? And for the small libraries of 5000 v. or under there are the library commissions who are supposed to, and do, advise them. There is difference with the commissions, some are in closer touch with the local situation than others, some are more conscientious than others about costly books, and some are given to this "expert" business which I have named, but on the whole they are doing good work and bid fair to do better.

5. *Matter of cost.*—This should be carefully considered. I hold it to be little short of criminal to recommend high priced books for libraries of limited means. By high priced books I mean those costing over \$5 a volume. This of course does not apply to reference books. And yet in one annual list such books constantly appear, as not only suggestions but, considering the source, as recommendations or even commands. I am thankful the Wisconsin Library Commission has taken up this work systematically and is doing all it can to discourage such foolish waste of money. The worst example is the "Encyclopædia Britannica" now from 25 to 10 years behind the times and never a satisfactory book of reference at its best. Take De Bry's "Mycetozoa," it stands on the shelves of dozens of libraries, leaves uncut, totally unused, each copy meaning at least four dollars wasted money. These are only given as an example—there might be hundreds of them. There are scores of books now published and more coming out every day on various questions of philosophy, sociology, science, art and particularly literature and history priced from \$1 to \$2.50 which are far superior for practical purposes to the heavy weight monographs at \$5 a volume and upwards. You thus get two or three books on the same subject for the money, and in a small library this is a vital question. The money must bring in the largest possible number of good books.

BOOK REVIEWS, BOOK LISTS, AND ARTICLES ON CHILDREN'S READING:  
ARE THEY OF PRACTICAL VALUE TO THE CHILDREN'S LIBRARIAN?

BY CAROLINE M. HEWINS, *Hartford (Ct.) Public Library.*

A CHILDREN'S librarian has three sources of reliance in the choice or purchase of books. They are: 1, Book reviews in current or earlier periodicals; 2, Lists, graded or ungraded, for libraries; 3, Articles on children's reading in books or periodicals.

1. The children's librarian, or any librarian, who orders children's books from reviews often finds the books entirely different from what the description has led her to suppose. Even if there is no positive untruth in a notice, it is often misleading from the lack of a standard of comparison with the best books for children.

The papers oftenest taken in a country household or small library are a daily or semi-weekly from the nearest large town or city, a religious weekly, and an agricultural weekly or monthly, sometimes all three, oftener only one or two, and it is from the notices and advertisements with quoted notices in these papers that estimates of books must often be formed. Libraries and library trustees who send book lists from such sources as these to a state public library commission are often surprised that they do not receive what they ask for, and write anxious inquiries as to why certain books have not been bought. "There surely can be no objection to them," they say, "for we took the titles from reviews in the—or—or—," naming denominational papers. Now, lest the Children's Section should be accused of unfairness and denominational prejudices, I shall quote no reviews from these papers, except one which came from a leading religious weekly taken by the household in whose pew I have a seat. It is of Eden Phillpotts' "Human boy," a series of sketches of English schoolboy life, which is dismissed with this remarkable sentence: "The scene here, too, is in the west, and various hunting experiences are recorded." The librarian who

orders that book for boys greedy for big game will be disappointed!

Such a mistake as this is not common, but reviews in both religious and secular papers are often perfunctory and meaningless. One reason of this is that many books are published for the Christmas trade, between the 15th of September and the 15th of December, when they come into newspaper offices with a rush, until they are piled in stacks on the desk of the hapless reviewer, and hastily noticed, sometimes by title only. In a new edition of Elizabeth Sheppard's fine, but forgotten novel, "Rumour," whose keynote is the quotation from "Lycidas" on the title-page,

"Fame is no plant that grows on mortal soil,  
Nor in the glistening foil  
Set off to the world, nor in broad Rumour lies,  
But lives and spreads aloft in those pure eyes  
And perfect witness of all-judging Jove,"

the reviewer did not understand the meaning of the lines, and called the book "a good example of the working, influence, and effect of rumour." On one of our own local papers not long ago there was a review of Mrs. Barr's "Maid of Maiden Lane," which was referred to as the sequel to her "Beau of Orange River." Even in newspapers fortunate enough to command the services of specialists for history and science, and an additional critic for novels, the children's books are hastily noticed, sometimes by the youngest reporter in his spare minutes. In smaller offices the task of reviewing all books falls to the hard-worked editor, who is, like Jacob Riis, also his own "reporter, publisher and advertising agent," but whose sense of literary values is often not in proportion to his knowledge of state politics or local reforms.

It is unfortunate that in the newspapers of as high a class as the *Outlook*, *Independent* and *Dial* the notices of children's books are often carelessly written, and show the lack of a standard of comparison. In the *Outlook*

for Nov. 27, 1897, Richard Pryce's "Elementary Jane," a most unchildlike book, is classed among books for children, and "Pansy" and "Elsie" are recommended in other numbers.

In the *Independent*, where notices of books for older readers are written with discrimination, Ellis's "Klondike nuggets" is described: "Full of lively adventures and exciting experiences, and is told in a straightforward, off-hand style just suited to the purpose." (Oct. 6, 1898.) There is nothing absolutely untrue in this, but there is nothing to guide a reader in comparing it with better books. One of Alger's heroes is mentioned as "An admirable boy with wonderful ability to take care of himself" (Oct. 20, 1898), and a book by Stratemeyer as "a stirring tale, told with enthusiasm." (Oct. 6, 1898.) Stratemeyer is an author who mixes "would" and "should," has the phraseology of a country newspaper, as when he calls a supper "an elegant affair" and a girl "a fashionable miss," and follows Oliver Optic closely in his plots and conversations.

Mrs. Cheever's "Little Mr. Van Vere of China," with its cheap sentiment and well-worn plot of a stolen child coming to his own at last, is commended as "well made, well illustrated." (*Dial*, Dec. 6, 1898.) A notice in the religious paper mentioned above says, "He is a thoroughly fascinating little fellow, and his story is told most acceptably." One of Amanda Douglas's tales is spoken of as "A story with a fine moral influence, yet not preachy, in the end leaving in the reader's mind the sense of having been in good company." (*Independent*, Dec. 15, 1898.)

One notice of "Elsie on the Hudson" is: "The multitude of young people who have read the Elsie books, by Martha Finley, will eagerly welcome this volume by the same author. It has to do with American history in the days of the Revolutionary war, and the style is simple and pleasing." In another: "Miss Martha Finley continues also the instruction which is mixed up with that young woman's experiences." (*Dial*, Dec. 6, 1898.)

It is, I think, the same periodical, though I have not been able to verify the quotation, which commends Harry Steele Morrison's "Yankee boy's success" thus: "The book is interesting, full of push and go. Boys will

read it with a gusto; yet they must remember that what this lucky Yankee boy did is not what they all can do." Another number which puts a just estimate on Master Morrison as a "very unlovely and unpleasant sort of boy," whose impudence and enterprise ought later to fit him for a place on a yellow journal," entirely mistakes the purpose of Pugh's "Tony Drum," a realistic story of London slum life, and classes it as a book for boys. (*Dial*, Dec. 16, 1898.)

The *Outlook* says of Frances Hodgson Burnett's mawkish "Editha's burglar," which was well parodied in *Punch* by Anstey in his "Burglar Bill": "This story of the queer, loving little girl and her daring and successful effort to protect her mother, and the equally queer burglar, is too well known in play and story to need comment." (Dec. 10, 1898.) This story is in almost all library and school lists, even the best selected and classified. The same number calls "Mr. Van Vere" "a charming story." (The adjective is used for four different works for young people in that week's grist.)

Even Noah Brooks, in a signed article in the *Bookbuyer* (Dec., 1898), gives praise to Drysdale and Stratemeyer, commends the uninteresting Chilhowee books, refers to Pansy's as "strong and helpful," and one of Amanda Douglas's as "rich in chastened and refined sentiment." He mentions Oliver P. Tunk's "Awful alphabet" as "a fit companion for 'A coon alphabet.'" Perhaps it is, but when libraries and schools are circulating Jane Andrews's "Seven little sisters" to teach the brotherhood and sisterhood of all nations, and teachers, in the language of Professor Thurston, of the Chicago Normal School, are "encouraging each nationality to contribute the best it has of song, story, game, home customs and occupations to the life of the school," it is wrong to buy a book for a white child in which black children are held up to ridicule, as they have been many times in *Harper's Young People*. "Blackberries" and "Comical Coons" are also recommended in the *Dial* (Dec. 16, 1897), where Gertrude Smith's "Ten little comedies," a book entirely different in spirit from her "Arabella and Araminta" stories; Marion Harland's "Old-field school girl," which has a story of

horrible cruelty of a schoolmaster to a child, and is not meant for children; the silly "Elaine" book, and the equally silly and sometimes coarse "Father Goose" are favorably reviewed.

The *Nation's* reviews of children books have lately not been up to the old standard, as for instance a review of Sydney Reid's would-be funny "Josey and the chipmunk" (Dec. 13, 1900), which is called "a perfectly delightful child's book, nearly as good as the 'Alice' books, and, indeed, might be pronounced quite as good if Lewis Carroll, like Shakespeare, had not 'thought of it first.'"

It will be seen by these instances that reviews help children's librarians very little, and that it is impossible under present conditions for a library to determine the worth of a book without seeing it.

2. There have been in the last 25 years many lists of children's books by libraries, schools, denominational societies and other organizations. The earlier lists, although interesting to a student of the evolution of the Children's Section, have so many books out of print or superseded that they do not concern us now, except in that they are not made for very young children, and often have a profusion of material which is over the heads of boys and girls below, or even in, the high school age. Some of them are made from hearsay or from other book lists, without an intimate knowledge, or indeed any knowledge at all, of books recommended, as in the following instance: A paper read at a library meeting and afterward printed in the report of a state librarian describes the "library ladder" as "a list of books beginning with a tale of adventure. From this the reader's attention will be drawn to the next in order, leading on and out, until finally the child will be unconsciously delving into the mysteries of science; for example, we could first take Butterworth's Indian story, 'The wampum belt'; next, Brooks's 'Story of the American Indian'; from this lead to Bancroft's 'Native races,' and finally various United States histories."

Any one who has ever seen the five ponderous volumes of Bancroft's "Native races of the Pacific States" knows that although it has some value as a work of reference, not

as a history, for older readers, it is entirely useless as a stepping-stone for children, who can easily go without its aid from Brooks's, or better, Grinnell's "Story of the Indian" to a good one-volume United States history, or even to John Fiske or Parkman. It is no more meant for boys and girls than the other thirty-four volumes on the history of the Pacific coast completed by Bancroft and his corps of assistants.

Some tests of a library or school list are: Are the books in it chosen for their permanent value? Has the maker of the list read them? Will it tell an overworked teacher or librarian what the best modern straightforward stories in simple English are, the best life of Lafayette without any long words like "evacuation," or the best account of a salamander in language that a child of 10 can understand? A list for teachers is not a help in choosing books for children, unless from the point of view of child-study, which has another place than on the shelves of a children's room.

"In one list the "Dotty Dimple" and "Flaxie Frizzle" books are recommended for the third-reader grade. Children who are in this grade cannot read the ungrammatical baby-talk easily, and if they could it would demoralize their English.

Another has for the seventh grade a part of the "Library of wonders," translated from the French, and out of date 20 years ago. Teachers should be careful in buying books of popular science that they are modern, and also written in a style that makes them attractive to boys and girls. In a long experience in libraries I have never found that boys and girls liked the "Library of wonders."

A third, for children under 10 years of age, includes Miss Plympton's "Dear daughter Dorothy," and even in one of the best and most recent graded lists it is annotated as a "story of devotion and comradeship between a father and his young daughter." Now "Dear daughter Dorothy" is the best specimen I have ever seen of a kind of book to be kept out of libraries and homes, the story of a little eight-year-old girl, who has the entire control of the \$1200 earned yearly by her father, a bookkeeper with literary aspirations. He is arrested on a charge of em-

bezzlement, found guilty in the face of his daughter's testimony, but at last acquitted through the confession of the real criminal, and he and that important little personage, Dorothy, who takes all hearts by storm, sail for England escorted to the ship by a crowd of admiring friends, including the judge who sentenced him.

The next list has Mrs. Burnett's "Little Saint Elizabeth," a morbid tale, and with it a reproduction of "Prince Fairyfoot," a story which the author read when she was a child in a book that she never could find again. In order to understand the pertness and flippancy of her style in this story, one has only to compare it with the original, reprinted within a few months in Frances Browne's "Wonderful chair," or "Granny's wonderful chair," as it is called in one edition. A few lines in the simple, direct English of the old fairy tales, are expanded by Mrs. Burnett into eight or ten pages, with attempts at wit and allusions to unhappy married life, which should be kept out of books for children.

The same article in the *Nation* which gives high praise to "Josey and the chipmunk" thinks "The wonderful chair" prosy, but I have tested it on children who do not enjoy stories unless they are simply told, and have found that it holds their attention.

Books on differences of religious belief, books written in a style or on subjects beyond the years of boys and girls, scientific books that are inaccurate or out of date, books that make children despise their elders, or have an overweening sense of their own importance, and books that are cheap, slangy, flippant, or written in bad English, dialect or baby-talk, should have no place in a school list, and books on poor paper and in poor type and binding should also be kept out. There are books that tell stories of wholesome, well-bred children; fairy tales in the simple, old-fashioned style; out-of-door books that are not dull or aggressively instructive; and selections from the best poetry to choose from. There is room yet for the right kind of histories that are interesting without being babyish, and accurate without being dull.

Lists are often made in entire ignorance of the limitations of the children who are to use the books recommended in them. A well-

intentioned paper suggests for children of eight or over Ebers' "Uarda" and Thiers' "French Revolution" as attractive historical works. In science it mentions Hooker's books, which are quite out of date, and in biography Lockhart's Scott and Forster's Dickens, which not one boy or girl in a hundred would read through, great as is their charm. Bryce's "American commonwealth" is also named. This list has either been made up from books that the compiler has heard of as classics, or else she is not in the habit of associating on familiar terms with boys and girls, even of high school age. This paper recommends Sophie May for very young children, and also the "Story of liberty," which a mother in the *New York Times* says is in the library of her daughter of eight. This is a mother who would not allow a child to read Scott's novels till 14 or 15, and thinks Dickens too sad for even that age!

The hundred books recommended in the *St. Nicholas* for March, 1900, made up from many competing lists, are nearly all good. A few, like Mrs. Richards' "Captain January," Mrs. Wiggin's "The Birds' Christmas Carol," and Munroe's "Through swamp and glade" have no permanent value. If one of Munroe's books is to be included it should be "The flamingo feather," or "Derrick Sterling," both of which are well worth reading many times and are great favorites with children. The defect in the list is the same just spoken of, that too many of the books are for boys and girls from 10 to 14 years old of bookish families, and that little attention is paid to younger or less carefully trained children.

One list puts into the first primary grade, or fourth year of school, for children nine or ten years old, Abbott's "Cyrus," "Darius," "Xerxes," and other heroes, and Fiske's "War of independence," all of which are entirely beyond the grasp of 499 children out of 500 under 12 or 14. Lists should be shorter, and not too closely divided. A division, "Easy books," should include whatever children need until they can read without difficulty, and should contain books like Longman's adapted stories from the "Blue fairy book" and the earlier volumes of the "Ship" English history, Baldwin's "Fifty famous stories retold"

and Eggleston's "Great Americans for little Americans."

In one case where books are not classified by grade, Horace Bushnell's "Woman suffrage," Hinsdale's "President Garfield and education," and Wright's "Industrial evolution of the United States" are in the same class with Emilie Poulsson's "Through the farmyard gate," with no discrimination as to the age for which any one of the four is intended. Three are beyond the understanding of boys and girls below high school age, and if in school libraries should be for teachers only, and the fourth is a book of kindergarten stories.

A book which is often commended by teachers and librarians is Coffin's "Story of liberty," which I said nearly 20 years ago "is so fierce in its Protestantism and so bloody in its details that it causes pain to many a sensitive child." The pictures are too horrible for a child to see, and the book, like any other which wars against any form of religious belief, should not be allowed in a public school.

Some lists admit the "Elsie" books, tearfully sentimental and priggish, where the heroine is held up as a saint and martyr for refusing to obey an entirely reasonable request of her father, and where money, fine clothes, and love-making at an early age hold too prominent a place.

In one list, one of Mayne Reid's books is annotated, "To read carefully any volume of this author is to acquire a considerable knowledge of the trees, the flowers, the animals, the insects, and the human creatures existing in the region where the story takes place." In Mayne Reid's "Desert home" maple sugar trees are tapped in the autumn and yield nearly a hundred pounds of sugar. Emerson's "Trees and shrubs of Massachusetts" states that although sap will flow in summer and early autumn, it has but little saccharine matter. Mayne Reid's stories as stories are delightful for children to read, but should never be used as aids to geography lessons.

One library offers its boy-and-girl readers Bushnell's "Moral uses of dark things," Mrs. Campbell's "Problems of poverty," Ely's "Labor movement in America" and Shinn's "Mining camps."

The lists made by James M. Sawin, of

Providence, are good and suggestive, but better for older than younger children, including, however, for beginners in reading some excellent old favorites like Mrs. Follen's "Twilight stories," and for children a little older a book that ought to be in print, Paul de Musset's "Mr. Wind and Madam Rain."

The Milwaukee list for children under 10 is good for the most part, but includes "Dear daughter Dorothy" and "Editha's burglar."

Mrs. Whitney's list of "Books not usually selected by young people" (first published in the *Bulletin of Bibliography*) is for the most part beyond the grammar-school age, including such books as Sismondi's "Literature of the south of Europe" and Ragozin's "Vedic India." It is unclassified, good and not too American.

The Buffalo Public Library lists are the best that I have found, thoroughly practical, well chosen, and in the pamphlet entitled "Classroom libraries for public schools" well graded as far as one can judge. The grading of schools varies so much in different cities that it is impossible unless one knows exactly what "four" or "eight" or "nine" represents to say whether books are suitable for it. A list of this kind cannot be made without a thorough understanding between librarian and teachers, a thorough knowledge of the condition of the schools and the home-life of the children on the part of the librarian, and a knowledge of books on the part of the teachers.

The graded and annotated list from the Carnegie Library of Pittsburgh is for teachers, not children, and has many suggestive notes, but will bear weeding.

Many lists are almost entirely American, and seem at first sight narrow and one-sided. A little thought and knowledge of the conditions under which they are made shows the cause of this apparent fault. City lists are made for schools which are full of children of newly-arrived emigrants, whose first desire, as soon as they can read English at all, is to know something of the great free country to which they have come. It is to supply this demand that many simple United States histories and historical stories relating to this country have been put upon the market in the last five years, almost to the exclusion of other books of the kind. Teachers and librarians should remember in making lists that

there are other countries in the world, and good histories of them, like Longmans' "Ship" series.

The books suggested by public library commissions are usually published in this country, partly for the reasons that it is easier to find them, that they are cheaper than imported books, and that they are in demand in small libraries. The New York State Library lists are of this kind, and the books for children are carefully chosen as far as they can be from this country alone.

With regard to scientific books for children, the Springfield (Mass.) City Library has printed a short list of books on science and useful arts that children really enjoy. This list has been prepared by the children's librarian in connection with the supervisor of science in the Springfield public schools and an out-of-town librarian. The list is the best I have seen, but is open to criticism on account of one or two of the books being out of date. The list for third-grade teachers compiled by Miss May H. Prentice for the Cleveland Library is excellent for supplementary reading and nature-stories and poems.

3. The value of articles on children's reading is variable, but a fair specimen may be found in the *Contemporary Review* for June, where H. V. Weisse states in his "Reading for the young" that a generation ago the number of published books was small, magazines were high in tone, and in the realm of juvenile literature Ballantyne was "monarch of all he surveyed." On account of the limited supply of children's books, boys and girls were thus driven to standard authors. "Now magazines and so-called 'historical stories' are issued in such quantities that young people read nothing else. They should be trained to better things, and teachers and mothers should read to their children and see that they read good books for themselves, if need be rewarding for a clear reproduction of the sense of any good book, never punishing for a failure to understand, at first hearing or reading, that which involves 'a new form of mental effort.'" We have all heard something like this before! Even Agnes Repplier, with her charm of style and her denunciation of the "little Pharisee in fiction," and the too-important Rose in Bloom in contrast to the well-kept-under

Rosamond, makes few suggestions of books which are good for children to read.

The reading lists in the *New York Times* are based on the experience of the writers, who have often been precocious, over-stimulated children of bookish families without companions of their own age, and have no idea of the needs, wants and limitations of the public library children of to-day, many of whom have few or no books at home. "I have quite a library," wrote one such child. "I have three books, Longfellow's poems, a geography, and a book of fairy tales."

A dreamy boy like "The child in the library" of a recent *Atlantic Monthly* and the keen little newsboy who snatches a half hour after school is over and he has sold his papers to spell out a simple life of Columbus or the "Story of the chosen people" have little in common, and need different books, but they both need the very best of their kind.

A book reviewer or maker of book lists for children should have an intimate knowledge of the best books which have been written for them, and the unconscious training which this knowledge gives in good taste and a critical sense of style. He (or she) should have also the intimate knowledge of all sorts and conditions of children and their limitations that a teacher or a settlement worker or a wise mother has. More than 20 years ago, in the meeting of the American Library Association in Boston, Mrs. Kate Gannett Wells said: "I would like to have mothers prepare lists, whose headings should vary from any yet given; such as: books that make children cry; books of adventure for unexcitable and unimaginative children; unlovesick novels."

The best reviews of children's books ever written in this country were the work of a woman and a mother—Lucy McKim Garrison, who, in the earlier volumes of the *Nation*, put into her work broad-mindedness, high ideals, and an understanding of children. It is such work as this that should be a model for the reviewers and a guide to the librarians of to-day, and one of the most important duties of the Children's Section is to insist upon higher standards, both in reviewers and through them in the writers of children's books, and upon trained critical knowledge in the makers of children's lists.

## BOOKS FOR CHILDREN:

## I. FICTION, II. FAIRY TALES, III. SCIENCE.

IT seems to have been fairly demonstrated that we have as yet no proper standard of values to guide us in the selection of children's books. Reviews fail: they either do not evaluate the book at all, or they lack appreciation of it or of the children who are to read it—or both. Book lists fail, as a rule, through eagerness to get something printed before we know what to print. Articles upon children's reading fail because the people who have written them are not always familiar with children's books or are not acquainted with the "public library child." We turn to the books themselves, but, having no standard of values, how shall we judge? How are we to know whether a book is good or poor?

It is not possible to reduce the appreciation of literature—whether books for children or for all time—to an exact science. It is difficult to conceive of any formula for the evaluation of books in general or the books of a particular class which would not fail again and again when applied to the individual book through the medium of a personal judgment. We shall not attempt, therefore, to answer the questions which form the substance of our topic. We have endeavored merely to state a question which to all children's librarians seems to be of paramount importance, trusting that we may eventually reach a partial solution of this problem by bringing the thought of many minds to bear upon it.

This collective paper, or, more properly, this collection of ideas upon different classes of books, requires a word of explanation. The contributors were not asked to prepare papers but to furnish ideas and opinions, which should form the basis for discussion of the general principles of selection and of individual books in the several classes considered. The purpose was to present briefly the principles that should apply in each class, and to emphasize these by citation of specific books.

## I. FICTION.

We were recently asked to make out a list of a dozen books suitable as prizes for a Sunday-school class of boys and girls from 12 to 16 years of age. We studied a long and carefully prepared list of stories written for girls of this age and supposed to include what was most desirable. Assuming that the girls had read Mrs. Whitney and Miss Alcott, we did not consider them, and we found not one story which we could recommend as possessing permanent interest and literary value. There were many books which girls read and like but they did not reach a fair standard for this purpose. We filled out the desired number for the girls with books written for older readers. Far different was our experience with the books for the boys. It was only a matter of choice between a large number, both suitable and desirable, and yet the lists which we consulted had been compiled by the same hand.

In making selections of books for her readers, the children's librarian encounters at the first step this difference in the quality of the books written for boys and those written for girls. Judged purely by the standard of taste, she must reject the greater proportion of those written for girls. When she finds so few that reach her standard she may blame herself for ignorance of the better books, but she must ultimately reach the conclusion that whatever her own shortcomings there is a lack of desirable books for girls. However, another most important factor comes into the case on the reader's side of the question. If the librarian is going to meet the needs of her readers she must understand what they are instinctively seeking in books, and she must enlist herself on the side of human nature. She will find at once that a distinct division in the reading of boys and girls springs from the fact that, generally speaking, the mental life of the boy is objective, that of the girl subjective. The boy seeks action

in fiction, the girl is attracted by that which moves her emotionally or relates itself directly to her own consciousness, and the last thing that either of them cares about is the literary value of the book. Hundreds—no doubt thousands—of our college graduates look back to the period when, according to their sex, the "Oliver Optic" series, or the "Elsie Dinsmore" series, played a very important part in their existence. The love of adventure in the boy gave the charm to the books. Adventure he must have, whether he finds it in the tinsel setting of *Oliver Optic* or the refined gold of Robert Louis Stevenson. And the magnet in the nature of the girl draws to herself something helpful even from Martha Finley; otherwise, she would not speak of the "Elsie" books as "beautiful": there is something in them which to her represents "beauty." Nevertheless, while justly condemning the *Oliver Optic* and the *Elsie* books as cheap, tawdry things, the librarian must seek among better authors the holding quality on the nature of the child which these books possess. She must search for books in which these elements of interest are incarnated in what we call literature—books which, while rivalling these in attraction, will at the same time refine and broaden the taste of the reader.

Now, the lovers of *Oliver Optic* and Mrs. Finley do not take kindly to the classics and as, in the modern stories for young people, few will pass muster as literature, all that the librarian of to-day can do is to use her judgment and discrimination among those the writers have provided. The boys are readily turned from *Oliver Optic* to Henty, Tomlinson, Jules Verne, and on to "Ivanhoe," but with the girls the case is hard. The girl tells us that she likes stories about boarding-school. It is a capital subject: in the hands of a writer sympathetic with girls, of fertile imagination and vigorous power of characterization, boarding-school life affords material for most entertaining combinations—but the literature of the boarding-school has yet to be written. The average boarding-school story has three main characters—the attractive, impulsive heroine, always getting into trouble; the cruel, cold-blooded, unscrupulous rival, habitually dealing in falsehood,

and the teacher who is singularly devoid of discernment or intuition. The heroine inevitably falls into the snare of the rival, and things are usually set right all around by a death-bed scene—although actual death is sometimes averted. "Louie's last term at St. Mary's" is one of the better stories of this kind, and Mrs. Spofford's "Hester Stanley at St. Mark's" is fairly well written, with a touch of the charm of the author's personality. "Chums," by Maria Louise Pool, is one of the worst of its kind, where envy, hatred, and malice run riot through the pages and the actors in the story are wholly lacking in vitality. The experiences of Miss Phelps's "Gypsy Breynton" and Susan Coolidge's "Katy" are as satisfactory pictures of boarding-school life as we have; and Helen Dawes Brown's "Two college girls" is a good story. "Brenda, her school and her club," by Helen L. Reed, is a recent valuable addition to books for girls.

In stories of home life Miss Alcott still easily takes the lead, with Susan Coolidge and Sophie May following in merit and popularity. The boys have an excellent story of home life in Rossiter Johnson's "Phaeton Rogers." The setting is perfectly simple, every day surroundings, but the characters have the abounding vitality that keeps things moving. The entertaining succession of events proceeds directly and naturally from the ingenuity and healthy activity of the young people grouped together. The book is a model in this respect as well as in the use of colloquial English which never loses a certain refinement. Every boy, while reading "Phaeton Rogers," finds himself in touch with good companions—and this is true as well, in Charles Talbot's books for boys and girls.

The most important books for boys are the historical stories, appealing at once to the hero worship and the love of adventure common to boyhood; at the same time they should give a good general idea of history. The story in historical setting is, also, most desirable for girls—in that it balances the too subjective tendency; it carries the mind of the reader beyond the emotional condition of the heroine—indeed the heroine has no time to study her own emotions when brought into

vital relation with stirring events. Apart from the value of the historical facts imparted is the indirect but more valuable habit of mind cultivated in the girl reader. Vivid, stirring, absorbing stories for girls can be and should be written in this field, which is practically unlimited. Miss Yonge has done some good service here. "The prince and the pauper" and the "Last days of Pompeii" are also illustrations of the kind of work that should be done—they are both strong in the direct interrelation between the imaginary characters and real history—and both appeal alike to the boy and the girl.

Books written with a direct moral purpose seldom achieve popularity with boys—and yet one of the most popular of all their books is "Captains courageous," which is of the highest moral value though without one line of religious preaching in its pages. Here the boys are in touch with a real, living character, acted upon and developed, through the moulding pressure of life itself—from first to last the aim of the story is the boy; and yet the moral outcome is simple, natural, inevitable and manly; it appeals to the common sense which is strong in boys.

Now when a woman writes for girls on the subject of the transformation of a frivolous butterfly into a girl of sense, instead of giving us character and action with a moral outcome, we have a religious setting with the action of the story and the conduct of the characters bent in every direction to illustrate the motive of the story—the religious idea.

The plastic nature of the young girl wrought upon by life, fresh faculties brought into activity by the hard knocks of fate or the sunbursts of good luck—although these things are happening every day in the real life of young girls, we yet await the writer who will put them into literature without sentimentalizing. What we want is the novel simplified; the story told directly, without byways of description or analysis; where healthy young people, neither saints nor prigs, nor creatures of affectation, jealousy, or malice, are acted upon by life and each other in a natural fashion.

Let boys and girls be brought together as in real life; brothers are a good element in girls' stories, and love affairs need not be excluded, if handled with delicacy, common sense and

true feeling. Many books classed as novels are merely stories simply and clearly told, intended for older readers, but far better for young girls than the stories usually written for them. Miss Jeanie Gould Lincoln's stories and Mrs. J. G. Austin's historical novels, some of Mrs. Barr's and Mrs. Oliphant's novels and a wide range of other interesting, well-told stories can be substituted, if care and discrimination are used in the selection. Fortunately, too, many girls of twelve are ready for Dickens and other standard writers.

However it is not only through the emotions that these aspirations and desires are ministered to—when the writer can develop this emotion into spiritual enthusiasm—or when she portrays a character of active spiritual force, she has put something valuable into the life of the reader. Here, as always, it is the personality of the writer—the soul back of the words that most counts, and it is just this quality of true spirituality which gives value to Mrs. Whitney's stories, in spite of their wordiness, lack of proportion and forced symbolism; as it is the genuine goodness and pure idealism of Miss Mulock which forms the very atmosphere in which her characters move.

While it is impossible to offer a practical guide to the selection of books a few suggestions can be made. In the religious stories, for instance, there must be discrimination between those encouraging morbid self-examination or religious sentimentalizing, and those cultivating optimism and the perception of true values and ideals.

In books of adventure the dividing line would fall between, on the one side, those stories where the hero is actuated by pure love of adventure or where the adventure is worth while in itself—as in "Foul play"; and, on the other side, those stories where the hero is merely seeking to exploit himself and in which the tendency might be to incite boys to reckless escapades for the sake of notoriety.

In the purchase of books one must consider the range of the average reader, but in recommending books to the individual boy and girl, appreciation of differences in temperament and culture is indispensable.

WINIFRED L. TAYLOR.

*Pratt Institute Free Library, Brooklyn, N. Y.*

## II. FAIRY TALES.

FAIRY tales must appeal to the love of the marvellous, and must yet be told with a simplicity that precludes all doubt of their reality in the mind of the child, no matter how improbable the circumstances to our prosaic minds. The language must be simple and dignified. To write a fairy tale, one must first of all be a poet, at least must have the poetic instinct. The child very early absorbs the idea of rhyme. He is sung to sleep with cradle songs, and soothed by jingles, and he does not soon outgrow their influence.

These tales from the librarian's standpoint, fall naturally into two classes: the folklore legends adapted for children (in which, regardless of classification, we include mythological tales) and the purely literary, imaginative story.

*Fairy tales derived from folk-lore.*

Fairy tales derived from folk-lore — stories drifted down from the childhood of the world, were not originally written for children, and perhaps for this very reason, they have claimed them for their own. They are not "the artless appeals to all little masters and misses who are good or intend to be good" of John Newbery's time. They have a naturalness which these first books printed especially for children lack; the moral is not too strongly urged. Different versions of the old, old tales reflect in a measure the manners and customs of the country in which they are collected. Fairies are stolid or clever, mischievous or amiable, according to the characters of the people to whom the stories were told.

To this class belong the Grimm brothers' "Household tales," "Icelandic tales," edited by Mrs. A. W. Hall (tales in which it is the princess or the peasant maiden who rescues the prince, instead of being rescued); the Norwegian tales of Asbjørnsen and Møe, the Grimm brothers of the far North. The collections of Lang, Baring-Gould; and Cruikshank, because of illustrations; Miss Mulock's "Book of fairies" and William Canton's "True annals of fairyland" should be in all libraries.

Collections of tales derived from Greek and Roman mythology, such as Kingsley's "Heroes," Hawthorne's "Wonder book" and "Tanglewood tales," may also be considered as fairy tales derived from folk-lore.

One of the most exquisitely told of the old Greek fairy tales is that of "Eros and Psyche," adapted by Paul Carus from Apuleius. The story appeals to children, regardless of the religious significance indicated in the preface of the book.

"Fairy tales from far Japan," translated by Susan Ballard, is excellent, particularly the story of the "Magic mirror," which is also found in a charming set of booklets published in Tokio, in English. This set is called the "Japanese fairy tale series," the type, paper and colored illustrations being all of Japanese manufacture.

"Fairy stories from the little mountain," by John Finnemore, is a good collection of Welsh stories as is Frere's "Old Deccan days" of Indian folk-lore.

"Wigwam stories," edited by Mary Catherine Judd, are told by Indians, or adapted from ethnological reports and original sources.

Mabie's "Norse stories retold from the Eddas," Keary's "Heroes of Asgard," "The wonder-world stories" of Marie Pabke and Margery Deane, Scudder's "Book of folk tales" and Wiltse's "Folk-lore and proverb stories," both of the latter for the youngest readers, the Countess d'Aulnoy's fairy tales, the collections of Laboulaye and the immortal tales of Perrault, we cannot afford to be without, as well as Howard Pyle's "Wonder clock" and "Pepper and salt," which retain the old-time flavor and are much enhanced by the author's illustrations.

*Literary fairy tales.*

Hans Christian Andersen's stories, while based often upon tradition, are excluded by Hartland from the list of pure fairy tales and classed as literary. Yet even the old, old fairy tales cannot, with justice, rival his in the hearts of the children. Their feeling for him has been expressed by John White Chadwick, in writing of another:

"But as I muse, I seem at heaven's door  
To hear a sound which there I heard before.  
When Danish Hans that way did softly wend —  
A sound of children making merriest din  
Of welcome, as the old man entered in."

Mary S. Claude, in "Twilight thoughts," has shown herself a graceful follower in the footsteps of Andersen. Such stories create a tenderness for plants and animals not easily effaced.

It detracts nothing from the interest of the story that what a child calls a fairy tale we call literature. Even Dr. Johnson recognized that "babies do not want to hear about babies." It is a great pity that a child should never meet the knights of the Round Table, or the Charlemagne legends — half history, half romance — or the Homeric tales, outside the dissecting room of a literature class. Small wonder that a child who heard them there for the first time should exclaim with considerable animus, "I like to read, but I hate literature."

Here is a good field for the "story hour" so successfully introduced in the Carnegie Library, Pittsburgh. That edition which follows most closely the original, or is told in graphic clear-cut English, such as Morris uses in the "Earthly paradise" or the "Life and death of Jason," or Butcher and Lang's translation of the *Odyssey*, is the best. Such a version read aloud is infinitely better than the best dilution by any well-meaning attendant. Skip judiciously, but do not weaken the story. It is not only the plot but the charm of style which we wish to introduce. The argument may of course first be given, that the child be put in sympathy with the situation.

#### *Modern fairy tales.*

A good modern fairy tale is a rare article. One may search far and long before finding it. If it is not worth reading twice, it is not worth reading once. In many of these modern tales there is an atmosphere of haste wholly lacking in the good old tales. Fairyland has a government of its own, where neither time nor space has value. It lies "east of the sun and west of the moon."

One of the best collections is "Granny's wonderful chair," by Frances Browne — in the American edition "The wonderful chair." It is well written, the interest is well kept up, and the language is befitting the subject. The surest way to test a poor fairy tale is to first read one of unquestionable merit, and to get thoroughly into its atmosphere.

#### *Good modern fairy tales.*

"Princess Ilse," by Marie Petersen; a gracefully told story of a discontented mountain brook.

"Mopsa the fairy," by Jean Ingelcow, and

"The little lame prince," by Dinah Maria Craik.

"Lob-lie-by-the-fire," by Mrs. Ewing, and "At the back of the North wind" and "The Princess and Curdie," by George Macdonald.

The average modern fairy tale is a jumble of impossibilities, with no continuity of incident, well enough or poorly written, according to the ability of the writer.

"The magic fruit garden," by Marion Wallace Dunlop, is an illustration of this kind. Two very small children, in abbreviated pinafores, are studying their Monday lessons; one is writing an essay on Perseverance, the other is copying geographical names. By the illustrations, one may judge the children to be of kindergarten age. It is not surprising that they fall asleep, and, to dreamland sent, meet with adventures enough to make the strongest head whirl — a case of literary delirium tremens.

"Snow garden," by Elizabeth Wordsworth, is on the whole a good collection; the stories, however, are of unequal merit.

"The other side of the sun," by Evelyn Sharp, is of negative goodness. The witches and wizards are mild and amiable, especial care evidently being taken that no child should be kept awake at night. It does no harm for children occasionally to shiver and shake as poor Hans in the Grimm collection longed to do. The author's satisfaction at the expression the "wypms wimpled" is insisted upon a little too frequently.

"Fairy folk of Blue Hill," by Lily F. Wesselhoeft, is of especial interest to children about Boston, since it accounts for the granite quarries and pudding stone of the region. It is smoothly written and is not spoiled by slang or pertness.

"Summer legends," by Rudolph Baumbach. The stories are not altogether fairy tales nor are they written for the youngest readers. They are gracefully written although they lose somewhat by translation. The book is in some parts amusing and all the stories are peopled with the wonderful creatures of fairyland.

Other tales seem invented only for the purpose of forcing religious sentiment, or pointing a moral in inverse proportion to the size of the reader. Their authors seem some-

times to have reached Mark Twain's conclusion that "every one being born with an equal amount of original sin, the pressure on the square inch must needs be greater in a baby."

"Pixie and Elaine stories," by Carrie E. Morrison, is a mixture of fairy tale and religious story. The author speaks in her preface of the stories having been carefully pruned. One shudders at thinking what they must have been before, with such chapters as "The Elaines' picture of heaven," and "The pixie transforms an Elaine" left in.

"New book of the fairies," by Beatrice Harraden, is marred by the suggestion of cruelty to animals. In one story, in place of rubbing the Aladdin lamp, that what one wishes may happen, one must pull the black cat's tail. It is gratifying to reflect that black cats have their own peculiar method of retaliation for such experiments.

#### *Burlesque fairy tales.*

Burlesque fairy tales are the most atrocious of all. They are apt to be broad in their humor, full of *fin de siècle* jokes or puns, and modern allusions which mar the poetry of the tale if there is any in it, and create an appetite for facetiousness in books. "Lips wagging, and never a wise word," one is tempted to say with Ben Jonson. . . . Copyright fees should be trebled on this class of books.

Under this head come:

"The book of dragons," by E. Nesbit.

"Here they are!" by James F. Sullivan; full of modern allusions and puns.

"The pink hen," by Cuthbert Sterling; a sort of "continuous performance." The pink hen is hatched from a forgotten Easter egg, is driven from the barnyard by her associates and forced to seek her fortune. She links her fate with that of a little girl who has escaped from an ogre, and together they redeem a prince from the curses of bad fairies. The pink hen is continually punning, and the prince while still in the cradle is addicted to smoking.

It is hard to tell how the author of Jewett's "More bunny stories" would classify them. We hope not as fairy tales. They are poor from any point of view. The bunnies might as well be ordinary children as anything. They go to lawn parties, play golf, dance the Virginia reel, go to West Point, tell folk-lore

stories, repeat Bible verses and say their prayers. We are sometimes asked for a Sunday book. For one who must have a special book for that day, this might possibly answer; it is certainly full of moral reflections and pious sentiment; but there is no reason at all for reading it on Monday or Tuesday or Wednesday. The story closes with a wedding where the happy bunnies are united under a bridal bell, while the strains of the march from "Lohengrin" float in the air.

Humor is not early developed in all children, which is perhaps why a great many do not care for "Alice in Wonderland," and for Stockton's fairy tales—"The bee man of Orn," "The griffin and the minor canon," etc.

Laura E. Richards' "Chop-chin and the golden dragon" must also be classed as humorous. It is not as good as the Toto stories.

#### *Animal folk-lore.*

Animal folk tales as exemplified in Joel Chandler Harris's stories, "Little Mr. Thimble-finger," "Mr. Rabbit at home," "Daddy Jake," "Uncle Remus," "Story of Aaron," etc., are excellent. Brer Fox and Brer Rabbit, the black stallion and all the animal characters are quite as much realities to the children as Buster John, Sweetest Susan and the Little Master.

Ortoli's "Evening tales," follows the same general line.

Kipling, too, in the "Jungle books" has won the hearts of the children, and here there is no hint of the "garlic flavor," mentioned by Higginson.

Fraser's "Mooswa" also belongs to this class.

A common practice in modern fairy stories is for the author to open the tale in this way: A child falls asleep and enters fairyland via the dream country. Often the child has been sent to bed for some misdemeanor, as in the "Dream fox story book," by Mabel Osgood Wright, or has fallen asleep over his tasks, as in the case of the "One-eyed griffin," by Herbert E. Inman, the fairy tales being offered by way of consolation; a reprehensible practice in itself, besides putting one out of touch with the real fairyland. It is too conspicuously "make believe" and leads one to suspect that the author has little confidence in his

own production. As "good wine needs no bush," so a good fairy tale needs no introduction or apology. In the real fairyland one cannot easily be ungraceful.

#### *Nature fairy tales.*

Nature fairy tales are more than apt to be failures, and often include a great deal of pertness and cheap talk, in their effort to teach by stealth. (Charles Lamb writes to Coleridge in regard to Goody Two Shoes in this way: "Think what you would have been now, if, instead of being fed with tales and old wives' fables, you had been crammed with geography and natural history.")

A conspicuous example of the faults of this class of story is found in "Sylvia in flowerland," by Linda Gardner. The heroine is introduced as a high-school girl, well-advanced in Latin and mathematics, and amply able to supplement very largely the information which the flowers give her about themselves. Linda strolls into the fields and is told all sorts of facts about the habits of plants by the flowers. The story where the author forgets to interject puns is interestingly told, certainly enough so to attract a girl of fourteen, who has any fondness for flowers. Besides the numerous puns, such glaring sentences as the following, condemn it. "I don't know *who* you mean." "Why it is a nasty nettle!" said Sylvia. "Nasty, yourself," ejaculated the nettle sharply, "why do you come shoving against me?"

McCook's "Old farm fairies," gives what Mrs. Malaprop calls "a supercilious knowledge" in its attempt to interest children in insect life, by introducing different insects in the form of pixies, brownies and fairies. While it has not the faults of "Sylvia in flowerland," the information is mainly crowded into footnotes and appendices, which as a rule are carefully avoided by children.

Mabel Osgood Wright's "Tommy Anne" and "Wabeno" are more successful; but the same amount of energy spent in making the facts of nature interesting in themselves would be preferable.

While not assuming an absolute censorship in this department, the principle of natural selection may be applied in discarding such books as are characterized by the faults here cited, that we may do our share towards

discouraging a taste for facetiousness, flippancy and poor style in literature. For while these modern, sham, soulless fairy tales soon lose themselves in the overwhelming mass of printed matter, in their brief existence they have time to accomplish considerable harm. Far better to encourage re-reading the imperishable tales, than to gratify an insatiable desire for more. Did not we ourselves again and again shed fresh tears over Cinderella's hard fate, or gasp with bated breath while watching with Sister Ann for that distant speck on the horizon? If children are different to-day, it is partly because we are helping to make them so.

ABBY L. SARGENT,

*Medford (Mass.) Public Library.*

#### III. SCIENCE FOR CHILDREN.

IN the selection of books for children's libraries it is necessary to understand the difference between the aims and methods of the old education and the new.

Until recently the schools have centered their work about man, studying his language, literature, methods of reasoning, and the manner in which he has partitioned off the earth into countries. No importance whatever was attached to his physical surroundings, which form so great a factor in his life and by which he is so profoundly affected. In history, the study of dates, battles and leaders was all that was required. In geography, the work was almost exclusively confined to a description of the earth, the location of mountains, rivers, cities, and political divisions. Before the establishment of the national Weather Bureau there was scarcely any public interest manifested in the phenomena of the atmosphere and its relation to various weather elements. Many of us can recall from our own experience the picture of the earth divided into zones, but why such a division was made did not come up for consideration.

What are we now aiming to do for the child? We are looking beyond the mere cultivation of memory; and we desire to increase the child's point of contact with the world, to bring him into closer relationship with the life about him, to broaden his sympathies and to develop the powers of observation and reason. In so far as we are able to accomplish these results, we shall make him

happier by enabling him to understand the great laws that govern the universe. The child is learning that the facts of history are the results of causes, that they are the working out of great principles and that by the comparison of the past with the present he may be able to judge of the future. From a study of the physical features of the earth he learns that slopes determine the course of rivers and that cities are dependent for their growth upon physical environment. The consideration of the weather enables him to understand the state of the atmosphere about him, its effect on climate, the cause of storms, and the different action of solar energy on air, land, and water, which renders possible life upon the earth. Science demands an investigation of the growth and habits of plants and animals, the relationship of one form to another, the function and adaptation of parts, the effect of surroundings, while form and structure are results, not ends.

We want to lead the child from results back to causes. The possession of a vast number of facts, unrelated among themselves, is valueless and even harmful, for the child does not look upon nature as a whole. Nature-study, perhaps more than any other subject, leads the child into sympathy with his environment. He observes carefully and thoughtfully and thus the individual is developed. From personal contact with nature he gains the power of accurate observation, correct thinking and judgment; thus strengthening his moral character. If this is the effect of nature-study upon the development of the child, the question comes to the librarian—What principles shall guide me in the selection of books that the library with which I am connected may be of assistance in accomplishing these results, and meet the demand of modern education?

A book for children should be attractive. The exterior should present a harmony of color and tasteful decoration. The text should be printed with clear type upon good paper and should be well illustrated. Colored plates are preferable, provided the coloring is good, otherwise uncolored illustrations are far more desirable. The text should be clear, simple, and scientifically correct.

The new scientific book differs from the old.

The old style book gave dead results, no sympathy in or interest for life was aroused, no suggestions were given for first-hand observations of nature, consequently the book failed to stimulate a desire for personal investigation that could be verified by the recorded work of others. The new scientific book not only gives results but a detailed account of the methods employed in obtaining those results. The reader is interested in trying the same experiments, gains a sympathy and interest in the wonderful life history of a plant, bird, or insect, develops a tenderness for life and feels that all nature is a sympathetic unit.

Within the last few years the interest that has been aroused throughout the country in "nature-study," has caused a great demand for this class of books. Writers and publishers have hastened to meet the demand and as a result the market has been flooded with books that were made to sell. Too often the writers have not been scientific persons, and as a result the books have been mere compilations, or were not true to facts. They lacked the true spirit of science. Other authors have not separated the element of fiction from that of science, thinking that the child could only be interested in nature by means of a story. The writer of this paper does not believe that science books should be made story books. "Tenants of an old farm," by McCook, is a good illustration of the combination of the science and story element. The author is a naturalist and whatever facts are presented may be accepted as being as nearly correct as it is possible to make them since they represent the results of careful personal observation. The author himself did not believe that the truths of nature were so unattractive that they needed to be woven into a story in order that the book might find its way to the general reader. Then why did he employ this method? He was persuaded by his friends to change the original plan of the book and presented it, after much hesitation, in its present form. The book has thereby lost much of its usefulness.

Another element that many authors have employed to a greater or less extent is personification. That the value of a book is lessened thereby and its power over the reader greatly decreased, is beyond question. There

may be some excuse for a limited amount of personification in the treatment of bees, wasps, or ants, but the majority of forms of plant and animal life does not need the human factor in order to make clear life-relationships. Grant Allen, in his "Story of the plants," has described the use of the stamens and pistils as "how plants marry" and the modes of fertilization as "various marriage customs." Allen Gould, in "Mother Nature's children," speaks of the "snakehead" fish and its young as "Mr. and Mrs. Snakehead and their babies" and of the seed-vessels of plants as "ways the mother plants have of cradling their babies." This method of treating nature's truths does not make the facts any clearer to the child; it only tends to diminish the grandeur of that truth. Some writers have considered it desirable to embody the thought in terms that are already, or are supposed to be, familiar to the child, that he may be able to grasp the truth. The author forces upon the child a double task, since he must first get the thought as it appears and then search for the concealed fact. This process is not liable to be successful. Mrs. Dana, in "Plants and her children," uses the term "sweet stuff" for nectar, "watery-broth" for the cell-sap of plants. The food of plants is spoken of as the "plant's bill of fare," and in expressing the fact that the crude sap which is taken up by the roots needs to be converted into elaborated sap before it may be used as food, she says "When the watery broth is cooked in the sun, the heat of the sun's rays causes the water to pass off through the little leaf mouths. Thus the broth is made fit for plant food." Must not the child possess some scientific knowledge before he will be able to understand the author's meaning? "Plants and her children" is a valuable book, but would not its merits be greatly enhanced if the scientific facts were told in simple language? They certainly have interest enough in themselves to be attractive to the child. Books like Hooker's "Child's book of nature" should be discarded. They represent the old scientific thought. No sympathy or interest in life is aroused, no relationships are suggested, no adaptation to environment is shown, no incentive is given for personal observation. Why should we cling to

the old when a book can be obtained that will more nearly satisfy our needs?

There is often a great difference in the individual merits of books by the same author. Mabel Osgood Wright's "Birdcraft" is valuable, while "Tommy Anne and the three hearts" and "Wabeno" are the reverse. The last two represent a type of book that should not be included in a science library. The fairy and story element so greatly exceeds the scientific as to render the books absolutely valueless, nor are they a success from a literary standpoint. No book in which the author wanders from one subject to another, in such rapid succession that the reader has difficulty in following the thought, or is so vague that an effort must be made to understand the topic treated, can be of much practical value. The greater number of the Appleton's "Home reading books" possess little merit. The selections were not written for children; they lack simplicity, are not attractive and are too technical. The article "The life of plants" in "Plant world" would require two or three readings by an adult in order to understand what the author was discussing. The best books in this series are Weed's "Insect world" and Holden's "Family of the sun" and "Stories of great astronomers." Such books as Fanny Bergen's "Glimpses at the plant world," Carpenter's "Geographies," Kearton's "Our bird friends," and Weed's "Stories of Insect life" represent the style of book that the elementary science of to-day demands. We do not wish to make scientists of the children, but by means of the best books on nature-study we would prepare the way for elementary science. *Nature-study* is not *science*, for science is classified knowledge. So far as possible let the elements of personification and fiction be omitted, do not select books that are too technical or vague, that are not well illustrated, and that are not true to science.

Then our libraries will contain books that will incite the self-activity of the child and arouse the spirit of investigation; books that will stimulate observation and inculcate a spirit of tenderness and love for all life.

## BULLETIN WORK FOR CHILDREN.

BY CHARLOTTE ELIZABETH WALLACE, *Hazelwood Branch, Carnegie Library of Pittsburgh.*

THE primary object of bulletin work is to direct the attention of the children to the books. The bulletin, like a poster, attracts the eye, arouses interest in a subject, and advertises the books treating of it. By means of picture bulletins interest may be awakened in topics before unnoticed; the children are curious to learn more about the pictures displayed, their curiosity is further excited by the short descriptive text, and as a result books relating to the subject are read. Thus, without rousing the children's suspicions, we are able to guide their reading.

The second object is the cultivation of the children's appreciation for pictures. If we can catch the eye by attractive pictures, we may add to the children's store of ideas, and aside from broadening their knowledge, bring them under the beneficent influence of beauty. Pictures of æsthetic value placed in a children's room in which harmony of decoration, furniture, and arrangement have been considered, exert a vitally refining influence. When we realize how painfully lacking in refinement are many of the homes of the children who visit the library, how blinded are their eyes to beauty because of their sordid surroundings, we shall then see how essential it is to enrich their lives by every means of cultivation appropriate to our field of work.

Whatever we may do in bulletin work must accord with the high standard of taste evidenced in all of the fittings of a dignified library. While we are to aim to attract the children by bulletins which are simple and childlike in spirit, we must keep a sharp lookout that in our effort to please them our bulletins do not become tawdry and fussy in style. We are to meet the children on their level and yet educate their taste to a higher standard.

The first practical consideration of bulletin-making is the collection of material. Pictures may be obtained from a variety of sources. Old magazines, book announcements, publishers' catalogues, book covers, book plates, railroad guides, advertising sheets, posters, special prints, etc., form the main sources of

supply. In addition to a stock of good-toned gray mounting-board for regular use, colored mounting-board may be employed as a suitable background for colored prints, or to express the main idea of the bulletin—a delicate shade of green making an effective mount for certain pictures for bulletins on "Spring."

The choice of subject is of supreme importance. We should study the children whom we are trying to benefit, that we may discover their tastes and learn their interests. We may select a subject in line with the course of school study. This serves not only to illustrate a subject in which the children are already interested, but is an incidental means of making known to the teacher and pupils the usefulness of the library in furnishing reading supplementary to the school studies. We may bulletin a subject of transient interest, thus informing the children along this particular line; or, we may choose a topic which by the novelty of its presentation, may arouse interest in an unfamiliar subject, providing we make sure in choosing that we relate the unknown to the known. We always have a chance of illustrating some one of the universal interests of childhood. Spring and autumn exhibits, bulletins on birds, flowers, and animals, certain anniversaries, etc., invariably prove attractive to children. The bulletins should be such as to satisfy a catholicity of taste and cover a wide range in age and understanding. But whatever be one's choice of subject, let it be carefully thought and wrought out, definite in plan and purpose, and worthy the necessary expenditure of time, material, and effort.

It is well to read thoroughly on a subject before attempting to plan a bulletin. The reading of sketchy accounts in children's books is not a sufficient preparation for this work. It is better to turn to more substantial sources that we may penetrate the meaning of the subject for the children, and reflect this in the selection and arrangement of the pictures in the text, and in the talks with the children about the bulletin. We may thus reinforce the message of the bulletin and lead

the children to the best book where the information they are seeking may be found.

The explanatory text of the bulletin should be direct and simple. Accuracy of statement is essential; this is especially important in scientific subjects. Experiment has proved that a concise and simple account will be read, when a longer statement is passed unnoticed.

Poetry may be appropriately introduced to illustrate the thought of the bulletin. We should select the very best poems which will serve the purpose, making sure they are simple and clear enough in meaning to be readily understood by the children. In bulletin work we have an opportunity to acquaint the children with the choicest poetry. In addition to displaying pictures which please the eye, we may also present word-pictures, thus making a double appeal to the mind.

An annotated book list is of great service in connection with the bulletin. This enables the children to gain an idea of the subject matter of the various books, and, if the notes are attractive, induces them to read a book which otherwise might be ignored. In teaching the children the use of lists we are also preparing them for independent work later. The books, if possible, should be placed on a shelf near the bulletin, that they may be conspicuous and easily accessible.

No matter how beautiful the collection of pictures, nor how happy the choice of subject, a bulletin will not be successful unless it is well executed. Technical skill is also necessary in carrying out the idea. Not only should the bulletin direct attention to books but it should nourish æsthetic taste as well. Form is as important as subject. Slipshod mounting, unequal margins, untidy work in general, detract from the appearance of the bulletin, and are most disastrous object lessons to children.

We must collect only material which is worth while and even from this select with the greatest care. Sometimes it may be necessary to make use of weak or faulty prints in reference work, if a subject is sparingly illustrated, but such material should be reserved for this purpose rather than posted on bulletins.

There is danger in exhibiting more than one bulletin at a time — exception being made, of course, for such bulletins as illustrate allied subjects, thus forming an exhibition. The

display of too many pictures on any one bulletin is equally inadvisable. Have we not all of us at times felt oppressed and confused by the seemingly endless array of pictures at a large art exhibit? The mind is overtaxed in the effort to grasp it all. Knowing the patience with which little children study a picture, even dwelling on the smallest detail with delight, it would be better to choose with discrimination, and avoid bewildering the minds of the children, and fatiguing their attention by a large collection of pictures. A miscellany of pictures or bulletins defeats its one purpose — that of making a definite impression which should lead to further investigation of a subject.

The arrangement of the bulletin should make its central thought and object apparent. A bulletin on Lincoln's life if properly arranged could easily tell the story of the experiences between the log-cabin and White House. The pictures should have some logical grouping, whether by succession of events, or according to some natural relationship, as bringing a collection of wild flowers together in the order of their appearance, birds and animals by families, etc.

Concerning the composition of the bulletin, we may borrow the rules of pictorial composition and adapt them to bulletin purposes. According to John C. Van Dyke, "Pictorial composition may be defined as the proportionate arranging and unifying of the different features and objects of a picture. . . . There must be an exercise of judgment on the part of the artist as to fitness and position, as to harmony of relation, proportion, color, light; and there must be a skilful uniting of all the parts into one perfect whole." In a bulletin as in a picture there must be a center of interest. We should strive to effect this by selecting for this purpose a picture which has earned its place, because it best suggests the subject, or because pictorially, either through tone or color, it best adapts itself to the principles of composition. The other pictures should be grouped accordingly, always taking account of the subject and artistic value of each in placing them. The bulletin should be built up architecturally as well, letting the heavy pieces support the light. Such a picture as Rosa Bonheur's "Ploughing" should not surmount Breton's "Song of the lark."

Color has its legitimate place in bulletin work as children are keenly alive to its attractiveness. It is because they are so sensitive and impressionable in this regard that our responsibility is proportionately greater; this alone should make us most discreet and careful in its use. Van Dyke cautions us in the following terms: "Beware of your natural taste, beware of bright pictures for they are generally bad." He tells us "That 'color' does not mean brightness alone; and that a 'colorist' is not one who deals in flaming colors with the recklessness of a crazy-quilt maker, but one who justly regards the relationship, the qualities, and the suitability of his colors one to another. . . ." Harmony strives to associate colors which are congenial to each other; however, it cannot be comprehended in the abstract. We bring to our bulletin work the results of our previous standards of taste, be these high or low. But we may raise our standards by holding ourselves receptive to the influence of art, whether it be decorative, ceramic, textile, or pictorial, and appropriate the lessons which it teaches in blending color into harmony. The love of prime colors is characteristic of primitive man, while the appre-

ciation of the neutral tones is the acquirement of civilization. Intellectual development conforms to the epochs of racial progress. Children love crude and elementary colors. But while we make concession to their taste we should also educate it to an appreciation of the refined in color.

The question of economy often arises in connection with bulletin work. Are bulletins sufficiently useful and effective to pay for the outlay of time and money? In a system of central and branch libraries this is not so serious a problem as the same bulletin may be of service in the various libraries. The tendency toward extravagance would appear in the excessive quantity of bulletins exhibited, rather than in the expensive quality of any one of them. Certainly we should strive to be economical in the sense of planning the material without loss or waste, but "whatever is worth doing at all is worth doing well," and the main question is, are bulletins worth doing at all? The bulletin justifies itself by the results it accomplishes in calling attention to subjects, guiding the reading, circulating books, and increasing the children's observation and enjoyment of pictures.

#### REFERENCE WORK WITH CHILDREN.

BY HARRIET H. STANLEY, *Brookline (Mass.) Public Library.*

PRELIMINARY to preparing this report, a list of 15 questions was sent to a number of libraries in different parts of the United States, from 24 of which replies were received. So far as space would permit, the facts and opinions obtained have been embodied in this paper.

Reference work with grown people consists in supplying material on various topics; we consider it sufficiently well done when the best available matter is furnished with as little cost of time and trouble to the inquirer as is consistent with the service we owe to other patrons of the library. To a certain extent this statement is true also of reference work with children, but I think we are agreed that for them our aim reaches further—reaches to a familiarity with reference tools, to knowing how to hunt down a subject, to being able to use to best advantage the material found.

In a word, we are concerned not so much to supply information as to educate in the use of the library. Seventeen of the 24 libraries reporting judge children to be sent to them primarily, if not wholly, for information. One of the first steps towards improving and developing reference work with children will have been taken when the teacher appreciates the larger purpose, since the point of view must materially affect the character and scope of the work. Another forward step is for the library to have definitely in mind some plan for accomplishing these ends. Whatever the plan, it will in likelihood have to be modified to accord with the teacher's judgment and needs, but a definite proposal ought at least to give impetus to the undertaking.

Six libraries state that a considerable part of the inquiries they receive from children are apparently prompted by their individual inter-

ests, and not suggested by the teacher. These inquiries relate chiefly to sports, mechanical occupations and pets. This paper is confined to the discussion of reference work connected with the schools.

#### *Library facilities.*

In selecting reference books for the purpose, certain familiar ones come at once to our minds. Beyond those there have been suggested: Chase and Clow's "Stories of industry," "Information readers," Brown's "Manual of commerce," Boyd's "Triumphs and wonders of the 19th century," Patton's "Resources of the United States," Geographical readers, *Youth's Companion* geographical series, Spofford's "Library of historic characters," Larned's "History for ready reference," Ellis's "Youth's dictionary of mythology," Macomber's "Our authors and great inventors," Baldwin's "Fifty famous stories," "Riverside natural history," Wright's "Seaside and wayside," bound volumes of the *Great Round World*, and text-books on various subjects.

A dictionary catalog will be useful in teaching the child to look up subjects for himself. If a separate catalog is provided for children, the question arises whether it is wiser to follow closely the A. L. A. headings or to modify them where they differ from topics commonly asked for by children or used as headings in text-books. This question suggests also the advisability of a modified classification for a children's library.

Last and not least, children should have room and service adapted to their needs, so that they may not constantly have to be put aside in deference to the rightful demands of adult readers.

So far as the writer knows, the Public Library of Boston was the first library to open a reference room expressly for children, well equipped and separate from the children's reading room or circulating department, and from the general reference department for adults.

#### *Choice of topics.*

Many libraries report that they find the topics habitually well chosen. The gist of the criticisms is as follows:

(a) The teacher should make clear to the

child just what he is to look up and how to ask for it. An eastern library furnishes this incident:

"I want a book about flowers."

"Do you want a special flower?"

"Yes, I want the rose."

A book on the cultivation of roses is handed her. Her companion, looking over, exclaims, "Why, she wants the *Wars of the roses!*" The same librarian was invited to provide something on *American privileges*; whether social, religious, political, or otherwise, the child did not know.

(b) The teacher should be reasonably sure that there is on the topic something in print, in usable shape, that can be gotten at with a reasonable amount of labor.

(c) The subject when found should be within the child's comprehension. The topic *Grasses* is manifestly unfit for children, since grasses are difficult to study, and the description of them in encyclopedias and botanies is too technical. An eight-year-old had to investigate the *Abyssinian war*. Pupils under 16 were assigned the topic *Syncretism in the later pagan movement*. A western librarian was asked by some girls for Kipling's "Many inventions" and "Day's work." Both were out. "Well, what other books of Kipling's on *agriculture* have you?" "Why, Kipling hasn't written any books on *agriculture*; he writes stories and poems." "But we have to debate on whether agriculture or manufacturing has done more for the welfare of the country, and we want a book on both sides."

(d) The topic should be definite and not too broad, and should be subdivided when necessary. The briefest comprehensive description of *Rome* is probably that in Champ-*lin's* "Persons and places," where the six columns, already much condensed, would take more than an hour to copy. A young girl came to find out about Italian painters. None of the several encyclopedias treated them collectively under either *Italy* or *Art*. Mrs. Bolton's book of 10 artists includes four Italians, but it takes some time and skill to discover them, as the fact of their nationality does not introduce the narrative. How should a sixth grade pupil make a selection from the 60 painters in Mrs. Jameson's book? Three names were furnished by the librarian, and the child made notes from their biog-

raphies. The next day she returned and said she hadn't enough artists.

(e) The question should preferably be of such nature that the child can be helped to find it rather than be obliged to wait while the librarian does the work. One inquiry was, "What eastern plant is sometimes sold for its weight in gold?" This is not in the book of "Curious questions."

(f) The topic should be worth spending time upon. The *genealogy of Ellen Douglas* will hardly linger long in the average memory.

*Use made of the material by the child.*

Suppose the topic to be good and suitable material to have been found; for older children there are two good ways of using it—one to read through and make notes on the substance, the other to copy in selection. Children need practice in doing both. The first method suits broad description and narration, the second detailed description. There seems to be a prevailing tendency to copy simply, without sufficient neglect of minor points, a process which should be left to the youngest children, since it furnishes little mental training, uses a great deal of time, keeps the writer needlessly indoors, and fosters habits of inattention, because it is easy to copy with one's mind elsewhere. The necessity for using judgment after the article has been found is illustrated by the case of some children who came for the life of Homer. Champlin, in about a column, mentions the limits within which the conjectures as to the time of Homer's birth lie, the places which claim to be his birthplace, and tells of the tradition of the blind harper. The children, provided with the book, plunged at once into copying until persuaded just to read the column through. "When you finish reading," I said, "come to me and tell me what it says." They came and recounted the items, and only after questioning did they at all grasp the gist of the matter, that nothing is known about Homer. Even then their sense of responsibility to produce something tangible was so great that they would copy the details, and from the children who came next day I judged that the teacher had required some facts as to time and place and tradition. While it is true that we learn by doing and it is well that children should rely upon them-

selves, it is evident that young pupils need some direction. Even when provided with sub-topics, they often need help in selecting and fitting together the appropriate facts, since no article exactly suits their needs. About half of the reporting librarians are of the opinion that it is the teacher's business to instruct pupils in the use of books; they consider the library to have done its share when the child has been helped to find the material. The other half believe such direction as is suggested above to be rightly within the librarian's province; several, however, who express a willingness to give such help, add that under their present library conditions it is impracticable. We can easily see that time would not permit nor would it be otherwise feasible for the teacher to examine every collection of notes made at the library, but there ought to be some systematic work where the topics are thoughtfully chosen, the librarian informed of them in advance, and the notes criticised. A moderate amount of reference work so conducted would be of greater benefit than a large quantity of the random sort which we now commonly have. Five librarians state that they are usually given the topics beforehand. Several others are provided with courses of study or attend grade meetings in which the course is discussed.

*Systematic instruction in the use of the library.*

While a general effort is being made to instruct children individually, only a few libraries report any systematic lessons. In Providence each visiting class is given a short description of books of reference. In Hartford an attempt at instruction was made following the vacation book talks. In Springfield, Mass., last year the senior class of the literature department was given a lesson on the use of the library, followed by two practice questions on the card catalog. In one of the Cleveland branches talks are given to both teachers and pupils. At the Central High School of Detroit the school librarian has for the past three years met the new pupils for 40 minutes' instruction, and test questions are given. A detailed account of similar work done in other high school libraries is to be found in the proceedings of the Chautauqua conference. Cambridge has given a lecture to a class or classes of the Latin school. In the current library report of Cedar Rapids,

Ia., is outlined in detail a course of 12 lessons on bookmaking, the card catalog, and reference books. The librarian of Michigan City, Ind., writes: "Each grade of the schools, from the fifth to the eighth, has the use of our class room for an afternoon session each month. Each child is assigned a topic on which to write a short composition or give a brief oral report. When a pupil has found all he can from one source, books are exchanged, and thus each child comes into contact with several books. At these monthly library afternoons I give short talks to the pupils on the use of the library, the reference books, and the card catalog, accompanied by practical object lessons and tests." At Brookline our plan is to have each class of the eighth and ninth grades come once a year to our school reference room at the library. The teacher accompanies them, and they come in school hours. The school reference librarian gives the lesson. For the eighth grade we consider the make-up of the book—the title-page in detail, the importance of noting the author, the significance of place and date and copyright, the origin of the dedication, the use of contents and index. This is followed by a description of bookmaking, folding, sewing and binding, illustrated by books pulled to pieces for the purpose. The lesson closes with remarks on the care of books. The ninth grade lesson is on reference books, and is conducted largely by means of questioning. A set of test questions at the end emphasizes the description of the books. In these lessons the pupils have shown an unexpected degree of interest and responsiveness. The course brought about 400 children to the library, a few of whom had never been there before. These were escorted about a little, and shown the catalog, charging desk, bulletins, new book shelves, etc. Every one not already holding a card was given an opportunity to sign a registration slip. The following year the eighth grade, having become the ninth, has the second lesson. With these lessons the attitude of the children towards the library has visibly improved, and we are confident that their idea of its use has been enlarged.

#### *Bibliographical work.*

The inquiry was made of the reporting libraries whether any bibliographical work was

being done by the high school. The question was not well put, and was sometimes misunderstood. Almost no such work was reported. At Evanston, Ill., one high school teacher has taught her class to prepare bibliographies, the librarian assisting. At Brookline we have ambitions, not yet realized, of getting each high school class to prepare one bibliography a year (we begin modestly) on some subject along their lines of study. Last May the principals of two grammar schools offered to try their ninth grades on a simple bibliography. The school reference librarian selected some 60 topics of English history—Bretwalda, Sir Isaac Newton, East India Company, the Great Commoner, etc. Each bibliography was to include every reference by author, title and page to be found in the books of the school reference collection of the public library. The pupils displayed no little zest and enjoyment in the undertaking, and some creditable lists were made. Observation of the work confirmed my belief in its great practical value. Pupils became more keen and more thorough than in the usual getting of material from one or two references on a subject. Such training will smooth the way and save the time of those students who are to make use of a college library, and is even more to be desired for those others whose formal education ends with the high or grammar schools.

The practice of sending collections of books from the public library to the schools is becoming general. When these collections are along the lines of subjects studied, it would seem as if the reference use of the library by pupils might be somewhat diminished thereby. No doubt it is a convenience to both teacher and pupils to have books at hand to which to refer. The possession of an independent school library also tends to keep the reference work in the school. But in neither case ought the reference use of the public library or its branches to be wholly or materially overlooked, since it is on that that pupils must depend in after years, and therefore to that they must now be directed. We recognize that the people of modest means need the library. As for the very well-to-do, the library needs them. Other things being equal, the pupil who has learned to know and to know how to use his public library ought

later so to appreciate its needs and so to recognize the benefits it bestows that he will be concerned to have it generously supported and wisely administered.

Even we librarians claim for our public collections no such fine service as is rendered by those private treasures that stand on a person's own shelves, round which "our pastime and our happiness will grow." Books for casual entertainment are more and more easily come by. But so far as our imagination reaches, what private library will for most readers supplant a public collection of books for purposes of study and reference?

Is it not then fitting that we spend time and effort to educate young people to the use of the public library? Do not the methods for realizing this end seem to be as deserving of systematic study as the details of classification and of cataloging? We have learned that to bring school authorities to our assistance our faith must be sufficient to convince and our patience must be tempered by a kindly appreciation of the large demands already made upon the schools. Have we not yet to learn by just what lessons and what practice work the reference use of the public library can best be taught to children?

## VITALIZING THE RELATION BETWEEN THE LIBRARY AND THE SCHOOL.

### I. THE SCHOOL.

BY MAY L. PRENTICE, *City Normal School, Cleveland, O.*

YEARS ago a little girl ran down a country road to meet the light wagon returning from town with the purpose of climbing into the back and so getting a ride. Without turning, the wise elder brother spoke from the driver's seat: "I wouldn't undertake that if I were you." And over his shoulder a breathless but dignified voice answered, "But I have already undertaken it!"

A similar answer might reasonably be expected from the library to any well-meant but tardy advice from the school-side in regard to the vitalization of the relation between the school and the library. It has already been accomplished, and comparatively small thanks are due to the school for its doing.

Graded lists of books, special lists of materials for occasions, library league work, the establishment of school branch libraries, all these have been the work of the library in a much larger measure than of the school.

However, there are many teachers who share the library's buoyant faith in the blessing which books bring. These have been first to appreciate all which the library has offered them. They have accepted all that has been offered them and asked for more. They have circulated library books through their own schools, sometimes at considerable cost and trouble to themselves, and for years have done all in their power to make their pupils wise and discriminating patrons of the libra-

ry. That the children of their care and love might have life and have it more abundantly—that is why they have done these things.

These teachers are comparatively few.

That it is any function of the school to give joy to its children is an idea of slow growth. A child's school-time is usually thought of as preparation for living and not as living itself. Hence the rebuke of the teacher to the child who interrupts the "nature-lesson" to blow the thistle-down which waves over his head, or to watch the bee which booms against the window-pane, or the hawk which floats lazily against the blue sky. Life is such a wild, wilful, irregular thing. Quietude, prudent inaction, is so much safer.

So with books. It is the old search for life, life, more abundant life—for knowledge of it, for entrance into it—which sends the child to the fairy-story, the boy to the tale of adventure, the young girl to the story of romance, the older man and woman to the realistic novel. And it is the instinctive feeling of the teacher and parent that life is a dangerous force and difficult of control which has made school and home look askance upon reading which the child finds too enjoyable.

There is another feeling or belief which lies back of our doubt of work or study or reading which is too enjoyable. It is in regard to the part which love of ease plays in human enjoyment. Love of ease is strong in human

nature, and the man who tries to get his knowledge of human life mainly through the novel has indeed sought a short-cut to his end which will bring him but a short distance on his way. This is not the time nor place for the discussion of the value of fiction, but undoubtedly we are inclined to believe that man's indolence is a strong factor in man's enjoyment of certain lines of reading, and indolence is a bad thing. Therefore, we distrust the value of such reading. Whether we like or dislike it, however, we are obliged to admit that fiction is a permanent form of literature, that our children will read it, and that the question for us to settle is shall it be good or poor.

What, then, has the teacher to do? Two things: To be the atmosphere from which the child breathes in love for and delight in good books. This is first. All things in the way of learning are possible after this. Second, To be the pupil's guide and director in what may be called his "laboratory practice" with books.

The Autocrat, mellowest of men of ideas, once suggested that every college and university should have a professorship of books. The Autocrat was an ingrained aristocrat, although one most mild and kind. The true democratic idea is that a professorship of books should be established in every school-room.

But how shall the blind lead the blind? How shall the teacher who herself never has learned to know, to enjoy, and to choose good books guide others to do so?

The library is a storehouse of great thought, an unailing source of healthful recreation, but also the library is the mine in which the practical man and woman, the lawyer, the machinist, the scientist, the teacher, must dig deep for information, if he is to keep near the head in his own line of work.

So far, as I have said before, nearly all organized effort to teach the teachers along these lines has come from the library. Certain normal school and college librarians have done much, but to a large extent the work has been on sufferance. Odds and ends of the students' time and attention have been given to it.

The desirable thing is that the study of juvenile literature and the use of the library shall take equal rank with other studies in the pre-

paration of prospective teachers; that the normal school, the pedagogical department of the college and university, the teachers' summer-school and institute, shall recognize this subject in their curricula.

The practical side of library use—its use for information—is easily seen by the public, and schools for teachers can quite readily be induced to make room for the course of study suggested.

In the Cleveland City Normal Training School an attempt to carry out such a course of study has been made. A term's work is given in juvenile literature and the use of the library. Moreover, this subject is placed upon an equality with the philosophy of teaching, history of education and psychology.

As yet the work is not thoroughly organized. We feel, however, that some things of value have been already accomplished.

In a twelve-weeks' term a class of 116 prospective teachers (the junior class of the school) have taken notes on a series of talks on reference books. They have learned something of the comparative value of various standard encyclopædias, gazetteers, dictionaries and indexes, and they have been sent to the public library a half-day at a time to do work which required the use of these.

For instance, a study of the life of Robert Louis Stevenson was made for the purpose of giving a talk on the subject to fifth-grade pupils. The students were required to look up all the available material in the library, looking not only in the printed and card catalogs for individual and collective biography, but in the various indexes—Poole's, the Annual, the Cumulative—for magazine articles. They were required to select the four or five articles found most valuable and to estimate their comparative value for the purpose in hand, making definite statements of the points of value. They were required to make careful and well-worded notes from the best material available, either books or periodicals, always giving the source, and to read these notes in class subject to the criticism of their instructor and school mates. And, lastly, they were required to write the story of Stevenson's life as they would tell it to the children.

Careful instruction in the use of the printed and card catalogs and of indexes had pre-

ceded this assignment. We were fortunate in possessing quite a large number of issues of the Cumulative index unbound. It was thus possible to place one of these in the hands of each student during instruction on the subject. This was a considerable aid.

There was too much work with the less-used ready-reference books. Next year the number will be largely reduced.

A study of fairy stories was made. An attempt was made to find a philosophical basis for the love of children for fairy stories. An attempt was made to discriminate between the good and the bad fairy story. Felix Adler's "Moral instruction of children" was helpful here, but the study of the fairy stories at first hand is still more helpful.

The following books were read by the whole class:

(1) Alcott's "Little women." Lessons were given on reading it with the children.

(2) Mara L. Pratt's "History stories," vol. 3.

(3) Eggleston's "First lessons in American history." The Pratt and Eggleston books were read in succession for the purpose of contrasting them. A yet better contrast would have been Baldwin's "Fifty famous stories."

(4) Frau Spyri's "Heidi." Some of our girls read this story in the original German but most in the translation published by Ginn & Co. It is a charming story of a breezy little maiden whose home was in the Swiss Alps, and one of the rather scarce desirable books for the fourth grade.

(5) Mrs. Burnett's "Sara Crewe." This was read as a type of the "child novel" and for the sake of a study of the charms, dangers and benefits of this class of books.

(6) Howard Pyle's "Men of iron" was read as a study of the worthy historical story.

The following outline was given the students as an aid in judging the books read:

*Outline to aid in estimating a juvenile book.*

1. Written when? By whom? For children or adults? [e.g., "Robinson Crusoe" and "Gulliver's travels" were written for adults.] If for children, of what age? (Consider both manner and matter.)

2. Essential purpose of the book: Recreative? Instructive? Moral? Is the recreation afforded wholesome? The in-

struction reliable? The moral lessons sound?

3. Style: Is it clear? Correct? Beautiful? Suitable?

4. If a story, What is the strongest character in it? The most effective passage? Give reasons for thinking so. Is it true to life?

5. Is the book a creator of ideals? How so? Along what lines?

An effort was made that there should be no formal adherence to this outline. Papers on the books read were required in which the outline could not be used. For example, after reading "Men of iron" the students were required to write, in class, a paper on "The education of a boy in chivalry" based on the story of Myles Falworth.

The oral discussions of these books were often very animated.

Each student was also required to hand in an annotated list of at least 20 books actually read by the student and judged by her suitable for the grade in which she is to train. An oral discussion of these lists took place, and the student in many cases was required to justify her judgment, and to answer questions in regard to the books read.

Some of these lists were very cheering. One excellent list for the sixth grade, with very original annotations contained 60 instead of 20 books actually read, and 30 more which the student had listed to be read at her convenience.

Not all of the lists were of that character. A list for the third grade recommended "Gulliver's travels, by Gulliver" as a valuable aid in geography.

The instance is eloquent of the value of a course of study which results in the illumination or the elimination of such a student.

Much remains to be worked out, but a beginning has been made.

Ours is one instance of the awakening of the school to the value of the privileges which the library gives it. And as the reward of doing work well is invariably to have more work to do, from the school fully awakened the library shall receive its exceeding great reward in more work to be done.

Except for the hearty co-operation of the Cleveland Public Library the little experiment here outlined could not have been undertaken.

## VITALIZING THE RELATION BETWEEN THE LIBRARY AND THE SCHOOL. II. THE LIBRARY.

BY IRENE WARREN, *Librarian University of Chicago School of Education.*

THE establishment of the Library Section of the National Educational Association was proof that the thoughtful librarians and school men of this country believed that an effective co-operation between public schools and public libraries was possible. In many states library sections of the state teachers' associations have been formed. Many public libraries have for some time past systematically sent both books and lists of books to the public schools.

No sooner had this been done than librarians and teachers both saw that they had made but a beginning, and the next steps, and, indeed, the present needs, are to bring about a more intelligent use of both books and libraries and to place larger and better arranged collections within easy access of the pupils. Rarely do the teachers find the libraries adequate to the reference work or the collateral reading they wish the pupils to do. The funds are seldom sufficient to keep the libraries up to date. There is no one person in the school who knows how to organize and administer the library, and therefore whatever work the teachers do in this line is at a greater expense of both time, energy and material than it would be were it done by one having had a library training. The school buildings are frequently closed to the students shortly after the school session, usually by five o'clock, and always on holidays and during vacations. Most of the pupils' reading and research must therefore be done in the one or two books which he carries home with him. The Buffalo Public Library made another step in organization when it offered to take the collections of books from any of the public schools in the city and in return mend, rebind, catalog, classify them, furnish such schools as agreed to this arrangement with the books they needed, either from their own collections or from that of the public library, and appoint two attendants to look after the school work.

The public school began with the one cen-

tral school in the community, but it soon found that it must establish branches if it reached all of the children of the city. Today there is no town of any considerable size but has its central school with a high school usually, and its branches on the north, east, south and west sides. The public library, following the public schools, has found that it cannot reach the people of the community unless it delivers books to the various parts of the town, and moreover establishes branch reading rooms where at least reference books may be consulted and magazines read.

As in the history of the schools, so in the history of the libraries, provision was first made for the mature student. Educators have been slow to see that they should begin with the child before he has established habits of thought and action. Not until the public library is considered a vital factor in the educational scheme of a city can it hope to secure its best results. nor is this possible when the central library and its few branches are removed, as at present, from the public schools. The libraries and the schools should be housed in close proximity to do the most effective work.

It is with keen interest that the experiment in New York City is being watched. It certainly seems as if the most economical arrangement would be to have the branch of the public library so placed in a school building that the students would have free access to it, and the public also, not only during school hours but public library hours. It seems the logical duty of the board of education to furnish the few necessary reference books that are in continual demand in every school room and also the sets of books which are used for supplementary reading. It does, on the other hand, seem that the public library can furnish a larger general collection, in better editions and keep them in better condition for less money and with better results than can the public schools.

The already crowded curriculum in most of our public schools made many an educator hesitate when a course in library economy was suggested. One can indeed see a time not far distant, it is hoped, when such a course will not be thought necessary. Such a time will be when instructors have awakened to a much greater appreciation of the value and use of bibliography and the need of training students in this line. Along with this will develop a desire in the student to keep his own references and material so arranged that he will be able to use them easily. There will still be considerable of a general bibliographical character, hand-books, etc., which would be of value in all subjects and yet perhaps be overlooked by the specialists, that could be called to the students' attention through such a pamphlet as was recently compiled by Mr. Andrew Keogh, of Yale University Library, under the title, "Some general bibliographical works of value to the students of English."

There is a phase of library economy that every teacher should know, and which it seems must always have its proper place in the curriculum of the normal school. That is the knowledge of how to obtain books. Every teacher should know what the laws of his state are regarding the establishment and maintenance of the public library and the public school library, and how these laws compare with those of other states. He should know what aid he can gain through the travelling library system, should he be in a village or country district, and the possible co-operation between the public library and the public schools should he be assigned to a city. Just as the public schools are finding that they must adapt their curriculum to the needs of the children of a certain district or class, so the public library has the same lesson to learn. The Carnegie Public Library of Pittsburgh has been one of the first to recognize this in the establishment of home libraries. It has thus reached a class of children that could be reached in no other way, and why should not the public library as well as the public school aim to reach these less fortunate children?

The subject of children's literature should be a serious one with every teacher of children. The best writers for children, best

illustrators, and best editions should be part of the normal school student's knowledge when he completes his course and goes out to teach. It is a great problem with him now how he shall keep this information up to date, when there are hundreds of books coming out every year and his school-room duties absorb so much of his time. Here is the librarian's opportunity to be of great aid to the public school teacher by issuing lists of the best children's books on various subjects, exhibiting them in the library from time to time, and to the schools for trial, as so many libraries are now doing. In the country districts the library commissions must supply this information through annotated lists.

It has been shown in a number of schools that children love to make books, and that the making of books quite successfully lends itself to the constructive work as carried on in the schools of to-day. The materials for this work are not so costly as to make it impossible for the average school. Every child at the completion of the graded schools should know the value of a title-page, the use of the preface and introductory notes, the difference between the table of contents and the index, the best books in the several subjects which he has studied, and where and how he can obtain more books on these subjects later, should he wish them. It would doubtless be a great surprise to one who has not tried the experiment to ask the pupils in our graded and high schools even, for such simple information as the author, title and date of the text-books they are using daily.

If the suggestions in this paper be accepted, and most of them have already been successfully tried, it will be seen at once how great is the importance of having trained librarians in our normal schools and institutions of higher learning. The time has now come in a number of cities which we hope is prophetic of the future, when the public library stands equally important as an educational institution with the public school, each supplementing the other in work and still distinct in function and administration. It is therefore necessary that our teachers should be trained to use libraries, and that our librarians should be acquainted with the great educational movements of the day.

## OPENING A CHILDREN'S ROOM.

BY CLARA WHITEHILL HUNT, *Newark (N. J.) Free Public Library.*

IN writing this paper on the opening of a children's room, I am presupposing the following conditions: That in a library whose work with the children has been confined to the general delivery desk, and the divided attention of clerks whose time an adult public would monopolize, there is to be set aside a commodious apartment to be known as the Children's Room; that, considering this work of enough importance to demand such a department, the trustees are prepared to support it by a reasonable outlay for new books, necessary and convenient furnishings, and especially by placing in its charge one who, by natural fitness and special training they believe to be so thoroughly capable of supervising the work, that she is to be given a free hand in deciding both how the room is to be made ready for opening, and how managed after it is opened. This being the case, I imagine the children's librarian, with opening day a few weeks or months ahead, planning her campaign with such wise foresight and attention to the smallest detail that, in the rush of the first weeks, there may be the least possible wear and tear on nerves and temper from petty inconveniences which assume gigantic proportions when one is hurried and tired, and the smallest amount of undoing and beginning over again as time goes on.

It is difficult to be clear in speaking of furnishings without something more than verbal description for illustrating mistakes and excellences, but so much power can be lost by not having the parts of the machine properly fitted and well oiled that how to furnish the children's room becomes one of the most important topics under this subject.

To begin with, the children's librarian must cultivate, if she does not already possess, the architect's faculty of seeing a completed structure in a flat piece of paper marked off by lines labelled 20 ft., 50 ft., etc. If 20 ft. does not mean anything to her she would do well to take a tape measure to an empty lot and

measure off the exact dimensions of her room to be, until she can see its floor space clearly. She should live in her room before its existence, locating every door and window, the height of the windows from the floor, every corner and cupboard, the relation of her room to the other departments of the library. In proceeding to furnish the room she will learn what to adopt and what to avoid by visiting other children's rooms and asking if the tables and chairs are the correct height, if the exit is satisfactorily guarded, what working space is necessary for a certain circulation, whether the electric light fixtures are easily broken, and many other things. If she cannot make such visits, her knowledge of children and a study of conditions in her own library will answer.

Limited to a small space the children's room is nevertheless a circulating department, a reading room, a reference room, perhaps a repair room, and a cataloging department all in one; and if the children's librarian has not had actual work in each of these departments of her library, she should serve an apprenticeship at the receiving and charging desks, the registration desk, the slip rack, not only for the sake of knowing the routine of each department, but for studying improvements in planning her furnishings. The registration clerk will tell her that she has not enough elbow room, that the application drawers are too narrow or too heavy; the attendants at the charging desk find every present arrangement so satisfactory that they advise exact reproduction. Armed with pad and tape measure the children's librarian notes all these points.

The problem how with a minimum of help to "run" all departments, to see all parts of the room, to keep your eye on the entrance so as to nip in the bud any tendency to boisterousness as the children come in, and to watch the exit so that no book goes out uncharged, how to keep all unfinished work out

of the children's reach but to give them perfectly free access to the books, in short, how to arrange your working space so that one person on a moderately busy day can attend to all these things, may be answered, I think, in this way. All wall space will sooner or later be needed for books. Taking an oblong floor space (dimensions proportionate to size of room and circulation) and surrounding this by a counter 30 inches high and two feet wide, is a simple way of accomplishing these things. The counter opposite the entrance is the receiving and charging desk; at another place it is the registration desk; books after "slipping" are piled in another part ready for return to shelves; books waiting to be marked occupy a fourth section; the catalog case, notices to children, call-slip holders, etc., stand on the counter. The space under the counter is available for supply cupboards and drawers. The height of the counter is such that a grown person sitting in an ordinary chair works comfortably behind it, but it is so low that no small child feels frowningly walled out in standing on the other side. Thus all the work of the room is concentrated and supervision is easy. A few details are worth noticing. First, don't let the carpenter give you drawers instead of cupboards. Drawers are wasteful of room for packing supplies, and of time in hunting for them. Next, have the cupboard doors slide, not swing, open, for economy of your working floor space. Underneath registration and charging desks leave space empty for your feet. Just under counter near the registration desk have a row of drawers, sliding easily but fastened so they cannot fall out, made of the exact size to hold your application blanks and cards, with guide cards. A work table within the counter will be necessary.

In addition to this working space, every large children's room should have a locked closet, or better still, a work room opening from it. In busy times things *will* accumulate which must be kept out of reach, and it would not be sensible to take valuable space out of the children's room to hold such accumulations until you have time to attend to them.

The height of the children's chairs and

tables seems to have reached a standard in children's rooms—tables 22 and 28 inches high, with chairs 14 and 16 inches to go with them. I think it best to have very few tables of the smaller size, for tall boys take the strangest delight in crouching over them, snarling their long legs around the short table legs and trying, apparently, to get a permanent twist to their shoulders. Small children do not stay long, and it is less harmful, if necessary, for them to sit in a chair a little too high than to compel large children to spend a holiday afternoon with bodies contorted to fit a small chair and table.

By all means have the electric light *fixed* in the center of the table so that each child gets an equal share of light, and have the connections so made that jarring the table and the movements of restless feet will not put the fixtures out of order. Be very careful not to have the shade so high that the glare of the lamp instead of the restful green shade is opposite the child's eyes.

When you see a chair that you like, find out before purchasing whether it is very easily tipped over. You will know why, if you are not wise, on some rainy day, when the room is full of readers and the reports of chairs suddenly knocked over sound like a fusillade of cannon balls.

Leaving this hasty and most unsatisfactory discussion on getting the *place* ready for opening, I would say a word about getting the *books* ready—not about buying a large quantity of new, and putting the old into the best possible condition of repair and cleanliness, for that will naturally be done. But from experience I know that the moment is golden for weeding out, never to return, authors you think objectionable.

Suppose a girl reads nothing but the Elsie books. Very likely one reason is that she knows little about any other kind. In a printed catalog with a scattering "j" between many titles of adult books it is easier to make lists of numbers from the long sets of prolific writers, and those excellent authors who have produced only a few books for children are oftenest overlooked. Suppose in the process of moving the Elsie books are left behind. The little girl comes into the beau-

tiful new children's room. She sees the shining new furniture, the pictures, the comfortable tables and chairs and book cases so planned that any child can reach any book. She finds that there is perfect freedom for every child in this room—that no stern Olympian comes and says, "Don't do this," and "You can't have that," and "Those books aren't for you," but that among all these hundreds of fresh new covers she may take her pick, may sit anywhere, or stand or kneel as she chooses. Do you imagine that, as these unaccustomed delights sink into her mind, any child is going off in a huff when she finds one author is lacking, if the children's librarian uses any tact in introducing her to others adapted to her tastes? I have been asked for Alger and Optic and Elsie, of course, though much less often than I anticipated, but I am perfectly certain that I have never lost a "customer" because I did not display these wares. One little girl exclaimed in doleful tones, "Oh, haven't you the Elsie books? Oh, I'm terribly disappointed! I think those are *grand* books!" But in spite of this tragic appeal her curiosity and interest proved stronger than her disappointment, and I have the satisfaction of seeing a more wholesome taste develop in a child who must have been on the high road to softening of the brain and moral perversion from association with the insufferable Elsie. If you once put these books on the open shelves, however, and later attempted the weeding out process, a howl would arise which would not be silenced without consequences which I, for one, would not like to face.

Furniture and books are comparatively simple matters to make ready, but to prepare your assistant or assistants for opening day and the time that follows is harder. The external preparation for the rush of the first weeks consists in drill in the routine to be observed. Assigning a place and certain duties to each person, foreseeing as far as possible all questions that may arise and making sure that each attendant understands what to do in any case, having a place for everything, and everything in its place, and every person knowing what that place is, so that there will be no frantic search for an

extra set of daters when a long line of people stands waiting—this also requires only foresight and firmness. But so deeply to imbue your chief assistant with your spirit and principles of management that she will not simply obey your directions, but be inwardly guided by your desires, and there may be no break in the steady march to a definite end—this demands that rare species of assistant who is born, not made, for the position, and a leader who possesses strength, tact, contagious enthusiasm, a likeable personality, and other qualities difficult to attain.

This brings us to the consideration of what the guiding principles of the new department are to be—a question which must be pondered and settled by the children's librarian before making the external preparations. If the senior members of the American Library Association, the librarians-in-chief, would consider the children's room of enough importance to give us their ideas of what it should stand for, what its scope should be, the result might be more uniformity of thought among members of the library profession in this regard, and a more sensible attitude toward the children's room in the library. Between those who, on the one hand, take themselves so very seriously, pondering with anxious care what probable effect on the child's future career as a reader the selection of a blue or a green mat for mounting the picture bulletin would have, and those who look upon the children's room merely as an interesting plaything, driving the big boys away in disgust by encouraging visitors who exclaim, "Oh, what cunning little chairs and tables! Why, you have a regular kindergarten here, haven't you?"—from either point of view, the discussions on children's rooms in libraries seem almost to lose sight of the very word library and all it carries with it.

The children's room is only one room in a great dignified library. As the newspaper room, the catalog room, and all the rest are fitted up with furnishings suited to their peculiar needs, so the children's room is furnished with tables and chairs and books suited to its constituents. Apart from this, all its management and spirit should corre-

spond as closely as possible to that of the other departments. The same dignity, the same freedom, the same courteous attention to every want without fussy attentions which by grown people would be called intrusiveness should prevail. Make the selection of books what it should be, provide guides and catalogs, perfectly clear but not patronizingly written down, show the children that you are always willing to respond in every way to their questions, and then — let them alone!

Some one has asked me to speak on the question of discipline. After the first two or three weeks, if one begins properly, there will be no such question. Allowing something for the noise of small feet which have not learned to control themselves as they will later on, and expecting more "talking over" an interesting "find" than is common with adults, one should aim for library order. Teach the children what a library reading room means. If in the first days there is a disposition on the part of any boy to be rough or unruly, or if a group of girls make a visiting-and-gum-chewing rendezvous of your tables, don't waste any time in Sunday-school methods of discipline, trying to keep a hold on the child at any cost to the library. A sentence in a report of Pratt Institute children's room is worth adopting as a guiding principle. "The work of the children's room should be educative, not reformatory." Give one decided warning and then if a child does not behave, send him out at once. Do not be afraid of seeming stern at first. The fascinations of the room are such that a child who has been turned away for disobedience comes back a subdued and chastened young person and your best friend forever after; then with your aim and your firmness early settled, you will have no more thought of discipline than the reference librarian with his tables full of studious adults. After the first a little care about the way a child enters the room will be all that is necessary. Your courteous man-

ner, low tones, a little reminder about caps and clean hands while discharging his book, will give him the cue as to what is expected, and he will have a pride in living up to what is expected of him as a gentleman, not demanded of him as a child under authority.

Many other points will engage the thought of the children's librarian, for example, what shall be the attitude of the children's room toward the other departments — whether it is to encourage the children to make use of the adults' reference room, to take out cards in the main delivery department, and get into the way of reading standard works from suggestions of the children's librarian; or whether the line of separation is to be rigid and she will be jealous of their "graduating" from her care. How to prepare the public, especially the school-teaching public, for the opening, so as to secure their hearty co-operation from the beginning is worth constant effort. The question of blanks and forms for the children's room is a minor matter which is after all not a small thing. To make as few changes as possible in the forms already in use, so that any assistant from the main delivery room can in emergencies quickly take up the clerical work of the children's room without needing to learn a new routine may save much confusion should the children's staff all happen to be stricken with grippe at the same time!

Beginning early to plan, profiting by other people's mistakes, getting the routine of each department at one's finger tips, foreseeing every probable obstacle and removing each in imagination, beforehand, proceeding with calmness and common sense, thus the new machinery will move as smoothly during opening weeks as if it had been running for years, and, as "well begun is half done," every thought given to preparation while the room exists only on paper will have a far-reaching effect on the permanent influences of the children's room.

REPORT ON GIFTS AND BEQUESTS TO AMERICAN LIBRARIES; 1900-1901.

BY GEORGE WATSON COLE.

THE period covered by this report is from June 1, 1900, to July 1, 1901, and includes all gifts and bequests of \$500 or more, as well as all gifts of 250 volumes and over, given by any single individual. A few gifts have been included which fall below these figures where the importance or value of the gift seemed to require mention. This report has been increased by the addition of over 50 gifts, information of which was received too late to be inserted before its presentation to the Waukesha conference. A few others, which have been announced since July 1, have also been inserted.

Much of the information here given has been obtained by a careful examination of the *Library Journal* and *Public Libraries*. Communications were sent to all the state library commissions, several state library associations and clubs, and to the librarian of libraries known to have 50,000 volumes or more. The responses to these communications have been quite general, and the information contained in the replies has been embodied in this report. The thanks of the compiler are herewith extended to all who have assisted him in collecting the material for this list.

It was suggested by Miss Hewins in 1896 that it would be desirable to have the library commission of each state appoint some librarian, or library trustee, who should be responsible for the collection of information regarding the gifts and bequests made within his state. Judging from the replies received this year the suggestion has never been carried out.

Following the example of my predecessor, I wish to emphasize the importance of the suggestion, and would further recommend that the information so gathered be divided as nearly as possible into the following classes:

1. Buildings, giving value or cost;
2. Sites, giving value or cost;
3. Cash for buildings, with accompanying conditions, if any;

4. Cash for sites, with accompanying conditions, if any;
5. Books, pamphlets, periodicals, prints, maps, etc., giving number of each kind, with value or cost of the whole, if known;
6. Cash for books, etc., with accompanying conditions, if any;
7. Cash for endowment funds, giving purpose for which income is to be expended;
8. Cash to be expended, with specified purposes for which it is to be spent;
9. Cash given unconditionally;
10. Miscellaneous gifts, specifying their nature and value.

It will be observed that the first four of the above headings relate to gifts of real estate, which should also include gifts for fixtures of any kind, such as plants for lighting, heating, and ventilation; mural decorations, such as frescoes; furniture, so constructed as to be an essential part of the building; landscape gardening, etc. The remaining headings include books, endowment funds for various purposes (excepting building funds and the other objects just mentioned), and gifts of money for administration, current expenses, etc., etc.

Then, too, information should be given as to whether a gift has been offered, accepted, or received.

It seems desirable that information relating to such old and moribund libraries as have been absorbed or merged with newer and more vigorous institutions should somewhere find a record. As such transfers are usually made as gifts, there seems to be no more suitable place for such a record than in the annual report of Gifts and Bequests. It is to be hoped that, in the future, the tables of statistics issued from time to time by the state library commissions, the U. S. Bureau of Education, and others will contain a record of the final disposition of such libraries.

In the report of Gifts and Bequests made by Mr. Stockwell, a year ago, covering a pe-

riod of two years, there were given 458 separate gifts, amounting to over \$10,500,000, and distributed among 36 states and the District of Columbia. This report, covering 13 months, includes 482 separate gifts, amounting to \$19,786,465.16, and is distributed as follows: 468 in 39 of the United States, 10 in the British provinces, and three in Scotland. To that princely philanthropist, Mr. Andrew Carnegie, we are indebted, during the past year, for gifts reaching the enormous aggregate of \$13,704,700, over \$12,500,000 of which was given for the erection of library buildings. In every case the gift, except where otherwise specified, was made upon the condition that the city or town receiving it should furnish a site for the building and appropriate yearly for the maintenance of the library a sum equivalent to 10 per cent. of the gift.

The most notable gifts of the year are due to the ever-increasingly generous hand of Mr. Carnegie. That to the city of New York of \$5,200,000, for the erection of 65, or more, branch libraries, is probably the largest library gift ever made at one time to a single city. His gift of \$1,000,000 to the city of St. Louis for library buildings and an equal sum, placed in trust as an endowment fund, for the Carnegie libraries at Braddock, Duquesne, and Homestead, Pa., occupy the second and third positions, by reason of their amounts. His recent gifts of \$750,000 each to the cities of Detroit and San Francisco, though announced since July 1, have been included in this report. Mr. Carnegie's gifts during the year number 121; 112 in the United States, six in Canada, and three in Scotland. One hundred and seven of these gifts in the United States were for library buildings. Of the remaining five, amounting to \$1,028,000, one of \$25,000 will probably be used for a building.

The transfer of the John Carter Brown Library to Brown University by the trustees of the estate of the late John Nicholas Brown, recently announced, is one of the most important library events of the year. This library contains, if not the finest, at least one of the finest collections of early Americana in this country, and possesses many books not to be found in any other library on this side of the Atlantic. Its collector, after whom it is named, was a competitor with Lenox,

Brinley, and other early collectors of Americana for many a choice nugget which Henry Stevens and other European dealers had secured for their American patrons. The library is estimated to be worth at least \$1,000,000, and the gift carries with it two legacies, one of \$150,000 for a library building, and another of \$500,000 as an endowment fund for its increase and maintenance.

The gift of four public-spirited citizens of St. Louis, who have jointly contributed \$400,000 to lift an incumbrance on the block to be used for the new Carnegie library in that city, is a noble example of public spirit, and one of which the friends of that city may justly feel proud.

The collection of Oriental literature of Yale University has been enriched by the gift of 842 Arabic manuscripts, many of which are extremely rare. The collection covers the whole range of Arabic history and literature, dating back to the 12th and 13th centuries.

This collection, formed by Count Landberg, was purchased by Mr. Morris K. Jesup, of New York, at a cost of \$20,000, and was presented by him to the university library. This library has also received, as a bequest, the private library of the late Prof. Othniel C. Marsh, consisting of about 5000 volumes and 10,000 pamphlets, dealing mainly with palæontological subjects.

The New York Public Library—Astor, Lenox, and Tilden foundations—through the generosity of Mr. Charles Stewart Smith, has come into possession of a large and valuable collection of Japanese engravings and chromo-xylographs, formed by Captain Brinkley, of the *Japanese Mail*.

I regret that I do not have the pleasure to record any addition, during the year, to the Publication Fund of the American Library Association. The Publishing Board is much hampered by lack of funds from carrying on its important work. If some philanthropically inclined person would present a fund, say \$100,000, upon condition that all publications issued from its income should bear the name of the fund, it would not only be of inestimable benefit to the cause of libraries, but would also be a most enduring monument to its donor.

An examination of the following list will

disclose other gifts worthy of special mention if space permitted. The main list has been arranged alphabetically by states, as being the most convenient for reference. A tabulated summary, arranged by the geographical sections of the country, will show how widely scattered have been the benefactions of the year, extending from Alabama in the south to Montreal in the north, and from Bangor in the east to "where rolls the Oregon" in the far west.

ALABAMA.

- Montgomery.* Public Library. Gift of \$50,000, for a public library building, from Andrew Carnegie.  
 — Gift of books forming its library, from the Montgomery Library Association.  
*Tuskegee.* Tuskegee Normal and Industrial Institute. Gift of \$20,000, for a library building, from Andrew Carnegie. The building will be erected entirely by student labor.

CALIFORNIA.

- Alameda.* Public Library. Gift of \$35,000, for a public library building, from Andrew Carnegie.  
*Berkeley.* University of California. Gift of \$10,000, as a fund for the purchase of books for the law library, from Mrs. Jane Krom Sather, of Oakland, Cal.  
 — Gift of \$1000, from Col. E. A. Denicke.  
 — Gift of about 2500 volumes, being the private library of the late Regent, A. S. Hallidie, from Mrs. M. E. Hallidie.  
*Fresno.* Public Library. Gift of \$30,000 for a public library building, from Andrew Carnegie.  
*Napa.* Public Library. Gift of \$20,000, for free public library building, from George E. Goodman.  
*San Francisco.* Public Library. Gift of \$750,000, for a public library building, from Andrew Carnegie.  
 — Gift of building and fixtures for Branch Library, No. 5, estimated to cost \$20,000, from Hon. James D. Phelan, Mayor of San Francisco.  
*San Jose.* Public Library. Gift of \$50,000, for a public library building, from Andrew Carnegie.  
*Stanford University.* Leland Stanford University. Gift of \$2000, \$1000 for books on sociology and \$1000 for books on bibliography, special gift from Mrs. J. L. Stanford.

COLORADO.

- Grand Junction.* Public Library. Gift of \$8000, increased from \$5000, for a library building, from Andrew Carnegie.  
*Leadville.* City Library Association. Gift of \$100,000, for a public library, from Andrew Carnegie.

- Ouray.* Walsh Library. Gift of a library building, costing \$20,000, from Thomas F. Walsh.

CONNECTICUT.

- Branford.* Blackstone Memorial Library. Bequest of \$100,000, from Timothy B. Blackstone, of Chicago, founder of the library.  
*Danielsonville.* Edwin H. Bugbee Memorial Building. Bequest of \$15,000, for the erection of a building, also the donor's private library and cases, from Edwin H. Bugbee.  
*Derby.* Public Library. Gift of a fully equipped public library building, by Col. and Mrs. H. Holton Wood, of Boston, the city to agree to maintain the library and raise a book fund of \$5000, to which sum the donors will add an equal amount.  
 — Gift of \$12,000, raised by popular subscription, towards book fund, from interested citizens. Nearly \$75 was given by public school children.  
 — Gift of \$5000, towards a book fund, from Col. and Mrs. H. Holton Wood.  
 — Gift of 900 volumes, from Derby Reading Circle.  
*Greenwich.* Public Library. Gift of \$25,000, as an endowment, from wealthy New Yorkers.  
*Hartford.* Case Memorial Library, Hartford Theological Seminary. Gift of \$2000 towards fund for purchase of periodicals, from Mrs. Charles B. Smith.  
 — Gift of \$500 for book purchases, from Miss Anna M. Hills.  
 — Gift of 365 volumes, pertaining to missions, from Rev. A. C. Thompson, D.D.  
 — Public Library. Gift of \$5000, from F. B. Brown.  
*Kensington.* Library Association. Gift of \$10,000, for a new library building, from S. A. Galpin, of California.  
*Litchfield.* Wolcott Library. Bequest of \$1000, from ex-Governor Roger Wolcott, of Boston, Mass.  
*Middletown.* Wesleyan University. Gifts of \$3604, to be added to Alumni Library Fund.  
 — Gift of \$483, to be added to the Hunt Library Endowment. This addition has been increased to \$1000 by the reservation of the income of the fund.  
*New Haven.* Yale University. Gift of \$10,000, for a fund for the Seminary library in the department of Philosophy, from Mrs. John S. Camp, of Hartford, Conn.  
 — Gift of \$1500, a contribution towards an administration fund, from Charles J. Harris.  
 — Gift of \$1300, for purchases in the department of Folk-music, from an anonymous donor.  
 — Gift of \$1000, for purchases in department of English literature, from Edward Wells Southworth, of New York.  
 — Gift of \$500, a contribution towards an administration fund, from the Hon. Wil-

- liam T. Harris, U. S. Commissioner of Education.
- Bequest of about 5000 volumes and 10,000 pamphlets, forming the private library of the testator, from Prof. Othniel C. Marsh.
  - Gift of 842 Arabic manuscripts, collected by Count Landberg; bought for \$20,000 by Morris K. Jesup and presented by him to the University. Many of these Mss. are very rare. The collection covers the whole range of Arabic history and literature, dating back to the 12th and 13th centuries.
  - Gift of a collection of musical manuscripts, number not stated, from Morris Steinert.
- Norwalk.* Public Library. Gift of \$50,000, for a public library building, from Andrew Carnegie.
- South Norwalk.* Public Library and Free Reading Room. Bequest of \$1000, for permanent fund, from R. H. Rowan.
- Southington.* Public Library. Gift of \$5000, towards a library building, from L. V. Walkley.
- Torrington.* Library Association. Bequest of \$100,000, by Elisha Turner. From this amount is to be deducted the cost of the library building, about \$70,000, which was being erected by the testator at the time of his death.
- Wallingford.* Public Library. Gift of library building, cost value not stated, from the late Samuel Simpson, as a memorial to his daughter.
- Windsor.* Library Association. Gift of \$4000, towards a library building fund, from Miss Olivia Pierson.
- GEORGIA.
- Atlanta.* Carnegie Library. Gift of \$20,000, for furnishings and equipment of new building, from Andrew Carnegie.
- Travelling Libraries for Schools.* Gift of 960 volumes for 16 travelling libraries for country schools, for that number of counties in the state, from the Hon. Hoke Smith. It is planned to have each library remain in a school for about two months.
- ILLINOIS.
- Aurora.* Public Library. Gift of \$50,000, for a public library building, from Andrew Carnegie, the city to furnish a site and guarantee \$6000 a year maintenance.
- Centralia.* Public Library. Gift of \$15,000, for public library building, from Andrew Carnegie, the city to provide a site and \$2000 yearly for maintenance.
- Chicago.* John Crerar Library. Bequest of \$1000, from the late President, Huntington W. Jackson.
- Rush Medical College. Gift of 4000 volumes of medical and surgical books, from Dr. Christian Fenger. This gift contains a practically complete collection of German theses for the past fifty years.
  - University of Chicago. Gift of \$30,000, to endow the history library, from Mrs. Delia Gallup.
- Decatur.* Public Library. Gift of \$60,000, for a public library building, from Andrew Carnegie.
- Young Men's Christian Association Library. Gift of \$500, from Miss Helen Gould, of New York.
- Dixon.* Dodge Library. Gift of a valuable and extensive collection of art books, value and number not stated, from George C. Loveland.
- Evanston.* Northwestern University. Gift of \$750, for the purchase of books in political economy, from Norman Waite Harris, of Chicago.
- Gift of \$543.50, to be known as the "Class of '95 Library Fund," the income of at least 4 per cent. to be used for the increase of the university library, from the class of 1895.
  - Public Library. Gift of \$5000, toward library site fund, from William Deering.
- Freeport.* Public Library. Gift of \$30,000, for a public library building, from Andrew Carnegie.
- Galesburg.* Knox College. Gift of \$50,000, for a library building, from Andrew Carnegie.
- Public Library. Gift of \$50,000, for public library building, from Andrew Carnegie. The city already appropriates \$6000 for library maintenance.
- Grossdale.* Public Library. Gift of \$35,000, for public library building, from Andrew Carnegie.
- Havana.* Public Library. Gift of \$5000, for a public library building, from Andrew Carnegie.
- Jacksonville.* Public Library. Gift of \$40,000, for a public library building, from Andrew Carnegie.
- Kewanee.* Public Library. Gift of \$50,000, for a public library building, from Andrew Carnegie.
- Lake Forest.* Lake Forest College. Gift of the Arthur Somerville Reid Memorial Library building; cost about \$30,000, from Mrs. Simon Reid.
- Lincoln.* Public Library. Gift of \$25,000, for a public library building, from Andrew Carnegie.
- Maywood.* Public Library. Gift of \$100, being surplus campaign funds remaining after the election, from Republican Committee of that town.
- Pekin.* Public Library. Gift of \$10,000, for a public library building, from Andrew Carnegie. The city has appropriated \$1500,
- Gift of a site for the proposed Carnegie library building, value not stated, from George Herget.
- Rock Island.* Public Library. Gift of \$10,000, for book stacks and furniture, from Frederick Weyerhauser, of St. Paul.

- Rockford.* Public Library. Gift of \$60,000, for a new public library building, from Andrew Carnegie, the city to furnish site and "not less than \$8000" yearly for maintenance.
- Springfield.* Public Library. Gift of \$75,000, for a public library building, from Andrew Carnegie. The City Council appropriated \$10,000 annually in hope that the gift might be increased to \$100,000. The library will be known as the "Lincoln Library."
- Streator.* Public Library. Gift of \$35,000, for a public library building, from Andrew Carnegie.
- Sycamore.* Public Library. Gift of a library building, to cost about \$25,000, from Mrs. Everill F. Dutton, as a memorial to her late husband, Gen. Everill F. Dutton.
- Waukegan.* Public Library. Gift of \$25,000, for a public library building, from Andrew Carnegie. The city already appropriates \$2000 for library maintenance.

INDIANA.

- Crawfordsville.* Public Library. Gift of \$25,000, for a public library building, from Andrew Carnegie.
- *Wabash College Library.* Gift of the original manuscript of "The prince of India," from General and Mrs. Lew Wallace.
- Elkhart.* Public Library. Gift of \$30,000, for a public library building, from Andrew Carnegie. The city, in advance, has pledged \$3500 yearly for maintenance.
- Elwood.* Public Library. Gift of \$1000, through the local Women's Club, from President Reid, of the American Tin Plate Co., of New York.
- Gift of \$200, the results of a benefit, from The Women's Club.
- Fort Wayne.* Public Library. Gift of \$75,000, for a public library building, from Andrew Carnegie.
- Goshen.* Public Library. Gift of \$25,000, for a library building, from Andrew Carnegie, the city to furnish \$2500 yearly for maintenance.
- Indianapolis.* Butler College. Gift of \$20,000, for a library building, also a site for the same, from Mr. and Mrs. Edward C. Thompson, in memory of their daughter.
- Public Library. Gift of 275 volumes on music, in memory of her son, Harry S. Duncan, deceased, from Mrs. Ella S. Duncan. This collection includes musical scores of the most famous operas and oratorios, as well as the best critical works on music.
- Lafayette.* Public Library. Gift of property, valued at \$15,000, from Mrs. Robert R. Hitt, of Illinois.
- Logansport.* Public Library. Gift of a fine library of historical material relating to the Mississippi Valley, collected by the late Judge Horace P. Biddle. This collection was the result of 60 years of historical re-

- search, and contains originals of maps, drafts, etc., of great value.
- Madison.* Public Library. Gift of \$20,000, for a public library building, from Andrew Carnegie.
- Marion.* Public Library. Gift of \$50,000, for a public library building, from Andrew Carnegie. A site was purchased some time ago, and the offer was promptly accepted.
- Michigan City.* Public Library. Gift of \$500, for books, from Mrs. J. H. Barker.
- Muncie.* Public Library. Gift of \$50,000, for a public library building, from Andrew Carnegie.
- Gift of \$6000, from the heirs of an estate, name not given.
- New Harmony.* Workingmen's Institute Public Library. Bequest of \$72,000, from Dr. Edward Murphy. In the final settlement the amount may exceed these figures.
- Peru.* Public Library. Gift of \$25,000, for a public library building, from Andrew Carnegie. The city already appropriates \$2700 yearly for library maintenance.
- Portland.* Public Library. Gift of \$15,000, for public library building, from Andrew Carnegie.
- Wabash.* Public Library. Gift of \$20,000, for a public library building, from Andrew Carnegie.
- Gift of 5000 volumes, from Woman's Library Association. The library has been turned over to the city to be maintained as a public library.
- Washington.* Public Library. Gift of \$15,000, for a public library building, from Andrew Carnegie.

IOWA.

- Burlington.* Public Library. Gift of \$20,000, from Philip M. Crapo.
- Cedar Rapids.* Public Library. Gift of \$50,000, for a public library building, from Andrew Carnegie.
- Centerville.* Public Library. Gift of \$25,000, for a public library building and site, from ex-Governor F. M. Drake, on condition that a two mills tax be laid for the perpetual and proper care of the property.
- Davenport.* Public Library. Gift of \$25,000, for a public library building, thereby increasing former gift to \$75,000, from Andrew Carnegie.
- Dubuque.* Carnegie-Stout Free Library. Gift of \$50,000, from Andrew Carnegie, on condition that the Young Men's Library Association be made the nucleus of a free public library, and that the city furnish a site and maintain the institution.
- Gift of a suitable site for the library building offered by Andrew Carnegie, valued at \$17,000, from F. D. Stout, given in memory of his father.
- Fayette.* Upper Iowa University. Gift of

\$25,000, which will be devoted to library purposes, probably for a new building, from Andrew Carnegie.

*Fort Dodge.* Public Library. Gift of \$30,000, for a public library building, from Andrew Carnegie.

*Grinnell.* Stewart Library. Gift of a new library building, costing \$15,000, from Joel Stewart.

— Gift of a site for new library building, value not stated, from The Congregational Church.

— Gift of \$4000, for books, raised by popular subscription by the citizens of Grinnell.

*Iowa Falls.* Public Library. Gift of a public library building, if the city will provide a suitable site, from E. S. Ellsworth.

*Mt. Vernon.* Cornell College. Gift of \$40,000, for a library building, from Andrew Carnegie. Conditions, if any, not stated.

*Muscatine.* Public Library. A new library building, to cost about \$30,000, by P. M. Musser, provided the city vote to establish and maintain the library.

## KANSAS.

*Dodge City.* Railroad Library and Reading Room. The Atchison, Topeka, and Santa Fé Railroad Co. are fitting up a library and reading room at this place for its employés.

*Fort Scott.* Public Library. Gift of \$15,000, for a public library building, from Andrew Carnegie.

*Kansas City.* Public Library. Bequest of about \$6000, from Mrs. Sarah Richart.

*Lawrence.* Public Library. Gift of \$25,000, for a public library building, from Andrew Carnegie.

## KENTUCKY.

*Lexington.* State College. Gift of \$50,000, from President James K. Patterson.

## LOUISIANA.

*New Orleans.* Public Library. Gift of \$10,000 and a valuable collection of books, from Abram Holker.

## MAINE.

*Bangor.* Public Library. Bequest of \$18,347.26, towards the building fund, from A. D. Mason.

— Gift of building site, costing \$7500, from Nathan C. Ayer.

*Belfast.* Free Library. Gift of \$3000, as a fund for the purchase of books on history and biography, in memory of Albert Boyd Otis, from Albert Crane.

*Brunswick.* Bowdoin College. The new library building, given by Gen. Thomas H. Hubbard, of New York City, reported last year, at over \$150,000, will cost over \$200,000.

— Bequest of \$2000, from Captain John Clifford Brown, of Portland.

— Gift of \$1200, from an unknown donor, through a Boston friend.

*Fairfield.* Public Library. Gift of a library building, to cost between \$8000 and \$10,000, from E. J. Lawrence.

*Farmington.* Public Library Association. Gift of \$10,000, for a public library building, from Hon. Isaac Cutler, of Boston, Mass.

*Lewiston.* Public Library. Gift of \$50,000, for a public library building, from Andrew Carnegie.

## MARYLAND.

*Cumberland.* Public Library. Gift of \$25,000, for a public library building, from Andrew Carnegie.

*Hagerstown.* Washington County Free Library. Gift of \$50,000 and accrued interest \$1250, from B. F. Newcomer, of Baltimore, the town to furnish a site for building, which will cost about \$25,000.

## MASSACHUSETTS.

*Amherst.* Amherst College. Gift of \$500, to form a fund for the purchase of Spanish books, from Hon. John S. Brayton, of Fall River, Mass.

*Bolton.* Parker Library. Devise of a dwelling house and one-half acre of land, on condition that within one year from the allowance of the will the town shall establish a free public library to be known as the Parker Library, from Louisa Parker.

*Boston.* Lang Memorial Library. Gift of a free public library of musical scores, founded by B. J. Lang, as a memorial to Ruth Burrage.

— Public Library. Bequest of \$4000, from Abram E. Cutter.

— Gift of 599 volumes of text-books used in the public schools of Boston, from the Boston School Committee, in co-operation with the publishers.

— Gift of 597 volumes, relating to music, scores, etc., from Allen A. Brown.

— Gift of 576 volumes, relating to music, including operas, oratorios, collections of school and college song books, etc., from The Oliver Ditson Co.

*Cambridge.* Harvard University. Bequest of \$10,000, to increase fund, already established by him, for purchase of works of history, political economy, and sociology, from ex-Governor Roger Wolcott.

— Gift of \$1250, for purchase of books relating to the history of the Ottoman Empire, from Prof. A. C. Coolidge.

— Gift of \$800, for the purchase of books on ecclesiastical history in the Riant Library, from J. Harvey Treat, of Lawrence.

— Gift of \$500, for purchase of books relating to Scandinavian subjects, from Mrs. Emil E. Hammer.

— Bequest of 1920 volumes, mainly English

- and French literature, from Edward Ray Thompson, of Troy, N. Y.
- Gift of 700 volumes from the library of James Russell Lowell, to form the Lowell Memorial Library for the use of the Romance Departments of the University, from various subscribers.
  - Gift of 549 volumes, the library of Alphonse Marsigny, from The J. C. Ayer Company, of Lowell.
  - Gift of 317 volumes, belonging to the library of her late husband, from Mrs. John E. Hudson.
  - Bequest of 250 volumes of Sanskrit and other Oriental works, from Henry C. Warren, Esq.
  - Public Library. Bequest of 550 volumes, consisting chiefly of Maine and New Hampshire local histories, genealogies, etc., from Cyrus Woodman.
  - Gift of a collection of art works, valued at about \$500, from Nathaniel Cushing Nash.
- Clinton.** Public Library. Gift of \$25,000, for a public library building, from Andrew Carnegie.
- Conway.** Field Memorial Library. Gift of a library building to cost \$100,000, as a memorial to the donor's father and mother, from Marshall Field, of Chicago. It will also be endowed by Mr. Field.
- Fairhaven.** Millicent Library. Gift of Fairhaven Waterworks, valued at from \$100,000 to \$125,000, and producing an annual income of about \$8000, from Henry H. Rogers.
- Groveland.** Public Library. Bequest of \$5000, from J. G. B. Adams.

    - John H. Converse, \$1000.
    - George H. McFadden, \$500.
  - Gift of 2466 volumes, from Dr. J. M. Da Costa.
  - Gift of 1500 volumes, from Dr. John Ashurst, Jr.
  - Gift of 272 volumes, from the daughters of the late Dr. William T. Taylor.
  - The Franklin Institute. 844 volumes and 899 pamphlets, relating to iron, coal, mining, railroads, and statistics, from the late Charles E. Smith, at one time president of the Philadelphia and Reading Railroad Co.
  - Free Library. Bequest of 1215 volumes and 1806 unbound books, pamphlets and magazines, through Stevenson Hockley Walsh, from Mrs. Annie Hockley.
  - Gift of 464 volumes, for H. Josephine Widener Branch Library, from Mr. P. A. B. Widener.
  - Gift of 245 volumes, from estate of George B. Roberts.
  - Gift of several volumes in embossed type for the blind, from Dr. David D. Wood.
  - Historical Society of Pennsylvania. Gift of \$5000, from Mrs. Miffilia Wistar.
  - Gift of \$2041, from Miss Ellen Waln.
  - Gift of \$500, from Carl Edenheim.
  - Library Company of Philadelphia. Gift of 900 volumes, from the Hon. Richard Vaux.
  - Gift of 406 volumes, from Henry Carey Baird, Esq.
  - University of Pennsylvania. Gift of \$1750, to be spent in purchase of philosophical books, from Class of 1889.
  - Gift of \$615, for purchase of files of botanical periodicals, from Robert B. Buist.
  - Gift of about 2500 volumes exceedingly valuable in works of Travels and Archæology, from the heirs of Robert H. Lamborn, and the Academy of Natural Sciences.
  - Gift of 1300 volumes, secured at Hunter sale, from contributions of friends of the University.
- Phoenixville.* Public Library. Gift of \$15,000, for public library building, from Andrew Carnegie.
- Reading.* Public Library. Gift of \$2000, for purchase of books, from friends.
- Gift of 681 volumes, from same source.
  - Gift of 356 volumes, forming his library, from Henry S. Comstock.
- Sharon.* Public Library. Gift of \$25,000, for a public library building, from Andrew Carnegie.
- Washington.* Washington and Jefferson College. Gift of \$10,000 (added to the \$50,000 given by her husband, William R. Thompson, for a new library building), from Mrs. Mary Thow Thompson, of Pittsburg. The building will cost \$40,000, the balance, \$20,000, will be held as a book fund, the income only to be spent. Mr. Thompson's gift is intended as a memorial to his mother, Mrs. Elizabeth Donaldson Thompson.
- Gift of \$30,000, towards the erection and maintenance of a new library building, from W. P. Thompson, making in all from Mr. and Mrs. Thompson \$60,000.
- Wilkesburg.* Public Library. Gift of \$50,000, for public library building, from Andrew Carnegie.

RHODE ISLAND.

- Central Falls.* Adams Library. Bequest of \$35,000 from Stephen Ludlow Adams, as a special trust for the establishment of a library, to be named as above; \$25,000 to be spent on building, the income of \$10,000 for its maintenance.
- Newport.* Redwood Library. Bequest of \$1000, from Miss Martha Maria Anderson.
- Bequest of \$5000, to be paid at the expiration of three years, from John Nicholas Brown. This is to be used as a fund, the income to be used for the purchase of books.
  - Bequest of \$2000, from Mrs. Orleana Elbery Redwood Pell (Mrs. Walden Pell).
  - Gift of 316 volumes on angling and hunting, from Daniel B. Fearing.
- Providence.* Brown University. By the will of the late John Nicholas Brown it is provided that the John Carter Brown Library of Americana previous to 1801, the estimated value of which is at least \$1,000,000, shall be maintained as a permanent me-

morial. The testator sets aside \$150,000 for a building and \$500,000 as an endowment fund for its increase and maintenance. This library and its endowments have been presented, by the trustees of the estate, to Brown University.

- Gift of \$1000, for purchase of American poetry and drama, at the McKee sale, from William Goddard, Chancellor of the University.
- Gift of over 250 volumes on international law, from William Vail Kellen, a trustee of the University.
- Public Library. Bequest of \$10,000, from Ada L. Steere.
- Gift of \$3000, to be invested and income used for purchase of books. The name of the donor is not made public.

## SOUTH DAKOTA.

*Aberdeen.* Alexander Mitchell Library. Gift of \$15,000, for public library building, from Andrew Carnegie. Mr. Carnegie requests that the library be called after his friend, Alexander Mitchell. Accepted March 20, 1901.

*Sioux Falls.* Public Library. Gift of \$25,000, for a public library building, from Andrew Carnegie.

## TENNESSEE.

*Chattanooga.* Public Library. Gift of \$50,000, for library building, from Andrew Carnegie. It is reported that the amount of the gift will be raised to \$100,000, provided the city agrees to appropriate \$10,000 yearly.

*Jackson.* Public Library. Gift of \$30,000, for public library building, from Andrew Carnegie.

*Memphis.* Cossitt Library. Bequest of 942 volumes and 423 pamphlets especially strong in social science and history, from Gen. Colton Greene.

## TEXAS.

*Dallas.* Public Library. Gift of over 1100 volumes, from various persons, at a book reception, held Dec. 11, 1900.

*San Antonio.* Carnegie Library. Collection of books, valued at \$3500, from San Antonio Library Association. To be turned over to the Carnegie Library on the completion of its building, and provided that the city contribute \$50 a month towards expenses until so turned over.

*Waco.* Public Library. Gift of \$1000, by Andrew Carnegie, towards the library.

## UTAH.

*Ogden.* Public Library. Gift of \$25,000, for a public library building, from Andrew Carnegie.

*Salt Lake City.* Free Public Library. Gift of \$75,000, to erect a free public library building, and a building site worth \$25,000, from John Q. Packard.

## VERMONT.

*Middlebury.* Middlebury College. Gift of the Starr Library building, erected from a bequest of \$50,000, from Egbert Starr, of New York City.

*Windsor.* Library Association. Bequest of \$2000, from Charles C. Beaman, of New York.

## VIRGINIA.

*Hampton.* Hampton Normal and Industrial Institute. Gift of a new library building, cost not stated, as a memorial to Collis P. Huntington, from Mrs. C. P. Huntington.

*Lexington.* Washington and Lee University. Bequest of his law library (1884), made available by death of his widow, from Prof. Vincent L. Bradford, of Philadelphia.

*Norfolk.* Public Library. Gift of \$50,000, for a public library building, from Andrew Carnegie.

— *Seaboard Air Line Travelling Libraries.* Gift of \$1000, from Andrew Carnegie.

*Richmond.* Public Library. Gift of \$100,000, for a public library building, from Andrew Carnegie.

*Winchester.* Public Library. Bequest of \$250,000, from Judge John Handley, of Scranton, Pa.

## WASHINGTON.

*Seattle.* Public Library. Gift of \$200,000, for a new library building, to replace the one destroyed by fire Jan. 2, 1901, from Andrew Carnegie, on condition that the city make a guarantee to provide \$50,000 yearly for maintenance and improvement.

*Tacoma.* Public Library. Gift of \$50,000, for a public library building, from Andrew Carnegie. Accepted with the proviso that \$7500 will be appropriated for maintenance annually if the gift is increased to \$75,000. A site has already been selected.

## WEST VIRGINIA.

*Wheeling.* Public Library. Gift of \$75,000, for a public library building, from Andrew Carnegie.

## WISCONSIN.

*Appleton.* Public Library. Gift of \$663.54, from directors of Prescott Hospital.

— Gift of \$500, for furnishing room, from women's clubs.

*Ashland.* Vaughn Library. Bequest of the Vaughn Library, valued at \$60,000; also property which will give it an income of \$1200 a year, from Mrs. Vaughn-Marquis, of Chicago.

— Bequest of 540 volumes, from Mrs. E. Vaughn-Marquis.

*Columbus.* Public Library. Gift of \$1300, \$1000 for endowment and \$300 for immediate use, from Mrs. C. A. Chadbourne and F. A. Chadbourne.

*De Pere.* Public Library. Gift of \$2000, towards furnishing a library of 10,000 vol-

umes and upwards, if accepted before September, 1902, from A. G. Wells.

*Green Bay.* Kellogg Public Library. Gift of \$20,000, for public library building, from Andrew Carnegie, the city to furnish site and \$2500 yearly for maintenance.

— Gift of a building site for new Carnegie Library, worth \$2000, from Bishop Messmer.

*Janesville.* Public Library. Gift of \$30,000, for a public library building, from Andrew Carnegie. The city council voted March 19, 1901, to appropriate \$3500 yearly for maintenance.

— Bequest of \$10,000, for a public library building, from F. S. Eldred.

*Kenosha.* Gilbert M. Simmons Library. Gift of a library building and furniture, costing about \$150,000, from Z. G. Simmons, in memory of his son, Gilbert M. Simmons.

— Gift of \$20,000, for purchase of books, from Z. G. Simmons.

*La Crosse.* Washburn Library. Gift of the Albert Boehm collection of stuffed birds, valuable but cost not stated, from citizens of the city.

*Lake Geneva.* Public Library. Gift of 750 volumes, from several ladies.

*Lake Mills.* Public Library. Gift of \$1000, in addition, for building, from L. D. Fargo.

— Gift of \$1700, for building site, from citizens of the place.

*Madison.* Free Library Commission. Gift of \$35, for German travelling library, from citizens of Milwaukee.

— University of Wisconsin. The Germanic Seminary Library, comprising 1700 volumes, relating especially to Germanic philology and literature; purchased from a fund of \$3146, raised by German-American citizens of Milwaukee and presented Jan. 1, 1899.

— Gift of \$2645 for purchase of books for School of Economics and Political Science, from gentlemen in New York, Milwaukee, Madison, and other Wisconsin cities.

— Gift of \$2350, for the purchase of books for School of Commerce, from five citizens of Milwaukee.

— Gift to the Germanic Seminary Library of 268 volumes, from the house of F. A. Brockhaus, of Leipzig.

*Marshfield.* Public Library. Gift of \$2500, one-fifth to be expended annually for five years for books, from W. D. Connor.

*Menomonie.* Memorial Free Library. Gift of about \$2000, for running expenses pending settlement of the estate of Captain A. Tainter, from his son and daughter, L. S. Tainter and Mrs. Fanny Macmillan.

*Milwaukee.* Law Library. Bequest of \$10,000, one-half for endowment and one-half for the purchase of books, from A. R. R. Butler.

— Public Library. Gift of \$10,000, for a col-

lection of books on literary subjects, from Mrs. A. A. Keenan, as a memorial to her husband, the late Matthew Keenan.

*Oconomowoc.* Public Library. Gift of \$1500, toward library building, from Mrs. P. D. Armour.

— Gift of \$1500, toward library building, from Mrs. P. D. Armour, Jr.

— Gift of \$1500, toward library building, from Mrs. Bullen.

*Oshkosh.* Harris-Sawyer Library. Bequest of \$75,000, toward new library building, from Marshall Harris.

— Bequest of \$25,000, towards new library building, from Philetus Sawyer. The bequests of Mr. Harris and Mr. Sawyer were supplemented by \$50,000 from the city. The Harris bequest of \$75,000 was made in 1895 by Mrs. Abby S. Harris, to carry out the intentions of her husband. It was made on condition that within three years an equal amount should be raised for the same purpose. The bequest of \$25,000 by Hon. Philetus Sawyer was made to assist in raising the latter amount, the balance of which was secured by the issue of city bonds. \$90,000 remains as a trust fund.

— Gift of paintings, valued at \$5000, from Leander Choate.

*Racine.* Public Library. Gift of \$10,000, towards a public library, from citizens of that city.

*Sheboygan.* Public Library. Gift of \$25,000, for a public library building, from Andrew Carnegie.

— Gift of \$1000, or his salary of \$500 per annum for two years, for a site for library building, from the mayor, Fred Dennett.

*Stanley.* Public Library. Gift of \$12,000, \$8000 for building and \$4000 for equipment, from Mrs. D. R. Moon.

*Superior.* Public Library. Gift of \$50,000, for a public library building, from Andrew Carnegie.

— Gift of \$5500, for a library building site, from citizens of the town.

*Waukesha.* Carroll College. Gift of \$20,000, for a library endowment fund, from donor whose name is not given.

*Whitewater.* Public Library. Gift of \$3000, for a memorial collection of books, from Mr. and Mrs. D. S. Cook.

---

NOTE. — Foreign gifts include: For British provinces, Vancouver Public Library, \$50,000 from Andrew Carnegie — For Canada, McGill University of Montreal four gifts (\$14,000, \$1300, \$1000, \$500) for various purposes; Ottawa Public Library, \$100,000 from Andrew Carnegie; Windsor Public Library, \$20,000 from Andrew Carnegie; Sidney Public Library, \$15,000 from Andrew Carnegie; Winnipeg Public Library, \$100,000 from Andrew Carnegie; Halifax Art School and Public Library, \$75,000 from Andrew Carnegie — For Trinidad, Cuba, bequest for public library from Mary B. Carret — For Scotland, Glasgow district libraries, £100,000 from Andrew Carnegie; Greenock, £5000 from Andrew Carnegie; Hawick, £10,000 from Andrew Carnegie.

Total Gifts and Bequests to American libraries from all sources, \$19,786,465.16, 145,361 volumes, and 20,856 pamphlets. The above figures do not include several buildings and other gifts, the value of which was not stated. Statistics of this nature must ever remain mere approximations until some uniform system of gathering them is devised and carried out.

## REPORT OF THE A. L. A. PUBLISHING BOARD.

By JOSEPH L. HARRISON, *Treasurer, Librarian of The Providence (R. I.) Athenaeum.*

IN accordance with the requirement of the constitution I have the honor to present herewith the report of the Publishing Board for the year 1900. The table of the financial operations of the board is essentially a trial balance, but divided into two sections to bring out more clearly the condition of the board's undertakings. The first section shows in the last two columns the net balance of loss or profit on each of our publications, June, 1901. In general it is true that our book publications, except the "List of subject headings," have not brought in what was expended on them, while our card publications have more than offset these losses by their profits, for although the final balance of all these accounts shows an excess of expenditures over receipts of \$830.74, yet it should be noticed that the two largest items in the expense column, \$476.84 and \$1290.02 are on account of publications which have not yet begun to bring many returns, *viz.*, the second edition of the "A. L. A. index" and the "Portrait index." If these are left out of consideration our other publications show a net profit to date of \$927.12. The second section of the table shows what means we have in hand or can count upon. The unpaid bills (\$241.69+\$369.52+\$16.50), \$627.71, are just about offset by the amount of bills and subscriptions due us, \$636.82; leaving the cash balance, \$823.64, plus the amount sunk in publications, \$830.74, to represent the sum still remaining in our hands of money appropriated to our use by the trustees of the Endowment Fund or received from other sources, \$1617.08, plus the sum of the balances still standing on the old membership accounts, \$46.41. It should be remembered that the office expenses of the year having been heavier than usual, over \$1800, have not been all charged to the account of our different publications, but a balance of \$345.55 has

been allowed to remain, reducing by so much the balance on this account of the previous year.

As a complement and supplement to the table the following statements concerning the board's publications and work may be of interest:

*Books.*

*A. L. A. proceedings.*—The board has in stock at its headquarters, 10½ Beacon street, Boston, nearly 2000 copies of the conference proceedings, covering the years from 1882 to date. There are a very limited number of copies of the years 1882, 1886, 1892, and 1893, and it is suggested that libraries desiring to complete sets in order to bind the proceedings by themselves would do well to give the matter early consideration.

*Annotated bibliography of fine art.*—The "Bibliography of fine art," prepared by Mr. Sturgis and Mr. Krehbiel and edited by Mr. Iles, which has become so favorably known because of the value of its descriptive, critical and comparative notes, was among the board's publications transferred to Messrs. Houghton, Mifflin & Co., of Boston (now the regular publishers of the board), in January, 1900, and may be obtained directly from them. The sales of the book, last year amounting to 84 copies, are gradually reducing the deficit incurred in its publication, which at the end of the year amounted to less than \$400.

*Books for boys and girls.*—The little, inexpensive, paper-covered handbook which bears this title, with its carefully annotated lists, prepared by Miss Hewins, of the Hartford Public Library, for the home use of fathers, mothers and teachers, continues in such active demand that less than 700 copies are now left of an original edition of 3000. It remains in the hands of the Publishing Board.

*Library tracts.*—Messrs. Houghton, Mifflin & Co. have published for the board dur-

ing the year three library primers, an edition of 1000 of each tract being printed. The first, "Why do we need a public library?" was compiled by a committee of the A. L. A. This was followed by "How to start a public library," by Dr. G. E. Wire, of the Worcester County Law Library, and "Travelling libraries," by Mr. Frank A. Hutchins, secretary of the Wisconsin Free Library Commission. They have been well received, and others on practical library subjects will follow as soon as possible. A very low price has been fixed for the tracts, and it is hoped that they will be generously used by clubs, commissions and individuals interested in promoting the advancement of library interests.

*List of books for girls and women and their clubs.*—This carefully selected list of some 2100 books "worthy to be read or studied by girls and women" should now be ordered directly of Messrs. Houghton, Mifflin & Co. Nearly 300 copies, including parts, were sold during the year, showing a continued though not increased demand.

*List of French fiction.*—Nearly 1000 copies of this convenient list, chosen and annotated by Madame Cornu, of Montreal, and Mr. Beer, of New Orleans, were sold during the year, reducing the stock on hand at the board's Beacon street office, where it can still be obtained, to less than 500 copies.

*List of subject headings for use in dictionary catalogs.*—"Subject headings" continues to be one of the most lucrative publications of the board. Nearly 300 copies were sold in 1900, and the accounts of the year show a balance in its favor of nearly \$500. Since the demand for the book comes almost exclusively from libraries, it still remains in the hands of the Library Bureau, where orders should be sent.

*Reading for the young.*—Sargent's "Reading for the young" is offered by Messrs. Houghton, Mifflin & Co. in three forms: the original edition, compiled by Mr. John F. Sargent; the "Supplement," compiled by Miss Mary E. and Miss Abby L. Sargent; and the original and supplement bound together. During the current year the original edition has become exhausted. It is probable that a limited number of copies will be printed

at once to supply the immediate demand and that a reprint, with additional matter, will be undertaken in the near future.

#### *Printed cards.*

*Current books.*—It need simply be stated under the head of "Printed cards for current books" that the entire reorganization of this part of the board's work has been the subject of active discussion during the year, and that the proposed plans for carrying it on more effectively will be fully explained to the conference by Mr. Fletcher, chairman of the Publishing Board. It may be appropriately added that, as in past years, the thanks of the Association are due to the publishers for their courtesy in sending books, and to Miss Browne for her earnest work in getting the cards to subscribers with—under often adverse conditions—most commendable promptness.

*English history.*—The annotated cards on English history continue to be printed at a loss. Mr. W. D. Johnston has been re-engaged, however, to edit the cards for the current year, and it is hoped that in the end their usefulness will be found to justify the work, at least to the extent of making them self-supporting.

*Periodical and society publications.*—The Publishing Board is now printing cards for nearly 250 periodical and society publications. During 1900, 2843 titles, or more than 170,000 cards, were sent out. This represents the largest single item of the board's work and an expenditure of more than \$1700, which is nearly met by receipts from the sales.

*Miscellaneous sets.*—The board has now printed 16 of the so-called "Miscellaneous sets," which are, together with the years or volumes covered, as follows: American Association for the Advancement of Science—Proceedings, 1875-1898; American Historical Association—Papers, 1885-91, v. 1-5; American Historical Association—Reports, 1889-98; New York State Museum—Bulletin, 1892-98, nos. 1-23; Massachusetts Historical Society—Collections, 1792-1899; Old South Leaflets—series 1-4; Smithsonian Institution—Annual reports, 1886-96; Smithsonian In-

stitution — Contributions to knowledge, 1862-97; Smithsonian Institution — Miscellaneous collections, 1862-97; U. S. Bureau of Ethnology — Annual reports, 1879-95; U. S. National Museum — Annual reports, 1886-95; U. S. National Museum — Bulletin, 1875-98, and (books) Depew, "One hundred years of American commerce"; Authors Club, "Liber scriptorum"; Shaler, "United States of America."

These sets simply cover the back numbers of what are now grouped in the board's work as "periodicals and society publications" — completed works like "Liber scriptorum," of course, being excepted. Subscriptions to these periodicals and publications as current continuations begin with the date of the receipt of the subscription, so that unless one has been a subscriber from the beginning there will of necessity (because of the limited number of the cards printed) be a break between the last year covered by the "Miscellaneous set" and the beginning of the subscription.

The sets have met with a warm welcome from the libraries, and the board is prepared to print cards during 1901 for the following additional sets, providing a sufficient number of orders are received to justify the work: American Academy of Political and Social Science — Annals, 1900 to date; American Economic Association — Economic studies, 1896-97; American Economic Association — Publications, 1887-96; *Bibliographica*, 1895-97; Bureau of American Republics — Publications; Columbia University Studies in History, Economy and Public Law, 1891-96; Johns Hopkins University Studies in History and Political Science, 1883-98; U. S. Geological Survey — Bulletins, 1884-98; U. S. Geological Survey — Monographs, 1882-98; U. S. Geological and Geographical Survey of the Territories — Reports, 1875-90; U. S. Geological and Geographical Survey of the Territories — Miscellaneous publications, 12 nos.

These brief statements show concisely the bibliographical work which the Publishing Board has completed and is now carrying on, and for which it needs the continued moral and financial support of the libraries of the Association.

*In preparation and under consideration.*

Other important work is in active progress. The "Literature of American history," being edited by Mr. Larned, and for which Mr. Iles has so generously donated \$10,000, is well along, and may be announced as a fall book. Under Mr. Fletcher's direction work on the second edition of the "A. L. A. index" has advanced rapidly, and the book will be ready for distribution before the end of the year. Mr. Dewey has promised that the long-delayed "Supplement" to the "A. L. A. catalog," being edited, as was the original, by Mrs. Salome Cutler Fairchild, will be out this summer. It is expected that active work on the "Portrait index" will be continued, and that under the editorship of Mr. Lane and Miss Browne the index will be pushed to rapid completion.

Among the pieces of valuable work under consideration, on which the board hopes soon to be able to take final and definite action, may be mentioned Mr. Teggart's "Handbook of libraries of the United States," an "Index to library periodicals," a "Bibliography of reference books," cards to current books recommended by the Wisconsin Free Library Commission and the Massachusetts Library Club index to the Massachusetts public documents.

In conclusion it remains to express the deep and sincere regret with which the board accepted the resignation of Mr. William C. Lane as its secretary and treasurer, tendered in December of last year on account of ill health and after a long period of most earnest, faithful and valuable service, and to repeat here the suggestion with which he closed his report to the Montreal conference, a suggestion made, it must be remembered, after years of closest attention to the workings of the board:

"The desirability of taking some definite steps toward putting the work of the Publishing Board on a broader and stronger basis is as evident as ever. In addition to the efficient service rendered by the assistant secretary, the Publishing Board could with advantage employ a portion, say half, of the time of a capable man who should combine business judgment and alertness with bibliographical tastes and knowledge of library

interests. The time has come when both for its own sake and in justice to those who serve it the Publishing Board should have sal-  
 aried officers. To make the change success-  
 fully, however, requires a better financial con-  
 dition than it yet has."

## THE PROCEEDINGS.

WAUKESHA, WIS., THURSDAY, JULY 4—WEDNESDAY, JULY 10, 1901.

## FIRST SESSION.\*

(METHODIST CHURCH, WAUKESHA, THURSDAY EVENING, JULY 4.)

## PUBLIC MEETING.

The meeting was called to order at 8.15 by President CARR, who announced that the American Library Association would take up the program prepared for its 23d annual meeting. The president then introduced ANDREW J. FRAME, of Waukesha, who extended a cordial welcome to Waukesha on behalf of the local committee, referring to the advance made in library development throughout Wisconsin, largely through the efforts of such men as Senator Stout, of Menominee, and Z. G. Simmons, of Kenosha, and the enthusiasm of the state commission.

Mr. CARR then delivered the  
PRESIDENT'S ADDRESS.  
(See p. 1.)

## The subject

WHAT MAY BE DONE FOR LIBRARIES  
was presented by three speakers, T. L. MONTGOMERY presenting

WHAT MAY BE DONE BY THE CITY,  
(See p. 5),

Dr. E. A. BIRGE reviewing

WHAT MAY BE DONE BY THE STATE,  
(See p. 7),

and HERBERT PUTNAM outlining

WHAT MAY BE DONE BY THE NATION,  
(See p. 9.)

Adjourned at 10 p.m.

## SECOND SESSION.

(ASSEMBLY ROOM, FOUNTAIN SPRING HOUSE,  
FRIDAY MORNING, JULY 5.)

President CARR called the meeting to order at 10.25, and announced that the usual reports of officers and committees would be taken up in due order.

\* Preceding this first general session of the Association, an informal social reception had been held at The Fountain Spring House, Wednesday evening, July 3; and during Thursday, July 4, there were meetings of the A. L. A. Council, special committees, etc.

The PRINTED REPORT OF 1900 MEETING was approved as presented and distributed.

The AMENDMENT TO CONSTITUTION, as approved at the Montreal meeting was submitted for ratification, and was adopted. It provides that in section 17, line 10, of the constitution the words "of the association," shall be stricken out, thus making the final sentence of that section read as follows: "It may, by a two-thirds vote, promulgate recommendations relating to library matters, and no resolutions except votes of thanks and on local arrangements shall be otherwise promulgated."

F. W. FAXON presented his

## SECRETARY'S REPORT.

During the 13 months since the Association met at Montreal the number of new members added has been 167.\* Including with the new those who have rejoined (for they are practically new members), we have over 225, the largest year's increase in the history of the A. L. A. The system of giving to each person who joins an accession number, and after a lapse of membership for one or more years reverting to the old number when he again joins, is not to my mind quite fair to the regular continued membership. One of the charter members, to take an extreme case, may, after paying dues for 1876 only, come in again this year by paying for 1901 and yet appear on a par with the 1876 members who have faithfully kept up their membership for 25 years. Those rejoining members should be included with the total of new names added. There is a chance here for our statistician to devise a better system of accession. In March, 1901, the active membership reached the 1000 mark, an achievement which may well be recorded at the opening of a new century.

In January 4000 copies of preliminary announcements were mailed to members, and others supposed to be interested. The secretary compiled for this purpose a card cata-

\* From the close of the Montreal meeting to close of Waukesha meeting the total new members joined were 280.

log of names, including in it members of all the state associations and local clubs.

In May a new handbook (68 pages and cover)  $3\frac{1}{4} \times 5\frac{3}{4}$  in., practically following the size of last issue, was sent out, giving list of members, officers and committees, statistical tables, lists of state and local library associations and state library commissions, necrology for the year, and other information of value to members and of use in extending the work of the A. L. A.

An edition of 4500 was printed at an expense of \$160.60, and about half were mailed, in connection with circular no. 2 regarding the Waukesha meeting. The remainder should suffice for the coming year, with a small supplement to include the new members, and the by-laws to be passed at Waukesha, thus completing the new constitution.

Early in June the final announcement was sent out, with private post card enclosed, requesting advance registration. This was entirely successful, 476 persons registering for attendance, up to June 28. A printed list of these, for distribution at the early sessions of the meeting, will, it is confidently expected, more than justify the expense of its compilation. (800 copies, 24 pages, same size as handbook, \$32.75.)

2000 copies of program (16 pages, hand-

book size) were printed and a copy mailed to each person who registered for attendance at the meeting, and to all members of the Association.

The secretary's expenses for the year, exclusive of handbook, will be about \$400, the chief items being postage and printing. This seems justified, as it has been the means of increasing the income of the A. L. A. by more than the amount expended.

Number of letters and postcards written during the year 956, number received about 1000.

Gifts to the A. L. A. during the year have included:

Current issues of the New York Public Library *Bulletin*, and the *Library Journal*, from the publishers.

Reports of the Bristol meeting of the L. A. U. K., from the Honorable Secretary.

Report of the trustees of the Public Library of Victoria, Australia, 1900.

Catalogue of books on art, from the Newcastle-upon-Tyne Library.

Statistics of labor, Conn., Report, 1901.

*World Almanac*, 1901.

Annual reports of several American libraries, including Philadelphia Free, Haverhill Public, Somerville Public, and Bowdoin College libraries.

In closing I wish to thank all upon whom I have called for information or help, for the promptness and cordiality of their response.

#### GARDNER M. JONES presented the

##### TREASURER'S REPORT.

Balance on hand, Dec. 31, 1900 :

Deposit in New England Trust Co., Boston.....	\$201 55	
Deposit in Merchants' Bank, Salem, Mass.....	106 05	\$307 60
		\$2029 39

From Jan. 1 to July 1, 1901, the receipts have been \$1650.00 and the payments \$781.32, the balance on hand July 1 being \$1176.28. The membership, hence the income, of the Association is increasing from year to year, but it should be borne in mind that increased membership means increased expenses. The secretary and treasurer are obliged to ask for more money for postage, stationery, printing, etc., and it is only by the most rigid condensation that the recorder is able to keep our conference Proceedings within our means.

The number of members in good standing on Dec. 31, 1900, was as follows :

Honorary members.....	3
Perpetual member.....	1
Life fellows.....	2
Life members.....	34
Annual fellows (paid for 1900).....	9
Annual members (paid for 1900)....	796
Library members (paid for 1900)....	29
	—

874

During the year 1900, 208 new members joined the Association and seven died.

GARDNER M. JONES, *Treasurer*.

The following report of audit was appended :

The Finance Committee have performed the duties laid down in the constitution ; they have examined the accounts of the trueasurer, during the period covered by his report, and find them properly kept and vouched for.

JAMES L. WHITNEY, }  
 CHARLES K. BOLTON, } *Finance Committee*.  
 GEO. T. LITTLE. }

*Necrology.*

1. Eleanor Arnold Angell (A. L. A. no. 1631, 1897) assistant librarian American Society of Civil Engineers, New York City. Born Jan. 23, 1874; died in New York City May 18, 1900. Miss Angell graduated from the Pratt Institute Library School in 1896 and was a member of the Pratt Institute Library staff until July, 1897. From Dec., 1897, to the time of her death she was as-

sistant librarian of the American Society of Civil Engineers.

2. Hon. Mellen Chamberlain (A. L. A. no. 335, 1879) ex-librarian, Boston Public Library. Born in Pembroke, N. H., June 4, 1821; died in Chelsea, Mass., June 25, 1900. He was graduated from Dartmouth College in 1844, taught school at Brattleboro, Vt., entered the Harvard Law School in 1846, was graduated and admitted to the bar in 1849. In the same year he took up his residence in Chelsea and began the practice of law in Boston. He held several municipal offices and was a member of both houses of the state legislature. From 1866 to 1870 he was an associate justice of the Municipal Court of Boston, then chief justice of the same court until his resignation in 1878. He was librarian of the Boston Public Library from Oct. 1, 1878, to Oct. 1, 1890. During his administration the library's collection of Americana was largely increased and the preliminary plans for the new building were developed. The remainder of his life was devoted to literary and historical work. Judge Chamberlain was recognized as one of the foremost students of American colonial history and his collection of autographic documents relating to American history was one of the finest in the country. This collection was deposited in the Boston Public Library in 1893 and became its property on the death of Judge Chamberlain.

(See "Brief description of the Chamberlain collection of autographs," published by the Boston Public Library.)

3. Henry Barnard (A. L. A. no. 104, 1877.) Born in Hartford, Ct., Jan. 24, 1811; died July 5, 1900. He graduated from Yale College in 1830 and in 1835 was admitted to the bar. From 1837-40 he was a member of the Connecticut legislature and during his term of service advocated reforms in insane asylums, prisons and the common schools. From 1838 to 1842 he was secretary of the board of school commissioners in Connecticut; from 1842 to 1849 school commissioner of Rhode Island; from 1850 to 1854 state superintendent of the Connecticut schools, and from 1857 to 1859 president of the State University of Wisconsin. From 1865 to 1867 he was president of St. John's College, and from 1867 to 1870 U. S. Commissioner of Education. He wrote and compiled many educational books and edited several educational periodicals, the most impor-

tant being the *American Journal of Education*. In 1886 he published a collected edition of his works comprising 52 volumes and over 800 original treatises. Dr. Barnard received the degree of LL.D. from Yale and Union in 1851 and from Harvard in 1852. He was always greatly interested in libraries. In 1823 or 1824 he served as assistant librarian and made his first donation to the library of Monson Academy, and from 1828 to 1830 was librarian of the Linonian Society of Yale College, giving twice the amount of the small salary back to the library in books. During his connection with the legislature and common schools of Connecticut, 1837 to 1842, the district school library system was established and the power of taxation for libraries was given to every school society in the state. During his sojourn in Rhode Island he started a library in every town in the state. He joined the A. L. A. in 1877, and was made an honorary member at Chicago in 1893. He attended the conferences of 1876, 1877, and 1893.

("National cyclopaedia of American biography," vol. 1; L. J., 4:289.)

4. Enos L. Doan (A. L. A. no. 1909, 1899), librarian of the Wilmington (Del.) Institute Free Library. Born in Indiana about 40 years ago; died in Wilmington, Dec. 18, 1900. He was a graduate of Haverford College and was for several years connected with the Friends' School in Wilmington, first as teacher and later as assistant principal and principal. In the spring of 1899 he resigned that office to accept the appointment of librarian of the Wilmington Institute Free Library. He had previously been active in the development of the library, and as chairman of the library committee had aided in the reorganization of the former subscription library into a free public library.

(L. J., Jan., 1901.)

5. Josiah Norris Wing (A. L. A. no. 585, 1886), librarian New York Free Circulating Library. Born near Lynchburg, Va., Sept. 29, 1848; died in New York City, Dec. 20, 1900. His father, E. N. Wing, was engineer of the East Tenn. and Va. R. R. He was a Union man and after the siege of Knoxville removed to New York City. Here young Wing attended the public schools and entered the College of the City of New York, but before the close of the first year he became a

clerk in the Mercantile Library. He was connected with the library for 13 years and became first assistant librarian, but his unceasing work and devotion to details injured his health and he was obliged to retire from active work. In 1880 he took charge of the library department of Charles Scribner's Sons, for which his library training well fitted him. In April, 1899, he was elected chief librarian of the New York Free Circulating Library. During the years he was in the book business Mr. Wing kept in close touch with library interests. He was a member of the A. L. A. for 14 years, and was almost from its beginning an active member of the New York Library Club. He had been treasurer of the New York Library Association for seven years, holding that office at the time of his death. He was also prominent in book trade organizations and in various civic reform movements in New York City. He was always ready to give help and service in any good cause and he will be missed by many friends among librarians and bookbuyers.

(*Publishers' Weekly*, Dec. 29, 1900; *L. J.*, Jan., 1901.)

6. Huntington Wolcott Jackson (A. L. A. no. 884, 1890), president board of directors of the John Crerar Library. Born in Newark, N. J., Jan. 28, 1841; died in Chicago, Jan. 3, 1901. He attended Phillips Academy, Andover, Mass., and entered Princeton College. At the end of his junior year he enlisted in the army, where he secured rapid promotion. After a year at the Harvard Law School and a year spent in European travel and study, he finished his studies in Chicago and was admitted to the bar in 1868. He practiced law in Chicago and in 1888 was elected president of the Chicago Bar Association. Mr. Jackson was a warm and trusted friend of the late John Crerar. At Mr. Crerar's death he was, with Mr. Norman Williams, one of the executors of the will and a co-trustee of the John Crerar Library, then to be founded. For many years Mr. Jackson was chairman of the committee on administration and practically all of the details of administration were passed upon by him and some quite important changes were made by him. Mr. Jackson was a member of the A. L. A. from 1890 until his death, but there is no record of his attendance at any conference.

(*See Report of John Crerar Library*, 1900.)

7. Robert Crossman Ingraham (A. L. A. no. 205, 1879), librarian of the New Bedford (Mass.) Free Public Library. Born in New Bedford, Feb. 11, 1827; died there March 3, 1901. The New Bedford Free Public Library was instituted in 1852 and Mr. Ingraham was chosen its first librarian, then taking up the work to which he gave nearly half a century. Under his management the library grew from its nucleus of 5500 volumes to 72,000 volumes, and the strength and good proportions of the collection are due to his scholarship, unsparring labor, and discernment of local needs. For many years Mr. Ingraham had little or no assistance in the library, yet for more than 30 years he cataloged every book added to its shelves. He kept in touch with changes in library administration and was not prevented by conservatism from adopting those which his good judgment approved. Mr. Ingraham was a man of retiring disposition and simple tastes, a hard student with a marvelous memory. In addition to his great fund of general information, and knowledge of the books in his library, he was thoroughly posted in everything relating to the history of New Bedford, and had few equals in his knowledge of mosses and liverworts. He devoted his life to his library and his fund of erudition was always at the service of every one who sought his assistance.

(*See W. R. L. Gifford in L. J.*, April, 1901.)

8. Eugene Francis Malcouronne (A. L. A. no. 1973, 1900), for the last 10 years secretary-treasurer and librarian of the Fraser Institute Free Public Library, of Montreal, died April 11, 1901. Mr. Malcouronne will be pleasantly remembered by many who attended the Montreal conference.

The treasurer's report was accepted.

C. C. SOULE read the

REPORT OF THE TRUSTEES OF THE ENDOWMENT FUND.

*To the Secretary of the American Library Association.*

I submit herewith a report of the receipts and expenditures from the date of last report, June 6, 1900, to July 1, 1901, together with a schedule of assets, and an estimate of income for the ensuing year.

There are no donations to report. The permanent fund has been increased by the fees for three (3) life memberships, \$75 in all.

In March, 1901, the mortgagor on a loan of

The following report of audit was appended:

At the request of Charles C. Soule, treasurer of the Endowment Fund, we have examined his accounts and securities, and find evidence of investment of \$3700 in mortgage loans, of deposit of \$1050.80 in the Brookline (Mass.) Savings Bank, and of \$2102.18 in the International Trust Company, of Boston. We also find his accounts correctly cast, with proper vouchers for all expenditures.

JAMES L. WHITNEY, } *of the*

CHARLES K. BOLTON } *Finance Committee*

Mr. SOULE: In submitting this report, I would call the attention of the Association to the fact that the permanent fund is not as large as it ought to be. If you will remember, the attempt at collection, made with much vigor at first, had to be abandoned on account of general financial trouble through the country. No systematic effort has since been made to increase the fund. The work of the Association would be very much furthered if this fund were large enough to provide \$5000 or \$6000 of income, so that the Association could have two or three, or one or two, permanent paid officers, with a good allowance for travelling and incidental expenses. If any of you should be asked where an amount of say \$100,000 could be placed with advantage to the general library cause, I hope you will bear in mind the inadequate funds of the Association.

The report was accepted.

In the absence of W. L. R. GIFFORD, chairman, the secretary read the

#### REPORT OF THE CO-OPERATION COMMITTEE.

The exhaustive report on co-operative cataloging rendered by the Co-operation Committee of last year has disposed for the present, so far as this committee is concerned, of the most important subject which has of late years been brought to its attention.

Dr. Richardson reports that the index to theological periodicals is progressing rapidly, and will probably be published before the next conference of the A. L. A. The index will cover the years 1891-1900, and will include all the standard theological periodicals, of Poole rank and upwards, in all languages of which there are representatives in American libraries, together with many references to theological articles in general periodicals,

in all not less than 25,000 references. It will be an alphabetical subject index like Poole, but will differ from Poole in giving regular author-title entry, and will be more bibliographical in character through the select references to general periodicals. A feature of the index will be a very brief definition of each subject. Dr. Richardson has at present seven clerks engaged in the work, and is pushing it as fast as possible.

The dictionary of historical fiction, in preparation by the Free Library of Philadelphia, is making satisfactory progress, and will probably be issued within the coming year. Since the announcement was made at the Atlanta conference that this dictionary was in preparation there have been many inquiries concerning it, and the prospect of its publication will be welcome.

The committee has received no new information during the past year in regard to plans for bibliographical work, and it would emphasize the recommendations of previous years that all such plans be reported promptly to the committee, so that they may be published in its annual report.

WILLIAM L. R. GIFFORD, *Chairman.*

In the absence of C. H. GOULD, chairman, C. W. ANDREWS read the

#### REPORT OF COMMITTEE ON FOREIGN DOCUMENTS.

The committee begs to report, with considerable confidence, that this is positively its last appearance in connection with the list of French government serials, which has been long in course of compilation and publication. This work is now in its final stage, and as it will soon be in the hands of the reviewer, to say much in regard to it at present seems hardly necessary. Two points, however, require a word:

1. Recognizing the difficulties in the way of attaining anything like completeness in an enumeration of this nature, the committee deliberately decided to omit certain documents in favor of others. Thus it happens that no reference is made to the legislative proceedings of the several Revolutionary Assemblies, nor to other publications of equal importance.

2. In addition to enumerating documents, this list indicates particular libraries where

they may be consulted. It was, of course, unnecessary, even had it been possible, to mention all the libraries in the country which possess sets more or less complete. But it is hoped that the libraries chosen are so widely distributed as to save a would-be reader from undertaking a long journey when a shorter one would serve.

Such other features as call for notice will be referred to in the preface.

It would, however, be unbecoming if the committee failed now to recognize and thank Miss Adlaide R. Hasse for the pains and labor she has bestowed upon the list. She has co-operated with the committee from the first, and to her and to Mr. Andrews the committee is under special obligations.

The committee would further report that it now has on hand a considerable amount of raw material for a German list similar to the French; and it is hoped that progress may be made in arranging this during the present summer.

Respectfully submitted,

C. H. GOULD, *Chairman.*

W. I. FLETCHER read the

REPORT OF COMMITTEE ON TITLE-PAGES AND INDEXES OF PERIODICAL VOLUMES.

Your committee have understood their business to be the preparation of a note to be addressed to the publishers of periodicals, setting forth the views of librarians in regard to the issue of title-pages, etc., with periodicals. They, therefore, submit as their report the accompanying draft of such a note, with the recommendation that it be sent to the publishers of all leading periodicals, and that a committee on this subject be continued, to receive and act upon any correspondence that may be called out.

THORVALD SOLBERG, }  
W. I. FLETCHER, } *Committee.*

*Note to publishers of periodicals, as to the furnishing in proper form of title-pages and contents. This note was drawn up by a Committee of the American Library Association and was approved by the Association.*

As a result of much dissatisfaction among librarians with the irregularities and uncertainties connected with the issue, by publishers of periodicals, of title-pages and "contents" of volumes, the American Library Association has had a special committee consid-

ering the subject with a view to drawing up a suitable memorial to be presented to such publishers, looking to the securing of more uniformity and propriety in this matter. After mature consideration the committee have prepared the following recommendations as embodying the minimum of improvement which may reasonably be hoped for.

1. Title-pages and tables of contents should always accompany *the number completing a volume*, and not the first number of a new volume. [They should be *stitched in, and not sent loose.*] There are several cogent reasons for this recommendation:

(a) In many cases it is a serious detriment to the usefulness of a set in a library, if a completed volume cannot be bound until the receipt of the next number.

(b) More important is the need that the numbers of a volume shall constitute the volume in its entirety, so that as they are bought and sold there shall not be the necessity of handling also another number belonging to a different volume in order to complete the first. Now that libraries are buying periodical sets and volumes in such large numbers for use with Poole's and other indexes, it is of great importance to the book trade, as well as librarians, and must have a real bearing on the business interests of the publishers, that this matter, often trifled with, shall receive due attention. Publishers must come to feel that if it is necessary (which it generally proves not to be) to delay a completing number a day or two in its issue in order to insure its completeness in this respect, the delay is abundantly compensated for.

2. Title-pages and contents should be furnished *with every copy* of the issue of a completing number. We earnestly believe that by inserting title-pages and contents in all cases publishers will at once put a premium on the preservation and binding of their magazines, suggesting it to many who otherwise would not think of it. In the long run the demand for back numbers to make up volumes must more than compensate for the extra expense of putting in the additional leaves.

The policy of sending title-pages and contents only to those calling for them is suicidal, as it results in flooding the market with numbers from which volumes cannot be made up and by destroying the hope of making up sets weakens the demand which would otherwise exists for volumes and numbers of the periodical in question.

If an alphabetical index, in addition to a table of contents, is furnished, which is the preferable practice, the former should be paged to go at the end of the volume. When such an index is furnished, and no table of contents, the index should be printed to follow the title-page.

3. As to the form in which title-pages and contents should be issued: they should be

printed on a two-, four-, or eight-leaved section, separate from other printed matter, either advertising or reading. Nothing is more important in binding volumes to stand the hard wear of our public libraries than that none of the earlier leaves in the volume shall be single leaves pasted in. One of the greatest abuses of the book trade at present is the disposition to have title and other preliminary leaves pasted in. Librarians find to their cost (what is not so obvious to the book manufacturer) that this does not work. An absolute requirement for good bookmaking is that the first and last portions of the book especially shall be good solid sections — no single leaves, nor do most librarians or owners of private libraries like to include advertisements, in order to secure these solid sections for binding. We feel sure that it is abundantly worth while for the publishers to squarely meet this demand.

4. Admitting that there may be cases in which it is practically impossible to furnish title and contents with the completing number of a volume, we would recommend for such cases that such a separate section as has been described be made and furnished with the first number of the new volume, stitched in *at its end*, not at its beginning. The last-named practice is likely to cause more trouble to librarians than any other that is common, as it is difficult to remove the section without making the number unfit to place in the reading room.

We would like to call the attention of periodical publishers to the difficulties arising from the common practice of printing some first or last leaves of reading matter on the same section with some pages of advertising. Most librarians prefer to remove the advertising leaves before binding the magazines. The practice referred to makes it necessary to bind in some advertising leaves or else take off and paste in single leaves of reading matter, sometimes three or four in one place, which is very inimical to good binding. Publishers are advised to have all advertising pages printed on separate sections if possible.

Desiring to meet, so far as possible, the views of publishers in regard to the matters referred to above, the committee will be pleased to hear from any to whom this note may come.

Mr. FLETCHER: The committee have corresponded with some of the magazine publishers, and if any are disposed to consider what is here proposed an ideal system, your attention may be called to the fact that several of our magazine publishers are carrying it out. For instance, Houghton, Mifflin & Co. — I am not mentioning them as superior to others; others might be mentioned — but in

their reply to a tentative letter Houghton, Mifflin & Co. say that "in all of our publications every one of these recommendations is strictly carried out." They took pride in replying to us that they believed they were doing exactly what we wanted — and several other publishers.

G. M. JONES: I understand the report to recommend that title-pages and indexes be fastened into the last number of the volume. Now it seems that in many cases it would be very much better to have them left loose. The case is this: In almost all public libraries of any size periodicals are put into some kind of a binder. On many accounts binders which perforate are the best, but we do not wish to perforate title-page and index, if we can help it, especially the title-page, and I would like to inquire why the committee considered it so essential that the title-page and index should be fastened into the number?

Mr. FLETCHER: These questions were all considered by the committee, and I would say when I first drew up my suggestion on this point it was that title-page and index should be sent loose; but I found an overwhelming argument against that, when we came to consider that they were desired to be with every completing number; that those completing numbers are sold to the people in railroad trains and elsewhere and are coming into the second-hand periodical market, where we must look for many to make up our sets. Now as to the point which Mr. Jones has spoken of. If the magazine is to be perforated to be put in the binder, as the completing number is to have the title and index, as we proposed, in a separate section, it can be removed by undoing the stitching, or sewing, if it is sewed. That can be done before it is put into the binder. Of course there is no necessity for ruining the stitching in its entirety. There may be some little objection there, but it is so slight that it seemed to the committee entirely counterbalanced.

Mr. JONES: Mr. Fletcher's reply is perfectly satisfactory on that point.

W. S. BISCOE: One other suggestion: Do I understand from Mr. Fletcher, if there is a table of contents, that the index be put after the title-page?

Mr. FLETCHER: No, the suggestion is that

if there is an alphabetical index and a table of contents, the index should be planned and arranged at the end of the volume, but that if only an index is furnished, and no table of contents, that would be in accordance with the usual practice in such cases—the index should go, like a table of contents, after the title-page.

Mr. BISCOE: If there is no table of contents the alphabetical index is to go after the title-page? It seems to me desirable that it should always go at the end of the volume.

Mr. FLETCHER: I am very glad that point has been called attention to. I should like it if Mr. Biscoe would suggest an amendment. According to the report, when such an index is furnished, and no table of contents, the index should be printed to follow the title-page. We might say: if an alphabetical index is furnished, it should be paged to go at the end of the volume.

T. L. MONTGOMERY: Was not the committee's report to provide for the printing of the alphabetical index in the place of a table of contents, thereby making it one section?

Mr. FLETCHER: The advantage of that would be that there would be something to go with the title-page to make up the section. The title-page should be part of a section for binding as a separate section. I wonder if most of the librarians present haven't had the same exasperating experience which I have so often had with those title-pages which are separate leaves, and have to be pasted into the volume. There is hardly any practice so vicious in bookmaking as having the title-page pasted in. It almost always pulls out before the book is in any other respect at all dilapidated.

A. G. JOSEPHSON: I would suggest that the committee recommend that both a table of contents and an index should be furnished.

Mr. FLETCHER: The committee would entirely agree to that, and it could very easily be done. If an alphabetical index, in addition to the table of contents, is furnished, a practice to be preferred might be to consolidate them.

Pres. CARR: I think, Mr. Fletcher, you should be able to modify your report, before printing, to incorporate those suggestions.

F. W. FAXON: If the committee is trying

to get at an ideal arrangement, it might be well to suggest that the publishers of magazines have some one who knows something about the contents make the index. We have a magazine in Boston that persists in indexing articles under "a" and "the," and proper names under "John" and "James." But if the committee is trying to get a rule that the publishers will be most likely to adopt, it seems to me they might suggest that the index be published in each concluding number of a volume, even though the index is put in place of that many pages of text. Of course it would not do to suggest that these pages be taken out of advertising, but as the text usually costs the magazine something, publishers would probably be willing to devote four of the pages they would have to pay for to an index, which would cost them much less.

Mr. FLETCHER: I think it would interest the Association to know of an example that Mrs. Fairchild sent me some time ago of the way these indexes are made. Some periodical in New York had an article on motive power for the canals, and in the index it appeared under "Mule, Must the Canal Go?"

The report was approved and referred to the Council.

In the absence of Dr. J. S. BILLINGS the secretary read the

REPORT OF COMMITTEE ON "INTERNATIONAL CATALOGUE OF SCIENTIFIC LITERATURE."

Your committee begs to report that the final conference of delegates of the various governments for the purpose of considering an International Catalogue of Scientific Literature was held in London on June 12 and 13, 1900, and, as intimated in the report of your committee last year, owing to the failure of Congress to make it possible for delegates with power to attend, no representatives of the United States were present. Mr. Herbert Putnam, Librarian of Congress, who was visiting England at the time was informally in conference with various members of the Royal Society and rendered effective service in enabling them to reach a conclusion.

The conference decided to undertake the issuing of the Catalogue provided 300 complete subscriptions were received by October 1st, the quota of the United States in this being 45. During the summer the Smith-

sonian Institution issued a circular to American libraries and universities and learned societies and scientific men, announcing the fact, with the very gratifying result of the subscription to the equivalent of over 70 complete sets for a period of five years.

A meeting of the International Council to finally arrange for the beginning of the work was held in London on December 12 and 13, 1900, at which the necessary financial arrangements were agreed to, the Royal Society advancing certain sums and agreeing to act as publisher, and being authorized to enter into contracts, etc. Doctor H. Foster Morley was elected director and offices were secured at 34 and 35 Southampton street, Strand, London, W. C. The initial work has begun. The preparation of a list of periodicals to be indexed and a more careful revision of the schedules was the first work to be done. Thus far the periodical lists for Germany, Great Britain, Denmark, Norway, Sweden, Holland, Japan, Portugal, Canada, India and Ceylon have been printed. That for the United States is expected to be ready for transmission to London about August 1st.

In the absence of any provision, the Smithsonian Institution is carrying on the work for the United States, although with very inadequate force. It would be very desirable if legislation could be had to enable the Smithsonian Institution to prosecute this work more vigorously and without drawing upon its own funds.

J. S. BILLINGS, *Chairman.*

CYRUS ADLER, *Secretary.*

Pres. CARR: Dr. Hosmer has, I think, a communication to make that is of concern to us all.

MEMORIAL TO JOHN FISKE.

Dr. HOSMER: Mr. President, and Ladies and Gentlemen:

We meet here in the midst of beautiful surroundings, but with considerable discomfort. Perhaps we hardly make it real to ourselves that this is in our country a time of calamity. Never in the course of a somewhat long experience, can I remember so many fatalities from the terrible heat of the summer. The newspapers have come to us from day to day with the list of victims from the great cities, and this morning comes in intelligence of a

death which touches us librarians very closely—the death of John Fiske. He died yesterday at Gloucester, Mass., overcome by the heat; and I think it entirely right to say that in the death of John Fiske comes the extinction of the greatest force in American literature at the present moment. John Fiske, while not a member of our association, was at one time a librarian; he had a great interest in the Association; he was the personal friend of many of its members. It is perhaps quite right to say that no author at the present time is so frequently in the mouths and in the hands of the librarians. It has been thought fitting by the executive committee that we should make an exception in his case, and that there should be some formal mention of his passing. I regret very much that the time is so brief. What I have to say must be unconsidered.

In several directions, John Fiske was a great writer. First as regards the doctrine of evolution, the great idea which has come to the world in our day. What a great and solemn thing it is! The slow process through the lapse of ages from the monad to that which crawls, then to that which swims, then to that which flies, until we come at last to that which walks erect with brow expanded broadly to the light of heaven; the slow increment of intelligence in the brain, as species becomes merged in constantly higher species; the extension of infancy, with its beautiful sequence of humanity, of love, of spirituality. This has come to be accepted by scientific minds as the path which the divine energy chooses to follow in the work of creation. Now, among our American writers, I suppose there is no one who has had so much to do with the development of the doctrine of evolution as John Fiske. He was the intimate friend and counsellor of Darwin, of Huxley, of Herbert Spencer, of Tyndall. They recognized in him their peer, and if it is the case—and I believe it to be the case—that John Fiske contributed to the doctrine of evolution the idea of the “extension of infancy” as being the cause of what is most gentle and lovely in humanity he deserves to be named with the first of those who have been connected with that great theory.

In the second place as a historian, this won-

derfully versatile man stands among the very first of the country. As a historian, John Fiske is not to be spoken of without discrimination. He had his limitations. I do not think that he had the power of picturesque description to the extent that Motley or Prescott possessed it. I do not think that he had the power of indefatigable research to the extent that it was possessed by our honored fellow-member, Justin Winsor. I do not think that he had the faculty of character-drawing as it was possessed for instance by the great historian, Clarendon, of the seventeenth century. But John Fiske had his gift, and it was a remarkable one. Taking a chaotic mass of facts, I know of no other American writer who had such genius to go in among them, to discern the vital links that connected one with another, to get order and system out of it, and then to present the result with a lucidity and a beauty which carried captive every reader. That was his faculty, as a historian; and he possessed it to such an extent and he used it in such a way that he is entitled to a place among our greatest historians.

Nor are these the only claims to distinction of this great man who has gone. As a religious leader, John Fiske is one of the foremost men of the time. His "Destiny of man," his "Idea of God," his latest noble address on the immortality of the soul, not yet published, are priceless writings, and men and women among the very best and brightest find in these books the best expression and guidance for their religious feelings.

Every one here has had opportunity, abundant opportunity, to know the greatness of John Fiske's mind. Few here, perhaps no other one, has had such opportunity as I have had to know the warmth and the generosity of his heart. For ten years in the Washington University, at St. Louis, we were colleagues; for 35 years we have been friends, and as I stand here before you to speak of him, my emotions fairly overcome me and I can do nothing but take my seat; but it is appropriate that in the American Library Association there should be some recognition taken of the passing from the midst of us of this great and noble figure.

Pres. CARR: After these fitting and touching

words, we can hardly have it in our hearts to transact any further business this session, and therefore, if there is no objection, we will proceed to take an adjournment.

Mr. CRUNDEN: I think a fitting action, on the suggestion of Dr. Hosmer, would be the appointment of a committee, with Dr. Hosmer as chairman, to draw up memorial resolutions. I make a motion to that effect.

The motion was adopted, and a committee was appointed, of J. K. Hosmer, George Iles, and R. G. Thwaites.

Adjourned 12 m.

### THIRD SESSION.

(FOUNTAIN SPRING HOUSE, SATURDAY MORNING, JULY 6.)

The meeting was called to order by President CARR at 10.20.

In the absence of R. R. BOWKER, chairman, W. E. HENRY read the

#### REPORT OF COMMITTEE ON PUBLIC DOCUMENTS.

The Committee on Public Documents this year makes an exclusively negative report. The Congress was occupied so exclusively with matters of larger public policy, particularly in relation with new territorial developments, that no attention was given in either house to public documents measures. A bill was presented in the House of Representatives by Mr. Heatwole, on somewhat different lines from the Platt bill offered in the Senate last year, but like that in essential conformity with the general position taken by the American Library Association. This bill did not, however, progress beyond the introductory steps.

Within the past twelvemonth the Indiana State Library has issued its useful "Subject catalog of U. S. public documents in the Indiana State Library," as an appendix to the 23d biennial report of the state library, covering 289 pages, and presenting a useful conspectus within its field. This index, while serving helpfully as a general key for the use of other libraries through the range of documents contained in each specific library, suggests the greater importance of an adequate subject index to U. S. government publications in general, which could be made a checklist by several state and other libraries. The Indiana State Library has also prepared an

index to the *Documentary Journal* of Indiana from the beginning of that publication in 1835 to 1899, which is included in the 23d report of that library.

There is also little to report as to state publications, although there is evident a growth of interest in state bibliography, particularly in the state libraries. Part second of the bibliography of "State publications" is promised for the present year, including the states of New York, New Jersey, Pennsylvania, Ohio, Indiana, Illinois, Michigan, and Wisconsin.

A contribution of interest within this field has been made by the Acorn Club, of Connecticut, which has issued an elaborate bibliographical record of "Connecticut state laws," from the earliest times to 1836, compiled by A. C. Bates, librarian of the Connecticut Historical Society, a useful feature of the work being the indication, when possible, of some library in which each issue recorded may be found. Record may also be made, in this connection, of the work accomplished or accomplishing by the Public Archives Commission of the American Historical Association, headed by Prof. William McDonald, of Bowdoin College, as chairman, in which Professors Robinson, of Columbia, Caldwell, of Nebraska, Bugbee, of Texas, who are his associates on the committee, have the co-operation of representatives in the several states. While this commission does not concern itself specifically with bibliography, it is preparing the way for a better bibliography of state publications than has hitherto been possible, by investigating the conditions of the public archives of each state, with a view to inducing the systematic and more complete collection in each state of its own archives, including its printed documents as well as manuscript records.

R. R. BOWKER,  
W. E. HENRY,  
JOHNSON BRIGHAM. } *Committee.*

HERBERT PUTNAM: I would suggest that the Superintendent of Documents is here, and that possibly he might have some suggestion or recommendation to make on the subject of this report.

L. C. FERRELL: I suppose anything I may have to say will be in addition to what was

said in the report of the committee on public documents, as the report was rather negative. The matter of bringing about any legislation requires time and involves a great deal of hard work upon somebody. This is especially so if the subject is one in which no member of Congress, in particular, has a personal interest. It generally takes 10 or 12 years to pass any bill of interest to the people that no member of Congress will take care of personally. If it is a matter like saving the country, you can get a fifty million dollar bill passed in half an hour, but you cannot get a member of Congress to take up and pass a bill changing the method of printing and the distribution of documents without a great deal of pressure. Now, if Mr. Heatwole, chairman of the House Committee on Printing, was here, I think we might accomplish something to advantage on that subject, because I think if he could meet this great body of librarians face to face, we might get him to commit himself as to what he will do next session. He has promised me to take up this matter next winter and revise the printing laws from "A" to "Z," as he expressed it, but whether he will do so or not, I cannot say. Now, I shall prepare another bill, or have the old bill introduced again, I do not know which, and, as long as I remain in the office of Superintendent of Documents, I shall endeavor to bring about legislation on the lines proposed in the bills heretofore presented to Congress. In the first place, I want all the government periodicals taken out of the Congressional series and bound in cloth, so that they can be distributed to the libraries as soon as they are printed. But one edition of any document ought to be printed, and that edition ought to have the same endorsement on the back and the same title on the inside. If we continue to print duplicate and triplicate editions — departmental, bureau, and congressional — librarians will always have trouble in classifying and cataloging them. As far as my record is concerned, I suppose most of you are familiar with it. I am constantly endeavoring to improve the service. I have adopted a cumulative index for the monthly catalog; cumulative for six months, with a consolidated index for the entire year, in the December number. That was done mainly

because the annual catalog cannot be printed so as to be distributed promptly, and the monthly catalog fully indexed can be made to answer all temporary purposes. Now, we have three series of catalogs, as you all know, perhaps, each one serving a distinctive purpose. The document catalog, or comprehensive index—its official title—is intended for permanent use. It includes all documents printed during a fiscal year—July 1 to June 30, following. The document index is a subject, title, and author index of all congressional documents, indicating the number of each document and the volume in which it is bound up. In the monthly catalog all documents are arranged alphabetically under the author of the document, and everything related to the same subject is brought together in the index. Now, we are broadening out a little in our work; probably doing something Congress never contemplated we should do when the office was established. We are doing a good deal of bibliographical work, and I intend to enlarge upon it as I have the opportunity. We have published "Reports of explorations printed in the documents of the United States government, a contribution toward a bibliography," by Miss Hasse; a "Bibliography of U. S. public documents relating to inter-oceanic communication across Nicaragua, Panama, etc.," and we expect soon to take up the subject of documents relating to the various states, the purpose being to make a complete bibliography of everything printed in the U. S. public documents concerning each state and territory. We propose to take up the matter of documents relating to the Louisiana purchase first, because we are going to have a great exposition two years from now at St. Louis to commemorate that great event.

J. C. DANA presented the

REPORT OF THE COMMITTEE ON CO-OPERATION  
WITH THE NATIONAL EDUCATIONAL ASSO-  
CIATION.

Early last winter I secured from librarians, library assistants and teachers about 25 brief articles on co-operation between libraries and schools. These articles were written with special reference to teachers. I made a descriptive list of them and sent this list to leading educational journals in this country, with

the request that the editors thereof select from it one or more of the articles and publish them prior to July 1, 1901. Largely through the kindness of Mr. Winship, editor of the *Journal of Education* of Boston, I got the promise of publication of these articles from educational editors to the number of 25. The articles were duly sent out. I regret to have to report that I have received notice of the publication of less than half a dozen of the whole number. A few others may have been published, but the editors have never notified me of the fact. The articles were brief and chiefly written by persons prominent in library work in this country, they were of general interest, and seemed to deserve publication. The fact that they did not get it is to my mind somewhat indicative of the comparative unimportance of libraries in the opinion of educational people of this country.

Since coming here I have learned of another little incident which throws some light on our relation to the educational profession of this country. From the office of *Public Libraries* the program of the meeting of the library department of the N. E. A. at Detroit was sent to 32 leading educational journals in this country with the request that they print it. Of these 32 papers two only printed the program as requested, or at least two only printed it and gave due notice of the fact.

From all this we may learn, as I have stated more than once before, that libraries and librarians are as yet held in small esteem by the educational people of this country. Our influence among them is not great. It is not considered that we are connected in any important way with educational work. This is the opinion held by the rank and file. I believe this to be true in spite of the fact that the leaders of the N. E. A. have themselves been more than generous to the library department. Those leaders, largely through the influence of Mr. Hutchins of Wisconsin, gave a special appropriation of over \$500 to a committee of this department for the publication of a report on the relation of libraries and schools. This report has been quite widely circulated and has been well received by both teachers and librarians. We owe that to the N. E. A. We owe it to the appreciation of library work by the leaders of the N. E. A.

Nevertheless, taking the teaching profession at large, I think it safe to assume that our experience with the educational journals during the past winter is indicative of the teacher's attitude toward libraries and their possible helpfulness in the school room. This fact should not discourage us. On the contrary it should stimulate us to make our collections and our work with them of still more consequence until it becomes quite impossible for anyone in the educational world to be ignorant of, or to fail to take advantage of, the assistance to every day teaching work which we believe our libraries can give.

It is quite difficult, of course, if not impossible, for us to produce any great effect on the teachers of the present day save through individual work in our respective communities. No one can ask for a better opportunity to see the result of such work than I have had myself. I have seen two or three hundred teachers in the course of four or five years changed from an attitude of indifference toward the library as an aid in every day school room work, to one of readiness not to say eagerness, to take advantage of every opportunity the library could possibly offer. Many other librarians have had similar experiences. But this work does not go on rapidly enough to influence the profession as a whole. The teaching profession as it now stands is, as I have said, indifferent toward us. One thing we can do, and that is, arouse an interest among those who are to become teachers. After individual work in our own towns the best thing we can do, and especially the best thing we can do as an association, is to stimulate an interest in library training in the normal schools of this country. Interest in this phase of practical work has increased very much in normal schools the last few years. This is especially true in the west; and perhaps more true in Wisconsin than in any other state.

Mr. Dewey has recently given this matter consideration and I shall be much pleased if he will say something further by way of supplementing this informal report of mine, on what has been done and what can be done in normal schools toward interesting teachers in the use of libraries in teaching.

MELVIL DEWEY: What Mr. Dana has said,

though perhaps a little discouraging in its tone, is pretty nearly the truth; but we ought to remember this — the public school teachers and the other teachers of this country are a badly overworked class. Many a man and woman has broken down of nervous prostration in school, who has entered a library and worked hard and kept well. Our friends on the school side of educational work have a strain that comes from the disciplinary side. Worry kills more than work, and teachers have to meet this question of discipline; they have to take responsibility in the place of parents; they have an interminable number of reports to fill out; they have a mass of examination papers to read and deal with; and they have examinations to make until they are driven almost wild. Now, we go to them and present our case, our arguments for co-operation with the library. They admit it; they are convinced of it; but they have not vital energy and force enough to take up the matter and do much work in our cause. It is not that they doubt. They won't question the high plane on which we want to put the library, and they want to fulfil all their duties. I believe if we were to change places and were put into their routine, the majority of us would do just what they do — put it off until a more convenient season. I think that is the real trouble with our teachers. They are overworked, many of them; they are in certain ruts; and my suggestion is to try to reach them when they begin their work, through the normal schools. If we can get the normal school authorities to give the right kind of instruction and the right kind of a start to the teachers, we will accomplish a great deal more. We can do twice as much in working with the student teacher; it is like working in plaster of paris — easy while in a soft and plastic stage, but you leave it awhile and it hardens. So I should say, in considering this report, that we ought not to be discouraged. It is what we should expect, and we should turn our attention to, doing all we can to reach the young teachers who are now in a plastic state, ready to be moulded, but who in ten years will be dominant forces in education.

MISS M. E. AHERN: I wish to call attention to the fact that the program of the Library Department of the National Educational As-

sociation calls for a greeting from some representative of the A. L. A., and I therefore request, as secretary of that section and as an earnest member of the A. L. A., that you appoint some member to carry such greetings to the Library Department of the N. E. A.

It was voted that Mr. Crunden be appointed to represent the Library Association at the N. E. A. meeting.

F. M. CRUNDEN: Touching the subject before this meeting, I want to corroborate the statement made by Mr. Dana regarding the progress that comes quickly if you once induce the teachers of a city to accept, even in a small measure, the co-operation of the library. Only a few years ago we almost had to beg the teachers to use our books. We had to offer every inducement to them, and they did it, most of them, rather reluctantly. Now the great majority of our schools use the library books. Not long ago I asked three questions of the teachers using the library in their work: What value do you place upon the library in supplementary reading? What effect has it had thus far on the progress of your pupils in their studies? Is it an aid to the pupils? All these questions were answered most satisfactorily to us. Several say the library books are worth as much as any study in the curriculum, while two of them say that the library books are worth all the rest. And regarding discipline, the universal testimony is that the library is an aid to the discipline. In the school where most reading is done, the principal tells me that the problem of discipline has been practically eliminated; they give no more thought to it, because the children are interested and pleasantly occupied, so they do not get into mischief. The library has aided in all studies, is the basis of language work, has improved the language of the children, and has given an interest to the school work that it did not have before. Now if the teachers can only understand that this is going to lighten their work instead of increasing it, they will accept the co-operation of the library.

Dr. CANFIELD: Just one word to express my appreciation of the fairness with which Mr. Dewey put before you the position of the teachers and to add this statement: You are all likely to forget that you determine the lines of your own work and that a teacher's work

is laid out for her by other people, and it takes about all the time and strength of the pupil to meet the immediate demands of the curriculum, which is often very unwisely laid out. I want to add to that, as a proof of the interest taken by teachers, I know of my personal knowledge that the teachers of the high schools of New York have frequently placed their personal endorsement upon library cards for the pupils they have sent to the libraries and for whose books they are personally responsible. They cannot prove their interest in any better way than that.

Mr. DANA: I just want a moment to correct a possible impression that I was finding fault with the educational profession of this country. I was not finding fault with them, but finding fault with ourselves. If we are not yet a power to the teachers of this country, then it is our own fault. We do not as yet understand our own fitness, especially in relation to schools and reading in the schools, and we do not even know what we want to do, or what books to recommend. We do not know what the field of work in the schools is. How, then, can we expect to teach it; to urge a thing in regard to which we are not yet free of all doubts? The fault is our own possibly, and yet it is not all our own fault. It is largely a question of necessary time.

In the absence of Dr. E. C. RICHARDSON, chairman, the secretary read the

#### REPORT OF COMMITTEE ON INTERNATIONAL CO-OPERATION.

The Committee on International Co-operation in taking up the work referred to it by the Association has limited itself this year to a consideration of the question of a uniform standard of book statistics. This question is a two-fold one, first, what should be called a book, second, when statistics are classified, what are the most practical and useful classes?

In respect of the first matter, it recommends that all books for statistical purposes be divided into two or three classes. (1) Books of 50 pages or over; (2) books under 50 pages; or, where books of under eight pages are regarded at all, books of from eight to 49 pages; and (3) books under eight pages.

In respect of the second question, the chairman has prepared a comparative table of the usage of the *Publishers' Weekly, Bookseller*

Table showing classification of book trade statistics.

Some of the chief matters for attention are the questions of *Biography*, whether by itself or scattered in classes; *Literary History and Art*, by itself or under Philology, or under Bibliography, or scattered; *Juveniles*, by itself or divided among Fiction, Poetry, Education, etc.; *Scientific School Books, Geographies, etc.*, under subject or under Education; *Art of War, Commerce, etc.*, under Economics or Technology. All these conflict somewhere in usage shown and in the judgment of the various members of the committee, although there is a majority for keeping Biography as a separate class—contrary to unanimous foreign usage.

and *Newsdealer, Publishers' Circular, Bibliografia Italiana, Hinrichs and Reinwald*, arranging these in the order of the Dewey classification. This was printed by Mr. Bowker for the use of the committee, and is herewith submitted.

Mr. Bowker, in behalf of the committee, has submitted the matter, through Mr. G. H. Putnam, to the International Congress of Booksellers, and it is hoped that there may be a committee appointed or empowered to confer with this committee, and that some practical result may be reached in spite of various difficulties. This committee therefore recommends for the purpose of library reports, etc., the use of the Dewey order and divisions given in the accompanying table, with such modification as may be necessary to meet book trade requirements, but in the case of all recommendations begs to make them subject to an international understanding, and asks that the committee be continued and given full power to adopt a recommended order, providing an understanding can be reached with a representative of the booksellers. If such an understanding is reached, efforts should be made to get the further concurrence of other library associations and bibliographical bodies generally.

ERNEST C. RICHARDSON, *Chairman,*  
*for the Committee.*

J. C. DANA for the

#### COMMITTEE ON LIBRARY TRAINING

made a brief statement, that the committee as a whole had been unable this year to visit and report upon the schools. He presented, as the report of the committee, a letter from Dr. E. C. Richardson, one of its members who had visited several of the schools as lecturer.\*

WILLIAM BEER spoke briefly on

#### COLLECTION AND CATALOGING OF EARLY NEWSPAPERS.

The few remarks I have to make on this subject are prompted by a recent effort to collect from printed catalogs the scattered newspaper material for the first 15 years of the 19th century. The collection of information on the locality of files of newspapers up to 1800 has been commenced, and will in time

\* This report will appear in a later issue of the *Library Journal*.

be completed by Mr. Nelson, who publishes his results in the "Archives of the State of New Jersey." Many corrections will be necessary to his list, but it will even in its present shape be of great advantage to historical students.

The difficulty of the work increases almost in geometrical proportion as the dates approach the present era. The great increase of newspapers renders it necessary to divide the work into decades. I have chosen to carry it to 1815 on account of the importance to Louisiana history of the reports on the battle of New Orleans.

The particular feature in cataloging which I would fain see carried out in every library is the chronological conspectus, of which so admirable an example exists in Bolton's catalog of scientific documents, which is, or ought to be, familiar to all present.

It is exceedingly simple and easy to prepare and is of the greatest possible service, both to the librarian and the student.

Take any folio book ruled in wide columns with an ample margin. For my purpose I start by heading the first column 1800, and so on to the end of the page. Taking material from Mr. Galbreath's useful compilation, I find that in the libraries of Ohio there is only one title which will appear under this head, the *Western Spy* in the collection of the Cincinnati Young Men's Mercantile Library. Enter in the marginal column the full details of the publication of this newspaper and draw a horizontal line across the column. The years 1802-3-4, etc., present an increasing number of titles. The horizontal lines in the columns present an immediate summary of all the newspaper literature on the subject.

Dr. G. E. WIRE read a paper on

#### SOME PRINCIPLES OF BOOK AND PICTURE SELECTION.

(See p. 54.)

MELVIL DEWEY: I want to say a word about that New York list of pictures. When we printed that bulletin a great chorus of criticism arose from among the newspapers, and we smiled; we said it was characteristic of newspapers to discuss a thing without knowing at all what they were talking about. But I did not suppose that same characteristic would appear in this Association. Our bulletin

tin states very distinctly what it is for, and it makes its own case absolutely infallible. We had to meet the problem in the state of New York, of circulating pictures bought with the taxpayers' money, to be put on the walls of the school houses—Jewish schools, Roman Catholic schools and schools of many denominations. Under those peculiar conditions it was a question whether we could carry the movement at all, and we selected about 50 people, whose judgment was most reliable, and asked them, out of several hundred pictures, to select 100 that would be open to no objection of any kind. There was no effort whatever to select the hundred *best* pictures. They simply made a list that would pass the legislature. It included pictures that people ridiculed sadly; and yet we had on file letters from prominent people in the state to the effect that they would protest against certain well-known pictures, and we thought it wiser not to raise issues over minor details. Our bulletin is simply a list of pictures that have been passed by representatives of various religious and ethical interests. You may think it most absurd that certain pictures, perhaps the most famous, should have been voted out of such a list, but if you were to go through the schools of the state of New York or any other state you would find that there are conscientious mothers and fathers, who have had no opportunity for art training, who would get down on their knees and pray that some of these pictures might not be put on the walls of the school room. If you do not know that, you are not familiar with the sentiment in the rural districts. There was a specific purpose in our action; we heard all of these criticisms, and we did the thing that seemed right and best under the circumstances. There are about a hundred of us on the state library staff, but we do not yet, as a body, venture to feel as omniscient as some single individuals regard themselves. I strongly believe that it is not a bad thing to take the opinion of experts. We are perfectly willing to show respect to the specialist in his own field, and I think it is mighty unwise advice to give young librarians, when they are told not to ask the opinion of a good specialist, whose verdict commands the confidence of the public.

Adjourned at 12.05 p.m.

#### FOURTH SESSION.

(LIBRARY HALL, MADISON, WIS., MONDAY AFTERNOON, JULY 8.)

President CARR called the meeting to order at 2.25 p.m., and in a few words expressed the appreciation of the Association for the delightful arrangements that had made "Madison day" so interesting and enjoyable.

Miss MARY W. PLUMMER then spoke on

#### SOME EXPERIENCES IN FOREIGN LIBRARIES\*

Miss PLUMMER deprecated any desire to make a comparison between foreign and American libraries. They served so different a purpose, for the most part, that comparison was impossible. Libraries, like systems of education, were an outcome of the history, of the race-temperament and characteristics, and of the social conditions of a people. And it was according to one's point of view whether such a comparison would be favorable to one side or the other. One thing seemed almost predicable—that, wherever democracy was making its way, there the library supported by the people and for the use of the people had a tendency to appear patterned more or less after those of England and America.

English libraries were not touched upon, but the leading collections of Germany, France and Italy were briefly described. At the Bayreuth and Nuremberg libraries books were secured without formality, and all privileges were extended to the visiting colleague, with entire trustfulness and fraternity. In Italy more formality was required, the libraries being government institutions for reference use, but courtesy and a desire to be of service prevailed throughout. Considering the question, "What do people do who want to read fiction in Italy—the same people who are always wanting the new novels in this country?" Miss Plummer said: "Apparently, these people do not exist in sufficiently large numbers to be considered in the libraries. If a work of note comes out, such as a new novel by d'Annunzio or Fogazzaro, it can be had at the book shops in paper for two lire or two and a half, *i.e.*, 40 to 50 cents, and people buy it and lend it. In some of the

\* Abstract.

little book shops books circulate for a small fee, but not by any means the best class of books. The government libraries may purchase the novels of such authors as those I have mentioned, but they do not make haste about it, and in one library (a municipal, circulating library) no book can go out that has not been in the library's possession three months. The novel-reading class is chiefly composed of visiting or resident English and Americans, and in all Italian cities of any size there is a subscription library where books in English can be had."

At Florence, when one discovers the large and enterprising subscription library which the Viesseux, father and son, have carried on for several generations, one's troubles in getting books seem ended, for they have all the books that the government libraries cannot and do not buy—a large subscription list of periodicals, open shelves, late books separated from the rest, and they will get what one asks for if they haven't it already. If American publishers sent their lists regularly to Viesseux one would probably find more American books there. Further than this, one's subscription entitles one to a book or books by mail to any place in Italy or in the surrounding countries where one may be staying. Of the Florentine libraries, the Marucel-*lian* is the nearest our ideal of a modern reference library in its collections as in its methods. It has, as its chief field of purchase, the best modern books in belles-lettres, and as it is open in the evening its rooms are often crowded with students and readers until closing time. It has a card catalog by subjects and a duplicate card catalog of part of the collection of the National Library of Florence; a ms. catalog in book form by author, which is accessible to readers; a room set apart for women students, with a woman, a university graduate, to preside over it. The National Library is a much greater collection and older, in its 87 rooms; and its periodical room is the most modern of all, with its magazines from all countries, even our own *Harper and Century* showing their familiar faces on the racks. A special room here is devoted to the catalogs, which were partly in ms, book form and partly on cards, and students were always searching the pages or the cards without let or hindrance.

At Rome the Victor Emanuel Library had a small room shelved with the Leyden catalogs, in constant consultation. As in most of the government libraries, there was a table reserved for women, though it did not seem to be much used.

Among the Paris libraries described were the Ste. Geneviève, the Sorbonne, and one of the ward or "arrondissement" libraries. The latter was in the Mairie, and open at 8 p.m. only. The books were in floor cases, with a counter between them and the people, and on the counter lay small pamphlet finding lists. It is not hard to keep these up to date, since the libraries themselves are far from being so, and new books are not often added. The librarian, who had some other occupation during the day and served here in the evening, to add a trifle to his income, got books and charged them in a book as people asked for them. Use of the library was permitted only after obtaining as guarantor a citizen living in the same arrondissement with the would-be borrower. While this kind of library is of course much better than none, and the situation in Paris is that much better than in Italian cities, the fact that the hours of opening are only in the evening is a barrier to much usefulness. On the other hand, a library to each arrondissement is a fair allowance, and no one has to go very far to reach his library. For the most part they are patronized by the small tradesmen of the neighborhood and their families. A large proportion of our reading public is missing from these municipal libraries—they buy their own books, in paper, at the department stores, and make no use whatever of the government libraries or of these small circulating centers.

In conclusion, Miss Plummer said: "If I were asked what sort of library was most needed in France and Italy, I should say first *good* libraries for children and young people. The children of these countries read earlier than ours, the language presenting fewer difficulties of spelling and pronunciation, and many of them are fond of reading. Good material is not plentiful, and what there is the child has no help in getting hold of. Bad reading there is in abundance, in the shape of so-called comic papers, etc., at every turn and for an infinitesimal price. One is ready to say that it is better not to know how to read

than to be induced by one's knowledge to make such acquaintance as this."

Dr. J. K. HOSMER followed with an amusing fable, entitled

FROM THE READER'S POINT OF VIEW, AND THE ERA OF THE PLACARD.\*

The subject was presented in the form of a clever parable, satirizing the present-day "booming" of popular books, and the unseemliness and vulgarities of modern advertising methods. It concluded with an "imaginary conversation" between a librarian and a reader, as follows:

"A fellow-librarian?" said I.

"Not quite that," said he, "but one who uses libraries—a reader, in fact."

"I felt a sudden thrill of satisfaction. Here at last I had found my reader, and I faithfully proceeded at once to get at his point of view. 'Well,' said I, 'is it not an inspiration to live in the era of the placard; and what do you mean to do for the Great American Bill Board Trust?'"

"We walked down the street arm in arm, and this is the rather unsympathetic monologue in which the reader indulged:

"The bill-board—and I mean by the bill-board coarse and obtrusive advertising in general, whether shown in this defacement of natural objects, road-signs, street car panels, or in newspaper columns—an evil from which even the public library is not free—the bill-board is an evil, but after all only a minor evil. If we had nothing worse than that among our social problems to vex us, we should indeed be fortunate. Advertising is a legitimate incident of commerce. The merchant who has wares to sell may properly make his commodities known. I own I study the advertising pages of my *Century* and *Scribner* with scarcely less interest than I do the text. But the world is so full of bad taste! There is no sanctity or silence through which the coarse scream of the huckster may not at any time penetrate. The loud bill-board is but the scream of the huckster transmuted so that it may attack still another sense. The wonder is that this bill-board, and its fellow enormities in the street car panel and the newspaper columns, do not re-

pel instead of attract. In the case of refined minds certainly repulsion must be felt. Now for myself,' said the reader, and here I thought he spoke conceitedly, 'the fact that a thing is coarsely and loudly advertised is a strong, almost invincible reason for my not buying it, however necessary it may seem. With the world in general, however, the standard of taste is low. Coarseness does not offend; also, it pays to use it.

"I have sometimes seen on library walls placards sent in with the demand, 'Please display this prominently,' that have exercised upon me an immediate deterrent effect. Still,' said the reader, with his superior air, 'do not think me ill-natured. The best thing we can do is to keep our temper, stamp down as we can what becomes too outrageous and indecent, and labor and pray for the refinement of the world's taste. This no doubt will come very slowly.'

"Can we help the thing forward at all?" said I, falling in for the moment with his humor.

"Only as we can promote in general the diffusion of sweetness and light,' said the reader. 'If a man should be aroused to attack directly I believe he might strike a more effective blow through ridicule than through denunciation. Keep denunciation for the more weighty and ghastly evils that beset us; a mere annoyance it is better to laugh away if we can do it.'"

Adjourned at 3.30 p.m.

FIFTH SESSION.

(FOUNTAIN SPRING HOUSE, TUESDAY MORNING, JULY 9.)

The meeting was called to order by President CARR at 10.20 a.m.

The president announced the receipt in pamphlet form of the

REPORT ON GIFTS AND BEQUESTS.

(See p. 87.)

This was read by title, and filed for publication in the Proceedings.

W. I. FLETCHER presented the

REPORT OF THE A. L. A. PUBLISHING BOARD.

(See p. 103.)

\* Abstract.

Mr. DEWEY: I wish to remind some of you who were with us 25 years ago in Philadelphia, when we organized the A. L. A., and who, during that whole period, have studied its interests so closely, that the time has come at last when we are really on the way to secure one of the things we have always thought most important—co-operative printed catalog cards. This will make for all of us less drudgery and more inspiration, for there is not much inspiration in writing out author's names; it will relieve us of a considerable burden; it will produce economy and increase efficiency; and it appeals strongly to our trustees and business men. It is perhaps the most important thing we have to do, and there have been apparently insuperable obstacles to success; but we have always hoped for one complete solution. And this was that it could be done at the National Library in Washington, with its printing presses, post-office facilities, copyright department and great central collection. You remember that when the Pacific railroad was built, and as the ends came together to make the connection, a great celebration was held through the country, a thrill that the work was at last done; and I feel to-day, now that we hear in this able report that printed catalog cards are really to be undertaken at the National Library, that what we have waited for over 20 years and what we have been dreaming about has come to pass at last. After serving my term on the Publishing Board—this is my valedictory—I feel to-day that I must say just this: Now that we have reached this point, that every one has hoped for so long, we must see to it that this agency is utilized and appreciated. Every one of us ought to watch those printed cards, and make suggestions as to their use. If we utilize them, and prove their value and their economy, we can rely on the great support of the National Library in many other movements.

The secretary read a letter from the Hon. Secretary of the

LIBRARY ASSOCIATION OF THE UNITED KINGDOM, inviting the A. L. A. to be represented at its annual meeting, to be held in Plymouth, England, Aug. 27-30, 1901; and, on recommenda-

tion from the Council, it was voted that members of the A. L. A. abroad at the time of the English meeting be authorized to represent the American Library Association on that occasion.

The president announced that the polls would be open for

#### ELECTION OF OFFICERS

in the library exhibit room at the Fountain House from 8 to 10 Tuesday evening, and that J. I. Wyer and J. G. Moulton would serve as tellers.

In the absence of F. J. TEGGART, chairman, the secretary read the

#### REPORT OF COMMITTEE ON HANDBOOK OF AMERICAN LIBRARIES.

Since its appointment this committee has worked steadily towards the accomplishment of the object of the handbook. Specifically this object is the collection of the statistics, history and bibliography of all libraries in the United States having 10,000 or more volumes on Dec. 31, 1900.

While about 80 per cent. of the circulars sent out in 1899 were returned, the cases in which the bibliographical and historical data was supplied were too few in number to be of much assistance. The work which has therefore fallen on the chairman of this committee is neither more or less than the preparation of a check list of all the publications of American libraries. The need of this work must be apparent to any librarian who considers that there is at present no bibliographical source in which information regarding library publications may be found. The "American catalogue," for example, ignores such publications altogether.

In beginning this work the chairman of your committee indexed the set of the *Library Journal* and all available bulletins and catalogs of libraries for library publications, and cataloged the similar material existing in the libraries of San Francisco. Approximately the list now includes between 8000 and 9000 cards.

This large body of material has been reduced to shape, and the greater part has been typewritten on sheets. What now remains to

be done is that some person conversant with the library literature of a state or city should take the sheets representing that district and carefully compare the entries with the books themselves, supplying omissions and correcting errors. This certainly is no light piece of work, but it is essential to the success of the undertaking.

The historical notices have been prepared in part, but the statistics obtained in 1899 must of necessity be renewed to bring the entire work down to the end of the century.

As the manuscript can be completed by Jan. 1 next, there is every reason to believe that this large piece of work can be presented in completed form to the Association in 1902, with one proviso. When the committee was appointed in 1899 it was given a general authorization to incur expenditure—in fact, without doing so no work could have been done. Again, in 1900, an authorization for expenditure was passed by the Association. Up to the present the chairman of the committee has expended directly on this work on postage and printing about \$150. Owing apparently to the general terms in which the authorizations for expenditure were made at previous meetings, the officers of the Association have not so far made any appropriation towards this amount, and it would seem proper that some definite provision should be made by the Association at this meeting to cover a part at least of this expenditure if the handbook is to be considered an "A. L. A." undertaking.

FREDERICK J. TEGGART, *Chairman*.

C. W. ANDREWS: As the third member of the committee, I may supplement this report, and state that the matter of obtaining the consent of the Bureau of Education to undertake the publication of this handbook was left to me, and that I have pleasure in informing the Association that there seems every prospect that at least a portion of this material will be published by the Bureau of Education, and that we may hope to have made available in this way a much-needed tool for practical use and a mass of information which cannot fail to be of value outside of this country.

W. I. FLETCHER: The matter of the publication of this handbook was referred to the Publishing Board, but if the plan for its pub-

lication by the government is carried out, the Publishing Board understands that will take the publication out of its hands. I move that the executive board be requested to inquire into the matter of the expense incurred by Mr. Teggart, and provide for meeting it, if this is found possible. *Voted*.

The secretary read the by-laws to the constitution, prepared by special committee and adopted by the Council, as follows:

BY-LAWS.

§1. The annual dues of the Association shall be \$2 for individuals and \$5 for libraries and other institutions, payable in advance in January. Members who are one year in arrears shall, after proper notification by the treasurer, be dropped from the roll of membership.

§2. Nine members shall constitute a quorum of the Council for the transaction of routine business, but no sections of the Association shall be established and no recommendations relating to library matters shall be promulgated at any meeting at which there are less than 17 members present. The records of the Council, so far as of general interest, shall be printed with the Proceedings of the Association.

§3. In case of a vacancy in any office, except that of president, the Executive Board may designate some person to discharge the duties of the same *pro tempore*.

§4. No person shall be president, first or second vice-president, or councillor of the Association for two consecutive terms.

§5. The president and secretary, with one other member appointed by the executive board, shall constitute a program committee, which shall, under the supervision of the executive board, arrange the program for each annual meeting and designate persons to prepare papers, open discussions, etc., and shall decide whether any paper which may be offered shall be accepted or rejected, and if accepted, whether it shall be read entire, by abstract or by title. It shall recommend to the executive board printing accepted papers entire, or to such extent as may be considered desirable.

§6. The executive board shall appoint annually a committee of five on library training, which shall investigate the whole subject of library schools and courses of study, and report the results of its investigations, with its recommendations.

§7. The executive board shall appoint annually a committee of three on library administration, to consider and report improvements in any department of library economy, and make recommendations looking to harmony, uniformity, and co-operation, with a view to economical administration.

§8. The executive board shall at each annual meeting of the Association appoint a committee of three on resolutions, which shall prepare and report to the Association suitable resolutions of acknowledgments and thanks. To this committee shall be referred all such resolutions offered in meetings of the Association.

§9. The objects of sections which may be established by the Council under the provisions of section 17 of the constitution, shall be discussion, comparison of views, etc., upon subjects of interest to the members. No authority is granted any section to incur expense on the account of the Association or to commit the Association by any declaration of policy. A member of the Association eligible under the rules of the section may become a member thereof by registering his or her name with the secretary of the section.

§10. Provisions shall be made by the executive board for sessions of the various sections at annual meetings of the Association, and the programs for the same shall be prepared by the officers of sections in consultation with the program committee. Sessions of sections shall be open to any member of the Association, but no person may vote in any section unless registered as a member of the same. The registered members of each section shall, at the final session of each annual meeting, choose a chairman and secretary, to serve until the close of the next annual meeting.

Dr. J. K. HOSMER reported for the committee on

#### MEMORIAL TO JOHN FISKE.

Dr. HOSMER: The committee to whom this matter was referred thought it best to prepare, instead of a formal preamble and resolution, a minute to be entered upon the Proceedings of the convention. That received the approval of the Council. The minute is as follows:

"The news having reached us of the untimely death of John Fiske, once our professional associate, we, the American Library Association, desire to make record of our profound grief at the departure of a writer who was a dominant force in American literature, and to express our sense that in this passing of a great thinker, historian, and spiritual leader, our land and our time have sustained irreparable loss.

President CARR: This minute will be spread upon the record of the Proceedings, having taken the regular course.

#### CO-OPERATIVE LIST OF CHILDREN'S BOOKS.

C. R. PERRY: At the last session of the Children's Librarians' Section action was taken

looking towards a co-operative list of books for children. There were some features connected with it that were of such a general character that we thought it essential that the plan come before the Association in general session, to secure proper authority for us to proceed with the work; furthermore, there was no further session of the Children's Librarians' Section, so if a report was made at all it would have to be made to the A. L. A. in general session. The report is as follows:

#### *To the American Library Association:*

At the last session of the Children's Librarians' Section a committee was appointed to formulate some plan whereby a co-operative list of children's books may be produced, this committee to report at some general session. We now are ready and beg leave to report progress.

We have interviewed over 50 members of the A. L. A. within the last two days, and find a general desire for such a list. Moreover, the people interviewed have expressed their willingness to subscribe among themselves a sum of money necessary to cover the cost of preparing such list (postage, type-writing, stationery, printing, etc.).

Your committee have found that one or two days are hardly sufficient to enable us to bring our plan into perfection. We desire very strongly to accomplish the results for which we were appointed, and therefore ask for more time. We do respectfully recommend and ask that authority be given to our committee to proceed with the following plan:

- (1) Committee on co-operative children's list to appoint six people to collect the subscriptions which have been promised.
- (2) Some one experienced and well-known librarian to be appointed by our committee to undertake the preparation of the said list.
- (3) When such person has been appointed and has accepted, the money raised to be turned over to that librarian.
- (4) Our committee to suggest to the person undertaking this work a plan whereby not only may be secured the approval or disapproval of librarians and teachers as to the books of the tentative list, but also a report as to the manner in which these books have been received by the children in all parts of the nation.
- (5) A final and definite report to be submitted at the next conference. This report to include the books generally accepted and those rejected as well.

Respectfully submitted,

CHESLEY R. PERRY, *Chairman,*

J. C. DANA,

ELIZA G. BROWNING.

President CARR: This report comes before you in the nature of a recommendation, and suitable action would be to move that the Association appoint a general committee to carry out the recommendations of the report. That committee might consist of the members of the present committee, who drew this report—Mr. Perry, Mr. Dana and Miss Browning.

R. R. BOWKER: Is not this a matter which should come under the jurisdiction of the Publishing Board? It would then give this proposed committee somewhat the relation to the Publishing Board that is borne by the advisory committee on printed catalog cards. Otherwise we might have a confusion of results.

Mr. PERRY: That matter was discussed, but we felt that we were preparing something which at the next convention might be submitted to the Association, and then referred to the Publishing Board. We are not expecting to prepare a list for general printing and circulation, but a list which may be brought up at the next conference as something definite to be referred to the Publishing Board.

It was *Voted*, That the committee acting for the Children's Librarians' Section be appointed to carry out the work outlined.

#### PRINTED CATALOG CARDS.

HERBERT PUTNAM: I ask your indulgence, Mr. President, for a few words. The readiness of the Library of Congress to take up the work of supplying printed cards has been stated. For the Library of Congress, I wish to say that we do not repudiate anything of what has been stated as to our readiness; it must be understood, however, that we are justified in entering upon this undertaking only in case it presents a reasonable probability of success. Now, for that probability three elements are essential. First, some body that should represent judgment and experience, in such co-operative work, and be in touch with the interests at large of the Library Association. That body is furnished by the Publishing Board. Second, there was necessary some office that was directly in relation with the publishers of this country. That office is the *Publishers' Weekly*, and the *Publishers' Weekly* has generously offered to place at our disposal all of its facilities for securing

prompt information as to every recent publication. Third, there is a strong probability that during the first year at least there will be some deficit, while the experiment is merely beginning. That danger has been met. Mr. Bowker, personally, has tendered a guaranty amounting, if necessary, to \$1000, to meet the possible deficit of the undertaking during the present calendar year. Repudiating nothing of what has been said about the readiness of the Library of Congress to serve in this undertaking, I nevertheless wish this matter to appear in its proper proportions, and we should not be willing to have these other elements overlooked.

In the absence of THORVALD SOLBERG, J. C. HANSON read Mr. Solberg's paper on

#### BOOK COPYRIGHT.

(See p. 24.)

GEORGE ILES read a paper on

#### THE TRUSTESHIP OF LITERATURE.

(See p. 16.)

Mr. ILES: I may add, that when I was in England three years ago and talked about this scheme, one or two asked me, "Who is going to meet your libel suits?" I explained that there was already a very large body of responsible critics who contribute in this country, especially in this field; as, for instance, the critics of the *American Historical Review*, and the notes that I have in mind are very much of the color of the notes one reads in such reviews—not many of them very black, not many of them very white; most of them a whitey brown. I have never heard yet of any libel suits against the editors of the *American Historical Review*, even when their reviews have not been particularly amiable. I do not think we need to dread any litigation. Mr. Larned went to work in organizing his staff of contributors with great caution and good judgment. He did not choose them from any one particular university, but when he heard that at University "A" there was a man who was acknowledged to know the literature of the Columbian period of American history better than anybody else, he sought to enlist that man. And Mr. Larned has been limited, of course, in various ways that you can readily understand, as for instance when

sometimes a contributor has given him notes which he has felt obliged to discard. And let me say also that in the main the most important work has been done by the professors of history in the colleges and universities, except for the period of the Civil War, where the late General Cox, who had made a special study of that field, was his contributor. Mr. Larned's idea is simply to find throughout this country in any particular field—the Civil War period, or the pre-Columbian period, or the settlement of the Northwest period, or the war of 1812—the most authoritative and trustworthy man and enlarge his audience to take in all the readers and students in this country, instead of having him speak merely to the students of a particular university or to the readers of a particular review.

Dr. RICHARD T. ELY read a paper on the same subject.

(See p. 22.)

Mr. BOWKER: Can't we have a word from Mr. Thwaites on this question?

R. G. THWAITES: I do not suppose I ought to speak on this matter, for I am one of Mr. Larned's contributors. I have done a good deal of annotation, or evaluation, of this sort, upon request; I have a fair acquaintance with reviewers, and have done a good deal of reviewing myself. I know the limitations of reviewers, and there is, I think, a great deal of truth in what Dr. Ely says. I always want to know, when I read a review, who wrote the review; after I know the individual who has written the review, I make up my mind more or less regarding its verdict. Often, in writing annotations for this work of Mr. Larned's I have felt the very serious responsibility which rested upon me as an individual contributor, in seeming to crystallize judgment for generations perhaps—if this book is to be used for generations—and the possible harm that might result from such crystallization. I know that my point of view will be entirely different from another man's point of view. You take four or five men and ask them to write a note on the same book for this annotated list, and you will have four or five different judgments—absolutely, radically different. It is perhaps, a dangerous thing to crystallize these judgments; and yet, after all, I sympathize very greatly with Mr.

Iles' position. I think the thing should be done. Librarians are asked for such judgments all the time. All of us who write textbooks are continually asked for annotated bibliographies for students to follow, and we are always passing judgments—other people might call them "snap" judgments—upon various books. Great wisdom is necessary in this matter. For instance, the other day Mr. Larned sent a note to two of us who are contributing to this annotated bibliography. It happened through some editorial mistake that two notes, asking for comment on a certain book, were written to different individuals. It was Dr. Davis Dewey, of the Institute of Technology, who happened to cross my path and wrote a note on the same book. Now we had two absolutely different opinions about this book. And yet it was very natural. I had looked at this book as the story of an exploring tour down the Mississippi valley; he had looked at it as a study in sociology from an economic standpoint. It was exceedingly interesting from my standpoint; it was filled with fallacies and whims from the standpoint of an economist and sociologist. Well, I threw up my note and let his stand. What are we going to do about it? Some work of this kind ought to be done, because it is most useful; but after all, I think Dr. Ely's word of warning is one that we should take to heart very thoroughly. Personally I really don't know whether we ought to "evaluate" literature or not; and yet I am doing it all the time.

Mr. ILES: We expect that this bibliography of Mr. Larned's, and any others in the same series which may follow, will appear also in card form, and I very much desire when the central bureau finds that a particular note can be replaced by a better one, in the light of further developments, that that particular note should be withdrawn, and a better and more nearly just note be substituted; all gratuitously to the subscribing libraries.

F. M. CRUNDEN: I realize the force of what Dr. Ely has said, but I still believe that this work is worth doing, because it is exceedingly valuable to us. We have got to have some guide. We cannot all of us read in all lines and so far as the contradictory notes referred to go, it seems to me that all that was necessary was for the editor to apply to those two

divergent notes just the remark that Mr. Thwaites made—that one was written from the standpoint of the sociologist and economist, the other from that of the historian and geographer. From one side it was a good book; from the other side a bad book.

Mr. PUTNAM: I speak on such a subject as this with very great reluctance, and yet, as a librarian who has had occasion in times past to select—I do not have so much occasion now, because so much matter comes to us without inspection—I wish to draw a distinction between selection and exclusion. Now, when Dr. Ely speaks of an *index librorum prohibitorum* or an *index expurgatorius*, the implication is that the libraries of this country, on advice or of their own motion without advice, are deliberately excluding from their collection books of which they disapprove. The librarian, however, approaches the matter in an entirely different way. He has at his disposal, for purchase, a very limited sum of money; a very limited sum of money, no matter how large his library, for the amount of literature put upon the market is practically limitless. Men of science themselves, after contending for liberty of expression, do not always use that liberty with discretion or to the advantage of the community. Now, there must be a selection. That is the point we start from as librarians; that is the duty laid upon us—to get, with the means at our command, the books that will be most useful to our constituents. Now, that means choice. How are we to make a choice? I do not believe there is a librarian in the United States who would set himself up as an arbiter or an expert in every department of literature; who would claim to determine the value of doctrine, either in religion or in economics, the two departments of literature as to which the discrimination must be most difficult and most dangerous; and yet even in those departments we must choose. That means a selection. What is the alternative, in case we have no guide? What would Dr. Ely offer us? Dr. Ely, of course, as any university professor, has his students, who are studying not merely one subject in which they wish to get the best and final opinion, but all opinions, from which they are to draw conclusions. Now, the duty of the librarian is simply to represent all opin-

ions, and not his own opinion, or his notion of the best opinion, or somebody else's notion of the best opinion; but, given a doctrine which is important, which is attracting attention, he assumes that this doctrine must be represented in his collection. It is only a question of what represents this doctrine best—not whether the doctrine is right or wrong. If there is a book regarding which there are two opinions, the appraisal may give the two opinions, as all appraisals should, so far as it can be done. The substance of what I wish to say is this: our duty is not one of exclusion; it is one of selection, and that fact is as little understood as any element in library administration today—and I am sorry to say that the misunderstanding is apt to be countenanced by the librarian. Take for instance the case of the Boston Public Library, berated all over the country for excluding certain books from its collection. Now, the Boston Public Library deliberately excludes, to my knowledge, almost no book. Its process is of selection. It receives about seven hundred volumes of recent fiction a year, to consider for purchase. It believes that it is for the best interests of its constituents to buy less than two hundred titles and multiply copies. Now, how is it going to dispose of the other five hundred? They are neither rebuked, disapproved of or placed in an index. They are simply left out, because in the process of selection, the first two hundred seem most useful for the purpose of the library.

Dr. ELY: I was not thinking about the librarians in my remarks. They must, of course, make their selections of books, but what I had in mind was the bringing, especially in the form of a card catalog, these judgments and these appraisals before the reading public all over the entire country, and so possibly forming opinion, along one line. Formerly librarians have had a great many facilities to aid them in making this selection of which Mr. Putnam has spoken. They have had the various periodicals with their reviews; they could read these and base their selections upon these. I had especially in mind the objections to crystallizing opinion and bringing a one-sided opinion, or one kind of an opinion, before the entire United States, instead of having opinions of one sort in one

place and opinions of another sort in another place. Also, it is the impartial nature, or the apparently impartial nature, of the proposed "evaluations" which seems to me especially objectionable. Of course, in our college classrooms, we give our estimates of books, but Professor A will give one estimate, and then the students go to Professor B's class-room, and they hear another estimate, so that they soon learn the personal inclinations and preferences of the various professors, and can soon offer some explanation of the conditions and the circumstances under which these estimates are formed. And the views expressed in one university are criticised very largely by another university. Not so I take it with the person who ordinarily consults the card catalog of a public library.

R. R. BOWKER: May I take a moment from my own paper to say just a word on this subject? Questions are asked of the librarians, and they must be answered. To answer them in the fullest light instead of the scantiest is, as I understand, the purpose of what Mr. Iles calls "evaluation." If Miss Smith—I think there are six of her, so that my remarks are not personal—comes from the library school, or after the library school training, to a public library desk, she is sure to be asked questions, we will say, in American history. There may be an information clerk to refer them to, or there may not; but, as I understand, this work of Mr. Iles is intended, not to exclude other sources of information, but to give Miss Smith opportunity to inquire and obtain the best and widest available information as to the character of a particular book, or as to its rating. If this book were to be the sole and exclusive authority, then of course we might have a censorship in literature, but I do not understand that in the minds of the promoters of this plan there is any such design to make an exclusive and solely authoritative work.

W. MILLARD PALMER read a paper on

THE RELATIONSHIP OF PUBLISHERS, BOOKSELLERS, AND LIBRARIANS.

(See p. 31.)

R. R. BOWKER: There is, or should be, I take it, a large purpose common to all who have to deal with books, as intermediaries be-

tween the author and the reader, whether from the altruistic side, as the librarian, or from the commercial side, as the publisher and bookseller. We are familiar with one expression of that purpose, to get "the best reading for the largest number at the least cost"; and I, for one, am firmly of the opinion that that function is properly shared by the two classes of whom I have spoken, that they are not in competition but in co-operation; I mean the librarian and the bookseller. It is a narrow view, it would seem, which puts the two in opposition, or even in the position of competitors. And just as it seems that the bookseller is wrong in feeling that the librarian is interfering with his business, so I think it is wrong for the librarian to feel that the bookseller should in any way be limited or hampered or belittled in his kind of work of getting books to the people. It seems to me a truism, indeed, that there is one thing better than a book loaned, and that is a book owned. The ideal library community is, after all, one in which the people are so well supplied with books in their own homes that the function of the library is not so much a great circulation, however fine that may look in the statistics, but rather that of guide and helper to readers in the selection, and, if you please, in the "evaluation" of books. The board of health in a city or in a state is, perhaps, a fair illustration of the final function of the librarian; a health board, in its ideal, is a body to promote sanitation, to warn people against errors, to get rid of the mistake that tuberculosis is a hereditary disease from which people have to suffer, instead of one which is communicated and which can be avoided; rather than a body to furnish free medical attendance like a dispensary. So I start with the proposition, that it is desirable for librarians, for public librarians, as such, to encourage most of all the formation and owning of private libraries throughout their bailiwicks.

Now, there has been one difficulty of late years in bringing about this result, in the most effective way, and that difficulty has been felt not only in this country, but throughout most countries—the fact that competition, not in quality but in "cut rate" price, has practically taken away the living of the com-

mercial intermediary in the distribution of books, the hire of the laborer who is working in that particular vineyard. That has been true in Germany, in France, in England, and in this country. It has not prevented the sale of books; it *seems* not to have limited the sale of books; but it is probably true that the dissemination of the best literature among the mass of the people, in private libraries, while it has been immensely improved by the library system, has not been promoted by the book-selling system under present conditions as it should be. In Germany, a movement has been on foot for a few years past, and has been quite successful, to give that particular kind of librarian, the bookseller, a fee more worthy of his function; a profit which makes it possible for him to keep that sort of library which is distributed into private libraries, *i. e.*, the book store. In France a very curious difficulty is in illustration. There the price of books had come to be very low, so low that when a rise in the price of paper came, the publisher's business was found to be almost impossible. The remedy naturally took the shape of a general rise in price, a considerable rise in price in cheaper books, sufficient to meet that particular difficulty and to make possible at the same time a better recompense, a living wage, to the intermediary. Now, the whole tendency of modern industrial development is to get rid of the intermediary as much as possible; *i. e.*, to have as few steps, of person and of cost, between the producer and the consumer as is practicable. This we may take as fundamental to-day. It remains true, nevertheless, that there must, as a rule, be somebody between the producer and the consumer, between the person in the great manufacturing center and the remote distributing points on the circumference to bring the thing wanted to the person who wants it; and it is only in view of that requirement that the bookseller is to be considered. In that sense, as I have said, he seems a complement of the librarian, and the book store the complement of the library. Now, a librarian cannot live without salary, though many live on very small salaries, in the hope of better things — and one of the accomplishments of the American Library Association has been to bring better things to the librarian. Both the dignity and the emol-

ument of the library profession have been, I believe, increased greatly by the existence of this Association. The librarian receives a salary, and it is not true, as we all know, that books can be circulated freely from public libraries in the sense of their being circulated without cost. Indeed, we have occasion to lament often that the cost of circulating a single volume is so great. It is a fair question whether the cost of shelving, preparing for the public, and in many cases, of circulating a volume, is not greater than the fee which the bookseller asks as his profit, his wage in transferring that volume from the publisher to the reader. Therefore it seems to me that the suggestion of which Mr. Dewey is the apostle, that the public library should take the place of the book store, that it should exhibit recent books to the public and take the public's orders for those books, rests both on an economic and on a social fallacy. In a word, work cannot be done for nothing, and whether that work is paid for by the public in the shape of salaries or by the private buyer in the shape of profits is a matter of comparison.

About the time at which the A. L. A. was organized, in 1876, there was an attempt on the part of the book trade to deal with this question, and at Philadelphia, in 1876, a meeting was held at which a reform plan was initiated. That plan, it seemed to me then as it seems to me now, involved a fundamental mistake, in that it did not deal with the question of published prices. It is evident that books cannot be increased in price, unless there is a specific reason in the price of paper or some such reason, without interference with their sale and wide distribution. It is poor policy for the publisher to limit the sale of his ware by putting a higher price on it than the traffic will bear. At that meeting it was proposed not to alter the published prices of books, but to recognize formally the custom of giving twenty per cent. discount to the retail buyer. The reform proceeded upon that basis, and the system presently broke down. Within a year past there have been shaped two organizations, the American Publishers' Association and the American Booksellers' Association, which are working in harmony on another plan. That plan is that new books, new copyright books (fiction and some

special classes excepted for the time), should be published at a price which recognizes the fact that the published price hitherto has not been the real or standard price. In other words, a book which was priced at \$1.50 it is expected to publish at twenty per cent., more or less, below that price, and to make a \$1.50 book, say, \$1.25 or \$1.20; a \$2 book \$1.60 or \$1.50, and a \$1 book 75 or 80 cents. This plan recognizes the existing situation, and the proposal is that the plan shall be enforced by the publishers declining to supply books to booksellers who fail to maintain those standard prices. The plan has worked out with other classes of specially owned articles, in that respect similar to books, and it has worked with fair success.

There is only one exception which the bookseller is permitted under the proposed regulations to make, and that is a discount to the library. That discount is limited to ten per cent., and I think it should fairly be stated that this may increase, perhaps by five or ten per cent., the actual prices which some libraries, at least, have been paying for their books. That is a disadvantage from the library point of view which must be faced. I do not know that it will increase the price in the case of libraries generally. In the case of the public, it has been true that while many have paid the lower price for the books, others have been asked the full published price, so that there has been an inequality of price where the person best equipped in one sense, least equipped in another, has had the advantage of the lower price. In other words, the person who had most books and knew most about them, got the book at a very low price, and the person who was really most in need of the book, because he knew less, had to pay the full price for it. I do not believe myself that that is the right or a good way of doing business. It would not be the method which you would permit in libraries, of treating one person differently from another, because the fundamental proposition of this Association is that the public should be treated equally and justly. Take it altogether, I for one believe that although in some cases there may be this slight rise in cost to the library, the whole library situation, or, I should say, the whole book situation, would be so much improved by the proposed

change that it would be to the general advantage of the libraries to suffer that specific disadvantage.

Nevertheless, there is a good deal of grasping in human nature, and it might be very wise for the American Library Association, in one sense representing the public, to come into official relation with this matter and be the guardian of the buying interests, to the extent of making sure that there is a real reduction in the prices of books on this scheme. The large-minded publishers will doubtless see their interests in making the reduction throughout on the copyright books which are to be published on this plan. There are others who may not see this advantage, and who may attempt, under the new plan, to set as high a price on the book as under the old plan. If we had a committee of this Association on relations with the book trade, it might be possible for such a committee, known to be on the alert, to prevent or remedy cases of that sort, and I trust such a committee will be appointed by this body, or by its Council, as I shall take the liberty of moving.

I should feel some hesitancy in speaking to this Association from the two points of view, of relation with the book trade and of relation with the library interests; *i.e.*, of speaking as the editor of the *Publishers' Weekly* and as the editor of the *Library Journal*, but for the fact that I believe the interests to be one. I may, however, make the personal explanation that while it seems to me that a journalist cannot write that in which he does not believe, on the other hand, a journalist who is responsible for the conduct of a representative journal cannot interpolate his own opinion to the exclusion of the opinion of the class whom he is supposed to represent; for that reason I have taken the position in my own office that in case the library interests should come in conflict with the publishing interests, I will give over that particular subject to some librarian, who, using the editorial columns of the *Library Journal*, will represent distinctively, free from any interest in the book trade, the views of the Library Association and of the library interests at large. I take this opportunity to say that in case the opinion of this Association is adverse to the plan which I have been outlining, the *Library Journal* will take that

course in presenting fairly and fully the views of the profession. When the whole question is threshed out; when such a committee has discussed, perhaps with the publishers' association itself, whether there should not be a somewhat greater discount to the librarian, to equalize the old rates; when such a committee expostulates with individual publishers against an abuse of this plan, I believe that the result will be, on the whole, to promote the wide and useful dissemination of books, and I trust that any action which is taken, if action should be taken by the Association or by its Council, will be in view of the wider co-operation in which these two interests should work. Let me remind you that the bookseller cannot live without earning his living any more than the librarian, and it is not quite fair perhaps for those of us who are protected by salaries to impeach the fair living which the bookseller earns in another way. The book store should exist in every community, alongside the library. We know as a matter of fact that even our large cities, certainly our small cities, even more our towns, are very ill equipped with book stores; that in many places they are notable for their absence rather than for their presence. This element of active work in the distribution of books should, I believe, come back more to our American life. It cannot come back, apparently, under present conditions, and any movement, it seems to me, should have the helping hand of the A. L. A. that tends to put the American bookseller on a plane with the librarian as an agent for the dissemination of the best books at the least cost to the most people, and I emphasize "at the least cost," meaning the least cost at which the service can be rightfully performed.

Adjourned at 12.45 p.m.

### SIXTH SESSION.

(FOUNTAIN SPRING HOUSE, TUESDAY AFTERNOON, JULY 9.)

The meeting was called to order at 2.15 p.m. by President CARR, who announced that the discussion would be continued from the morning session, on the subject

THE RELATIONSHIP OF PUBLISHERS, BOOKSELLERS AND LIBRARIANS.

MELVIL DEWEY: There seems to be an im-

pression on the part of some that the attitude I have taken in regard to this question is for the sake of starting up discussion. I am quite sincere in what I say and in what I believe in regard to it. In the first place, I think nothing could be more unfortunate than for any of us to get into an attitude of antagonism with the publishers and booksellers. There was something like that twenty-five years ago; their organization and ours began at the same time. There were some who wanted to fight with the booksellers and publishers. I think that is all wrong. I am heartily in sympathy with nearly everything that Mr. Bowker said this morning, and with what has appeared in the columns of the *Publishers' Weekly*. I read every page of it. I believe so profoundly in the value of the bookman's work that, when formulating definitions of our university studies, as to what a full-fledged university should be, I insisted it should include publishing research and publication, not only the preservation of learning. It is because I have so profound a respect for what may be done by the book trade, as we call it, that I believe in these things. But the discussion this morning seemed to be very much on the line of Ruskin's attack on railroads, which he said always were devices of the devil, and he said it very eloquently. You heard the same talk about the trolley lines—about the whitening bones of the young innocents that had been killed by them. We were assured that bicycles were to destroy the horse trade entirely, yet horses now bring double what they did before. Twenty-five years ago, I remember a very prominent man most earnestly pointing out just what was pointed out this morning—that the A. L. A. and the public libraries were simply devices to injure the interests of publishers and booksellers. And the attitude of men on these things is based on what Mr. Bowker called "an economic and social fallacy." I like the phrase; only he was fitting it to me, and I fit it to him, and it is for you to decide which is right. The question hinges on what we understand the library to be. If the library is like a blacksmith shop, or shoe store, or something of that kind, then he is right. If the library is an essential part in our system of education and a necessity for our civilization, then I

am right. In New York we still have the plank road and the toll-gate, and we are just taking them over for public use—buying them and abolishing the tolls, so that the public's right to use the roads has come back to them. All the arguments we heard this morning would fit the question of abolishing the toll-roads. A great many people keep no horses. Why should they be taxed to maintain the roads? We have the fire department. We do not tax only the people whose houses are on fire. It is a public necessity. We have the best illustration of the case in our schools. The tax-supported high school has killed off a number of private schools, and estimable people who were earning their living that way were thrown out of employment. And the tax-supported high school is in analogy with the public library. It has offered instruction free and has ruined the business of others. It is so with many professional schools. A transition has been going on very rapidly. The last big fight we have been having is over the business colleges, some of which are directed by mere charlatans, and others by those who are giving admirable instruction, doing their work well. But they have outlived their time. The public demanded that certain instruction of this kind should be made available cheaply to all the people.

Now, we have been charged with wanting to abolish the bookseller. I never said anything about abolishing him. It is like saying that because the tadpole is going to be a frog we are abolishing the tadpoles. It is nature that does it; it is a matter of growth. Or it is like saying that the entomologist in pointing out that the moth is going to develop into the butterfly, is abolishing all the moths. So the good booksellers, if they go on with the work of supplying the public with good reading, will do it through the agency of the public library, where they can do it cheaper. When we are sure that a certain thing ought to be done; that it is a good thing; and, secondly, when we are sure that it can be done cheaper than in any other way, we are not inclined to waste a great deal of time theorizing over anybody's philosophy as to whether it is a proper thing to do or not. We want the right things done in the best and cheapest way. I am sorry to see the old-time

bookseller, who did good work, crowded out of the field. I do not see any way in which he can save himself, except in the largest cities. I am sorry to see a great many of the old schools, the secondary schools, crowded out of business and entirely replaced by the tax-supported schools. I do not understand that it is our purpose, either in this Association, or in life, to be studying how we are going to feed every man after the system which has fed him up to the present time is abolished. If the man is good for anything, he will earn his wages; and it is utterly fallacious to say a thing is wrong because somebody is going to lose his business. When the railroad was built a great many worthy men who drove stage coaches were driven out of business in just that way. Every modern improvement does that; new machinery of all kinds has the effect of driving people out of employment; but, in the long run, it pays.

I ought to say in the first place that the suggestion that the librarian would sell books for a profit is one of those queer things that crop out in connection with all great movements. I never yet heard of any library that was buying books and distributing them. I believe that the library will order books in connection with other work. My thesis is this: the book owned is a great deal better than the book loaned. I believe it is better for a man to own a book than to borrow it; that it is legitimate, at public expense, to show him that book in the library and hand it to him as his book—just as legitimate an expense, every way, as it is to employ a man to sell people books so that they won't patronize the Booklovers' Library. I think the whole thing hinges there. It is not a matter of theory, but of fact. If that is what we want to accomplish, can we do it best with the book store or with the library? I contend that it is impossible to rehabilitate the old bookseller, any more than the old private school, which could be done only by endless means in endowment. I do not believe we should try, because it can be done better and cheaper in another way; because the library has the books on its shelves. The statistics this morning showed that the bookseller is dying out. I believe it to be entirely impossible to rehabilitate that profession. If in the library it

becomes a recognized principle that the library is supported at public expense for the purpose of lending books. I am confident that the public will demand it to be done in that way. I am confident of another thing. You have only to consult your catalogs to see the remarkable development of the last decade in publishing which is done by endowed universities and colleges and of learned societies. See the great body of technical journals that have been turned over the university presses. Every university that pretends to accomplish much now has a press, and is developing it with great rapidity. It was said this morning that the publisher hinged on the cash; that the bookseller hinged on that. Ladies and gentlemen, the cash profit is not a proper scale in which to weigh the questions in which we are interested. When you take questions of education, or religion, or philanthropy, and put them on a question of cash profit, you are in an absolutely false attitude. I do not mean by that that we must not regard business conditions. We must know how to pay for our coal and our rent, but not a dividend in dollars and cents. And the moment my antagonist says that this question is to be measured by a cash dividend, I say he is ruled out of court in any body of librarians who are giving their lives and their work at salaries not at all commensurate, but who make dividends on a higher plane. There is no occasion for an attitude of hostility; nor, I take it, for me to take issue on this new proposition in regard to prices to libraries. There is not a librarian in this room who has all the money he wants. If prices rise ten per cent., it will diminish the number of books he can buy. I followed the argument this morning. If it is correct, there is only one thing we can do. We, as librarians, are cutting into the revenues of these men, and we ought not only not to ask a discount but librarians ought to pay twenty-five per cent. in addition, because we are cutting into their revenues. We ought to appoint a committee, which without a bit of the spirit of antagonism, should meet the publishers and booksellers and point out all over the United States large consumers who buy for cash. I think it is a practical mistake to try to force up the price, and that we are bound as custodians of this money that is put in our hands, firmly and courteously, but, I

am sure, with the most friendly relations on both sides, to see that the prices of our books shall not be cut down.

I say, therefore, in summing up, after an observation of thirty years, that I am confident that the library of this century is going to assume those educational functions, and that among the most prominent of these is the putting into the hands of the people who wish to make their lives wealthier in arts or trades the books of power and of inspiration. The public library cannot afford not to put into their hands at a minimum price the books they want to read. And, logically we shall be forced in that direction. You will find that this tendency is growing all the while, and we will have to put the library squarely alongside the high school. Indeed the library in its development is following exactly the line of development of the tax-supported high school and for that same reason, that in the high school we now offer instruction free, the library will offer books for sale without profit—there should be no profit in the library—and will lend books freely, and will with regret kill the local book store and supplant it by something that is worth a great deal more.

W. I. FLETCHER: I have been so long on the Publishing Board with Mr. Dewey that I have got thoroughly in the habit, when he gets through, of saying something on the other side. It seems to me that a few words might be said to clarify this subject. It is undoubtedly true, as Mr. Dewey has said, that a book store that is worth anything could not be established in every place in the country. There ought to be something of the sort, even if it is a public library. The book stores exist only in places where it is commercially possible, and that number of places is very limited. Now I suppose that if we could ascertain the communities where it is not commercially possible for a book store to be carried on, we should none of us have any objection—it seems to me most of us would favor the idea—that the public library should, to some extent, take the place of the book store in supplying books to the would-be owners in such a community. That leaves the question confined to those places where a book store is commercially impossible, probably to those places where book stores have been, even with difficulty, maintained under past

conditions. I should be willing, for my own part, to do all I could in securing the establishment of a good book store where there is not one, where it is commercially possible to maintain one. Where it is not, it would be a good thing to let the library sell the books. I am greatly impressed with the argument as to the advantages of a book store in a community where it can be maintained. So it seems to me that there is not very much difference of opinion among us, after all, as I dare say those who spoke this morning would not object seriously to the distribution of books for sale through the libraries, where there is no hope of having a local book store. As to the amount of discount under this new arrangement, I am entirely in accord with Mr. Dewey in wishing that the Association might present whatever are the views of the Association. On the subject of the amount of discount that we ought to have, I should hardly feel that the booksellers were treating us right in this country if they should follow the custom of the German publishing trade and refuse any discount at all; and it is a question whether the ten per cent. which they propose to allow under this new system is enough. I have advised our library committee to express a hearty readiness to accede to the proposed arrangement, to take the ten per cent. discount, and we have given our adhesion to it. Perhaps that was somewhat hasty, before the librarians in general had an opportunity to act; but I do not believe anything very different from that will be the attitude of the librarians at large. We might in time, for example, make it fifteen per cent., but I am sure that could not be done at present. I am heartily in sympathy with the movement that will make it possible to have a good book store, which I believe every librarian would like to have in his place.

W. M. PALMER: I wish to say just this: Of course in the lack of time that was accorded me, it is difficult to say all that can be said on the subject, and explain the by-paths, and so forth; but, as I intimated at the introduction of my paper, I simply stated what I said as facts, and while we wish a great many things to be different, we realize that they cannot be reached in a certain direction all at once. In order to bring the bookselling business to a basis which will enable the bookseller to live, some reform had to take place.

The publishers have seen fit to institute the reform which has been outlined to-day. When I spoke this morning, for instance, of the fact that some librarians ordered books for friends and others at the discounts which the library and they themselves received from the booksellers, I did not wish to impute any wrong motive to the librarian in doing that. It is a matter within the knowledge of the booksellers, and the booksellers wink at it. I do not think there was any element of dishonesty in it, because the bookseller who sold the book to the librarian knew it was again to be sold to some friend of the librarian.

R. R. BOWKER: In offering a resolution, I wish to say just a word or two. I had not expected Mr. Dewey to make an argument in favor of the public library, for certainly there would be no disagreement on that point in this room. Where he went further and suggested that the salaried librarian should become the commercial bookseller, I think and I hope that there are few to follow him to that length of argument. As to the Booklovers' Library, of course that is not at all in analogy with the public library, and I want to take this opportunity to call attention to what seems to me an admirable use of the Booklovers' Library scheme, so long as it can hold out. Mr. Carr has told me that he has looked upon the Booklovers' Library as a very useful overflow or safety-valve for the public library. When thirty-five people come at once and want "Quincy Adams Sawyer," and a librarian sees that the two copies that could be put on the shelves would not meet the demand, he would say to himself "I cannot rightly spend the money for thirty-five copies," and therefore he would say to the thirty-three, "You can go to the Booklovers' Library and get these new books just when you want them." So this library may be a relief to the librarian who is conscientious in the spending of his money.

The resolution which I now ask to move is that the Council be requested to appoint a committee on relations with the book trade, to which this question shall be referred.

The resolution was carried.

The general session was then adjourned, and there followed a Round Table meeting on

THE WORK OF STATE LIBRARY COMMISSIONS.

(See p. 171.)

## SEVENTH SESSION.

(FOUNTAIN SPRING HOUSE, WEDNESDAY MORNING, JULY 10.)

President CARR called the meeting to order at 10 a.m., and after local announcements by the secretary called upon the tellers to report upon

## ELECTION OF OFFICERS.

The result of the balloting was announced by the secretary as follows:

*President:* John S. Billings, 103.

*1st Vice-president:* J. K. Hosmer, 103.

*2d Vice-president:* Electra C. Doren, 104.

*Secretary:* Frederick W. Faxon, 104.

*Treasurer:* Gardner M. Jones, 105.

*Recorder:* Helen E. Haines, 105.

*Trustee of Endowment Fund:* Charles C. Soule, 81.

*A. L. A. Council:* M. E. Ahern, 101; E. H. Anderson, 104; Johnson Brigham, 104; John Thomson, 104; H. M. Utley, 105.

The president then announced that the Association would be glad to hear from Mr. PUTNAM, as chairman of the

## COMMITTEE ON RESOLUTIONS.

Mr. PUTNAM: The Committee on Resolutions has suffered the usual embarrassments of committees on resolutions. It has been compelled to abstain from expressions which might seem hyperbole, and from designating by name many services that prefer to remain anonymous.

It is the custom of certain associations to make acknowledgment to those speakers on the program not members of the conference. That is not customary with the A. L. A. Had it been, I should have had a special pleasure in proposing an acknowledgment to Professor Ely for his presence and paper yesterday. It is no slight compliment to the Association when a thinker and writer so eminent as Dr. Ely is willing to lay his views before it. It is, in a sense, a greater compliment when his views prove unfavorable to some undertaking which the Association is inclined to approve. It implies that our action may be important, and therefore our judgment worth convincing. Could the Association convince Dr. Ely, great advantage indeed might result. For should a selected list of books in economics

be undertaken with helpful notes—I will not say “evaluations,” or “appraisals”—but helpful notes, Dr. Ely’s aid would be one of those first sought.

The resolutions follow:

## REPORT OF COMMITTEE ON RESOLUTIONS.

*Resolved,* That the American Library Association, in concluding a meeting that has been one of the most largely attended and most successful in its history, desires to express its hearty obligation to the various committees and individuals who have made considerate arrangements for its comfort, and in many an agreeable incident acted as its hosts. In particular:

To the Wisconsin Free Library Commission for its efficient general arrangements for the conference;

To the Citizens’ Executive Committee and Women’s Clubs of Waukesha, for the attractive drives about the city, for the pleasant evening reception at the Fountain Spring House, and for various attentive courtesies;

To the members of the Methodist Church of Waukesha, for the use of the church for the public meeting on July 4;

To Senator A. M. Jones, for the opportunity to visit Bethesda Park and enjoy there the concert given by him complimentary to the Association;

To the trustees, librarian and staff of the Milwaukee Public Library, for the opportunity to inspect the library under most favorable conditions, and to the junior members of the staff for the appetizing refreshments served in connection with the visit;

To the resident librarians of Madison, the Forty Thousand Club, and various citizens, for the drive through the city and delightful parkways of Madison; to the resident women librarians, the Madison Woman’s Club, and the Emily Bishop League, for the luncheon which was provided so substantially for the great company of visitors; and in general to the chairmen and members of the several local committees representing the state, the city, and various institutions and organizations, who contrived so excellently for the accommodation and enjoyment of the Association in its visit to Madison.

The Association deems itself fortunate indeed in having held its meeting within reach of two achievements in library architecture so notable as the library buildings at Madison and at Milwaukee.

The Association would add its appreciation of the endeavor of the management of the Fountain Spring House to convenience in every way the business of the conference; and its obligation for the special provision made by the management for its entertainment on two evenings of the conference.

provision for business offices, packing rooms, etc., unthought of formerly. To meet not simply these new ideas, but others with which the new century is pregnant, care must be taken that great sums of money, leaving the securing of more for a long time hopeless, are not expended on structures in which instead of provision for expansion we seem to have provision against it.

Another obstacle to expansion is found in elaborate systems of shelf-marks connected with systematic schemes of classification, representing carefully arranged subordination and co-ordination of the parts. For two things are certain: first, accepted classifications of books rapidly become obsolete, and second, no library will long be content with an out-of-date arrangement. Especially will my successor, or yours, be sure to feel the necessity of signaling his accession to office by introducing what is in his day the latest classification. And in this he will be right. Now, if we have a fair sense of our duty to our successor, which is merely an extension forward of our duty to the library itself, we shall be unwilling to tie the library by an intricate notation to a present system of classification. I think we must take more pains than is done by either the Decimal or Expansive schemes to provide a somewhat elastic notation. I regard the classification of the University of California Library as the best (available in print) for libraries of our class, because it employs designations which indicate mere sequence of classes. A little thought will, I am sure, show you how this is true. At any rate, a little experience in attempting more or less reclassification with, for example, the Decimal classification, will prepare you to believe that a less highly involved and articulated method of designation would be in the interest of reasonable expansion, and save such expansion from the odium of upsetting the classification. Through the logic of events forcing those considerations to the front more and more, I anticipate that the larger and rapidly growing libraries will increasingly shun all such systems as the "D. C." and the "E. C.," of which the paradox is certainly true, that the better they are made the worse they become. The scheme of numbering classes recently adopted by Princeton University Li-

brary points in this direction, while the reclassification of Harvard University Library, which has been slowly carried forward during the last 20 years or more, represents a complete departure from the idea of any correlation between classes, as indicated in the notation, the order of minor divisions being a numerical sequence easily changed or modified, while each main class bears a mark suggesting no relation to another. For example, the military and naval sciences have lately been reclassified and brought under the designation War, which may be called (to represent a certain harmony with other designations) W-a-r. The location of any main class in the library is subject to change at any time, and is known to the attendants by a chart, which may be somewhat altered to-day, and replaced by a new one with large differences to-morrow or next year. Not that such changes would be made except for real occasion, but under this system, when they are necessary they are not deferred or regarded as hopeless as they must be under any highly organized system.

Another obstacle to expansion closely related to elaborate methods of notation is found in the common practice of inserting the call-numbers in catalogs of all kinds, written or printed. When the Boston Public Library was moved into the new building it was naturally supposed that it would be completely rearranged to suit its ampler and entirely different shelf-room, particularly as much fault had already been found with its existing classification, which seemed quite outgrown. But when it is observed how the library was tied to its old numbering by an endless variety of catalogs, printed as well as written, it ceases to seem strange that it was thought best to transfer the old arrangement to the new building, with all its infelicities heightened by its new location and surroundings. And in this respect that library should serve as a warning to others to avoid, by any available means, such an entanglement. If it be asked what means of avoiding it are available, I would say that I am inclined to think that if I were starting with a new library I would try the experiment of putting no shelf-numbers or call-marks in any catalog, but rather have a key by which they could be found by

means of the accession numbers which alone would be given in the author-catalog.

I can only refer hastily to one feature of library expansion which is coming in with the new century, and which has to do with the catalog. I mean the introduction of printed cards, and would say that I look to see these work a revolution in library methods. If we can procure at low cost an indefinite number of these cards for each book we shall come to use them in many ways, as, for example, the accession record, the shelf list, bulletins and special lists, and charging cards. For the latter purpose they would have the advantage of absolutely identifying the book.

I am sure I have said enough to set you thinking, and I hope when time is given for discussion you will freely express your thoughts.

J. T. GEROULD read a paper on

DEPARTMENTAL LIBRARIES.

(See p. 46.)

W. P. CUTTER read a letter from R. C. DAVIS on the

RECLASSIFICATION OF THE LIBRARY OF THE UNIVERSITY OF MICHIGAN.

I am conscious that this report of our adoption of the Decimal classification is, as far as I am concerned, premature. I look upon the work in its present state as just from the broad-axe or the saw-mill. There is planning to be done and sand-papering. Except to discuss now and then some fundamental principle in classification, I have had little to do with the work. Other duties, which I must necessarily perform, have occupied every hour of my time. I am hoping that now the rough part of this work is off our hands, I can make a readjustment of the work in general that will give me time next year to participate in the finishing process. The history of the matter is very brief. Our old fixed location had become impossible, and a point was reached where it was necessary to begin at once with whatever movable method we might adopt. I had been at work for some time on a substitution of relative markings for fixed ones, which would, without any change of classification, set our books free. This was interrupted by sickness at the critical time, and it was determined to adopt the Decimal

classification as the most generally used and the most susceptible of modification. Also, my assistants, on whom the work would fall, were familiar with this method, and had experience in working it. The changes that had been made were made largely in deference to the desires of heads of departments. It was not always easy to act on these suggestions inasmuch as a general adoption of them would be fatal to uniformity. In consequence some of the changes are in the nature of a compromise, and are tentative. The change now so nearly accomplished has been made economically and, considering all things, expeditiously. The credit of this is due to my assistants. They have been untiring in their industry and their management of the differences of opinion that they have encountered has been wise and tactful. Mr. Jordan, my cataloger, has made a brief catalog of the changes, which I enclose. You can make such use of this matter as you may desire at your meeting, but I would prefer that nothing go upon record. By next year we shall have the matter better digested, and I hope some of us may be present at the meeting to discuss it. It is a subject which has a perennial interest.

In the absence of W. W. BISHOP, J. I. WYER read Mr. BISHOP'S paper on

SUGGESTIONS FOR AN ANNUAL LIST OF AMERICAN THESES FOR THE PH.D. DEGREE.

(See p. 50.)

After the reading of Mr. Bishop's paper there was some discussion in regard to the great desirability of having published each year a list of the dissertations presented to American universities. On the motion of Dr. B. C. Steiner it was resolved that a committee of three be appointed by the chair to consider the question of the section taking steps to secure such an annual list. Mr. Fletcher appointed Dr. B. C. Steiner, W. M. Smith and C. W. Andrews to form the committee.

Mr. A. G. S. JOSEPHSON wished that a complete bibliography of university theses could be made.

The chairman announced that the election of officers for the next year would take place, and called for nominations.

Mr. Josephson nominated Mr. A. S. Root for chairman. Mr. Root was elected. Dr. Canfield nominated for secretary Mr. W. M.

Smith, and Mr. Smith nominated Miss Emma A. Hawley. Mr. Smith was elected.

After the election there followed a general discussion of the topics presented during the afternoon, those receiving special notice being classification, notation, the use of call numbers, department libraries and university theses.

In the discussion Mr. FLETCHER said:

My thought about dispensing with shelf-marks in the card and other catalogs (not really my thought, for I had it from one of our leading librarians, who has not, however, put it in practice himself) is that the great difficulties connected with the changing of shelf-marks in catalogs when books are reclassified may be avoided by placing on the card only the accession number (in case of a set the accession number of the first volume), and then maintaining a key, consisting of a book closely ruled in double columns, where for each book in the library the shelf-mark is written in pencil against the accession number and changed whenever the book is renumbered. Such a scheme could not be satisfactorily applied in a library where the looking-up of the shelf-mark is involved in the calling for books in most cases. I am prepared to favor it only where (as is now the case in our own library) a majority of the calls for books are made orally and answered by the attendant without reference to shelf-mark. In our case these calls amount to seven-eighths of all the calls, and in addition to this it should be said that at least one-half the books drawn under our open-shelf system are drawn without any "call" at all, so that we may say, that if we had the "key" system it would come into play for perhaps one-sixteenth of the books drawn. In libraries of moderate circulation like our college and university libraries, and (for all but certain classes which are most used) even in the large public libraries, it seems to me that the key plan may work well. Of course the key if subjected to constant use would be difficult and expensive to maintain, owing to wear and tear. We should not fail to observe that three separate and distinct features of modern library progress are each and all working against the necessity, *i. e.*, tending to minimize the necessity, of shelf-marks in the catalog.

These are, first, the open-shelf system; second, minute classification and alphabetical arrangement in classes, and third, book-card charging systems. Without enlarging upon these points, I would like to suggest them to you as worthy of consideration.

Mr. HODGES described briefly the classification of the scientific books at Harvard. First, the serial publications of the broad learned societies, the societies taking cognizance of all branches of learning, are brought together arranged alphabetically by country and city. Secondly, the general scientific serials and the special scientific serials, however published, are arranged in a group; the general coming first, the others following according to subject, astronomy, mathematics, physics, chemistry, natural history, zoölogy, botany, etc. When suggesting the separation of the serials in pure science from the handbooks at the very outset of his work at Harvard, Mr. Hodges urged that the serials constitute a record literature to which the investigator must refer when carrying on original work, while the handbooks are used by the pedagog when preparing for his classwork. The general designation for the learned society group is L. Soc.; for the scientific serials, Sci. The handbooks on physics are in a group designated Phys.; the general treatises by Phys. 357-360. A treatise published in 1892 is marked Phys. 358-92; another of the same year, by Phys. 358.92.3.

Mr. Roor said: It may possibly have interest in this connection to note that the catalog of the University of Göttingen, which was established about 1750, has the feature which has been mentioned here as characteristic of the Harvard system. The books are grouped in large classes with an abbreviated heading, with minute sub-classification. Just when this system was introduced I do not know, but I suppose it to have been in use a hundred years or so, which I judge to be a longer life than Mr. Fletcher is willing to allow to the D. C.

Interesting remarks were made by several others, notably Mr. Andrews, Dr. Steiner and Dr. Canfield. It is to be regretted that the revision of their remarks has not been received in time for publication.

OLIVE JONES, *Secretary.*

## CATALOG SECTION.

THE Catalog Section of the American Library Association held two meetings in connection with the Waukesha conference.

*FIRST SESSION.*

The first session was held in one of the parlors of the Fountain Spring House, on the afternoon of Tuesday, July 9. The chairman, ANDERSON H. HOPKINS, called the meeting to order.

It was *Voted*, That the section waive the formality of registration of members preliminary to voting.

It was *Voted*, That the chairman appoint a nominating committee of three, to report at the close of the session. This committee was appointed as follows: Miss Sula Wagner, Mr. Jones, Mr. Roden.

A. H. HOPKINS: When the round table session on this subject was held last year its object was, of course, to find out whether there was a demand for a section of this kind. We found it out pretty soon. Now we have the section. Then came the question, when I was asked to assume the chairmanship for one more year, of how it might best be occupied. It seemed to me for a time that perhaps the best plan would be to go to the opposite extreme—from having been informal last year—and have set papers, especially as the Association had decided not to take stenographic reports of the meetings. However, a change came about in my views when the interstate meeting was called at Atlantic City last March. A meeting was held there of the Publishing Board's committee on rules for a printed card catalog. The members of that committee were at that time all of the opinion that no better plan could be followed for this year's meeting of the Catalog Section than to have another discussion similar to that of last year, but confining the talk chiefly to knotty points which they met in the course of their work. That has been done; but there have been added a few questions which have come to your chairman in the course of the year from persons interested in the section.

The Publishing Board, in taking up the task of producing printed cards, found that widely

divergent practices must be shaped so that they would work together. To this end they appointed a committee of seven and set them the task of producing harmony among the jarring elements of practice in all the libraries of this country, barring none. The head of the catalog department of the Library of Congress was made chairman of this committee; and, as you know, this great library and its chief, to whom we all turn so gladly, are lending their cordial support to the project, and realization now seems near at hand.

Now what do we want? We want an arrangement whereby any one may be able at a reasonable cost to get accurately made and well printed cards for any book at any time. This and nothing else will do. (Applause.)

The members of the Committee on Rules thought this session could not be better occupied, as I said before, than in a discussion of certain points, met by them in their attempts to produce a workable scheme which would meet adequate support, it having at that time become evident that the enthusiasm so manifest at Montreal had largely evaporated; probably because it had not been made clear that the proposed plan was really a workable scheme. Some of these points the chairman of the committee and myself have selected and graded roughly into three classes, and I will lay some of these before you.

One of the chief troubles is going to lie between the 32 and 33 size cards. Let us hear from you on this subject, if you have anything you wish to say about it.

Mr. FLETCHER: Perhaps those present may be interested to know something about the 32 and 33 card from the point of view of the Publishing Board. The Publishing Board has been supplying the 32 or 33 size card as required by subscribers for cards for current books. I cannot speak authoritatively, but I think the board is nearly prepared to say that in future, if these cards are prepared at the Library of Congress and distributed from there, it will be found very much the wisest plan from the beginning to use only the 33 size. It has not been declared impossible at the Library of Congress to print the cards in

such shape that enough could be cut off to make the card a 32 card; neither has it been decided by the board that it is not worth while to try earnestly to bring that about; but the present impression, I think, is that the 32 size will have to be left aside in the co-operative work. If there is a strong sentiment here to retain the 32 size card, let us hear of it now.

Mr. BOWKER: Couldn't Mr. Hanson, of the Library of Congress, give us a report on the letters they received there in regard to the size of cards used? And let me emphasize this thought, that in coming to a uniform system we must approach as near uniformity as possible. It is impossible to meet all the variances of cards in the several libraries, but we must look towards drawing all the using libraries into as close uniformity as possible. And I think the prevailing practice is shown best by the statistics which I believe Mr. Hanson has with him.

Mr. HANSON: The statistics Mr. Bowker refers to I have not with me. As I recall the figures there are something like 19 out of 100 that use the 32 card.

Mr. ANDREWS: I have Mr. Putnam's figures. I was astonished to find the percentage that were using the larger card. Out of 185 reporting 138 used the 33 card, 38 used the 32 card and only 19 (true those 19 are the older, better established and larger libraries) used odd sizes.

I will take occasion to ask Mr. Hanson to answer another question on this point. I had an interview in his company last winter with the representative of the Harvard Library, which uses the smaller card. We then came to a satisfactory compromise, and I am surprised to hear Mr. Fletcher say it is all in the air. It was understood that the Library of Congress wanted for its subject headings, and we wanted for our subject headings, a sufficient amount of space, and that they were not willing to print below the punched hole. That leaves exactly the width of the 32 card in the center of the 33. And the proposition agreed to by all of us in this conversation was to print the 33 card with the broad margin above and never go below the hole, so any library that wanted to could buy the cards and cut them down on both top and bottom and have

a 32 card. It was understood to be satisfactory to all the 32 users that I consulted, including Harvard, the largest, I believe, of them all. It is that point that I would like to ask Mr. Hanson to report on—whether he now feels that he must go higher or lower than the lines we then indicated.

Mr. HANSON: I don't feel it absolutely necessary; in fact we are following out the measurements laid down by the Publishing Board now. I have in my hand two cards—the title runs over on the second card at considerable waste of space, as you can see. But the printers have their measurements which provide for cutting away the space above and below to accommodate the 32 card. But I believe it is going to be objectionable, in the end, when it runs over on the second card. That is the only objection I can see.

Mr. FLETCHER: I should like to have Mr. Andrews state whether this card, if it has to be cut down at the top as well as at the bottom, will allow room for headings?

Miss BROWNE: Instead of having to print a second card I don't see why we can't print the 33 card; then if the 32 card libraries want it in their catalog why can't they transcribe the extra line or so by hand on a second card and cut off the bottom. In nine cases out of 10 it would not make any difference. In one case in 10 where they would have to transcribe on the second card, is there any reason why it could not be done?

Miss DOREN: I am not a user of the 32 card. The only objection I see, if I were to use it, would be that perhaps I should have to pay a little more for my card than those that use the 33 card, and it would make the catalog a little more bulky.

Mr. ANDREWS: Talking with Miss Crawford it was evident that the Dayton library wanted a broad margin for analyticals and headings above the print in the 33 card. That is exactly what we want. We don't want it as much as they do, but I want to emphasize the necessity for a broad top margin. That is the point which makes it desirable for 33 people as well as for 32.

Miss DOREN: I did not understand the question as referring to analytical headings. We do want those above all things, and if we are to use the card at all we need the broad

margin at the top. Our use of the card depends upon having a broad margin at the top.

Mr. BOWKER: I should like a show of hands on this point. Are those present, whether 33-card or 32-card people, of the opinion that, after dropping the heading so as to leave ample room at the top to permit the 32 card to be cut out from the 33 card, as stated by Mr. Andrews, it would be better to run the type down farther than the hole, if necessary, on either side, and then cut and recopy for the 32 size, or to make a double card both for the 33 and 32 size?

I suggest that the show of hands be first from those who prefer to have one card furnished for a title when possible, and then to transcribe the lower part, if necessary, for the 32 card; and then from those who prefer to have a second card wherever it is not possible to put the material on the space of the 32 card as printed on the 33 size. Is that clear?

CHAIRMAN: I believe so. It includes, however, both the users of the 32 and 33 cards, and instead of a show of hands let us have a rising vote, and give time to count them.

Mr. BOWKER: Those who are in favor of printing below the 32-card limit on the 33 card, rather than furnishing two cards to a title, please rise. 56 persons rose.

Mr. BOWKER: Those who are in favor of confining the print to the 32 size and having a second overflow card printed for the same title, please rise. 17 persons rose.

Mr. FLETCHER: I should like to call for a rising vote to learn how many would like to urge that arrangements be made by which 32-size cards can be furnished. Three persons rose.

Mr. HANSON: I cannot think of any library printing cards that would care to print any lower than the round hole. On the other hand, the library must have three-quarters of an inch at the top of the card for headings. Will that leave sufficient space for taking away from top and bottom?

Mr. ANDREWS: They accepted it by that first vote.

Mr. HANSON: Then they must punch the hole in the margin.

CHAIRMAN: Or lose the part they punch out. If you will excuse me, I will put forth a little argument of my own.

Apropos of another report I had to make some time ago, I had heard that the greatest library in this country, certainly in some respects, was changing its plan to accommodate itself to the 33 card. I wrote to Mr. Whitney, of the Boston Public Library, which as you know uses a card larger than the 33, and it is a fact that with their immense catalog running for so many years, and with so large a number of cards which they cannot now cut down to the 33 size, they have found it advisable so to modify their plan for titles henceforth that the cards may be cut down to the 33 size on reprinting the old titles. Here is the letter, the report from his cataloger. [Mr. Hopkins here read the letter.] If they do not think it likely that ultimately they will use the 33 card why should they take all that trouble? Now, the problem they had to deal with was 10 times more difficult than that which the users of the 32 cards have to deal with. All you have to do with a 32 card to make it a 33 size is to paste it on something big enough and provide space to hold it. With such evidence as this before us why should we fret ourselves to provide a 32 card when the change to the 33 can be so easily and so cheaply made?

Mr. BOWKER: May I add a word which Dr. Billings said to me? He said that he preferred a printed catalog card to a written catalog card any time, without reference to any question of uniformity. So he was actually replacing his written catalog cards with the Library of Congress cards or Library Bureau cards. I think that there is growing in the great libraries a desire for some general method which will supply printed catalog cards.

CHAIRMAN: Is there any further discussion on this topic? If not we will pass to the next.

*Notes and Contents.* I read from the official report made by the Committee on Rules to the Publishing Board: "The position of the collation and series note to be on a separate line immediately after the date and preceding other notes." Now we cannot take up the whole question of notes, nor the question of the minority report which Mr. Hopkins was asked to submit; but the question I would submit to you is this: Is not the contents note really, logically, sensibly, a part of the

title? Is it not actually, in almost nine cases out of ten, more important than the title itself? If it were not, would it not be nonsense to print the contents note? If it is so, why separate the contents note from the title by other relatively unimportant matter? Has anybody anything to say?

Mr. HANSON: It seems to me it would be well to say here, collation is used for pagination, illustrations, maps, plates, etc., and size. That is the imprint, as we have for convenience's sake called collation; and the idea is that this information is to be paragraphed, on a separate line, so as to set out the date and make the date end the line in twelve point.

Mr. BISCOE: I want to say a word on the other side. It seems to me that it would be unfortunate to put the collation after the contents, particularly where the contents are long. It would throw the collation on the second card. To find out whether you had more than one volume you would have to turn to another card. If you are looking for duplicates you want to see at once not only the author of the book, but also the number of pages, to show whether the edition is the same. And if for all those purposes you have got to turn to a second card, it seems to me it would be unfortunate.

Mr. JONES: I agree strongly with Mr. Biscoe. I think the number of volumes, size, etc., range in properly with the date, while the contents should come afterward and range in with such matter as critical or descriptive notes. Ordinarily you want those parts that I speak of first, then your contents, like any other kind of descriptive or explanatory notes.

CHAIRMAN: Mr. Biscoe's position appears at first sight very solid and plausible but there is nothing in it. The reason for this is that there is only a small class of books that will call for a contents note. I deprecate mentioning any institution, particularly The John Crerar Library, but that calls for contents notes probably as often as any, and I should like our cataloger to answer if he knows about how many cases run over on the second card.

Mr. JOSEPHSON: We have printed so far about 25,000 cards and the number of titles that run over to second cards is considerably below 1000; it is nearer 500 than 1000.

Mr. JONES: I should like to ask the chairman whether in foreign bibliographies we do not find that the data, as to volumes, size, etc.—called the collation—always come first. Should not we be setting ourselves up in opposition to other catalogers if we put the collation after the contents?

CHAIRMAN: Possibly that it so; but if we gain a truth, what then? Tradition is powerful, but it is not all. Sometimes it is very little indeed. And this is one of the cases in which I believe it is very little.

Mr. FLETCHER: I hold in my hand one of the sample cards which have been distributed, which has this arrangement. That represents what we now call the old practice, which we are proposing to depart from—Cutter's Rules say that the imprint, strictly, is place, date and form of printing; and then goes on to say that for practical purposes the imprint is considered as being enlarged so as to contain not only place, date and form of printing, but also publisher, number of pages and number of volumes. It seems to have been agreed some time ago by the Committee on Rules and the Publishing Board that it was wise to bring back the imprint to the old idea of giving the place, date and form of printing and publisher. It was also pretty generally agreed that form—or size as we now call it—number of pages and number of volumes, and anything else that might describe the book from an exterior point of view, should be called collation—we have not exactly agreed it should be called that—and that this should be put in a statement by itself in smaller type, after the title and imprint, the imprint being printed in the same type as the title and even completing the line the title ends on. Now the question is whether that line of smaller type should be printed immediately after the title and imprint or whether it should follow contents; that is to say, whether contents (called "contents" and not "contents note") should not be attached immediately to the title—which is Mr. Hopkins's idea, I understand, as he thinks logically it belongs there. The card I have in my hand has contents occupying four lines, because while it is one volume it contains four different lectures. That brings before us the "contents note" and the other notes. Now I

understand the new proposition is that the collation should follow the contents note, but precede other notes.

CHAIRMAN: The thing I want is that the contents note should follow the title. I called it "contents note" merely because it appeared in the smaller type with the other note.

Mr. FLETCHER: I wish to express my preference in accord with Mr. Jones and one or two others, that the collation note should continue to occupy the place it has always occupied, of immediate juxtaposition with the imprint, and other notes should go below.

CHAIRMAN: In explanation, permit me to take the floor again —

Mr. BOWKER: Has not the officer of The John Crerar Library given the best argument for placing the collation before the contents? Mr. Josephson has told us that probably the number of cards including contents would be less than three per cent. Why should we not follow the old practice and let the cataloger and the public continue to use the usual thing?

Mr. JOSEPHSON: I did not say how many cards give contents notes, but how many titles need more than one card.

CHAIRMAN: That is the strong point. It is not three per cent. nor anywhere near it. Those cards that ran over were not all contents notes. The actual number of contents notes that run over is very small indeed. And moreover, you have this bibliographical note on every card. You are going to put it between the contents note and the title every time.

Mr. HARRIS: I would like to ask what proportion of cards have contents notes at all.

Mr. JOSEPHSON: I don't think I can answer that. It is between ten and twenty-five per cent.

Mr. HARRIS: The point I was about to make was that I think it is well to sacrifice something for the sake of uniformity, for the aid of persons who consult the catalog; and as Mr. Josephson says only fifteen to twenty-five per cent. of the cards have contents notes, in seventy-five per cent. the collation would immediately follow the title. And therefore it seems to me it is desirable not to have the contents note follow the title.

A show of hands was called for.

CHAIRMAN: Before we have the show of

hands, may I say one thing more? I don't believe that most of you that have not been using these cards know how useful the contents note is or what it is for. It is to furnish your analyticals. If you want to analyze a volume of essays, for example, your contents note does it all for you with just a little bit of clerical work when the cards come in. You have fifty items that you would like to represent in your catalog, and the card does it all for you. It is costing you one to three cents instead of fifty or sixty cents.

Mr. L. P. LANE: I have learned a good deal since I have been in the Boston Public Library by observing the practices which that library has departed from. I know the library did in times past print contents and have an entry designed to fit one particular item of contents and then underline that item on the card. That has been found so unsatisfactory that when we now recatalog anything and deem any item of contents worthy a separate entry we catalog that item separately and print a second card.

Mr. ANDREWS: If the Library of Congress will do this we do not care for many contents notes. I didn't understand the Library of Congress proposed to print analyticals, but rather to print contents notes; that they, and most of the libraries that print cards, found their economy on this point. But it is really the Library of Congress that must be consulted as to the desirability of many contents notes.

Mr. HANSON: That has been one of the perplexing questions with us in printing cards. We do use the contents as analyticals to some extent, underscoring the particular item on the heading given. But where an analytical is what we catalogers call an imprint analytical, that is, with separate title and pagination, we find it more economical to print a separate card for that title. In other cases and where we find it very inconvenient to use the contents card, we print analyticals.

CHAIRMAN: My own opinion is that it is best to put the collation at the end. It is easiest found there. The thing I want to see is to have it go below the contents. I want to say one thing more. The reason you think more than one per cent. consult the note is because you are librarians. Take your popu-

lar libraries, and they deserve to be considered, how many readers are going to look for that note?

Miss CRAWFORD: I am somewhat undecided in mind between the two standpoints. It seems to me that the contents, from the nature of the case and from the accessibility of the catalog, belongs rather at the top. I believe you are right when you say that ninety per cent. would use the contents first, rather than the bibliographical note. But the critical notes and any other general information should come right next to the contents.

Mr. JONES: I wish to repeat that "collation" is a bibliographical description of the book; if you want to describe a book or to order from a bookseller you turn to that data. Collation, it seems to me, comes naturally after the title, and I still hold that to separate it from the title is not in accord with the general bibliographical practice of the world.

CHAIRMAN: As many as are in favor of placing contents note immediately following the title, please rise. Three persons rose.

CHAIRMAN: As many as are in favor of placing contents note after collation, please rise. 52 persons rose.

CHAIRMAN: The next question is a recommendation from the committee: "*That a column be set aside in the Library Journal for notifications to libraries of decisions on doubtful points; e. g., 'Kate Douglass Wiggin should not be changed to Riggs; or, Automobiles should be classified . . .'*"

In other words, that a kind of department be created, when the Central Bureau is created, for giving librarians throughout the country a notion of how these matters are to be treated. What is the opinion? Is there any discussion? If not we will go on to the next point.

A MEMBER: No discussion means that we agree to it, I understand.

CHAIRMAN: I suppose so. If it doesn't you should say so quickly.

A MEMBER: Does this recommendation say *Journal* or *journals*?

CHAIRMAN: *Journal* is the word used. The *Library Journal* is the official organ of the A. L. A. Probably if the committee had gone beyond that it would have been exceeding its province.

"*The committee earnestly recommends that the practice of giving dates of birth and death be used extensively. It is convinced that a very large share of the work has already been done and may be easily obtained for the use of the Central Bureau. Expressions from various members of the committee have shown a great readiness to assist in this.*"

Mr. MERRILL: I would like to inquire whether that means that dates shall be given only to distinguish men of the same name or whether they shall be used in every case.

CHAIRMAN: It is not designed that the use of dates be intended only for distinguishing writers, but it is urged that dates be given extensively.

Mr. BOWKER: Doesn't that mean that the dates should be used where the authors are not of the same names?

CHAIRMAN: Yes.

Mr. BOWKER: In the case of living authors, is it intended to give date of birth if possible?

CHAIRMAN: Yes.

Miss BROWNE: At the Boston Athenæum for years they have been giving those dates on their cards, and now they are scratching them off.

Mr. BOWKER: Does anybody know why?

Miss BROWNE: I believe they consider they are not as desirable as a means of distinction as some phrase might be, and so they scratch off the date and give, for instance, "Henry James, *Novelist*; Emerson, *Essayist*."

Miss WAGNER: How would they classify William Morris?

A MEMBER: Or Andrew Lang?

CHAIRMAN: The next question is the following recommendation of the committee: "*The committee recommends that the Central Bureau prepare a biographical card giving the fullest form of name, dates, official and honorary titles and degrees, membership of academies, etc., and all forms of names and pseudonyms used.*"

Mr. FLETCHER: I suppose the idea is to prepare a biographical card for each author for whom any card is issued. I don't know exactly how it should be worked. I want to call your attention to the fact that the Advocates' Library of Edinburgh tried this in preparing the first two volumes of their catalog; and when they got the two volumes printed

they concluded it was too expensive, and gave it up. I wonder how many libraries would advocate that the Library of Congress shall furnish us cards, not only for the books, but whenever an author comes for whom they have not furnished such a card that they shall furnish us a biographical card, which we shall pay for? I do not understand that the Library of Congress is preparing such a card now. It may be worthy of discussion whether we want such a card prepared.

Miss AMBROSE: It seems to me a card of that kind would be extremely helpful in smaller libraries that are limited in biographical books.

Mr. JONES: I would suggest that in the case of authors for whom we most need those facts, new authors, the facts would not be available. Could we have a copyright note by which each author should furnish the desired facts?

CHAIRMAN: Mr. Hanson could answer that, perhaps.

Mr. HANSON: I have familiarity with copyright authors that many librarians do not meet with, but whom we must have information about to distinguish from other well-known authors of the same name. We have a method of getting at them through the copyright records, and we write them, sending a blank, and occasionally ask them to give information of their other works. That is put on a preliminary card, and before every new author such a biographical card is inserted. I believe this is an old practice, used in many libraries.

Mr. BOWKER: The Publishing Board would like a show of hands on how many libraries would like such a biographical card. At first sight this struck me as a most valuable suggestion. It would, of course, cost the extra half cent or cent—whatever it might be—for the card; on the other hand, it might be of great value to the reader. I suggest that we have a show of hands, not *pro* and *con*—simply *pro*.

Miss VAN VALKENBURGH: I am especially interested in this, because we tried such a card in our library. We thought an information card was going to be a desirable thing. We tried it for about two years, and we found it was very little used indeed for biographical

purposes. People wanted more information than we could give on a biographical card. Of course it is very desirable to differentiate authors of the same name.

Miss AMBROSE: Have those cards a distinct purpose, as of assisting the catalogers aside from the public?

Miss VAN VALKENBURGH: From the standpoint of a cataloger who has done it, we didn't find it useful to us. It was more work than help.

Mr. BRETT: Wouldn't it be more valuable to the small library than to the larger library? A great many of the smaller libraries haven't time to look up authors. It seems to me it would be of value in our library.

Mr. ANDREWS: I think those cards would be of use not only to small libraries, but to readers in larger libraries. I do not say, though, that I think it was the purpose to print a card for every author. If the heading used on the Library of Congress card gave all the information desirable, I don't see any use of printing it again. I hope the proposition will be put in three forms: Those who want such a card for every author; those who only want a distinctive card in cases where distinction is desired; and those who do not care for such a card at all.

CHAIRMAN: As many as favor such a card for general use, please rise. 16 persons rose.

CHAIRMAN: As many as favor such a card for distinctive purposes only, please rise.

Miss VAN VALKENBURGH: If we are going to have the same material on the other cards we won't need it here.

One person rose.

CHAIRMAN: As many as do not care for such a card at all, please rise. None voted.

CHAIRMAN: We have still another of these topics: "*The committee recommends as strongly as it can the importance of placing the subject headings and classification numbers (D.C. and E.C.) on the bottom of the card.*"

Miss BROWNE: These subject heading are simply suggestive. If any cataloger has already started with, for example, "Birds" instead of "Ornithology," he can simply go on as he has begun. The same way with the D.C. and E.C. numbers. There are certain ones

that perhaps are absolute; others are suggested to go in one place, but would go perfectly well in three or four other places; you take the one that fits in with your scheme; if you have no scheme you can use the one that is suggested.

Mr. FLETCHER: The Committee on Rules has recommended this, and unless objection is presented here this meeting might endorse this recommendation.

W. M. SMITH: I don't see how these marks could be put on without preliminary classifying.

Mr. HANSON: If the work is done at the Library of Congress, of course the book has to be classified, and it is very easy to translate any classification mark into either D.C. or E.C. It would be an additional cost, of course, to print two or three headings at the bottom of the card, but it has to be done.

CHAIRMAN: In other words, the work has to be done for the Library of Congress.

Miss KROEGER: The subject headings are the most expensive part of the catalog. It would be a mistake to leave off the marks.

CHAIRMAN: A show of hands is called for. As many as favor recommendation of this rule, please rise. 70 persons rose; contrary, none.

Mr. BOWKER: I would like to say a word upon the question which was raised of printing certain matter in the *Library Journal*. While the *Library Journal* is technically the official organ of the A. L. A. it would seem desirable to send such material to all the library periodicals, and I should suppose that it would be understood that the committee might so do.

CHAIRMAN: In the formal report of the committee to the Publishing Board the same plan of numbering is followed that was followed in the last issue, or edition, of Cutter's rules, of the A. L. A. rules. A number of changes, additions, excisions and emendations have been made. I will read the first.

"1a. Enter books under surnames of authors when ascertained, the abbreviation *Anon.* being added to the titles of works or editions published anonymously."

Now the question has been raised since, by a member of the committee, and it was desired that it be placed before this section for de-

cision, If the heading of an anonymous book is always bracketed is it necessary to add the abbreviation "*Anon.*" to the end of the title?

Mr. JOSEPHSON: It sometimes happens that an author signs his name at the end of the preface. In that case the name is not on the title-page, and should be bracketed on the heading. We have to distinguish those from the really anonymous books in some way. You have to do one of two things, either put the abbreviation "*Anon.*" or the full word "*Anonymous*" on the top line, or, as we do in The John Crerar Library, put a note at the bottom.

Miss CRAWFORD: It has been my experience that the word "*Anon.*" at the end of the line is sometimes confusing to the reader and brings up all sorts of questions, and is taking space that might be needed for something else. I do not see its value, and sometimes it is positively misleading. The bracket expresses all that is of real use, and it doesn't matter whether the author's name appears in some other place in the book; at any rate it was not on the title-page. The brackets tell that, and I don't see the use of the abbreviation.

Miss WAGNER: I don't see that the public are interested in brackets or in the word "*Anon.*" It is for the public that the card is being made, I understand.

Mr. JOSEPHSON: When I spoke I went on the supposition that the title entry would, as is now usual, give the title only and omit the author's name from the title. But if, as I hope, the Publishing Board will decide to have the title-page copied exactly, giving the author's name in the title as it is done on the title-page, then you don't need to distinguish the anonymous authors from those who have signed in any other place than the title-page, except that in the former case you put a bracket around the name. As to the objection that the public is not concerned with the brackets, that may be true; but the librarian is very much concerned with knowing whether a book is published anonymously or not. I should like to have instead of brackets a footnote, telling "published anonymously" or "signed at the end of title-page" or "signed at end of the book."

Mr. FLETCHER: I would like to call atten-

tion to one or two things. In the first place, many popular libraries might like to have extremely simple cards. They will have to realize that they must take a good deal of information they do not want if they are to take the cards made for all libraries. Mr. Josephson's idea is a good one, that technicalities shall be avoided in favor of good, plain English notes. "Anon." is obscure to a great many people, while "published anonymously" is pretty plain English. If such a note follows it is not necessary to use any brackets.

Mr. JOSEPHSON: I rise to suggest that we should discuss the question of *size notation*.

Mr. FLETCHER: What we have to consider here is whether this meeting would favor one method or the other in size notation; and a consideration of that question might be largely affected by the further question, Is either of these methods to be followed for the printed cards? If you should be told that in all probability neither of them would be followed, it would prevent a good deal of waste of time in discussing one as against the other. We have two old methods that are mentioned in the reports. The third method, which finds a great deal of favor and which may be adopted by the Publishing Board, is that the size notation shall be represented by a mark giving the absolute measurement of the book, perhaps in centimeters, perhaps in inches and fractions.

Mr. HANSON: These three questions came before the committee at the meeting at Atlantic City; one was to give the fold symbol, as is used all over Europe and in the larger libraries of this country; the other was to give the letter symbol adopted by the A. L. A. in 1877; the third, presented by Mr. Hopkins, was to give measurements in centimeters of the letterpress and of the page—not of the binding. A minority report was submitted by Mr. Currier, Miss Kroeger and myself urging the fold symbol. Mrs. Fairchild, Mr. Cutter and Miss Browne are the majority, because I understood Mr. Hopkins to stand with them.

Miss KROEGER: Mrs. Fairchild was undecided, saying she was inclined to the exact measurement in centimeters; Miss Browne and Mr. Cutter voted for the old letter symbol; so there was no majority of the com-

mittee. Mr. Hopkins's vote was for the exact size. It was left with the Publishing Board to decide.

Mr. HANSON: The report is for the figure, but with a strong predilection of the members who signed it towards exact measurement, providing that should be adopted by the Publishing Board. Three of us argued in favor of the fold symbol. There were too main reasons argued, one that the great majority of readers in this country were familiar with the figure; the 4to, 8vo and 12mo gave them the size of the book; and that the majority of libraries used that rather than the letter. The other was in favor of uniformity. We found that the fold symbol as a measure of height, not in the old sense, was advocated by the Prussian, the Italian and the French university libraries and others. But if the Publishing Board should decide to adopt size measurement in centimeters I do not believe there is anyone of the committee who will insist very strongly on the retention of the one or the other.

Mr. HARRIS: I think that bibliographically it is a mistake to take the old fold symbol and apply it to size notation. It is not size—it represents form notation. It is much simpler to give size in inches or in centimeters, whichever you prefer, rather than to use the symbol which denotes fold.

L. P. LANE: It was said that the fold symbol was now almost never used to indicate the fold. In the Boston Public Library we use it to indicate the fold for foreign books and old books. We also use the same symbol in the case of American books to indicate size. There is considerable dissatisfaction with the practice and some of the cataloging staff would prefer to give the size in inches. How would that apply to books not in the condition in which they were published? Also I should like to ask whether it might not be possible where the fold is easily distinguished, to give both size and fold.

Mr. HANSON: That is really the practice of the Prussian university libraries.

Miss BROWNE: My thesis for defending the size letter is that 25 years ago the A. L. A. thrashed this matter all over and decided on the size symbol. Mr. Bowker has used that letter symbol from that time on. Miss Kroe-

ger found a very large proportion of the libraries using the letter symbol; library classes are teaching the letter symbol. My chief objection to the fold symbol is that we are making one sign serve two uses, which I think is always bad.

Mr. JOSEPHSON: If the Library Association 25 years ago decided to use one symbol or another symbol, that is no reason why we should do so now. The objection to using the fold symbol to denote size is, among other things, as Mr. Lane suggested, that you need it in case of old books to tell the fold. The only rational designation of size is by centimeters, or inches, if you prefer. There is of course one difficulty in using accurate measurement in centimeters, if you have a book that has been bound and cut down. But that can be overcome, I think, by letting the measurement mean letterpress and nothing else. In ordinary cases you know about how wide a margin is if you know the side of the letterpress; it is always a certain proportion. You don't need the size to tell on what shelf the book is put, because that is given by the call number. So in order to find a book you don't need the size notation; you need it to see what size the page is. It is a purely bibliographical notation.

[Mr. Hanson here read rule for size notation for books "notable for age or rarity."]

Mr. BOWKER: In the days of our youth, in fact almost as soon as we were born, this Association, as Miss Browne has indicated, adopted the letter symbol; and it seems to me that the reasons that operated for the choice of the letter symbol are stronger now than they were then, because the symbol has in the meantime come into quite general, if not universal use. The Association at that time had a phrase to indicate size. The objections to the old fold symbol still remain, and I think one very strong one has been stated. It is not only that the numerical system of 8vo, 12mo, etc., has ceased to mean what it originally meant and is confused with measurement size, but that it is used in England and America with utterly different meanings; and that difference continues. That is to say, the English use crown octavo and post octavo and two or three names for 12mo, in such a way as to cross our use of the word 8vo and 12mo

and make a double confusion. I feel very strongly, for one, that the method of breaking over from the octavo and duodecimo, etc., the figure designation, into a definite and accurate letter designation was a very ingenious and very useful move. It is difficult to get general adoption of a modification of that sort, but the adoption has been quite general, and to me it would seem a very great retrogression to go back to the old figure symbol; we had better adhere to the A. L. A. notation of 25 years ago and custom since, and give a symbol which is in no sense confusing or misleading, following that, if you please, with the actual size measurement in centimeters.

Mr. RODEN: I understand, of course, that we cannot legislate upon the subject, and possibly our discussion will not influence the legislature. At the same time, as a representative of a popular library in the middle west, I cannot help but regard with apprehension the small but insidious innovations which these rules seem to display. Mr. Josephson has said measurement is a bibliographical detail; in popular libraries it is a gratuitous detail. It could very well, as the chairman suggests, be placed at the end. In the public I am dealing with I should say the old fold symbol is most commonly used and means most. It occurs to me that a combination of fold and letter symbols might be used. I suggest this as a little concession to the popular library, and it is the first I have heard this afternoon.

Mr. JONES: An objection to exact measurement is, that so far as the greater mass of books that we have to deal with are concerned, it is not very important whether they are a few centimeters larger or smaller, and such books are often rebound in such a way that if we have an exact description our copies do not correspond. I agree with Mr. Bowker that the symbols adopted by the A. L. A. 25 years ago are sufficiently well known by people who are handling books to be recommended as a system to be adopted.

Miss KROEGER: I have been teaching in the library school according to A. L. A. measurements, yet it has always seemed to me somewhat absurd. None of the publishers have adopted it; I suppose the newer libraries have. The replies received to the questions sent to

the various libraries last June, except for the newer libraries, indicate that the majority are using the fold symbol, and they would like to know why, if the letter symbol is such a good thing, the publishers are still marking their books 8vo, 12mo and 4to. The fold symbol means more to the mass of the people than do the letters O or D.

Mr. BOWKER: If I remember correctly the London *Bookseller* is giving the exact size and measurement now.

Mr. HARRIS: Many literary and critical journals give the size of all books recorded in inches.

Mr. BOWKER: The Publishing Board is extremely interested in getting the feeling of those here on the question. I want to suggest that when it comes to the rising vote or show of hands, we take a somewhat complicated vote: those who are in favor of the present A. L. A. letter; those in favor of returning to the fold (I mean not in the usual sense); those in favor of exact measurement in centimeters; those in favor of a combination of letter symbol and centimeter; and those in favor of the fold symbol and centimeter. The board wants all the information it can get.

CHAIRMAN: I will ask Mr. Bowker to state the first proposition.

Mr. BOWKER: Those in favor of the letter symbol, the present A. L. A. method, please rise. Twenty-four rose.

Mr. BOWKER: Those in favor of returning to the fold symbol, the 8vo, 12mo and 4to please rise. Ten rose.

Mr. BOWKER: Those who prefer a designation of actual measurement, please rise — with the understanding that those voting for this will then vote their preference as to either inches or centimeters. Seventeen rose.

CHAIRMAN: Your next proposition, Mr. Bowker.

Mr. BOWKER: Those who would prefer centimeters if exact measurement should be adopted, please rise. Thirty-two rose.

Mr. BOWKER: Now those who would prefer inches if an exact measurement were adopted. Three rose.

CHAIRMAN: As many as are in favor of the exact measurement coupled with the A. L. A. symbol, in case there is to be a combination —

letter and exact size — please rise. Thirty-two rose.

CHAIRMAN: Now those who would prefer the combination of exact size with figure symbol. Sixteen rose.

Mr. JOSEPHSON: We might have another vote on whether the size should mean letterpress or book.

CHAIRMAN: Before this is done I want to call attention to the effect of binding after cataloging. If this scheme is going to take in foreign books, and you are going to get cards promptly, a large share of the books will be cataloged before they are bound. If a good binder does his work conscientiously and as it should be done, if you give the page you will have a more satisfactory measurement.

Mr. HANSON: I have looked into this question recently, and I find, where libraries do measure in centimeters they measure the paper. If the book is bound they measure the outside cover, for the reason that when the unbound book is trimmed down for binding what is lost is regained in the binding. I have found no instance yet where the practice that is advocated by yourself, the measurement of the letterpress, is followed in actual work.

Mr. JOSEPHSON: Let all those who want an exact measurement of the letter-press please rise. Two rose.

Mr. JOSEPHSON: Now those who want size to mean the outside of the book. Fifty-five rose.

Mr. BOWKER: I think it might clarify things if we take the vote of those who favor the use of the symbol alone as against those who favor the use of the symbol and exact measurement in centimeters.

CHAIRMAN: Those who favor the use of the symbol alone as against the combination of symbol with measurement please rise. Twenty-three rose.

Mr. BOWKER: Those who favor combination of symbol with exact measurement, please rise. Fifteen rose.

Mr. BOWKER: If there is no other business I wish to move the very cordial appreciation of the Catalog Section of the admirable report which has been presented in such detail by the advisory committee of the Publishing Board. *Voted.*

Mr. BOWKER: Mr. Hanson, as chairman of the committee, I have great pleasure in conveying to you and to your associates this appreciation, which I know is most thorough on the part of all here.

I would also like to move a vote of thanks to the chairman for his admirable presiding during the session. *Voted.*

L. P. LANE: I move that the program committee be requested to assign a time before the end of the conference when there may be a continued meeting of this section; and if such a time be found, that when we adjourn we adjourn to that time. *Voted.*

CHAIRMAN: Let me announce again that at the close of this session the secretary, Miss Van Valkenburgh, will be ready to begin the registry of persons who express themselves as willing to become members of this section.

Mr. ANDREWS: I would call attention to the fact that under the by-laws, if the section wants to, it can adopt rules restricting membership; if it doesn't adopt rules any member of the Association may be a member of this section. It is a question whether we wish to confine this section to catalogers.

CHAIRMAN: It is an important point or might easily become an important point. For the ordinary run of affairs it would be a matter of no consequence, but it may be that this section will sometime wish to promulgate some proposition and a little logrolling might vote it down. What does the section wish to do in this matter?

Mr. WINDSOR: I think we can safely leave it open to all who are interested in the subject of cataloging. I don't see that there is anything gained by leaving out anybody who is interested in the work.

Mr. JOSEPHSON: I move that a vote on this question be postponed. *Voted.*

Mr. HANSON: In the points that were outlined last year for discussion at this meeting there were a great many details; we have not reached a fifth of them. May I ask catalogers to get copies of the rules recommended by the Committee on Rules and look them over and communicate with any one of the members of the committee — Mr. Hopkins, Miss Kroeger, Miss Brown or myself. It would be of the greatest assistance to us.

[Miss Kroeger objected to giving out

copies of the rules, because they were incomplete.]

CHAIRMAN: I think we have no right to make a general distribution yet, to do so would perhaps exceed the province of the committee; but we might lend copies to those who want to look them over.

I will now call for the report of the *Committee on Nominations.*

[The committee reported the names of Mr. Hanson, of the Library of Congress, for chairman, and Miss Mary E. Hawley, Chicago Public Library, for secretary.]

Mr. HANSON: I am the chairman of the advisory committee and we have a great deal of hard work before us. I would ask the section to accept my resignation. I really do not feel I can give the time necessary to make this section a success at the next meeting.

CHAIRMAN: There are no rules governing us, Mr. Hanson, but I beg that you do not insist on this, or if you feel you must resign that you do so between now and the next session.

The names submitted were unanimously elected, and adjournment was taken subject to call of chair.

#### SECOND SESSION.

The second session of the Catalog Section was called to order on Wednesday, July 10, ANDERSON H. HOPKINS presiding.

CHAIRMAN: The matters that were of first importance to be brought before the section were discussed yesterday. At the same time there are other things that I am sure would be interesting; and perhaps you would prefer to bring up your own topics, and each present something you would like to talk about.

Miss WAGNER: Is the Y. M. C. A. question proper for discussion?

CHAIRMAN: I believe that question was received; please read it, Mr. Hanson.

Mr. HANSON (reading): Young Men's Christian Associations, mercantile library associations and the like are to be entered under place. That is 1 i 21 of the rules suggested.

Miss WAGNER: It is our practice to put the Y. M. C. A. under Y. M. C. A.; Y. M. C. A., Boston; Y. M. C. A., New York; instead of putting it under place. There is a separate association which has a distinctive being and the local associations are branches. It seems

this is much more logical, and where the public would expect to find reports of the Y. M. C. A.

Mr. HANSON: I wish to state in support of Miss Wagner's contention that Mr. Cutter in his new edition, which is now in manuscript, was rather in favor of changing his rule, which reads as this one does. He has always advised entering under the place; but he was now inclined to enter under Young Men's Christian Association, not only for the general association of the United States, but for the associations of the various states. A majority of the committee, however, seemed inclined to enter the local Y. M. C. A. under the place, on the ground that 99 per cent. would look for Chicago Y. M. C. A. under Chicago, Philadelphia Y. M. C. A. under Philadelphia, rather than under Y. M. C. A.; and that the same was true of the mercantile library associations.

Miss CRAWFORD: Was any argument brought forth to substantiate that statement that nine-tenths of the people would look under the local name?

Mr. HANSON: No contention, except that it seemed to be the general experience.

Miss CRAWFORD: It seems to me if the committee would correspond with public libraries there might be some change of opinion on the matter.

Miss WAGNER: I find that Chicago enters Y. M. C. A. under Y. M. C. A., as the St. Louis Public Library does.

Miss CRAWFORD: The logical thing has always seemed the fair thing in this matter — to ask one's self the question, Has the organization a national existence? And if so, to enter it under the generic name. The Y. M. C. A. has a national existence, which is more important as a governing body than any one of the local associations. And the same is true of other organizations. If they have no national organization, then I enter them under the local name; but if there is a national association, then I enter under the generic name.

Miss AMBROSE: Would you follow the same reasoning for entries under Methodist Episcopal church, or would you put them under the place? It seems to me the same reasoning would apply.

Miss CRAWFORD: I shouldn't wish this logical process to supersede the better rule of entering under the best known form. And I think in the case Miss Ambrose mentions the best known form would be the locality.

Mr. HANSON: Miss Wagner's question has launched us into the center of the most difficult problem of all — that is, corporate entry, entry of societies and institutions. There is an underlying principle which governs our distinctions, I believe. There is a distinction to be made between societies, and to some extent institutions; societies, including royal academies, which are societies, to be entered under the first word not an article; on the other hand, institutions, galleries, museums, libraries, etc., which generally have buildings and are affiliated closely with the place, to be entered under place, unless they have other distinctive names — that is to say, names from persons or geographical locations. That principle would to some extent affect the Young Men's Christian Associations and mercantile libraries.

Miss CRAWFORD: Would that override the other rule of entering under the best known form? Would the institution entry override the principle of entering under best known form?

Mr. HANSON: That rule we have not formulated. We have not considered as broad a rule as that — entry under best known form. We have tried to lay down some rule that should govern entry under place and entry under name; and what we are really trying to get at is best known form.

Miss CRAWFORD: I appreciate that, and there ought to be some ground on which to make exceptions. I think your distinction between institutions and societies is a good one. Is not the Y. M. C. A. a good case to make an exception?

Mr. HANSON: Yes, that is the 21st exception, is it not, under the rule? The general rule is, "Enter societies under the first word not an article or serial number, of its corporate name." Then there are 22 exceptions, and we began with the 21st.

L. P. LANE: I don't know whether the practice of the Boston Public Library is of interest, but personally I incline to the views Miss Crawford has expressed. The Boston

Public Library strives to use the corporate name where there is a corporate name, carrying that practice, I think, to an extreme degree, so that they enter Chamber of Commerce under Chamber of Commerce, so and so. I understand under this rule Chamber of Commerce would be entered under the name of the place.

Mr. HANSON: Yes. We propose to enter all boards of trade, all chambers of commerce under the name of the city or state.

Miss KROEGER: That comes under rule 1 i 9: If a body's name begins with such words as "board," "corporation," "trustees," enter that part of the name by which they are usually known.

Mr. HANSON: This will be very helpful to the committee, because it shows that in the case of exception 21 there is a strong sentiment of entering it under name instead of under place.

Miss CRAWFORD: Would you make that same application to mercantile libraries? It seems to me in that case the place is what people would look for, just as they would for a public library.

Mr. HANSON: Yes, personally I should feel disposed to give in on the Y. M. C. A. question, but not on the mercantile library.

Miss WAGNER: The mercantile library has no general organization. If you enter the local Y. M. C. A. under the city you are forcing the people to look in perhaps 30 or 40 places.

Mr. BISCOE: Is it the purpose of the author arrangement to show what the library has on Y. M. C. A.?

Miss WAGNER: It is the purpose to show what the library owns under the authorship of the Y. M. C. A. And to find that you force the person to look into as many different places as there are Y. M. C. A.'s represented in your catalog. The person who comes to your catalog wanting to know what Y. M. C. A. publications you have has a right to find them in one place.

Mr. HANSON: He could always find it by cross-reference under the general Y. M. C. A. to every local Y. M. C. A. represented in the catalog. The contention at the meeting of the committee was that in a great majority of cases a man is interested in a particular Y.

M. C. A. If he comes to study all Y. M. C. A.'s the catalog must make provision to help him.

CHAIRMAN: I am one who maintains the thesis that no one has a right to expect to find everything pertaining to Y. M. C. A. under Y. M. C. A. in the author catalog.

Miss WAGNER: It seems to me in the author catalog you have a right to expect to find what the author has written, therefore you have a right to find what the Y. M. C. A. is responsible for.

Mr. BISCOE: Why isn't it the same thing to expect to find out everything about the Episcopal church under "Episcopal church"? Isn't every branch of the Episcopal church a part of the general Episcopal church?

Miss WAGNER: The answer in our library would be that nobody asks for that information, as they do for the Y. M. C. A.

CHAIRMAN: Are you sure the reason they ask for the Y. M. C. A. in that way is not because you catalog it that way, and they have learned to look for it there?

Miss WAGNER: My answer is that for the last seven years we entered Y. M. C. A. under place. The change was made in agreement with the demand at the issue desk.

CHAIRMAN: That is just the kind of thing we want to find out.

Miss CRAWFORD: Under 1 i 12 what would you advise regarding the Carnegie libraries which in large numbers have assumed the name Carnegie since the endowment of the building? Would you give them all as Carnegie libraries of so-and-so, or would you still preserve the form showing the library was supported by the city in which it was? For example, Pittsburgh Carnegie Library and Atlanta Carnegie Library—introducing the word Carnegie right after the city? Or would you advise putting the word Carnegie for all of these libraries?

Mr. HANSON: I have not had to deal with that question. I should think they would be entered under the name of the city, and then if you want to bring the entire Carnegie record together you can make a second entry.

CHAIRMAN: This raises the question whether or not the designation "Carnegie library" is an official one. If it is not, then it is a name

which has come up by common consent, and it seems to me that nothing but time would enable us to determine exactly how it should be treated; the conservative thing would be to use the name of the place.

MISS AMBROSE: I would like to hear an expression of opinion — it is the same principle in three different places, i i 4, i i 5 and i i 16 — as to entering professional schools, libraries and observatories separately if they have distinctive names separate from the corporations that they belong to.

MR. HANSON: I think it would be better to enter the colleges of American universities under the name of the university. It is an easy rule to follow and a rule that has been followed in American libraries. On the other hand we have peculiar cases — the medical schools, for instance, which have distinctive names and are often situated a hundred miles from the mother school. "College libraries and local college societies under the name of the college, but the Bodleian library may be put under Bodleian. Intercollegiate societies and Greek letter fraternities under the name." I think all will agree with that. i i 16, "Observatories under the name of the place, except that those having distinctive names are to be entered under that name. Refer for university observatories from the university." I personally think that is unfortunate; I would prefer to see university and observatories under university. For instance, for Washburn observatory I would say, "Wisconsin university, Washburn observatory."

MISS CRAWFORD: Under i h 1, "Enter Government bureaus or offices subordinate to a department directly under the country not as sub-heading under departments." Is it proposed to invert the name of the bureau or office so as to bring the distinctive name to the fore or let it read in its natural way?

MR. HANSON: The practice of inverting has been followed, I think, in the majority of American catalogs. We have not as yet inverted our headings. We are printing them in the order in which they read, as "Bureau of Education"; but that does not mean we may not arrange entries under United States, *Education*.

L. P. LANE: It seems to me it would be most desirable to harmonize the practice of

the Superintendent of Documents with the Library of Congress in this matter. In the "Comprehensive catalogue" there is this inversion, and it seems to me it has been very judiciously done. In the present practice of the Boston Public Library, however, it is not done.

MISS AMBROSE: I should like a definition of the word "local" in i i 20.

MR. HANSON: i i 20: "Purely local benevolent or moral or similar societies under the place."

MR. CUTTER said that he had more trouble with this rule than with any other. He had, in fact, I believe decided to enter under name, not under place, but it seems during the discussion he changed back to the old rule.

MISS KROEGER: That was in deference to the majority vote. Mr. Cutter's opinion favored entry under name.

MR. HANSON: His reason seemed to be that those referring to these local societies were the citizens of the place where they were situated and they sought the name of the society. If the people in other states, using other catalogs, were looking for the societies, they would not remember the name. In fact, the only thing that remains in one's memory is the name of the place, and one naturally would look under the place for it.

CHAIRMAN: As I understand Miss Ambrose she raises the question how large a locality might be meant — whether it should go to the limits of a county or a state. I should have supposed it meant a narrower locality and would apply to a city or town — a vicinage.

MR. JOSEPHSON: Perhaps it might be well to let the word "local" mean here what it means in "local geography" — anything belonging to the state — not taking in towns.

I should like to bring up i k: "Enter commentaries accompanied by the full text of the work under the name of the author." And then exceptions only when the text is not to be readily distinguished from the commentary. We have a good many cases where the text is particularly short — a text of from four or five or ten pages — and then comes a commentary of several hundred pages. It seems absurd to catalog a text of five or ten pages accompanied by a commentary of five or six

hundred pages under the name of the author of the text.

Miss KROEGER: That is provided for in the rule. "Except when the text is distributed through the commentary in such a manner as not to be readily recognized or is insignificant as compared with the commentary." That is designed to fit just such cases.

Mr. HANSON: There is another rule, on laws, i h 3: "Laws on one or more particular subjects, whether digested or merely collected, to be entered under the collector or digester, with added entry under country."

I think that is a departure from the present practice, which has been to enter New York laws on state taxation under New York, State Legislature, and secondly under compiler or collector.

Miss AMBROSE: If you had a compilation of road laws of Illinois, you would put that under the compiler first and secondly under Illinois State Legislature?

Mr. HANSON: Yes.

L. P. LANE: Under i h and i q I would like to ask whether a proclamation by the king of England would be put under England, or Great Britain, King, or under Edward VII.?

Mr. HANSON: We enter such publications in two places; the official proclamations or edicts under the name of the country with a subdivision for king or sovereign, and then their private publications under their names.

Miss CRAWFORD: i j: "Enter a periodical under the first word, not an article or serial number, of its title."

What is the judgment of the committee upon newspapers? Should they always be entered under the first word of their title, or would it be better to enter under the name of the place?

Miss KROEGER: We consulted Mr. Fletcher about the rules, and he suggested this very point, bringing up the question of newspapers. And we have a rough draft of a rule to enter newspapers under the name of the place, putting the name of the place in brackets and not in the title. i j also brings up the question as to whether it is to be under the first word of the current title or of the original title.

Miss GRAHAM: i i 15: "Exhibitions under the name of the place where they are held."

It would seem to me that in the case of the Pan-American Exposition, that should be first, rather than Buffalo. Also the Columbian Exposition.

Mr. HANSON: I think a majority of the expositions in this country have specific names. In the discussion of the committee I think Mr. Cutter proposed the rule as follows: "Enter under the name of the place in case of expositions, always making a cross-reference from the special name of the exposition, if it has one." In all cases it would be necessary that the cross-reference should be made from the special name by which it is known—as the Cotton States, Pan-American, World's Columbian.

CHAIRMAN: Is there anything more to say on this subject? If not, Miss Graham, you might bring up that question you spoke to me about this morning.

Miss GRAHAM: The matter Mr. Hopkins refers to was regarding the revision of the "A. L. A. catalog" of the 5000 best books. We feel the need in small libraries, and I think the need is felt where libraries are trying to organize, for a revision of that catalog. We all use that in small libraries when making out lists of standard works. There are many of them out of print. If we could have a revision of that catalog on printed cards it seems to me it would be a great help in the work of library extension as well as to smaller libraries which have little cataloging force—where the librarian has to be cataloger.

CHAIRMAN: I thought perhaps enough would be interested in this to raise the question in such a way that the Publishing Board would take it up. It may be cards are in existence that might be reprinted for this work.

Miss AMBROSE: There is a supplement to this catalog just about ready to come out. Would that include new editions or simply new books?

Mr. FLETCHER: The matter has been put off to such a large extent that the State Library at Albany has undertaken to publish this supplement; but it has been delayed. They intend to print it for their own state use, but allow the Publishing Board to distribute it to other places. As to a revision, I do not know whether it has been undertaken. I think that the original edition was not electrotyped, and

that there are no plates existing to reprint it from.

CHAIRMAN: I will read a question from the Hartford Public Library on the arrangement of author, editor and translator in a card catalog—whether to be put in one alphabet or arranged separately?

Miss CRAWFORD: That hits upon a very practical experience which we had in Dayton. We arranged the works of an author under the author's own works; then the author as editor; and then author as joint author; and then the author as translator; alphabeting by the word which happened to follow the name of the author at the top of the line. We tried that for three or four years, and at the end of that time we ourselves in our own use of the catalog were so continually running up against our own arrangement as a thing which we never used and which was a constant blunder to us that last year we set about rearranging all the authors so as to bring them in one alphabeting order by the first word of the title, regardless of whether it was as author, editor or compiler. Of course when translator or editor of a specific person's work, that entry was placed after the others.

Mr. FLETCHER: That is our practice, after having used the other for some time. We now undertake to put all the works of an author in a general series, whether he is author, or editor, or collector, or whatever it be, if the work is significant as his work. We put those all in one alphabet, as if there was no such addition after his name, and then we put at the end the two notes which are in the nature of cross-reference. If a man is translator of somebody else's work we cannot very well put those in as his works. Everything else we put in one series.

Mr. PERLEY: In the library of the Institute of Technology, of Boston, we arranged the authors, joint authors, translators and editors all in one common alphabet. It seems to me in a library of this kind such an arrangement is especially good, because the public patrons of the library never seem to take very kindly

to distinctions, however interesting they may be to the librarians; and it happens very often that the American translator is a good deal more important to the American reader than the original author from whom it was translated. And in the same way a joint author may take equal rank with the author in the main entry.

Miss CRAWFORD: I o: "Enter under highest title unless family name or lower title is decidedly better known." Will you keep the title in the vernacular in all cases? For example, will you always say "Fürst von" instead of the English form, and "Graf von," etc.?

Mr. HANSON: There is a varying practice as to that. I will say for the Library of Congress, where they are purely titles of honor or minor noblemen, we use the vernacular; but we have found it advisable for kings, in fact for sovereigns, to use the designation king, emperor, pope, etc., in English.

Miss KROEGER: Has anything been said about entering sovereigns and popes in the vernacular or English form? The rule says, "May be given in the English form."

Mr. FLETCHER: I think we should generally feel, as Mr. Cutter expresses it in his rule, that this is a matter of progress; and before long our library committees will not tolerate "Henry" instead of "Henri" for king of France, or "Lewis" instead of "Louis." We are in a transition stage, and this "May be" means that it is considered allowable while we are in the transition stage to use the English form instead of the vernacular. But give names of sovereigns in the vernacular. The same thing is true of names of cities. Some librarians are leading us a little and giving Wien for Vienna.

Mr. PERLEY: It seems to me the use of the English form would largely depend upon the length of the custom. I think for the names of the Italian cities which have been given common English names since the Middle Ages we are justified in using the English forms, and the names of persons in the same way.

Adjourned without day.

## SECTION FOR CHILDREN'S LIBRARIANS.\*

THE A. L. A. Section for Children's Librarians held two sessions during the Waukesha conference. In the absence of Miss Annie Carroll Moore, chairman of the section, the chair was occupied by Miss L. E. STEARNS, who presided as honorary chairman.

## FIRST SESSION.

The first session of the section was called to order at 2.15 p.m., Friday, July 5.

The secretary read a communication from the chairman, Miss Moore, who extended her cordial greeting to the Children's Librarians' Section, and expressed regret that she was unable to be present. She also expressed her satisfaction that the meetings should be conducted by one whose contributions to the work of children's librarians, both by the pen and the power of her magnetic personality, have been so far-reaching in their influence. Miss Stearns' paper given at the Lake Placid conference, 1894, she believed to be one of the most important contributions to the development of work with children, as it set people thinking and talking, and stimulated activity along the lines indicated. In regard to the establishment of a separate section of the A. L. A., Miss Moore said: "It is most encouraging and gratifying to feel that we have the support of those whose interest in library work for children precedes our own, and whose wise counsel may be counted upon in considering the problems which have arisen out of a practical experience.

"It has been the chief object in the construction of this first program to define certain phases of our work in order that we may proceed with a clearer vision of its significance and with a better idea of how we are to accomplish the results at which we seem to be aiming. It is hoped that succeeding meetings may be rich in profitable discussions of practical problems, but let us plan our programs with the utmost care, that we may gather a body of matter which shall prove valuable for the future as well as enlightening in the present.

\* This report is from notes furnished by Miss Mary E. Dousman, secretary of the section.

"Most hearty thanks are due to all who have assisted in the making of the program, and to those who have volunteered to carry it to a successful issue.

"We feel especially grateful to the librarians at large who have so generously responded by the preparation of papers, or by participating in the discussions, to this special claim of ours upon their time and thought."

The secretary read a statement regarding

## THE CLUB OF CHILDREN'S LIBRARIANS.

At the A. L. A. conference in Montreal in 1900 an informal meeting was held for the purpose of personal acquaintance and co-operation among those actively engaged in library work with children.

As a result of this meeting an organization was formed, to be known as the Club of Children's Librarians, of which Miss A. C. Moore was made chairman, and Miss M. E. Dousman secretary. In order to facilitate the work of the club it was decided to divide the work into departments, each department to be in charge of a chairman appointed by the chair.

The secretary of the club was instructed to inform the secretary of the American Library Association of the formation of the club and to offer its services in the making of the program for future sessions on library work with children, if so desired.

The result of this proposition was that at a meeting of the executive board of the A. L. A. it was voted that a section for library work with children be established, providing such section be acceptable to the officers of the Club of Children's Librarians. The section was accepted, and the program for the same was submitted by the officers of the club to the program committee of the A. L. A.

The establishment of a section devoted to work with children, as a result of the efforts of the club, is a matter of congratulation for all those interested in this branch of library work. Special thanks are due the chairman, Miss Moore, for her unremitting efforts in making the program for the sessions helpful

and inspiring. Thanks are also due chairmen of committees for their zeal in collecting valuable material and for the presentation of practical and suggestive reports.

In view of the establishment of the Section for Children's Librarians, which makes possible the thorough treatment of children's library work, it seems desirable that the Club of Children's Librarians be no longer continued, its special purpose being accomplished; at the present meeting of the section it is hoped to perfect its organization and outline its plans for the coming year.

The first paper of the session was by Miss CAROLINE M. HEWINS, and in her absence was read by Miss HELEN E. HAINES. It dealt with

BOOK REVIEWS, LISTS AND ARTICLES ON CHILDREN'S READING: ARE THEY OF PRACTICAL VALUE TO THE CHILDREN'S LIBRARIAN?

(See p. 57.)

The subject was discussed by Miss HAINES, who said:

Miss Hewins' criticisms and deductions are so sound that there is little to add to what she has said, except in the way of assent. The children's librarian who relies only upon what she can find in print to tell her what she ought to think about children's literature, leans upon a broken reed. In general, reviews in this field are valueless, owing to lack of discrimination and of good taste, and to indifference. The reason for this is the unimportance of the subject, from the standpoint of the average reviewer or literary editor. Miss Hewins has stated with entire fairness the conditions that control reviews of children's books. Christmas time—the "rush season"—is practically the only time when they are given attention, and then owing to the great mass of review copies to be handled, notices are most inadequate. Indeed, most of these notices are evolved from material supplied by the publisher with the book—the trail of the publisher is over them all.

There is not yet among children's librarians a sufficient "body of doctrine"—critical judgment, knowledge of books—to produce satisfactory library lists. Such lists are too often made up from hearsay, or through selection from other lists, which is almost

always unsatisfactory. The most prevalent and serious defect in these annotated library lists is the use of too many words which mean nothing. In this work especially "the adjective is the enemy of the substantive." Even the Carnegie list, excellent as a whole and probably the best of the kind yet published, is crude in some respects, and would stand pruning. There is too frequent use of such phrases as "a wholesome book," "a cheery tale," "a children's classic," and there is too great a preponderance of American books, of commonplace "series," of books in what may be called the public-school rut. As an example of "what not to do" in book annotation, extracts may be given from a recent annotated list of children's books, which included the following:

Warner, S. The wide, wide world.

Miss Warner is one of the best friends a young girl can have as chaperone into the delightful kingdom of romance.

Weyman, S. The house of the wolf.

A modern English version of a curious French memoir written about 1620.

Church. Three Greek children.

Mr. Church is an accomplished restorer of the antique, and has a keen discrimination for points appealing to child-like magnetism.

Cooper. The spy.

A story founded upon fact. The same adventitious causes which gave birth to the book determined its scenes and its general character.

It will be seen that not one of these annotations conveys an idea of subject, quality, or treatment, while in two of them at least it is evident that the annotator knew nothing at all about the book.

Articles on children's reading are in general either sentimental or prejudiced, and they are not of direct practical use to the children's librarian. Reading such articles, however, is interesting and often suggestive. Their best feature is the hints they now and then give of some book or class of books that has pleased children, and that the librarian does not know or had not thought of.

Turning to specific points in Miss Hewins' paper, one is inclined to question the stringent criticisms of the "Pansy" books, the "Prudy" books, "Editha's burglar," and the like stories, that certainly do delight many

children, though they may not be of a high literary plane. Nor do I believe in children's books carefully "written down" to their audience and never rising above their comprehension. "Words-in-one-syllable" books are obnoxious to a right-minded child. It is a good thing to be given now and then what is above our comprehension. What we don't quite understand holds a strong fascination. Nor do I believe that the "horrors" of the old fairy stories are particularly harmful—the thrills they impart have a subtle charm, and most children delight in "horrors." The difficulty is to steer between what is vulgar and coarse or trashily sentimental on the one hand, and the limiting of a children's collection only to "pretty-pretty" stories, innocuous but utterly without character or variety, on the other. Such a collection should be made as broad, as varied, as catholic as it can be, including old books, English books—Miss Yonge, Miss Shaw, Miss Strickland—not just current and American books.

In conclusion, the most important thing is to know the books themselves. This could not be possible for the librarian of a general collection, but it is possible, and ought to be indispensable, for the librarian of a special class of literature. A children's librarian can make herself familiar with the literature suitable for children, and should do so. Personal familiarity is better than all "evaluations" by other people. There should be a constant interchange of criticism and experience among those working in this field—it is as yet small enough to permit this. This should be largely personal and individual—not brought out as a public expression—until there is developed a better basis for critical and literary discernment in this subject than now exists. The most important thing to do is not to rush hastily into print—to "educate ourselves in public"—but to set to work to know our books, and through such knowledge to establish a fund of critical judgment and experience that will later make it possible for the utterances of children's librarians to carry weight in their own field of literature.

There followed a "collective paper," in three parts, each part being treated by a special writer. It dealt with

#### THE BOOKS THEMSELVES.

In the absence of Miss WINIFRED TAYLOR Miss EDNA LYMAN read Miss Taylor's consideration of

##### I. FICTION.

(See p. 63.)

Miss LYMAN also read the second paper by Miss ABBY SARGENT, on

##### II. FAIRY TALES.

(See p. 66.)

The third paper, in the absence of its author, Miss ELLA HOLMES, was read by Miss BERTHA M. BROWN. It reviewed

##### III. SCIENCE FOR CHILDREN.

(See p. 69.)

The general subject was opened for discussion by F. M. CRUNDEN, who said that he thought it was unwise to make a distinction between the reading of boys and girls, as it tended to differentiate the sexes.

He also believed in the reading and rereading of the classics and standard literature to children as a means of checking the craving for new books which is a characteristic evil of the American adult. The best means of judging the quality of a new book was to set it in comparison with an old one that had stood the test of time, so that familiarity with, and an ample supply of, the best literature was one of the most effective ways of raising the standard of taste as regards current books. He also said that the well-brought-up child will usually choose the best himself, though wise direction is necessary, for the books he reads influence his whole life. Reading aloud to children is of great value in bringing them to love books, and too strict a grading of books by age suitability is inadvisable, as many very young children enjoy books that at first thought seem beyond them. The boy who reads the best books will not choose the worst companions.

The program of the meeting was shortened, owing to arrangements of the local entertainment committee, so that the conclusion of the discussion on this subject was carried over to the next session. Before adjournment a nominating committee was appointed, made up of Miss Linda A. Eastman, Miss Edna Lyman and Mrs. Menzies.

## SECOND SESSION.

The second session of the section was held on the afternoon of Saturday, July 6. The meeting was called to order at 2.30, when discussion was resumed of the subject

## THE BOOKS THEMSELVES.

Miss W. W. PLUMMER said:

I should much like to see tried Miss Sargent's plan for the story-hour, *i. e.*, the argument of the story being given first in the attendant's own words, followed by a reading from some good version of the original, with judicious skipping. If this has been tried anywhere, we should be glad to know of it. We have given as a problem to our class of children's librarians the selection of one or two books of Homer, of the *Odyssey* preferably, to cut and edit for reading by or to children, and have always found that what was left made an exceedingly interesting story, that it seemed might be read just as it was. But, of course, such an exercise would require an unusually good and very intelligent reader to be a success.

*Fairy tales.*

Belief, on the part of the author, at least while writing, is necessary if one would preserve the true atmosphere of the fairy story and communicate the right enjoyment to the child-readers. The fairy book in which the author tries to be "smart" and is continually thrusting in his own personality, is a failure. He must forget himself, leave the present century, and for the time be as credulous as the child himself.

*Fiction.*

The vulgarization of the child is one of the dangers we must avoid. What if the boy's father does read the *New York Journal* and the girl's mother, when she reads anything, *Laura Jean Libbey*? It is our business, as librarians for children, to see that by the time the child reaches the same age he shall like something different and better. And how can this be brought about if we let him steep himself in the smart, sensational, vulgar and up-to-date children's books that naturally lead to just such tastes in the adult?

We must also guard against false reasoning. Some authors whom we have probably never questioned will have to go, if thus examined. I am thinking, for instance, of a writer for girls who has been generally accepted. I ex-

amined her last book, the story of a little girl and her grandmother, apparently plain people, who moved into a summer village alongside of a family of fashionable city people. The question with the children of the fashionable family and their friends was whether they should or should not make a friend of the new girl—she was nice, but evidently not rich, not fashionable, not one of their kind. The counsel of the minority prevailed, and the children, boys and girls of 15 or 16, kindly admitted her to their circle, though not considering her their equal. How they held their breath at thought of their nearness to a great mistake when they found she belonged to a fine old family of another city, and had great expectations from the quiet grandmother! "See how it paid to be polite!" is the tacit morality of the book, which is full of the spirit of snobbery while professing to teach the opposite. It behooves us, therefore, to dip into books before purchasing or recommending. Nothing will take the place of knowing the books we handle and having our own opinion of them.

A thing we have to look out for is the intentional or unintentional imitation of the names of well-received writers, *e. g.*, the Marie Louise Pool, author of "Chums," to whom Miss Taylor refers, is not the Miss Pool who wrote "Roweny in Boston" and "Mrs. Keats Bradford," that author having died two or three years ago. The person who uses the same name, rightfully or wrongfully, writes very different and very inferior books.

At the information desk we have made lists for various classes and types of person—but very often have had to lay these aside and make a special selection for the individual, after talking with him or her. This is as true for children as for adults—the books that appeal to one person do not appeal to another of seemingly the same type. Until the proper relation be established between the child and the librarian, he cannot be influenced very much in his choice of books. Sometimes this relation may be established in five minutes, sometimes in a week, a month, or a year; sometimes it seems impossible to do it, and some other personal influence must be waited for.

People sometimes say that the children's own tastes in reading should be our guide. This is true thus far: that if a child is read-

ing books that do not seem good for him in our judgment, we should find out what it is in these books that appeals to him; then look for the same thing in books that are better written and lack the objectionable features, and both librarian and child are satisfied. Children learn a great deal by absorption, and if the children's librarian can give them the sort of plot or incident they want and, at the same time, a book from which they may absorb good English instead of bad, high ideals and a high code of behavior instead of low ones, she has accomplished a great part of her task.

#### *Science.*

With regard to nature books for children, I am glad that Miss Holmes has spoken frankly and pointed out to us the dangers we incur in rushing into the purchase of a new kind of book without investigation. The taking up of nature study and the study of art in the public schools has meant a great pressure upon libraries for books which teachers and pupils have heard of, but of the merits of which many of them as well as ourselves are unable to judge. In order to have books enough to meet the demand, our temptation is to buy entire series, every book we hear of in these lines, whereas our best plan would be to get them for inspection only, invite the inspection and criticism of some scientific person, or some one conversant with art and its literature, and reject what they condemn, putting in duplicates enough of the approved books to meet the large demand. A thing we need to beware of is the stampede—the wild rush to or away from a thing without reasoning, without stopping to think, just because other libraries we know of are engaging in it. The librarian needs at such times to keep cool, brace himself or herself against the rush, and when the dust of the crowd is over think things out and go ahead. And in these lines where special knowledge is necessary do not let us think ourselves infallible or even altogether competent; let us be humble enough to take advice and information from those who have a real claim to know.

J. C. DANA said:

The papers we have heard read tell us that we can put no dependence on book reviews; that the librarian must depend on herself. How can she do it? There are no laws or rules or principles of book selection. Even if

there were, no librarian has time to read even hastily all the books for children.

If she wishes to evaluate them in the light of any possible principles she may have laid down, she finds the principles themselves very shaky. Experience is our only guide. A friend of mine much interested in psychology, and especially in the psychology of young people, and especially, again, in the influence on young people of the books read during the years 12 to 16, tells me that as a result of considerable study of nickel-libraries and news-stand story papers of what we call a poor kind, he thinks this literature is generally harmless; is perhaps even helpful; is well above the intelligence of most of those who read it; and is largely written by men and women who seriously wish to help to bring light and joy into the world. If our general opinion about these nickel-libraries is to be given a shock such as that, what may we not expect as to other classes of books, of our judgment on which at present we are quite as sure? It is distressing, the amount of work that is being done in this country nowadays even by the librarians themselves in their attempt, each by herself alone, to come to sound conclusions in regard to the value of books for children. We don't care to read these books. We read them when we are weary, we read too many of them. Our own taste, if originally good, gets perverted; our point of view gets prejudiced; and our opinions are of very little value when formed. Why not try co-operation? I suggest that you appoint a committee to formulate some scheme for securing the beginning of an evaluated list of children's books; and that this committee see that at least a portion of the scheme, enough to show us another year how it can be successfully carried on, be completed before our next annual meeting. I would suggest, for example, that this committee, in the first place, collect from members of the Association sufficient money in voluntary subscriptions to pay for postage, clerical work and printing, in beginning the evaluated list; that they then appoint some person to set in motion the machinery necessary for getting together a set of evaluations. She would perhaps begin by selecting almost at random 500 story books for young people of the ages 10 to 14. This list she would submit, in whole or in small sections, to as many active libra-

rians who are interested in children's literature, as she could get into communication with. Having secured from them opinions, she would tabulate the results of the reading of each book and compile from these opinions a brief note. She would, perhaps, submit to us at the end of the year a brief list, in type, with or without annotations, of story books for children that are not good, another brief list of story books for children that are good. Without going further into detail I think you will see that in some such way as this, we can make the reading we now do along these lines permanently helpful to one another. We can perhaps in two or three years produce a foundation list of books for young people on which we can depend; we can then continue the evaluating process for other books as they appear from year to year.

H. C. WELLMAN directed attention to the economy which would result from a printed list of juvenile books to be prepared and issued by the Section of Children's Librarians and used as a catalog of the juvenile collections in public libraries. Such a list should not only embody the joint opinion of the best authorities, but should effect a saving of 90 per cent. in the work of preparing and the cost of printing separate lists for each library. The joint lists, containing 500 or more titles, could be set up with slugs, and revised and brought down to date in frequent editions. Some simple notation could be adopted, and the juvenile books in each library numbered to correspond. Then the list could be purchased in quantities by the libraries and sold to their borrowers at a cent apiece. The result would place within the reach of even small libraries a juvenile list at an exceedingly low price, always up-to-date, and of a quality and authority which should make it superior to any similar lists ever issued.

A motion was made by Mr. PERRY that a committee of three be appointed to take action on Mr. Dana's suggestion. The motion was carried and a special committee consisting of Mr. Dana, Mr. Perry and Miss Browning was appointed by the chair to act upon the suggestion at some general meeting of the Association.\*

In the absence of Miss H. H. STANLEY Mr. WELLMAN read Miss Stanley's paper on

REFERENCE WORK FOR CHILDREN.

(See p. 74.)

Mr. WELLMAN then discussed the question of whether the bulk of reference work with children should be carried on in the schools or at the library, and urged the claims of the library. The ultimate aim of reference work with children is to teach them to use the library during school life and after for purposes of study and self-education. To accomplish this end no person is so competent as the librarian and no place so appropriate as the library.

Miss LINDA A. EASTMAN said:

Miss Stanley's excellent report appears to furnish just the sort of basis for a discussion of one of the most vital questions in relation to the work with children, such a discussion as may lead to a much-needed definition of principles in regard to this side of the work.

A word or two about special topics mentioned—under library facilities. In addition to the books for reference mentioned by Miss Stanley, there is one which may not yet have come to the attention of all children's librarians because it is but just published—the new "Index to *St. Nicholas*," published with the consent of the Century Company by the Cumulative Index Co. It has its imperfections, but it certainly should prove a useful reference tool for every children's librarian, and the best simple stepping-stone yet furnished to the use of Poole and the other indexes.

Now, for the general subject, Miss Stanley says, "I think we are agreed that for the children our aim reaches to a familiarity with reference tools, to knowing how to hunt down a subject, to being able to use to best advantage the material found. In a word, we are concerned not so much to supply information as to educate in the use of the library."

The aim is well stated, and we are agreed in it, I believe, but are we agreed as to, and have we given sufficient thought to, the methods by which this desirable aim is to be accomplished? Where, in that ideal ultimate of co-operation between schools and libraries toward which we are striving, will the necessary instruction be given, in the schools or in the library? Or, if in both, where will the division of labor be placed? I, myself, am inclined to think that the formal, systematic in-

\* For report of this committee and action of Association see Proceedings, p. 130.

struction in the use of books should be given in the schools, with sympathetic, systematic help on the part of the library. Is it not possible that we, as librarians, seeing the need, are over-anxious to do the whole work, or at least feel sometimes that we can do the whole work more easily and better than we can get the overworked teachers to do it—though a large part of the work really belongs to them.

More than in any other work with the children, this reference work requires that we go back of the children and begin with the teachers—no, not with the teachers, but with the teachers in embryo—the students in the normal schools.

Miss ALICE TYLER, who followed, said that it was of the greatest importance to teach children the use of the catalog, which should be made to suit the mental capacity of children, using terms with which they are familiar.

In Cleveland the children's catalog was made upon these lines, using simple subject headings based on headings used by Miss Prentice in her "Third grade list" and the Pratt Institute lists.

Teaching children in the children's room how to use the catalog is the only way to make the future men and women more independent readers in the public library.

Mr. HENSEL closed the discussion with a short account of the reference work done in the Columbus public schools.

A paper by Miss CLARA W. HUNT was read on

#### OPENING A CHILDREN'S ROOM.

(See p. 83.)

The discussion was opened by HENRY J. CARR, who said:

I cannot say why I was selected to discuss Miss Hunt's paper, unless because I was known to her and somewhat familiar with her work and the particular children's room fitted up under her direction in the new building of the Newark Free Public Library.

I am so much in sympathy with Miss Hunt's views as expressed in the paper, and regard them as so correct that I can do little but emphasize the points she has brought out. She has been eminently wise in presenting for consideration some of the proper guiding principles of the children's room, something that is too often lost sight of in the attitude taken by those responsible for their establishment and operation.

We should not look upon the children's room as a "kindergarten," or playground for the younger children, so much as a stepping-stone to tide them along to the reading of books adapted to more mature minds, and hence to "graduate" them out of it as fast as possible. It has also a purpose, which is a further reason for retaining in this room, more or less, an aspect similar to that of the adults' rooms. Parents to some extent come to select reading matter for their children, and those of mature years but immature minds may drift into this department, if it is not made too juvenile in tone and appearance. Hence, I prefer the name Young People's Library to that of Children's Room. I have seen boys stand aloof at first for fear of ridicule for going into the room "for kids." I prefer to have the discharging of books done at one main desk, as it keeps the children in touch with adults and gives all ages more freedom in drawing from all departments. Hence we have no special juvenile cards. I should advise to include on the children's shelves good books for older readers; to avoid sets or the writings of voluminous authors, as a rule; and to aim to seek the writers of those good books that are apt to be overlooked. Discipline and good order should be maintained at the outset, and after that the children should be let alone, so far as possible. They like to have a chance to inform one another; those becoming first familiar with the room and its methods will only too gladly induct newcomers into its operation.

Mrs. M. A. SANDERS said:

The librarian from Newark speaks from experience, for hers is an ideal children's room, both in equipment and administration. At the dedication of the library the interest centered largely around that department. Her interest in the children and their work, so ably expressed, carried me back to the early 80's, when, as some of us remember, scarcely a round dozen libraries could be found where children were admitted. On one side of the door we saw a placard reading, "Children not admitted under 14 years"; on the other, "Dogs not allowed." A strong appeal was made at that time at the Thousand Island meeting for children's rights in the public library by a librarian who was making a specialty of work with children, and admitted them without an age limit. Glorious has been

the response, for the library that makes no provision for the children to-day is the exception.

At Pawtucket we open our children's rooms and bid them welcome, we open our shelves, and their judgment in the selection of books often equals our own. We decorate the walls with pictures that appeal to the affections, we send them into the homes, and by and by we see an entire family gathered around the table deeply interested in the pictures and the description of them as they read from the books brought home by the children. We put in our cases of birds, which the children delight to study, and soon a mother says to us, "I never thought much about the birds till the children began to talk about them, but we have been out every morning listening for the new calls as the birds appear in the spring." In these and various other ways we see the influence of the children's room, which is broadening every day.

There is, however, many a library where the children's room has not yet materialized, either from lack of space or funds, that is exerting a powerful influence through its children, and I question sometimes whether it may not be a mistake to draw too sharp a line of separation. Where should we draw our line? At just what age do girls and boys cease to be children? That has been for me a serious question; I wonder if you have escaped it, and if the children's room solves it.

I am in hearty sympathy with the opinion expressed that "the management and spirit of the children's room should correspond to that of other departments of the library." There seems to be a tendency to make these rooms a play-room—the children coming to be amused, and the time of one person devoted to their amusement. If this is the design of the children's room, our own young people at Pawtucket will be sadly disappointed. While we will put in the pictures, the birds, the plants, the busts and all else to make the room interesting, and while we will have frequent talks in the lecture room, the children being quietly led on to express themselves freely, the quiet dignity of the children's library room as an important part of the library will be maintained. The books will also be charged at the main charging desk for them, as we feel that this bringing of the adult

and the child into close contact is of mutual benefit.

The discipline of the children's department has never been a serious question to us. Give them a very few brief rules, and enforce them, and we shall have no great troubles to contend with; the children will virtually take care of themselves.

The question is asked us, "For what does the children's room stand, what is its real purpose?" It is evident that it has a different purpose in different libraries. To us the children's library room is for reading, for study, for observation, for questioning undisturbed and undisturbing, while the entire library is still at the service of any child who desires to make practical use of it.

Miss CHARLOTTE WALLACE read a paper on

BULLETIN WORK FOR CHILDREN.

(See p. 72.)

Two papers were read on

VITALIZING THE CONNECTION BETWEEN THE SCHOOL AND THE LIBRARY,

Miss MAY L. PRENTICE treating

THE SCHOOL.

(See p. 78.)

Miss IRENE WARREN presenting the side of

THE LIBRARY.

(See p. 81.)

Owing to the lateness of the hour discussion of the last topics had to be passed over.

The chairman then called for the

REPORT OF COMMITTEE ON NOMINATIONS.

The committee on nominations wishes to submit the following names: For president, Miss Annie Carroll Moore; for secretary, Miss Mary E. Dousman.

In suggesting the continuance of the present officers the committee does not wish to establish a precedent, but there seems to be special fitness and justice in asking Miss Moore and Miss Dousman to serve the section for another year. To their earnest effort this section of children's librarians is largely due; these well-balanced programs are a result of their careful planning. The section can hardly be put in safer hands for its second year.

The officers named in the committee report were unanimously elected.

## STATE LIBRARY COMMISSIONS AND TRAVELLING LIBRARIES: ROUND TABLE MEETING.

**A**N informal "round table" meeting for the consideration of the work of state library commissions, including travelling libraries, was held in the assembly room of the Fountain House on Tuesday afternoon, July 9. The chairman, MELVIL DEWEY, called the meeting to order at three o'clock, and in a few introductory remarks outlined the subjects to be discussed.

Mr. DEWEY: We have on our program this afternoon two of the most interesting things in library work. The travelling library is reaching out in its manifold forms with wonderful rapidity and gives very great promise of usefulness for the future; organized work under the state commissions is showing every year better and better results and indicating that just as our schools increased their efficiency so immensely by having state departments to look after them, we are repeating the history of that evolution in our state library commissions. We have only a single session this afternoon to discuss these two subjects. If we were to give them one quarter of the time that they ought to have, we would not get one quarter through, and I propose therefore to deal only with questions and answers, and utilize one another's experience or thought along these lines of state commission work and work of administering travelling libraries.

I have noted down some of the topics that have been given to me by persons who wanted to have them discussed briefly; we will first take up some of these. So much has been done in travelling libraries, that perhaps we should clear the floor of that subject, and then consider the work of the state commissions — and in that I mean all the work done by the state in its official capacity — chartering libraries, library legislation, inspection, travelling libraries — whatever the state may do for public libraries.

The first topic is, "What is the best method of getting travelling libraries before the people?" Who has any experience or suggestion to offer on that point — either of difficulties or successes?

A MEMBER: Go to the pastors and school houses.

Mr. HOSTETTER: Does the gentleman mean to put the travelling libraries into school houses? Last Sunday I visited a man who had never heard of such a thing as travelling libraries; he was a German pastor; and probably that accounted for it.

Mr. HUTCHINS: Is there not objection to having travelling libraries in school houses, for the reason that so many of the hours during which the children have leisure to read, and their parents could read, the school houses are closed? Another difficulty is the long summer vacation; and still another is that to place the library in the school house makes the travelling library merely a side issue.

Mr. DEWEY: Where would you put it?

Mr. HUTCHINS: Find somebody to take it in special charge. A travelling library in a community is bound to find some good woman who would rather have charge of it than anything else in the world.

Mr. DEWEY: Then you would put it in a private house?

Mr. HUTCHINS: In a private house or a country post-office — wherever you can find a person who believes in its use and will give service for it.

Mr. GALBREATH: I should like to ask Mr. Hutchins, provided the teacher is a man or woman who believes in the library, what objection is there to placing it in the school house?

Mr. HUTCHINS: The teacher may be a person who believes in it, but he or she makes the school of first importance.

Mr. BRIGHAM: What difference does it make if the library is a side issue, so long as it gets in its work?

Mr. HUTCHINS: If it is a side issue it does not get in its work.

Miss STEARNS: Let us go back to the original question, How to get the travelling library before the people. The best method, we find, is to take with you a county superintendent who is acquainted with all the people in

his county, or ought to be. Take your travelling library with you also, just as a travelling man takes his samples. Do not start out with a lot of circulars; take the books themselves right with you, in the back of the wagon. When you have brought the people together open your box; take out your *Scribner* or your *Youth's Companion*; take out your books on the Philippines, on birds, on cookery; show your audience some good stories; and you will organize a library association ten times quicker than if you had started out by writing letters. Those are letters, very often, that are never answered, and you wait and wonder why the people do not want the books. Go to the people with the books. That is the way we find we can work best in Wisconsin.

Mr. GALBREATH: Sometimes it is difficult to find the means to do the work that Miss Stearns has mentioned, and possibly our experience, briefly stated, in bringing the travelling library to the attention of the people of Ohio might not be out of place here. We began by advertising it through the daily and weekly papers. That brought us very few responses. We next tried to reach the people through the official organ of the teachers of the state. That brought us many responses from rural schools. Our next effort was to reach the farming communities through the state grange, which devoted one of its quarterly bulletins to the travelling libraries. This brought many responses. We reached the women's clubs through circulars issued to their membership, and this was very effective in turn. We found it best to reach the people of the state through the organs that were devoted to specific interests, especially along educational lines.

Mr. DEWEY: Did you go personally to the grangers, write to them, or send printed matter?

Mr. GALBREATH: We saw the lecturer of the grange, who issues a quarterly bulletin in our state. We explained the system fully to him, and he devoted almost an entire bulletin to an explanation of the system, and advised the farmers of the state to patronize the travelling libraries. Then we have published in Ohio the *Ohio Farmer*, which circulates widely outside of the state. That took up the work and

helped us greatly. We reached the farmers by going to the public press and using the organs that the farmers read. We reached the teachers in the same way, and the women's clubs. We have advertised our system pretty widely over the state, so that now we do not send circulars except when they are requested. We are circulating about one thousand travelling libraries in Ohio, and they go to all parts of the state. Not only that, but we have travelling library systems in three counties of the state that are in no way dependent upon the state for support and that are doing excellent work.

Mr. HUTCHINS: Do the people pay anything for the libraries?

Mr. GALBREATH: They pay transportation both ways, and that is all.

Miss STEARNS: Do they always have to pay it?

Mr. GALBREATH: Yes.

Miss STEARNS: If you found a community too poor to pay, what would you do?

Mr. GALBREATH: We have not so far met that condition. Perhaps some libraries have not been sent out because the people were too poor to pay the charge, but if that problem does come up before us, we will try to find some person who will pay the transportation.

Mr. DEWEY: Are there no remarks to be made on the use of annotated finding lists in travelling library work?

Mr. HUTCHINS: Annotations are worth a great deal, because the people, at their homes, sit down and talk over the books in these lists, and they get acquainted with the books and the authors.

Mr. DEWEY: The best form of annotation, I take it, would be the brief note, giving the best idea possible of the character of the book, and telling the reader whether he wants to read it or not, not necessarily as a matter of quotation from some one else.

Miss STEARNS: It is always a good plan to put in the publisher and price of the book; if the person gets interested in the book he can find out how much it would cost and where he can get it.

Mr. BRIGHAM: It would be well also to put in the number of pages, so that people know how large a volume it is — 150, 250, or 350 pages.

Mr. DEWEY: Has any one else tried the use of a wagon, as described by Miss Stearns—going right to the people and reaching the homes? That means going out into the rural districts and dealing with the farmhouses as individual homes. There must be the right person in the wagon, of course, who can stand and speak for an hour perhaps and leave half a dozen or a dozen books to start the work along.

Miss STEARNS: That is the only way in the world by which you can find what the people like to read—it is only by visiting the people, getting acquainted with them, going right into their homes. The idea of sending a box of books off in a freight car, not knowing anything about the country or the people it is going to! If you want those books to do good work, you must know where they are going.

Mr. DEWEY: That is the way men sell goods. The librarian is just as anxious to place his books to advantage as the merchant is to sell his wares. If he is dealing with the rural community he follows just that method. I am inclined to think that somebody is going to make a great success with those wagons.

Mr. GALBREATH: Where the demand for books is strong, as it is in Ohio, and you have all that you can do to supply that demand, should not that be attended to before you go out in a wagon to enlarge your field?

Mr. DEWEY: Oh, yes; but in Ohio everybody expects to be President sooner or later.

Mr. HUTCHINS: Isn't the point this: Where you only supply a demand you reach the intelligent communities first and the neglected communities are left out; but the libraries should reach the neglected communities. We spend too much money in buying books and not enough in educating the people to use the books. It is the same old story. You spend \$10,000 for books and not \$200 for administration, and the administration is the important point.

Mr. DEWEY: There is another analogy. We used to have the schools only for the bright boys. It is a modern idea to give education to the dull, the backward, the blind and the deaf, but nowadays they are all being trained. And we keep finding men who are among the strongest citizens of their age, but who, if we get at their early history, we find were once

dull, backward boys that somebody hunted up and started along the right lines.

Mr. GALBREATH: What communities, as a rule, are first served in Wisconsin?

Mr. HUTCHINS: The neglected communities. The community in which we are meeting is in the wealthiest part of the state of Wisconsin. We have not got a travelling library near here. We have only 300 of these libraries, and we seek out the neglected communities; not because we do not care to help the people here, but we must take the neglected ones first.

Mr. GALBREATH: This is a practical question. It may be that after a while we will all be seeking the neglected communities. What is the practical method of going out into the state after the neglected communities? How are you going to do it?

Mr. HUTCHINS: That is where you have got to have missionary work, personal contact.

Mr. DEWEY: It is not a question of studying what to do; it is a case of the man behind the idea. If a man starts out who is a born missionary, he will go straight to the communities who need him, while another man will take care of another class. We want to do all the work before us, but if we are so situated that we cannot do both kinds of work in this field, which is the more important to do first, cultivate the good field or the poor field, which if you do not cultivate it will run to weeds and escape us entirely? As Mr. Galbreath asks, if a community is anxious to read, will you supply that, or will you stir somebody up that does not want your supplies? In other words, if there is a field that is rather poor, will you cultivate that at the expense of another field that yields a good crop?

Mr. GALBREATH: It seems to me that a neglected community is one that has no library of any kind of its own; nine-tenths of our travelling libraries go out to communities of that sort.

Mr. HUTCHINS: I would not take that as a definition. In an intelligent community they buy books, they buy magazines, they have intelligent people. A neglected community is one that is not reached by these means, or by any means of civilization.

Mr. GALBREATH: Suppose I go into a com-

munity which all the American people are gradually leaving, only foreigners remaining. How can I reach the foreign people that hardly have the English language in their homes, and scarcely in the schools?

Mr. HUTCHINS: Take, for instance, one of those foreign communities. The children go to school; some of them stay in school until they can barely spell out the third reader, and then they go out and become American citizens. Reading is hard work for them. You offer them a chance to read a book, and they do not want it. But in that place we send first with our travelling libraries the *Youth's Companion* and the little picture papers, to interest them in spelling out little short stories. Try elementary books; simple books of American history and biography; lead them on to better books. But the way is, first of all, to go to them. We have many such communities in the northern part of the state, where the people have come from foreign lands and know nothing about our customs.

Mr. GALBREATH: Another question. I would ask Mr. Hutchins, if a farming community should send to the state commission for a travelling library, and with the request state that they had no library to which they had access, if he would decline to send to them because they were an intelligent community?

Mr. HUTCHINS: No, we send libraries to these communities. We are sending to all classes, but if Miss Stearns, in the northern part of the state, finds a neglected community, and can work with them, and can find some members of the women's clubs to go out and help, we send to them first.

Mr. GALBREATH: I think that perhaps our methods do not vary so much after all. The women's clubs are supplementing our work in that way. In Ohio we have succeeded in interesting a number of the members of the legislature, and frequently they come in and look over our maps illustrating the travelling library work, and say, "There is in our county a community that is very backward. They have no libraries there, and they are not very intelligent. I wish you to write to So-and-so in that community." We do a great deal of work in the line of reaching what Mr. Hutchins calls the neglected communities.

A MEMBER: I would like to ask Mr. Hutch-

ins if he has forgotten that we have something besides the readers in our Wisconsin schools? Under the present school law every district in the state has the beginnings of a library, and adds to that library each year. And we have in each of our school institutes held during the summer a 45-minute period which is spent in training teachers how to get children to read books, how to interest them in the books, and how to show them to get from the book the information it contains. And I would also like to ask if the library placed in the school house is not as accessible to the district as a library that may be placed at some central point? Very often people would have to drive 25 or 30 miles to reach that central point, whereas in the library in the school house the children can take the books to their homes. During the long vacation the library need not be left in the school house, but in some other place.

Mr. HUTCHINS: A library in a school is a school library, no matter where it may be, and the children do not go to the school house after they leave the school.

Mr. DEWEY: The library is an optional affair; the children are compelled to go to school. On the other side, there are a number of advantages in favor of the school building.

Has anybody succeeded in getting from the railroads or express companies special concessions for the transportation of library books?

Mrs. DOCKERY: In Idaho, while the travelling libraries were in the hands of the women's clubs. When they came in the hands of the state, the railroads felt that they should have some compensation, and they gave us half rates. The stage lines give us less than half rates.

E. H. ANDERSON: In Pennsylvania the Adams and the United States Express Companies, which are the two leading companies, have made this concession: We can send out books at full rate going, and half rate returning. These rates apply only on condition that the books returned are paid for at the library, so there is no confusion at any other station.

Mr. MONTGOMERY: How about books that are transferred to another point?

Mr. ANDERSON: We do not transfer them; they must all come back.

G. F. BOWERMAN: The law of Delaware requires that the express companies shall give the franking privilege, both coming and going, to all state documents, and we intend, if possible, to extend that provision to our travelling libraries, now that they are conducted by a state commission.

Mr. HOSTETTER: On the question of express, my experience in Illinois is that the shipping of our books has been unsatisfactory, and I have had some conversation in the matter with the express companies. They seem willing to give us some concessions, and I believe if this meeting would recommend that the American Library Association take up the question of express charges, that we could get for the whole United States a liberal concession for travelling libraries. At least I think we could get as much concession as is given the farmers for returning chicken coops. I think if this is taken up by the Association, as an association, we could get a very liberal reduction.

Mr. BOWERMAN: The Seaboard Air Line runs a free travelling library system, and I presume they send their books over that system free?

Mr. DEWEY: Yes. They also pay expenses, but would they open those privileges to other people?

Mr. BRIGHAM: I want to raise one question. Isn't it a mistake to put the library in the position of a beggar? Is it not better to pay for what we get?

Mr. DEWEY: If we have money enough. We would rather beg than have no bread. We are willing to profit by whatever concession we can get which will enable us to do our work.

No one has spoken of the most important thing of all in this work. We are reaching communities, but there are in all our states great numbers of isolated homes and of farmers. They have more leisure than any other class, especially in the winter, and we have to reach them through the mails. We have a letter from Mr. Lane, of Harvard, upon the movement to secure reduced postal rates for library books, undertaken through the New England Education League by Mr. Scott. This matter is of great importance to us all. [Mr. Lane's letter was read by Mr. Bowerman.]

Mr. MONTGOMERY: In connection with that, has any one here tried to send single books to individuals in any of the communities through the rural delivery system?

Mr. HUTCHINS: We have to a certain extent. We have not sufficient funds to send out enough of the boxes, so we allow a school teacher in the northern part of the state to draw out some book on some subject, and we send these by the rural delivery, or by mail, whichever will reach him most quickly, but of course we have to pay the regular postage.

Mr. HOSTETTER: We have sent out a few books to the country domestic science clubs through the mails, and we have a greater demand for them than we could ever supply. Now I find this experience: the express companies, in the matter of books, would carry a book more cheaply than the United States mail. I am quite confident that the express companies would return the books free, or at a very low rate, if the charges were prepaid. I move that this meeting recommend that the American Library Association take up the question of procuring reduced transportation rates for all free circulating library books.

Mr. DEWEY: If this large meeting is practically agreed on the importance of that, we could send the recommendation into the Council meeting to-night. It seems to me simply inconceivable that we are willing to allow periodicals, bad and indifferent, and the yellow journals, to receive the pound postal rate, while our libraries, suffering from lack of income and working for the public benefit, cannot use the public facilities as cheaply as the people who are using them for public harm instead of public good. I had supposed there would be unanimous approval of an act to register public libraries, owned and maintained for the public benefit, so that they could receive the pound postal rate on books.

Mr. HOSTETTER's motion was seconded.

Mr. DEWEY: Let us see if there is anything more on this question before the motion is put. There is a bill closely allied to this going into the next Congress. Mr. Hutchins, will you state it briefly?

Mr. HUTCHINS: We have twice tried to secure better transportation in the state of Wisconsin. We have found rural mail carriers who said that they would carry books to the farmers for a travelling library without cost,

but the United States law said that we could not do this; that we cannot carry in this way anything under four pounds in weight except it is stamped. Congressman Jenkins, therefore, has drawn a bill which gives libraries authority to send their books free along rural mail routes. At present the farmer must either carry the book himself and return it to the public library, or he must pay postage.

Mr. DEWEY: You say that the carriers cannot take packages under four pounds without stamps?

Mr. HUTCHINS: Yes; the government rules that packages under four pounds are to be sent by mail. Larger packages we could send by the carriers, and we have sometimes thought of sending 15 or 20 books to a neighborhood for distribution. I think that could be done, under the government rule, if the mail carrier was willing to carry them.

Mr. DEWEY: The idea is, that the carrier must not carry anything to compete with the postal service.

Mr. HUTCHINS: Mr. Jenkins, who has drawn this bill for us, has submitted it to all the Senators and Representatives in the United States, and nearly all favor it. Now, I am in favor of Mr. Scott's bill, which gives libraries reduced rates through the whole United States. As things are to-day, if you want to send a travelling library book 100 miles out into the country it costs as much as to send it to San Francisco or New York. If we can get the government to allow transportation by rural free mail delivery it will be an entering wedge for this other bill.

Mr. BOWERMAN: Why cannot the legislation adopting the rural mail delivery also include this matter of the pound rates? Why not have both provisions in one bill? My library is practically free to the whole of Newcastle county, not confined simply to Wilmington, but it is a farming community. We would like to send books to every part of the county, practically to every part of the state. The library is practically free to the state of Delaware, so far as people can come to us, but they cannot come to us; we would like to go to them, but we cannot do it, because of the expense. We could do it if we could afford sufficient postage to send books.

Mr. DEWEY: These are two closely allied

questions. Has any one any objection to this Jenkins bill, which, on its face, promises to be so useful to us? I think we can get it, if we work together.

Miss STEARNS: If the government admits library books into this country free of duty, why cannot it allow a man to carry a book free on the rural delivery route if he wants to do it? In our state we have people who cannot afford to pay postage on the books; if the mail-carrier is willing, in the goodness of his heart, to take the book to them, why can't it be done? Why should not a book from a free library be sent free? I do not mean from one state to another, but I mean by rural free delivery.

Mr. BRIGHAM: Would you make it optional with the carrier? Why not make it compulsory? You say, "if he wants" to carry the book. Suppose he does not "want" to carry it?

Miss STEARNS: I would have it so that he can do it for nothing if he wishes, or he can charge a little for express. The rural mail delivery people have to work hard, and they make but little. Now, the United States government has to employ good men to do this work, so it puts in a premium by allowing them to conduct an express business in connection with it. In order, however, that the government may receive its revenue, it does not allow the carriers to carry any packages under four pounds in weight. What we want is to have that embargo removed for free library books, so that they may carry books weighing a pound or a half pound.

Mr. BRIGHAM: The post-office would probably say that this would interfere with the delivery of the regular mail.

Miss STEARNS: If it interferes, then the whole express business interferes. The carriers are doing such a business now for packages about four pounds in weight.

Mr. DEWEY: Then all you need to do is to attach a brick to your book and make it weigh over four pounds. Is there any motion before the meeting?

Mr. BRIGHAM: The motion of the gentleman from Illinois has not been disposed of.

Mr. HOSTETTER: My motion relates to express transportation. Rural delivery is somewhat of an experiment, and it would not reach the case I have in mind. We spend our

money for expressage, and we want the express companies to give us a minimum rate.

Mr. DEWEY: I rule there is no motion before us until it is repeated.

Mr. HUSE: I move that we recommend the passage of the Jenkins bill. We ought to pay no attention to all this talk about lines of least resistance. If we have no law, we will find the Post-office Department ready with an objection that will answer any request we may make. If we can get a law authorizing what we want, the Post-office Department will obey it whether we seek the line of least resistance or not.

Mr. DEWEY: Is the motion seconded?

Mr. BRIGHAM: I rise to a point of order. There was a previous motion made and seconded, and I call for the question.

Mr. HOSTETTER: I made a definite motion in regard to the express companies. It was made for the reason that arrangements can probably be effected with the express companies, but we are not likely to get the legislation we want. This motion was this: That this meeting request the Council of this Association to negotiate with the express companies of the United States for reduced rates upon travelling libraries and travelling library books.

The motion was adopted.

Mr. HUSE: I renew my motion that we recommend the passage of the Jenkins bill.

Mr. HUTCHINS: The Jenkins bill provides that wherever there is established a public library from which rural delivery routes radiate, books may be carried upon those routes from the public library to the patrons in the country without cost. They may not, however, be returned free; in returning they must either be returned personally to the library or postage must be paid.

The motion made by Mr. Huse was adopted.

Mr. DEWEY: We come now to the question of pound rates. That has been before Congress for some time, and I think there is hope of its passage; but it needs our support. I am heartily in favor of it. I think it is just, and that a great deal of the criticism it has received is based on misapprehension. Some people look only at the rates that extend throughout the country, and say that the gov-

ernment will be carrying books at a loss, but these books will largely circulate within 100 miles of the library, and you will pay exactly the same rate within that circuit as you would if sending to San Francisco. Does anybody want to move that the Council be asked to support this bill?

It was moved and seconded that the support of the bill be recommended.

Mr. HUSE: It seems to me we are trying to get a good many things. If we get the cheap postal rates, that will include rural delivery, and then the express companies will come down in their rates to compete with the government.

Mr. DEWEY: The rural delivery is limited to a single section, and is analogous to newspaper rates.

Mr. HUSE: But if this pound rate is extended to library books the express companies will come down in their rates, and the rural delivery will be almost free.

Mr. DEWEY: But in any case if we want all these things, it won't do any harm to ask for them.

Mr. EASTMAN: I would like to raise one point, and that is, what would be the effect of the extremely cheap rates of postage upon small libraries or upon libraries which we want to establish? In the remote parts of the state, where the population is small, won't the tendency be to have one great library dominate the whole state? Then when you go to a community to awaken library interest the people will probably say, "We don't care about a library; we can get our books from New York, or Albany, or Cincinnati, or Chicago." Won't this measure tend to hamper the work of establishing libraries in the small places?

Mr. ANDERSON: That is a difficulty easily remedied. I do not think that any library should act as a forwarding agent to a person in any place where another public library is or can be established. Our library takes that position very firmly. We refuse to be a forwarding agent to any person; if a library, however small, asks us to send books, we are glad to do it. I know we have helped small libraries by making people feel that the small library was very important, as it could get concessions that they reasonably could not obtain.

Mr. DEWEY: Mr. Eastman's point, if this were a commercial question, might have something in it, but as long as books are circulated free, we should make the road free to the reader, for a short distance or a long distance.

The motion was adopted.

Mr. DEWEY: We will now take up the topic of county libraries as units in a state library system. Mr. Hodges, of Cincinnati, has something to say on this.

N. D. C. HODGES: By an act passed April 21, 1898, the privileges of the Public Library of Cincinnati were extended to all residents of Hamilton County. While the trustees did not derive any revenue from the taxpayers outside of the city limits until the beginning of 1899, steps were taken at once on the passage of the act to enable all the residents of the county to avail themselves of their new privileges. There has been some discussion in the public press as to whether this library or that might claim priority as a county library. The Public Library of Cincinnati has been loaning its books to all the residents of Hamilton County for more than three years. I believe there is no other library in the state of Ohio which had furnished books throughout a whole county before January of this year. This method of supplying books over a comparatively limited territory has interest when we are discussing the circulation of books over a whole state from the state capital.

For those who cannot, or will not, come to the central library, there have been established throughout the county forty-one delivery stations. Four of these are branch libraries. All these branch libraries had previously been village libraries with very respectable histories; started as subscription institutions they had in years past taken on a public character and were supported partially by taxation. There are several other local libraries in the county which are supported more or less by taxation and which are likely to come under the general management of the trustees of the Public Library of Cincinnati, as otherwise the taxpayers in the regions where they are located will be subject to double taxation for library purposes, and, moreover, there seems to be a consensus of opinion among those who

are interested in the branches which have come under the wing of the central institution that they have found the change to their advantage.

Hamilton County is not a flat region. The old part of the city of Cincinnati is located on what might be called the river bottoms, though the land is, most of it, at a safe height above the river floods. Half a mile or a mile back from the river there are sharp rises of four hundred or five hundred feet to the hill tops, on which the newer portions of the city are built. Again, these hill tops are not tablelands but are cut here and there by deep gorges. The hilly character of the county adds to the difficulty of transportation. It is slow work for a wagon to climb the steep ascent from the old city to the suburbs. The library does not have its own service of wagons, but depends on the local expresses. There are portions of the county with which there is no regular system of communication by stage or express. It is in these regions, more or less inaccessible, though not uninhabited, that the authorities of the library have placed travelling libraries. Twelve of these travelling libraries were sent out in March of this year. In each library there are 62 or 63 books. New books were purchased for the purpose, books of a character likely to interest the readers, the new novels with a 40% sprinkling of the best classed literature. The travelling libraries were arranged in three circuits of four each. Each library containing 62 or 63 books, the four libraries in a circuit contain 250 volumes. The books in circuit A are the same as those in circuit B and as in circuit C. The libraries were placed with school teachers. Right here a difficulty has arisen on account of the closing of the schools for the summer. The country schools have rather long vacations. Some of the teachers are willing to care for their libraries during the summer and see that they are open to the patrons. Some are not in a position to undertake this work. For the summer months there has been a gathering of these 12 travelling libraries at less than 12 stations. The idea has been, in general, that one of these travelling libraries should remain about six months at a station before it is moved on.

The Public Library has also sent out 36

travelling libraries to the 36 fire companies of the city. Each of these smaller travelling libraries contains 20 volumes and they have been moved more rapidly than the larger travelling libraries sent to the remote parts of the county. The deliveries to the delivery stations vary. With some there is a daily delivery, with others triweekly, for a few twice a week and there are two which have but one delivery a week.

There are a good many women's clubs in Hamilton County, Ohio. Last winter we received programs from 37 of these clubs, and reading lists were prepared on these programs by the cataloging department. A club alcove was set aside and an attendant assigned to aid any of the members of the clubs visiting the library for study on the papers which were to be read. We have not attempted to send out selected lots of books for the clubs in the suburban districts. Much better work can be done for the readers if they will only come to the central library; and it cripples the resources of the library to scatter its reference books far and wide. We have sent such selected lots of books for limited periods to the university for the use of the students and professors, but, in general, for such reference work the policy has been to encourage the use of the central library.

This brings me to the consideration of whether there is any advantage in the system of county libraries. No very great expense is involved in a journey from the most remote corner of Hamilton County to the central library in the city. Those who are intent upon serious study can, in most cases, make a journey of 15 or 20 miles. At the central library with a concentration of financial resources there can but be a more valuable collection of books. On the other hand, it is perfectly feasible for the officers of the library to visit even the most remote portions of the county and by personal interview estimate the character of the people whom they have to serve; with the result of a more intelligent distribution of books in the outlying districts. Serious study is provided for at the central library, while desultory reading is supplied through the delivery stations and travelling libraries.

Dr. STEINER: It seems to me that it depends

somewhat upon your unit of local government as to how much you need a county library. I should think in Massachusetts or Connecticut the county library would be rather an unfortunate enterprise, unless used in connection with the town libraries. But in many of the southern states the county library is going to be almost indispensable. With us the unit of local government is the county, except in the case of the incorporated municipality. There is a county in Maryland with 75,000 people without a single municipality. The county commissioners attend to the minutest details of administration in that county. It is manifestly unwise that the state should take all the functions of the local library. But it seems that in the states where we have no township system, or where the township system is little developed, the county library is at present a necessity.

Mr. DEWEY: How do you support the schools?

Dr. STEINER: By a county tax. We have school districts; but their only function is to have district trustees, appointed by the county commissioners, whose duty it is to take care of the school house and appoint teachers. The taxes are raised by the county. It is the same in other southern states, so far as I know.

W. T. PORTER: Mr. Hodges has said that the Public Library of Cincinnati was a county library. Possibly that was a little misnomer, in that the library still remains the Public Library of Cincinnati, but we have extended the privileges of that library to the county at large. That was done under act of legislature of 1898, continuing the board of trustees of the public library in office, and then authorizing that board of trustees to make a levy upon the county for the maintenance of the library.

Miss STEARNS: How much of the county is embraced outside of the city of Cincinnati?

Mr. PORTER: We have about 14 townships outside of Cincinnati township. Our county is possibly 28 miles in extent.

Miss STEARNS: Then it is a small county that you supply?

Mr. PORTER: It is a small county, but the population is extensive. We commenced the county delivery system in June, 1899. Up to the present, and through the stations alone,

there have been about 7500 new registrations, and we are to-day, through our stations, carrying 20,000 books.

Mr. DEWEY: This question seems to be of a city library extending its privileges. What I thought we were to talk about was whether the county should be used as a library unit. That is quite a different matter.

Mr. GALBREATH: But in this case the county here is the unit, and is taxed for the support of the library. There are no other public libraries in the county.

Mr. DEWEY: But there is a different side to the question. Suppose you take a rural community and establish a county library there? I think it would be a great extravagance to maintain not only local libraries throughout the state, but also county libraries; it is going to cost too much.

Miss STEARNS: Would it not be better to have a central library?

Mr. PORTER: We have also in Ohio, something which approaches the county idea, known as our Van Wert law. The state of Ohio, by an act, authorized the county commissioners of any county to accept library donations, funds, or building. Upon the acceptance of that donation the county can be required to maintain a library within the building. In Van Wert county, the Brumback Library building and grounds were given in this way and the agreement was made with the county commissioners, that they maintain thereafter a library.

Mr. DEWEY: Our question is not whether such libraries should exist or can exist, but are they desirable?

Mr. HUSE: What is the use of asking questions that must be governed entirely by local conditions? This matter must be governed by local conditions.

Mr. BRIGHAM: We are trying a line of rural travelling libraries in three counties of our state, in advance of any county or state legislation. Miss Brown, of Lucas county, and myself, in correspondence, could see no reason why a travelling library sent to Sheridan should not go on to another point, and to another point, and so on, and then back to Sheridan, back to me, and then after it had made its rounds, take another start, and so on. We tried the plan and it has worked so well

that we are now trying it in two other counties. What the development may be I do not know, but the satisfaction and the gratitude of the people in the small towns it reaches is worth all it has cost of extra effort.

Miss TYLER: The point of the plan is that the librarian of the county-seat library is responsible for the travelling library. She guards the books, watches over them and makes her library the point of distribution. She distributes the books through the county, they come back to her library for exchange, or are passed on to the next exchange, whichever is most convenient; but they come under her direction.

Mr. DEWEY: Let me state the point as I understand it. We are all agreed that we must have local libraries for the people. They can go from their homes into the library and take the books into their hands. If they are in the city almost every day they can utilize the large city library. When it comes to the question of sending books by mail or express we are all agreed that each state must have a state library and its own state commission. The question is, Should there be an intermediary point between a state library and the local library? It seems, at first thought, that there should be, because you would have a shorter distance to travel, but all commercial experience is against this. Manufacturers are closing factories all the while and paying transportation, because they can do their work more cheaply in one place. Thus, repair of books, checking lists, and all that kind of work can be done under a single executive at some central point in the state more cheaply than if there was a library in each county. In Wisconsin, with 71 counties, you would have 71 libraries and you would have to duplicate great quantities of books. My experience indicates that we can do this work more cheaply and more economically by putting the books under control of a central library. As to the extra distance, very often the identical trains that would take the books from a county seat would have brought them from the capital as it went through, so that they would have been received almost without delay. Is it going to pay to introduce a new ganglion—that is, the county library?

Dr. STEINER: Take Baltimore county in

Maryland. There is a county with 75,000 people; it has an electric lighting system, a police court, fire engine houses; there are towns in that county of a thousand people. There is no government in that county except the board of county commissioners, who are as complete autocrats as the czar of Russia. There is no municipality in the county; there is one town which has 5000 people. You must have a county library with a county administration, because you cannot have anything but the county library; you cannot discriminate between one part of the county and another. That library must send books equally to all parts of the county; you cannot put it where the great centers of the population are, because you cannot deprive any citizen of the county of his right to draw books.

Mr. DEWEY: Of course, we are not discussing a peculiar condition such as exists in Maryland.

Dr. STEINER: It is not a peculiar condition; it is the condition of at least one-third of the United States.

Mr. GALBREATH: It seems to me that there is nothing peculiar about this condition. Of course, it differs from conditions in the north, but it includes a state government, to which the county is subordinate, and if I understand Mr. Dewey, it is his purpose to do this work from the state as a center, and the question he has raised is whether it is better to do it from the county as a center, or from the state as a center. I think that in our state it would be well to use the county as a center, for a time at least. However, I believe that in our state "benevolent neutrality"—to apply the term that Mr. Putnam used the other day—on the part of the state librarian toward these matters would be more effective than "benevolent assimilation," and we hope for much from the county library system.

Mr. DEWEY: It is a question of what we should encourage. Is it wise to do this work by the county unit or the state unit? It is largely an economic question. How can you give the people the best reading for the least amount of money?

R. P. HAYES: In North Carolina we have practically nothing in the library field and the question is, shall we try for county library development or state library development? I would like to get some definite word on that.

Dr. STEINER: It seems to me we should try distinctly for county libraries. In the southern states at least there is no question about it; you have got to have county libraries. I started with the idea of the local township libraries, but we must wait until we have a township. My idea is, in any county where there are no incorporated municipalities or where the incorporated municipalities do not care to support libraries, the county library is the proper thing. In the south the county takes the place of the town in New England; it is the taxing unit, the unit in which all the local administration is carried on.

Mr. HUSE: It seems to me that for the south, as stated by the gentlemen here from Maryland and from North Carolina, the county system is very probably the best one; but in New England we could not work by a county unit, any more than the people of North Carolina and even further down south could run a toboggan slide nine months in the year—they would not have the ice; we haven't the counties. At least, we have the counties, but they are of no importance to us except to have court houses, and courts of justice. Now, each state must solve this problem according to its own conditions and according to the desires and enthusiasm of its own workers. The gentleman from Maryland, I haven't any doubt, will soon have the county system operating fully and successfully in his state, and the same will be true in North Carolina and throughout the south; whereas in New England it won't be done because the county is not a unit. In Wisconsin and New York, Mr. Dewey and Mr. Hutchins, and the men and women who know more than they do, will run the library system safely; whether it is state or county. But we cannot adopt any general rule or take any general expression of opinion, for the people in each state must work out their own salvation according to their own condition.

Mr. DEWEY: There are a number of other topics that have been specially asked for.

Can state commissions provide travelling libraries for hamlets which furnish the money, and make such hamlets travelling library stations?

Mr. HUTCHINS: I wish to say a few words on that question. All through Wisconsin, when we started travelling libraries, some people

found that there was a chance to make money by using the idea in a commercial way. They went to communities which had heard of the travelling libraries, raised \$150 or so for "subscription" and then sent about ten dollars' worth of books once in six months. Now, the plan we have worked out may be best described by this illustration: about a year ago Miss Stearns heard that there was a little hamlet of fishermen far up in the state on a point which juts out into Lake Michigan. It included about a hundred people who had heard of the travelling libraries, but they did not want to be indebted for a gift or a charity, and so they had a series of entertainments, and raised fifty dollars. They sent the money down to us and we agreed to buy a library in their name. That library was the contribution of the fishermen of the hamlet of Jacksonport, and the hamlet was made a travelling library station. You can see how such a method works out. The second point is, that in communities where there are a hundred people or so, and conditions are favorable, we offer to give them travelling libraries on condition that they establish permanent public libraries on lines that are satisfactory to us. We take care of the travelling libraries and they take care of the local libraries.

It seems to me, that in this method we have struck finally the correct principle, the principle of self-support. The state takes the money and gives trained service in the selection of the books, in taking care of them, and in keeping the books travelling around their circuit. The citizens pay for their books, and have the feeling that they belong to an organization. More than all, when they are collecting their library fund, giving their little "dime socials," contributing two dollars or five dollars apiece, they are advertising that library, and it seems to me that the library that is coming to them that way means far more than the library that is given to them as a charity.

Mr. GALBREATH: Mr. Hutchins, how often do the communities raise that fifty dollars?

Mr. HUTCHINS: They raise fifty dollars once, and for that the state engages to send them libraries during the life of the library given by them, which we estimate to be about six years.

Mr. DEWEY: What shall be the unit of circulation—the cataloged library or the single book or combination?

Mr. BRIGHAM: We have tried both in Iowa. One of the twins is growing faster than the other, and of course that is the hopeful one.

Mr. DEWEY: Which one is that?

Mr. BRIGHAM: That is the individual, or the single book as the unit, rather than the travelling library; but I believe that the shelf-listed library will always exist. The shelf-listed library of 50 or 25 books must be a necessity in the communities where there are no libraries, and I am sorry to say that there are a great many communities of that sort; but the communities in which there are libraries are increasing, and wherever there is a local library, or wherever there is a woman's club, there the single book can be used to the best advantage. There are disadvantages in the use of the shelf-listed library. Before we adopted the new system, we often had requests for library no. 38 or no. 53, and later found that the request arose from the fact that there was a single book, or perhaps two books in that library, that some one wanted, while the rest of the volumes would come back comparatively unused. That was not good business economy. We might better have sent those two books, and I became more and more impressed with this fact, and was finally able to partially adopt the other plan. We have now perhaps 2000 books on our shelves that are issued separately; but we have nearly 5000 tied up in libraries. Both classes are in use, but the expense to the local library of getting our collection of 50 books for the sake of using perhaps two volumes is unnecessary. I am more and more impressed with the fact—though the remark may be unorthodox—that there is prevalent a little fad for spending money for administration, and spending it not always economically. I believe in spending money freely for administration that is approved by good common sense; beyond that it is a woful waste of money. And so I would keep the use of the single book in mind. The women's clubs as you know, are studying more and more, and are doing less and less miscellaneous reading. Suppose we are trying to meet the wants of the women's clubs. We put up a library covering the Victorian period

in literature, and we find that some one wants a certain number of books on the lake poets. What is the use of sending the entire library? We may have a library made up on the lake poets. Then, suppose one librarian or one secretary writes for what we may have on Coleridge, another wishes material on Wordsworth. Why not send the Coleridge books to the one, and the Wordsworth books to the other? In that way, make the books count. We should not be penurious in the matter of expenditure for cases or for printing, or for any other working tools, but we should always keep in mind that the essential

thing is the book, and if we can get on without the book case, or without the cover that envelops it, or without the shipping case, or without the combination book case and shipping case, all the better. We cannot get along without them altogether, but we can send small packages all over the state wrapped in paper, and can get rid of a great deal of expense.

Mr. DEWEY: When you send ten books, of course send them in paper, but when you send 50 or 100, send them in boxes; that is cheaper. This is a mere shipping question.

Adjourned.

#### WORK OF STATE LIBRARY ASSOCIATIONS AND WOMEN'S CLUBS IN ADVANCING LIBRARY INTERESTS: ROUND TABLE MEETING.

THE work that can be done by state library associations and women's clubs to advance library interests was considered in a "round table" meeting, held in the assembly room, Fountain Spring House, on the morning of Wednesday, July 10. Miss MARILLA WAITE FREEMAN presided as chairman.

Miss FREEMAN: At the Montreal conference last year a round table meeting of officers of state library associations was held for the discussion of questions affecting association work. Certain subjects, some of which were informally discussed at that time, seem naturally to invite our attention at the present session. We are to consider the object and functions of state library associations—whether they should attempt other lines of effort than the holding of a general meeting; what principles as to time and place of meeting, topics, and participants should govern the preparation of a program. With this general subject has been joined the allied topic of the work of women's clubs in advancing library interests. Few of us fully comprehend even yet the amount of effective library extension work which has been and is being accomplished by club women in almost every state of the Union. I have asked representative members from some of the states which have been working along these lines to tell us of their work. We shall hear first from Mr. J. C. Dana, of the City Library, Springfield,

Mass., the Western Massachusetts Club, and the Massachusetts Library Club, on

#### WHAT THE WORK OF STATE LIBRARY ASSOCIATIONS SHOULD BE.

J. C. DANA: Perhaps the chief purposes of a state library association are to arouse an interest in libraries among the public and to increase the knowledge and enthusiasm of the members of the profession. The mistake is often made of thinking that the chief purpose of an association is to hold an annual meeting. It is thought that the annual meeting once provided with a good program, and that well carried through, the work of the association for the whole year is done. There could not be a greater mistake. The benefits of a state association come largely from correspondence between members, the preparation for the meeting, and the securing of ideas, new methods and statistics by circulating letters among members, and the publication in newspapers and elsewhere of notes about the meeting which is to come and the meetings which have been. One is almost tempted to say that a library association performs its duty better if it is active during the year—carrying on correspondence and thoroughly advertising itself—and holds no meeting whatever, than it does if it holds an annual meeting and does not advertise.

Another mistake common to those who or-

ganize state library associations is to suppose that they are chiefly designed for the benefit of those who organize them. They do not realize that to help younger and less experienced members of the craft is a chief purpose of the association, and that if through it librarians generally are informed and encouraged, the profession itself is thereby improved, and they are themselves advanced in general esteem.

It is, then, an association's business to be active all through the year, to devote itself largely to such work in and between its meetings as will benefit both beginners and past-masters among librarians, and, always, properly to advertise its work. Along this last line let me say an urgent word in favor of good printing. It is difficult to overestimate the value to an institution like a library association of an exhibition of itself, through all its circulars and programs and lists, by means of the best printing that money can buy.

The general state association, being the largest and richest of all associations in a given state, should take upon itself some large definite work of permanent value and as far as possible of general interest; say the compilation of historical material, the making of a useful index, the issuance of popular lists, etc., etc. This work may continue along the same line for several years, ending in the publication of something thoroughly worth while which shall have been the means of arousing interest in the profession itself and of bringing the members of it into touch with one another month by month and year by year.

As to the place of meeting of the state association, I doubt if much benefit accrues, on the whole, from meetings held in remote places for missionary purposes. I say this, of course, on the supposition that the meetings thus held, being at places difficult of access, will not generally draw a large gathering. Better results can generally be reached in these same small communities by sending to them occasionally one or two active representatives of the association to carry on a little propaganda work, speak before a woman's club, before the school teachers, or a local literary society on the local library problems.

About the programs of association meetings, it is difficult to say anything which will have

general application. They must, of course, to a considerable extent, fit local conditions. I do not think it advisable to give up much time to local speakers, either for words of greeting or for historical sketches. These latter are generally unspeakably dull. On the other hand, if popular interest in a place is desired a local speaker may be the one best means available for accomplishing your object.

Associations which are attended, as so many are, by librarians of smaller libraries who rarely get abroad and do not often have an opportunity to meet their fellows and to expand in the social atmosphere of the library meeting, should cultivate to the greatest possible extent what one may call the conversational feature. Not only should ample opportunity be given before and after and between the sessions for informal talks, but a portion of the formal gathering itself should be devoted to brief and rapid exchange of ideas. This can be brought about by a little preliminary wire-pulling. Let some one briefly open a topic, and then let questions be offered, some of them by the most diffident of those present who have previously been posted as to what they are to ask and when. Manufacture a little spontaneity by way of an ice-breaker, and it is surprising how freely genuine spontaneity will then flow. It is unquestionably of great value to a librarian who is unselfishly giving her energy to a small library in a remote place, trying to make her books of use, to be able to express herself, no matter how briefly, on some of the matters which touch her work at home.

A state association should draw out the diffident; cheer the discouraged ones; magnify our calling; compel public attention to the value of libraries; be active the whole year through; and always keep a little ahead of the general library progress in the state.

Miss ELLA McLONEY: It is unquestionably true, as has been stated, that the annual meeting of a state library association is not the whole of the work that must be done through the year. It is possibly only an incident, but the fact is that in the nature of things the work of preparation for this meeting must be carried on during at least half the year. The preparation of the programs

requires a great deal of correspondence, and this must extend over a great part of the state and during a great part of the year. Whenever any circulars or announcements are issued, they should be sent to every library in the state; it does not matter whether that library is likely to be represented or not, it should have information as to the work that is being done by the state association.

So far as advertising a library is concerned it seems to me a good deal of a problem. Of course, library people, like other people, need the help of the newspapers, but if you want to get the newspapers interested in libraries it will have to be on the strength of something more than what libraries are going to do. In other words, it will have to be something that the newspapers can take up as news and feel that the public are interested in; they want material that is fresh and newsy, and if you can furnish them with that, then the newspapers will be willing to help.

As to the printing of programs and other material, I am hardly prepared to say that library associations should always have the best and most expensive work. It is a proper thing, theoretically, to appear before the public in the handsomest and most suitable dress possible, but when every 25 cents is of importance and your treasury is practically empty, and there is no one upon whom you can legitimately draw to fill it, I think you must limit your work accordingly.

About definite work to be done, it is true of a library association, as of any other association, that it should do something that will furnish a reason for its existence. In most cases the most definite thing, if you are beginners in association work, will be the task of gaining a foothold; but the time will probably come when it will be necessary to undertake some definite work, that the life of the association may be prolonged and finally assured. The Iowa association, for its first three or four years, was a very frail child, and required most careful nursing; but finally, about the fourth year, it began to seem as if there was very good prospect of its growth and development. Miss Ahern, whom Illinois has claimed for the last five years, and who was at that time interested in the Iowa work, de-

vised the plan of establishing a four years' course of library study, an ambitious undertaking in the condition of affairs in Iowa then. This was printed in a neat folder, which was sent to every library in the state, with a circular telling them what the plan was, and that the library association wished the librarians of the state to enter upon this four years' course of study, and asked all who would pledge themselves to do so to come to the next meeting with their report of the work. I received seven letters in response to all this circular work, and when the time for the annual meeting came there was no one there to report. Librarians were too busy, too far apart, and too poorly paid, to permit the work being carried on systematically. It was dropped at that point; I think it could be done now, and it may be taken up yet. It did furnish a common bond, although the results were not very evident just then.

The next thing, as has been the case with many other associations, was the work of securing the library commission. We pegged away at that for five years before we accomplished anything. Finally the State Federation of Women's Clubs interested itself; we secured the commission, and the work has been going on exceedingly well for the past year. We have made no plan yet for further definite work, but some need will doubtless develop.

In regard to programs, they must, of course, as Mr. Dana said, be adapted to local conditions, and the people who are primarily the workers in the state association, cannot expect personally to get much from the program or from the work of the association. But it is probably true in most cases that these workers have opportunities of visiting other libraries, and have facilities for work that are not open to the librarians in the smaller places. The librarians of the smaller libraries should be given something definite, something technical, something that will be of help to them in the work from a professional point of view.

As to place of meeting, the Iowa meetings were always held in Des Moines, the capital city, until two years ago. Then it was decided to make the library association a movable feast. We met at Cedar Rapids two

years ago, last year at Sioux City, where we had a good meeting, although not largely attended. Sioux City is in the extreme western part of the state, and is not easily accessible by railroad, but we drew a little from South Dakota, which was what we had counted on; some Dakota people came and joined the association, and two of those people have attended this A. L. A. conference. We meet next in Burlington, where there are more libraries in the locality, and we expect a larger attendance. I suppose the ideal condition would be to meet in some central place, where there are library facilities, but I believe it is worth while to move the association about; that is one way of advertising it.

Miss OLIVE JONES: I fully believe that the greatest work of the state association it does through the librarians individually. It is of help in the state in bringing out different lines of work, and in keeping the library work before the public; but, after all, do we not gain more from individual effort than from anything else? In educational problems, it is coming to be realized that the work of the individual means more than the work of any body of people, and I am fully convinced, if we can bring librarians to our state associations, and have an association full of enthusiasm and that intangible something which we call library spirit, we will have more done for the state at large than by any devising of general work along large lines. I would make a special plea that in deciding where to meet, you should consider first the librarians, and settle a pleasant place for the members who meet fellow-workers only once a year. There are librarians who have no vacation at all, except when their board kindly allows them to go to the state association meeting; there are librarians who never know personally anything of this larger work done all over the country, and we should not ask such persons to come to a place where they are not going to be comfortable, and which they must spend a good deal of money to reach. We must be sure of having something for the librarians of the smaller libraries; something technical, not too much, but something which the librarian can take away, feeling that it has been worth while to attend. I am not certain that we could have library instruction in Ohio; we tried it and it did not seem to

work; but if you can introduce in the program one or two definite, technical papers, it is a good thing. And at the same time give a chance for sociability and some social entertainment.

There is one other point, and that is in regard to the advertising that we can do through individuals—you see my point is individualism. I believe in newspaper advertising, but I think if you can work up a good mailing list through your state, sending all your circulars to individuals, you will do more than by newspaper advertising. And it is a good thing to get one library in each city to keep a list of every one in that city who ought to be specially interested in library work, whether members of the association or not. Then let that librarian send to the secretary of the association a duplicate of that list, so that everything the state association issues goes to each person who should be interested in library work.

W. R. EASTMAN: In New York we are going through a little transition period in state library association work. Formerly our state association held occasional meetings in different places. It held one in midwinter in New York City, with the New York Library Club. Then in the summer or spring we held a meeting in the central part of the state. We tried to make our programs as practical as could be, discussing not only occasional technical points, but elementary points as well. We always had good meetings; we got together a little circle of librarians who were interested, and we thought the state association was worth keeping up, although the state was so large that we reached only one or two centers. About a year ago, under a new administration, Dr. Canfield suggested that the annual meeting should always be held in one place. We consented to try the plan, and decided to make Lake Placid, in the Adirondacks, our meeting place. We met there, and the association, to my surprise and somewhat to my disturbance, first voted always to meet in one place, and then voted always to meet at Lake Placid. We then made a proviso instructing the executive board to district the state into 10 or 12 districts, and lay out a plan by which every one of those districts should have a library conference in the course of the year. Thus, instead of one

meeting of the state during a year, we are going to have 12 local conferences. Whether those local conferences will have an organization I do not know; the board has not yet reported its plan. Probably there will be some sort of a skeleton organization — a president and secretary, and perhaps some one in charge of each local conference, and then some member of the association will probably come and attend the conference. Our object is to bring together the librarians and library trustees for 50 miles around; if the teachers are interested, so much the better. So, you see, we have begun to establish a system of local conferences all over the state. It is not extravagant; it is hopeful; I believe there is a great deal in it, especially for the larger states.

Miss STEARNS: I for one would protest against always meeting in one place, unless as Mr. Eastman has described, the meeting is held at a resort. I have known cases where meetings were held at one central, large town, because it was so accessible; and the librarian of a little library, who cannot have open shelves and all facilities, goes to this town and sees its large library, with its red tape, and gets so completely tangled up in the red tape of that institution that she will never be able to disentangle herself. I believe in the migration of meetings.

H. C. WELLMAN: I am in hearty sympathy with what has been said in regard to extending library work through the state. It is especially valuable in the newer states of the Union, but in the older states, in New England, in New York, and elsewhere, I think we must not attend too strictly to the extension of library work, but must rather intensify it. A state library association, as Miss Jones said, can do a great deal for librarians and for the library profession. The Massachusetts Library Club has done something in the way of giving a series of lectures, to run two or three years. The first lecture dealt with paper making, the subject being treated by an expert; then came book illustration, of which most librarians knew absolutely nothing; and then, finally, book binding, for which we had one of the best binders of the state to come down and show us the tricks of the trade. You are all library school graduates out here; but in the effete east nine-tenths of the libra-

rians have not had that technical training. I do not know anything that was of more practical good to our club membership than that lecture on library binding. There is another thing that we ought to do, and that is to give attention to the more scholarly side of librarianship. We are so busy organizing, so busy spreading library ideas, that we are in danger of losing sight of scholarship. That is something the state association can do — in the directions of literature, bibliography, and such subjects. I think that should be emphasized more than has been the case. In the Massachusetts Club we are trying a similar scheme to that of Mr. Eastman; we are going to have one annual meeting, which will take in all the library clubs all over the state. Then, besides that, the state club meets about three times a year in different parts of the state.

In concluding, I want to make sure that this round table is to be continued, and I therefore move that this assembly petition the program committee of next year for another round table meeting on this subject. *Voted.*

Miss M. E. AHERN: I want to say a word about this matter of having peripatetic meetings. In the state of Illinois we have all the library law and all the library books in the northern part of the state, and then there is a part of the state down in the south that they call "Egypt." There may be some libraries there, but we have been unable yet to induce them to take their place in the state library association. Two years ago, after having tried for several years to get these libraries to come into the association, we brought the association to them, and held our meeting in East St. Louis, under the most distressing circumstances of weather and other uncomfortable conditions; and not a single librarian from that community attended the meeting. We tried the same plan last year in another place in the state, and I felt when the meeting was over that we had not done much good there. Very few of the local people came to the meeting. Later I heard that we did some good, but I am inclined to think that the personal efforts of the librarians at that place did more than the association did. I am not at all a pessimist, but in Illinois this plan has failed to interest the people of the indifferent districts in the work that the library asso-

ciation was trying to do, and I have been almost convinced that it is the proper thing for an association to get a central point and bring librarians in touch with the vitalizing spirit of a good library conference, rather than to try to take the association to an indifferent community. I want heartily to emphasize the point made by Mr. Dana about local speakers. I have suffered more than once from these local speakers. I have a most distinct recollection of hearing a trustee talk for one hour and a quarter on the beautiful, magnanimous and generous efforts made by himself to run the local library. The point made by Mr. Wellman needs to be taken cautiously. I think there is more danger of emphasizing the scholarly side of librarianship at state meetings than there is of giving it sufficient attention. The American Library Association, in my opinion, should stand for the higher tenets of the library faith, and the scholarly side should be more emphasized than has been the case heretofore in the meetings of the national association. With all our different organizations, clubs, associations, conferences, round tables, and so on, it seems to me that the American Library Association should take care of the technical side, and the smaller questions, that must, indeed, be settled by local conditions, should be taken up by the state associations. While, of course, we want to have material of a high order presented at the state association, at the same time we must remember that these associations reach those people who cannot be touched in any other way; and if they have come to get light on this new topic of work for children, or if they are on the point of reorganizing their library, or if they are having trouble with their board, they do not take kindly to a dissertation on printing in the 15th century.

One thing has been left out in the various interests which have been brought forward, and that is the part of the trustee in the state association meetings. A librarian may have all possible inclination, and all the enthusiasm that we can give her, but if she does not have the co-operation and the kindly sympathy of her library board, or at least a majority of its members, life is to her a burden. Her condition is worse than when she did not know,

and did not know that she did not know. The state associations have not so far been open enough to the trustees. It seems to me that this is a subject well worth taking up, and we should try to do more for the library trustees of the state than we have done heretofore. Necessarily they take rather a material view of the situation, and we should try to lead them away from the dollar-and-cents view of library work. These two things need to be emphasized—keep in mind the small librarian, and educate the trustee. Some one has said that we need a library school for trustees quite as much as we need a library school for librarians, and the more I see of libraries the more I believe that.

Mrs. E. J. DOCKERY spoke on

#### HOW A LIBRARY COMMISSION WAS SECURED IN IDAHO.

I bring to you an accurate and complete history of the course adopted by the club women of my state in securing library legislation, as I personally participated in the work with other members of the Woman's Columbian Club, the organization that had the direct and immediate charge of the subject.

It is a somewhat embarrassing confession to make that Idaho, with its area of 87,000 square miles and a population of 164,000 souls, and its sobriquet of "The gem of the Mountains," has not a free circulating library. I make this statement, however, to emphasize the virgin field in which we had to labor and the munificence of our legislators when we consider the various tax burdens are so many and the number so few to bear them.

Boisé City, the capital of our state, with a population of 10,000, is the home of the Woman's Columbian Club of 200 members. This club, among its many achievements, established and almost wholly supports a public library of 2750 volumes at Boisé; and its members stand in the vanguard and do yeoman's service as leaders and in the ranks in all causes to advance the moral, intellectual and material good of all the people of the state that has granted women equal suffrage with men.

The club strongly urges the formation of

other woman's clubs throughout the state, and encourages at all times the organization and development of free libraries.

The first really effective and aggressive step of the club in this direction, and which led to important results, was the adoption of the free travelling library scheme. Its zealous members, by united action and individual effort, accumulated sufficient funds to put into circulation 15 travelling libraries with a total of 800 volumes, and invited discussion of this work in the public press.

At the 1899 state teachers' meeting representatives of the club, on invitation, espoused the cause of the travelling library and libraries generally. The demand for library cases soon exhausted the Columbian Club's ability to respond, and then an appeal for legislative aid was determined upon, and systematic methods, principally through the press, were pursued to awaken public sentiment favorable to the election of friendly legislators.

After the election of the legislators in 1900 the Columbian Club sent circular letters to each one, setting forth the merits of the two bills the club had prepared and upon which its energies were concentrated, namely: a bill creating a state library commission, and a bill authorizing common councils of cities and governing bodies of communities to levy a tax not to exceed one mill on the assessed valuation of property for the establishment and maintenance of free reading rooms and libraries.

Similar circular letters were sent to each of the 75 newspapers published in the state. All women's clubs were importuned to cooperate, and also all public school officials, teachers and educators of the state. The press responded right royally with one single exception, and book lovers and educators of high and low degree lent their willing assistance. Representatives of the club again appeared before the 1900 annual state teachers' meeting, and secured an official endorsement from that body for the proposed library legislation. The state teachers' association, in addition, advocated a law requiring that three per cent. of all school moneys be set aside as a fund for school libraries, to which the club women gave their aid and which also became a law.

At the convening of the legislature in January of this year the heaven had begun to work, thus paving the way for the successful lobbying by the official representatives of the Columbian Club.

The first step was the selection of a conspicuous legislator to stand sponsor for our bills. In this we encountered an embarrassment of riches in capable legislative material, but finally selected Senator S. P. Donnelly, who cheerfully assumed the duty, and exerted the full force of his wide popularity and marked ability from the time of his introduction of the bills until the final vote upon them.

The club members held frequent conferences with the educational committee of both houses of the legislature and other legislators specially interested in educational matters, and made plain to them the inestimable benefits of the bills we championed.

And in this connection I desire to make graceful acknowledgment to the library workers of Wisconsin, as it was while a resident of this state I received from them my first library inspiration; and particularly do I desire to acknowledge our indebtedness to Mr. F. L. Hutchins, whose personal communications and generous supply of library literature enabled us to fully present our subject and to meet all objections raised by some of the legislators.

Every member of the legislature, with the exception of one in the lower house, was buttonholed, and the consequence of that oversight was manifested on the final voting day.

In the meantime the club requested the home papers of the legislators to continue to urge favorable action; and the club women from all parts of the state, by letters, personal visits and petitions to the legislators, did likewise.

The instinct of partisanship, a peculiarity of all legislative bodies, was not manifested in the least.

On the day for the final action in the Senate Committee of the Whole the Columbian Club was notified and attended in a body, the courtesy of the floor being extended to us.

Imagine our consternation, when the question was submitted to an aye and nay vote, at not a voice being raised in its favor save

Senator Donnelly's. For a few moments silence so profound that it was almost palpable prevailed, when presently Senator Kinkaid, who was in the chair, without calling for the nays, solemnly announced, "The ayes have it"; and delight supplanted our agonized distress as the pleasantry at Senator Donnelly's expense and ours dawned upon us.

The bill was then placed upon its final passage, and the senators, who hesitated in their support on the ground of economy only, announced that they would vote in favor of the bill, but desired it expressly understood that they did so because they were intimidated by the presence of the Columbian Club. The best of spirits prevailed, and our bill providing for a state library commission of five members, two at least to be women, passed the senate unanimously, the president of the state university and the superintendent of public instruction to be *ex officio* members and the other three members to be appointed by the governor; and the law appropriated \$6000 for the purchase of travelling library books and the maintenance of the commission for two years.

The bill was sent to the lower house to take its course in that body, but we were denied the privilege of practicing intimidation there. Immediately upon its arrival in the house a member moved that it be made a special order of business and be immediately placed upon its final passage, and that a polite message be sent the president of the Columbian Club that the house would perform its solemn duties without the assistance or coercion of that club.

The bill passed the house unanimously save for the solitary negative vote of the member whom, by an inexplicable oversight, we failed to interview, and who announced he so voted for that reason.

This library commission bill was by all odds the most conspicuous matter before the legislature, and the enrolled bill submitted to the governor for signature was elaborately prepared and adorned with the club colors by the attaches of the legislature.

The commission has been in existence three months, or more properly speaking, less than two months, for the necessary preliminary

work did not enable us to get before the public until May. Already we have been invited to assist and direct the formation of six libraries and to select books for the penitentiary library, have placed in circulation 10 new travelling library cases in addition to the 15 cases donated to the state by the Columbian Club, and have 20 more cases in preparation.

While the law provided for the appointment of at least two women on the commission, the governor appointed three, two of whom are members of the Columbian Club; and our superintendent of public instruction being a woman, we have four of the five members, and what is more especially to the point, they are all club women.

Woman's clubs may with propriety, I think, lay claim to some credit for library laws in Idaho, and yet it is significant that the reason for their power lies in the fact that the women of our state have in their hands the wand of progress and civilization, the most powerful and bloodless offensive and defensive weapon on earth—the ballot. In the hand of the frailest of our sex this powerful weapon can strike as deadly a blow at evil or as strenuous a blow for good as it can in the hands of the brawniest of fighting men; no moral wretch of whatever size and strength but what the very gentlest of our number can cancel his registered will on election day; for an aspiring public servant to dare oppose a righteous cause means sure defeat—for womanhood inevitably arrays itself against the hosts of error.

The women of our state, marshalled under the leadership of women's clubs, stood in an unwavering and united array for all our library laws and every other law that stood for good; and there were, all told, 15 bills affecting education enacted into laws at the last session.

Whatever of inspiration and encouragement the success of women's clubs in Idaho may give our sister clubs in sister states, the success of woman's suffrage there at any rate will help to silence the scoffers' sneers and help put this ballot-sword, forged in the workshop of right and justice, in the hand of every woman.

In the absence of Mr. JOHN THOMSON Miss NEISSER read Mr. Thomson's paper on

HOW TO SECURE A STATE LIBRARY COMMISSION.

I am asked "How to secure a state library commission?" I answer:

*Ask for it.*

*Urge it on the legislature.*

*Strive persistently.*

Without these three methods, there is little hope of getting a library commission or the passage of good library legislation.

Pennsylvania has been behind every other state in the Union in the matter of library legislation and principally because hardly any effort was made to procure the assistance of the legislature. Outside of a dog-tax paid over for the support and maintenance of public libraries, under an act approved in May, 1887, no real step was taken in this state to secure the benefits of the public library movement until 1895. In that year, it was sought to pass an act to authorize all cities and boroughs of the commonwealth to levy taxes and make appropriations for the establishment and maintenance of free libraries. Unfortunately, this bill was stoutly opposed and was finally amended so as to affect only cities of the first class. The most important subsequent legislation was the approval by the governor in May, 1899, of a bill providing for the appointment of a free library commission and defining its powers and duties. Under this act, the governor had power to appoint five persons, who with the state librarian, constitute the free library commission—the state librarian being *ex officio* secretary of that body. The commission has power to give advice and counsel to all free libraries in the state and to all communities which may propose to establish them, as to the best means of establishing and administering such libraries, the selection of books, cataloging, and other details of library management; and the commission has certain powers of general supervision and inspection. The section closes with the following words:

"The commission shall also establish and maintain out of such sums as shall come into their hands, by appropriation or otherwise, a system of travelling libraries as far as possible throughout the commonwealth."

Legislature adjourned without making any

appropriation and the commission found itself in the position described by Dickens when Mr. Pickwick and his friends were authorized to travel where they liked, make such investigations as they thought good, and generally to promote science at their own expense. The commission was authorized under the powers conferred upon it to purchase books, provide book-cases, print whatever matter seemed good to it, and generally develop a travelling libraries system throughout Pennsylvania *at its own expense*. Nothing daunted, the members of the commission met in the state library on April 25, 1900 and organized, and being absolutely without funds, efforts were made to secure contributions from benevolent friends of the movement and \$2800 were raised from 29 persons who generously placed in the hands of the commission sufficient funds to enable it to start the work. In a recent circular issued by the commission, the secretary calls attention to the fact that Ohio already had more than 800 travelling libraries and an appropriation of \$5000 per year with which to carry on the work. Michigan has many libraries and an appropriation of from three to five thousand dollars per year. Wisconsin has six or seven hundred travelling libraries, and New York nearly one thousand. Every state of any importance in the Union has established and is maintaining travelling libraries on from three to five thousand dollars per annum. A few travelling libraries only at present have been sent out in Pennsylvania. These are now in use, but the commission was afraid to undertake much work, as it did not know how soon its funds might be exhausted, and it might find itself unable to grant the applications for travelling libraries which are steadily coming in.

When it is asked how to secure a state library commission the second question how to secure an appropriation with which to carry on the work of the commission is necessarily involved. In the case of Pennsylvania (just brought to a happy issue,) the active interest of many of the leading newspapers throughout the state was sought and obtained. The editors of these papers were written to in person and a statement describing the scope and needs of the library commission and the

amount of the appropriation hoped for was forwarded to each. With one or two exceptions, the editors printed much of this material as news, and a considerable number added editorials urging the importance of the movement. More valuable help could not have been secured. The smaller papers, which of course draw their material largely from the papers published in the larger cities, followed suit, and practically reprinted the same matter. Copies of the papers containing these articles were secured, and marked copies were sent to the representatives from their own neighborhoods. In this manner nearly three hundred of the newspapers throughout the state were communicated with, and their assistance had a great deal to do with the final granting of the appropriation. In this way information was laid before thousands of citizens who would otherwise have been uninformed on the matter. Beyond all this an explanatory letter fully detailing the position of the commission was sent by one of the commission to every member of the legislature and the secretary of the commission issued the excellently prepared circular (above referred to), several copies of which were sent to every member of the legislature and to others. The result has been that an appropriation of \$3500 has been passed by both houses, and there is no reason to doubt that the bill will receive the governor's signature when the time comes for him to sign the appropriation bills for 1901-1902.

It would be waste of time at a round table meeting like this to dwell upon the benefits of the travelling libraries movement. The free library commission of Pennsylvania has determined to do its utmost to develop the movement throughout the state, and if a practical answer is to be given to the question, How to secure a state library commission?, I would say, Recognize the importance of the movement, strive early and late, through the newspapers, by means of circulars and by personal interviews, to interest the members of the legislature, and persevere unintermittingly in impressing your needs upon those who have the power to grant the necessary legislation and appropriation. Work early and late and do not stop working until you have secured what you want.

Mrs. BELLE M. STOUTENBOROUGH spoke on  
WHAT WOMEN'S CLUBS CAN DO TO FURTHER THE  
WORK OF THE LIBRARY.

I trust you will pardon me for adding the word "Nebraska" to my topic. Six years ago last October the Nebraska Federation of Women's Clubs held its second annual meeting at our state capital. Some two weeks before the meeting Mrs. Peabody, a name familiar to every librarian in this room, who was at that time our president, wrote me: "I am very anxious to bring the travelling library movement before the women of our state. Will you talk for 15 or 20 minutes on this topic before the Lincoln meeting?" If she had asked me to talk on the study of comparative anatomy, I should have been just as familiar with the topic, but in the reference room of the Omaha Public Library, I held a consultation with Poole's index, and succeeded in finding just one article on travelling libraries; it was in the January *Forum* of 1895, and if I am not mistaken, it was a brief history or sketch of the travelling library movement in New York. Here was my opportunity; what had been done in New York, could be done in Nebraska, although upon a smaller scale, by the Federation of Women's Clubs. I shall not forget how I trembled as I stood before that large audience and made my first plea for a travelling library. However, the secretary, in reporting the meeting, was kind enough to say that the audience at once caught the speaker's enthusiasm, and a committee was appointed for the formation of plans for a federation travelling library. A hundred dollars was subscribed, and sixty books purchased and sent out to eight clubs that first year. I know it seems like a small beginning to-day, but it was serious, earnest, and full of possibilities, and to-day the work is an educational factor in our state. I believe that these books which have gone out to the club women have not only enabled them to pursue certain lines of study, which otherwise it would not have been possible for them to have taken, but they have created in the minds of other members of the family a desire to possess good reference books. These books are sent out from my own home. The clubs receiving them are at

no expense except in paying express charges for their return. The work is supported by voluntary contributions, and as to the salary of the librarian, she is paid over and over again in the thankful letters which she receives from the people who are using the books.

In 1897, the Nebraska Library Association succeeded in introducing a bill in the legislature, creating a library commission for travelling libraries. It passed the lower house, and went into the senate, where it was "lost to sight, though to memory dear." In 1899, nothing daunted, the Nebraska Library Association was there again with its library bill. It passed the lower house, but it never reached the senate. Last June, the National Federation of Women's Clubs was held in the city of Milwaukee. Mrs. Buchwalter, of Ohio, the chairman of the program committee, planned for a bureau of library instruction or information, and this bureau was located in an upper room in the Milwaukee Public Library. The presiding genius in the room was Miss Stearns; I always think of her as the pioneer travelling library woman of the northwest. A clubwoman from Nebraska was in attendance at that meeting and instead of spending her time listening to the program, she passed the greater part of the week in that upper room, and there she learned the work which is being done by women's clubs throughout the length and breadth of our land in this library field, and she went back to Nebraska determined, if possible, to secure legislation for free travelling libraries in the coming year. It was a strange coincidence, that last October the Nebraska Federation of Women's Clubs again held their annual meeting at our state capital, and as before, the same woman who had presented six years before to that meeting, a plan for a Federation travelling library, was there to present a plan for free travelling libraries and a state library commission for Nebraska. The plan was formally and unanimously adopted, and a committee was appointed to co-operate with the Nebraska Library Association to secure legislation. In all this work, we never had any one who assisted us more ably than Mr. Wyer, the librarian of the state university, who was never too busy to advise us or to see a man that

we could not reach, and he it was who drafted our bill and saw it through. To make a long story short, the first thing we did was to send out circulars suggesting that "a library day" be observed in the clubs; this library day was generally discussed throughout the state. Then we sent a petition which was circulated, not only in the towns, but among the farmers and their wives; and finally one March morning I received the following telegram: "Rejoice and be exceeding glad"—and I have been rejoicing ever since, for house bill no. 20, carrying with it an appropriation of \$4000 for free public libraries, for free travelling libraries, and for the state commission, had passed, not only the lower house, but the senate. It received the governor's signature, and it means we are to have travelling libraries in Nebraska.

Miss FREEMAN: Mrs. Morris, of the Wisconsin Free Library Commission and the General Federation of Women's Clubs, will be unable to be with us this morning on account of illness. We are, however, fortunate in being able to hear from Mrs. Youmans, the president of the Wisconsin Federation of Women's Clubs.

Mrs. YOUMANS: I cannot possibly fill Mrs. Morris' place, but I should not like to have this subject discussed without Wisconsin being represented.

We may gather from the deliberations of this association, that Wisconsin keeps a prominent place in library work among the states of the Union. If this is so, and I do not doubt it, it is, as we all know, due to the enthusiasm and energetic efforts of the Free Library Commission, and this commission will assure you that its members have had no more enthusiastic allies than the club women of the state. Work for libraries was the first work undertaken by Wisconsin women's clubs—the first work outside of their regular literary programs—and since the organization of the federation in 1896, it has been one of its most prominent lines of work. I suppose there are few clubs among the 150 in the federation that have not done something, sometimes important and sometimes unimportant, for the library movement. They have established libraries and free reading-rooms; they have helped to support libraries; they have

made donations of books and money; they have sent out travelling libraries on their errands of usefulness; and they have also sent out travelling reference libraries especially for the uses of the study clubs. The federation at the present time is making a special effort toward securing as many of these travelling reference libraries as possible. The club women in the interior of the state have very inadequate reference facilities; we have now only six or seven of these reference libraries, and we feel comparatively rich that we are soon to have half a dozen more.

A great many of the public libraries in Wisconsin are due directly to efforts of club women. The public library of Waukesha is due directly to the efforts of a little coterie of club women; they started seven years ago, with prospects that could not possibly be called brilliant. They kept the library going for seven years from one month to another, in some way securing the money, and finally the burden was taken from their shoulders by the city council. Now, the library is not large; it is not, from a technical point of view, fine; and it certainly lacks many things that we hope to have in the future; but it has 2500 volumes, generally read and much valued by the people, it has become established as a regular necessary part of the municipal life, and I think it is sure of a regular though moderate support from the public funds. In a city a few miles north of here a woman's club has a fund of \$500 towards a library building. It does not intend building a library with that sum; it does not intend to go on earning money by rummage sales and private theatricals; but it does expect to use that money and to use the interest of the members of the club as a center for developing library interests in the vicinity.

This work is illustrative of what is being done all over the state, and it is not so much the money that the club women collect for the libraries, nor the books they may secure, nor even the direct work that they do; it is the feeling that they disseminate as to the value of public libraries. The club woman, in her club work, finds the need of a good library; her associations and connections are such that she learns to value books more than she ever did before; she

learns, too, that for the intellectual life of her vicinity it is necessary to have a public library; she helps to develop the public spirit that demands a public library; she helps to bring out an atmosphere in which public libraries germinate and grow and flourish. This, it seems to me, is the most important part of club work among club women. This is what they are doing in Wisconsin, and what they will continue to do.

Mr. HUTCHINS: I have been watching for years the work of the women's clubs and their enthusiasm for libraries. They are accomplishing a great deal, and there is just one thing I would like to say to the club women of the country, "Plan a study club, and in a few years you get a public library. Plan a library, and in a few years you get five study clubs."

#### CO-OPERATION BETWEEN A. L. A. AND GENERAL FEDERATION OF WOMEN'S CLUBS.

Miss STEARNS: The American Library Association has fallen into a most successful alliance with the National Educational Association, as is demonstrated by the continuation of our meeting at Detroit. Now, the A. L. A. has never realized all that the General Federation of Women's Clubs has done for the promotion of library interests. This is the first time in the history of the A. L. A. that the women's clubs have been recognized on our program, and I move that the A. L. A. Council be requested to form an alliance between the American Library Association and the Federation of Women's Clubs for the promotion of library interests. *Voted.*

In the absence of Miss MARIE S. DUPUIS, the chairman read by title her paper on

#### THE WOMAN'S CLUB AND THE TRAVELLING LIBRARY.

The woman's club and the travelling library seem made for each other. So perfectly does the travelling library supply a suitable channel for the energies of the woman's club, and so admirably does the woman's club seem fitted for the work of sending out travelling libraries, that the one seems the natural and perfect complement of the other.

What a box of well-selected reading matter means to a rural community probably only

those know who have lived in a rural community without the box. Others must draw upon their imaginations to picture farm homes without other current literature than a weekly local paper whose "patent inside" contains all the news they receive of the world's work; homes where the family Bible — not always present — and the children's school books form the only bound volumes of the family library, where even the deservedly ephemeral literature of the daily paper and the 10-cent magazine are unknown, though rural free mail delivery will soon alter this.

With numberless such communities on the one hand, we have on the other numerous women's clubs organized for self-improvement and "mutual aid," to use the fine phrase of Prince Kropotkin. And so closely are human interests interwoven that "mutual aid" means self-improvement, and self-improvement "mutual aid." It is doubtful if any form of educational endeavor undertaken by women's clubs is so fruitful in good results as the travelling library. It is the most practical form of educational work as yet undertaken by these organizations. The work of the Illinois Federation of Women's Clubs in this direction has been under the supervision of the library extension committee of that organization. More than one-third of the clubs of the state are now engaged in travelling library work. The number of libraries in circulation has doubled in the past year.

The plan usually adopted in the formation of a travelling library is for each member of a club to donate one or more books. A Parmelee or other suitable trunk bookcase is purchased for the collection, usually consisting of about 50 volumes, a record-book is provided, each volume is furnished with a library catalog and the rules for borrowers recommended by the committee, and the library is then ready to begin its travels.

Several libraries are grouped into county

circuits—a unique feature of the Illinois plan—of four or more to a circuit. Two years has been found to be the average life of a travelling library, and a circuit of four libraries remaining in each community for six months will thus supply four communities with travelling libraries for two years.

With regard to the composition of the travelling library, the committee recommends that each library consist of about 50 volumes; that of these one-half shall be juveniles; that fiction shall be carefully selected, preference being given to standard works, those which have stood the test of time; that everything of a theological bias shall be excluded; that biographies, travels and nature studies and stories are particularly desirable, with other suggestions for particular communities or of a general character. We lay particular stress upon the proportion of juveniles being at least one-half, for the reason not only that children and young people are generally the most numerous class of readers, but also because many adults, unaccustomed to much reading, find juvenile literature more readily comprehensible. Considering the fact that our libraries are almost wholly the result of voluntary donation, it is remarkable and, indeed, extremely gratifying that the libraries sent out are of such a high degree of literary excellence. The outcome of the heterogeneous tastes of club members, they seem admirably adapted to the equally heterogeneous tastes of the communities to which they are sent. Improvement, however, is always possible, and for the coming year we have model lists of books drawn up as guides, if not patterns, for future libraries.

In states where a public travelling library system does not yet exist, the women's clubs seem excellently qualified for inaugurating and maintaining such a system until the time comes, as it surely will, when every state has its library commission and its travelling library fund.

## TRUSTEES' SECTION.

A MEETING of the Trustees' Section of the A. L. A. was held on July 6 in parlor C of the Fountain House, with Dr. Leipziger in the chair and Thos. L. Montgomery acting as secretary. There were 75 persons present. Dr. Leipziger made an opening address, outlining the work that might be discussed by the section.

Mr. Soule urged the election of trustees for a term of years only, and in the opinion of those present three years seemed the proper limit.

The question of whether members of the board of education should be admitted to library boards excited considerable discussion, in which Mr. Cooke, of Iowa, Mr. Porter, of Cincinnati, Mr. Crunden and the secretary took part. It was generally conceded that members of the board of education should not be trustees of libraries *ex officio*, but that there was no objection to electing them as individuals.

Mr. EASTMAN then read his very interesting paper on

## LIBRARY BUILDINGS.

(See p. 38.)

Mr. MAURAN, of St. Louis, spoke on

## THE RELATION OF THE ARCHITECT TO THE LIBRARIAN.

(See p. 43.)

Mr. Patton, of Chicago, said that the two papers showed the lack of any antagonism between the professions. He considered it absolutely necessary that the architect should be selected before anything else, in order that he should be familiar with all the librarians' requirements, and that the interior arrangement was the only matter that should be thought of then. The plan of giving premiums is bad, because it is no temptation to the skilled architect, but it is to the mere draughtsman. He also thought that library architecture must become a specialty.

Mr. Dewey asked, "What is the best way to get the combined judgment of several architects without offence to the profession, and yet give a proper remuneration for their labor?"

Mr. Patton answered that there was no objection to such consultations on the part of the profession, and that it was becoming more common every year. The objection to competitions was that there was no expert to make a fair decision. Competitions, as a rule, did not produce such good results as the appointment of a well-equipped and competent architect, to plan and oversee the work from the beginning. Under any circumstances expert advice might be had and should generally prove useful, especially when members of a library board were not prepared to give thorough attention to the architectural problems. Personally, he had often been employed as consulting architect, just as a physician might be called in that capacity.

Mr. Eastman stated that in the case of the Utica Public Library \$150 had been given to each of ten architects for small sketches or outlines incorporating the requirements of the board.

Mr. Dewey thought that every state commission should have an expert, to whom should be referred all suggestions for plans for libraries, in order that the bad features may be called to the attention of the library board. In the case of very large institutions the national library should be appealed to.

This was by far the most interesting meeting that has been held by the section, and the interest taken in the discussion promises well for the future meetings.

Dr. Leipziger declining to serve as chairman, and the secretary having declined the nomination, Mr. D. B. Corey was elected chairman and T. L. Montgomery secretary for the ensuing year.

THOMAS L. MONTGOMERY, *Secretary*.

PROFESSIONAL INSTRUCTION IN BIBLIOGRAPHY: ROUND TABLE  
MEETING.

AN informal "round table" meeting for the consideration of present and possible methods of professional instruction in bibliography, was held on the morning of Monday, July 10, in one of the parlors of the Fountain Spring House. A. G. S. JOSEPHSON was chairman, and J. I. WYER, Jr., acted as secretary.

The meeting was called to order at 10.30 a.m. by Mr. JOSEPHSON, who opened the session with a paper on

A POST-GRADUATE SCHOOL OF BIBLIOGRAPHY.

In looking over the various definitions of the word bibliography, I have found two main groups, one narrow, one broad.

The narrow definition has been thus expressed by Prof. C. V. Langlois: "Bibliography is the science of books. As library economy treats of the classification, the exterior description of books, of the organization and history of libraries; as bibliography treats of the history of the book as a manufactured product (printing, bookbinding, bookselling); so bibliography in the precise meaning of the word, is that particular part of the science of the book which treats of the repertoires and which provides the means of finding, as promptly and as completely as possible, information in regard to sources."

As an example of the broad definitions I choose the one by M. E. Grand in "La grande encyclopédie." He defines bibliography as "the science of books from the point of view of their material and intellectual description and classification," and goes on to say that "there are three principal things to be considered in the study of bibliography: classification of books, . . . (*bibliographical systems*); description of books (*bibliographical rules*); and the use of *bibliographical repertoires*."

If we compare these two definitions we see that here the same word has been used for two distinct subjects, the one of which includes the other. Without here going deeper into the intricacies of these definitions, I will, for the purpose of this discussion, accept the broader of the two.

The question what instruction in bibliography should contain is already answered in the above definition itself.

The study of *bibliographical systems* for classification of books presupposes the study of the theoretical systems of classification of knowledge and this presupposes the study of the history of the sciences.

*Bibliographical rules* govern the practical art of book description, what is technically known as cataloging. There are various codes of rules, more or less arbitrary, as they are more or less the outcome of a compromise. But under all arbitrariness one will discern some underlying theory as to what a description of a book should contain. Such theories are founded on the practice of printing and publishing: thus the intelligent study of bibliographical rules presupposes the study of the history of printing and publishing.

*Bibliographical repertoires* contain the systematic records of printed documents and the study of these repertoires is what is called bibliography in the narrow sense. While the branches of study previously referred to may by some be regarded as of less value to the librarian there is surely none who will deny the necessity of his being thoroughly familiar with the literature of bibliographical repertoires. However, I do not think that I am alone in the contention that all the different branches of bibliography in the broader sense are of the utmost importance to the librarian.

Dr. Dziatzko has pointed out that in such an eminently practical occupation as that of the librarian it is particularly important not to neglect altogether some kind of theoretical studies. There can be no studies of greater importance to the librarian than those just enumerated, namely, history of literature—the word taken in its broadest sense—history of the book in all its phases, and the study of bibliographical literature.

The library schools have done much to encourage the professional spirit of librarians and to develop the technical side of their work. It is, however, felt that something more is needed, something that a professional school or a training class cannot give, namely, solid bibliographical scholarship. This can, in my opinion, not be acquired except at a university with a faculty of specialists and an extensive equipment of bibliographical literature as a part of a large university library.

A post-graduate school of bibliography, such as I have in mind should offer instruction to two classes of students. The one class would be students in the other branches of instruction who would select as a minor one of the subjects offered by the school, and who should be required to pursue in the school the bibliographical study of their main topics and the preparation of the bibliographies that should be required as a necessary accompaniment to every dissertation. The other class would consist of persons wishing to prepare themselves for the professional work of the librarian and bibliographer. They would choose as their majors the studies offered at this school, and could choose as a minor any other scholastic subject. It would be of great importance to the would-be librarian, could he, while pursuing his special studies, be allowed to do university work in some other subject of his choice, such as literary history, philosophy, American history, mathematics, or the like.

As thorough bibliographical knowledge is the foundation for the work of the librarian, the central subject of instruction in the school should be the study of bibliographical repertories and of the record literature. This study should include seminar work in the handling of literary tools, in hunting up references on special questions, and in the preparation of bibliographical lists. This leads to the study of bibliographical methods. The principles of book description should be discussed, the leading codes of rules studied comparatively, their merits and defects discussed, but none should be taught as the one to be absolutely followed.

History of printing and bookselling comes next, preceded by an introductory consideration of palæography, particularly that of the 15th century. The steps leading to the discovery of printing with movable types, and the spread of the art over the world should be followed. Examples of the products of the first printing presses should be studied and described. Of later periods in the history of the book the most important seem to be the later 16th and the 17th centuries in England, and the 19th century in Germany.

A parallel study with that of the history of printing might be classification of knowledge and of books, with the history of science. The student might well be given his choice between these two topics, while that of bibliography in its narrower sense should be

required of everyone. The history and interrelation of the various sciences is a subject of great importance not only to the classifier, but to the library administrator in general. It should be covered by special lectures by the representatives of the various sciences, connected by a theoretical course in the theory of classification, and followed by seminar work in classification of books.

A course preparing for the professional work of librarianship cannot be complete without the study of library administration. While we are not particularly concerned with this to-day, it should be said that this subject would naturally be a required one, and would cover particularly the history of libraries and of the methods of library administration. The technical training in the minor topics of library economy would not have any place in a school of this description.

I had hoped to be able to present at this meeting some statements from university authorities in regard to the establishment of a post-graduate school of bibliography at some university. I have not, however, succeeded in getting any statement of such definiteness that I can present it here. I can only say that the president of one of the larger western universities seems to look with some interest on the proposition. A letter from Dr. W. T. Harris, Commissioner of Education, says:

"It is very easy for me to say that I believe post-graduate courses in bibliography to be a most excellent thing, but whether there should be such a school established in Washington — I have no conviction on this question. I am not in a condition to say whether it would not be a most excellent thing to establish such a school in connection with the Library of Congress. Mr. Putnam is proceeding in a very intelligent manner to make the Congressional Library of use to the whole country. Would not a school of bibliography here in Washington have the best opportunity to do, so to speak, laboratory work in bibliography, and this in connection with the national library? I am not able to affirm an opinion on this question. The subject is very important and your letter was a letter which I wished to answer to some purpose, but I have not been able to do it, and this is merely an explanation of why I have not been able to do it.

"You very well name the studies of such a school: The literature of the subject; the use and handling of books as literary aids; bibliographical methodology; comparative history of literature and the sciences; classification of knowledge accompanied by the study of the various systems of classification of books; palæography, history of printing.

"It seems to me that one-tenth of all the

librarians educated for the purpose of working in a library should take just such a course of instruction as this. This would give them directive power in the most important part of the librarian's duty."

The secretary read a paper by Dr. JOH. LECHE describing the

COURSES IN BIBLIOGRAPHY OFFERED BY PROF. DZIATZKO AT THE UNIVERSITY OF GÖTTINGEN.

The first and so far the only professorship in the auxiliary sciences of librarianship in Prussia was founded in 1886 in Göttingen as a consequence of the growing importance of libraries. This professorship has been filled since its foundation by Professor Dr. Carl Dziatzko.

The courses of lectures given have so far been as follows:

Library administration.

The laws of authors and publishers in the history of bookselling.

Books in the Middle Ages.

(The above courses have not been given in later years.)

Books and writing in ancient times.

History of printing and bookselling:

(a) previous to the Reformation.

(b) since the Reformation.

History and development of modern librarianship.

The lectures are held three times a week and have the same strictly scientific character as other university studies.

They demand therefore real co-operation between lecturer and students, putting before the latter, as they do, a rich and critically sifted material which gives them, in a way, a sharp outline only which they will fill out more or less fully according to their diligence in carrying on their studies. The lectures are made particularly attractive and stimulating through the exhibition of important examples of printing, if possible original works referred to or quoted in the lectures, etc.

Beside these public lectures, Prof. Dziatzko gives once a week a bibliographical seminar for a smaller circle. The majority of the members of this seminar are the library volunteers who naturally are more numerous in Göttingen than at other Prussian university libraries. If it is true of the public lectures that valuable results are gained only by real co-operation of the students, these seminars directly demand independent work of the

members. A considerable part, in fact half of the allotted time, is given to description of incunabula according to the rules formulated by Prof. Dziatzko and published in no. 19 of his "Sammlung bibliothekswissenschaftlicher Arbeiten." Apart from the importance of incunabula for the history of printing, they are particularly suited to bring out questions of various kinds relating to bibliography and librarianship. The remaining seminar hours are given up to reviews and papers by the members. In most cases the subjects are selected at the suggestion of Prof. Dziatzko, but it is preferred that the members should select their own topics. The papers deal with the most varied subjects: questions of a purely practical nature alternate with scientific and historical investigations of bibliographical topics. (Several of these papers have afterwards been prepared for publication in Prof. Dziatzko's "Sammlung bibliothekswissenschaftlicher Arbeiten.") The papers are followed by judicious criticism by Prof. Dziatzko and discussion by the members of the seminar. Whatever time is left is devoted to reading of old manuscripts, exhibition of bibliographical rarities and curiosities, important new publications, etc.

In connection with the palæographical studies just mentioned it should be noted that a special seminar in palæography, given by another professor, Dr. Wilhelm Meyer, is attended by many as a supplement to their bibliographical studies.

A. S. Root, librarian of Oberlin College, supplemented this letter with a description of his work with Dr. Dziatzko, stating that the real strength and power of the work consisted in the bibliographical seminar and the work with incunabula. In this work each student has assigned to him the work of a special city or a special press. He studies the books, catalogs them, and submits his work to Prof. Dziatzko for review. These papers are then discussed by the members of the seminar and sharply criticised by Prof. Dziatzko. The new literature of bibliography added to the library is periodically examined and discussed by the class.

G. W. HARRIS, librarian of Cornell University, gave in outline, the substance of a course of 15 lectures on bibliography, delivered one each week during a half year at Cornell. The nature of these lectures is general because in each department more or less stress is based

on the use of special bibliographies, and each thesis for an advanced degree at Cornell must be accompanied by a satisfactory bibliography of the subject treated. The large collection of early imprints representing many of the different presses affords excellent opportunity to inspect and study examples of early printing. Mr. Harris was of the opinion that work in the bibliography of special subjects should be given by the heads of the departments concerned. Mr. Harris gave the following

SYNOPSIS OF LECTURES ON BIBLIOGRAPHY, CORNELL UNIVERSITY.

LECTURE.

- I. Definition — Advantages of knowledge of bibliography; Range of bibliography; Antiquity of books. Ancient materials — Clay tablets of Assyria, Assyrian libraries — Palm leaf books of India — Birch bark books of Cashmere — Maya books and mss.
- II. Papyrus and its importance, preparation, grades, roll form of books — Papyrus mss. and Egyptian literature.
- III. Papyrus paper among Greeks and Romans — Methods of bookmaking and publishing in Greece and Rome. Writing instruments and inks — Mss. of Herculaneum — Public libraries of the ancients — Alexandrian and Roman libraries.
- IV. Wax tablets of the Romans — Introduction of parchment — Change from roll form to square form of books — Results of this change — Palimpsests.
- V. Latin palæography and various styles — Bookmaking in the Middle Ages — Schools of calligraphy — Scriptorium and its rules — Colophons — Monastic libraries.
- VI. Secular scribes of Middle Ages; Gilds. Art of illumination with examples of illuminated mss. — Changes resulting from introduction of paper — Cotton vs. linen paper — Block printing in China and Europe — Block books.
- VII. Invention of printing — Career of Gutenberg — Earliest printed books — Spread of the art in Germany, Italy, France, England — Printing in America.
- VIII. Incunabula — Characteristics — Types,

abbreviations, signatures, colophons with examples.

- IX. Technical terms for sizes of books — Confusion of size and form — Signatures, water-marks, size notation.
- X. Bindings of books — Historical sketch — Processes of book binding — Examples.
- XI. Rare books — Fashions in books — Famous presses — Famous editions.
- XII. Illustrated books — Methods of illustration — Manuals for collectors.
- XIII. Classification of books in libraries; various systems briefly described, with examples.
- XIV. Catalogs and cataloging; various kinds of catalogs briefly described, with examples.
- XV. Aids in use of the library — Reference lists — Bibliographies, national and special, with examples.

Prof. CHARLES H. HASKINS, professor of European history in the University of Wisconsin, presented an outline of his

COURSE IN HISTORICAL BIBLIOGRAPHY, UNIVERSITY OF WISCONSIN.

My standpoint is that of the user, not the custodian, of books, and of the user of historical books in particular. There is no branch of knowledge more dependent upon bibliography than is history. The natural sciences, for example, get their bibliographies through current journals and their original materials in the laboratory, while the student of history must not only cover current literature thoroughly but is entirely dependent upon bibliographies to guide him to the primary sources of his subject of study. There is not as yet enough definite instruction in historical bibliography offered in American universities; indeed, there is some vagueness as to just what historical bibliography is. In the work at Wisconsin the course is divided into two broad sections. The first half of the course is taken up with a general account of the manuscript and printed collections of historical material in Europe and America. The second half begins with a description of the bibliographical tools which all students alike use, the national bibliographies, and the trade bibliographies of all the important countries, and goes on to consider the bibliographical materials peculiar to history and of prime

importance only to the historical student. In this connection especial stress is laid upon the historical periodicals. The aim throughout the whole course is to indicate the nature and the range of historical material, where it is to be found, what and where are the sources, so that the student will come to know what he wants and where to find it. The course is given one hour each week through a half year and is taken entirely by graduate students. The registration is usually from 8 to 12. The work in the lectures is supplemented by many references to articles and books. In the latter part of the course the "Manuel de bibliographie historique" of Langlois is used as a text in the hands of the students. The second edition of this book, which is just out, forms an exceedingly satisfactory book for this purpose, and is supplemented by informal comment and mention of additional material. In this admirable little volume nothing of importance is omitted and very little indeed which is unimportant is included. Very much is made of the actual handling of the books by the students. No regular system of practical exercises in connection with this course has yet been worked out, but progress is being made in this direction. The object is primarily to impress students with the importance of the use of bibliographical tools. Considerable practice in the use of bibliographies is also given in all the advanced courses in history.

In general I have found that much inconvenience both to students and instructors results from the habit of secluding all the most important bibliographies in the catalog room. If it be true that these bibliographies are constantly needed in the catalog room, they should be duplicated for the use of the students. This practice of seclusion would not be worth mention did it not seem to be habitual in almost all libraries, and I wish here to register a special plea that bibliographies may be shelved just as publicly as any other section of the library.

I am much interested in Mr. Josephson's proposals for developing bibliographical instruction in universities. It seems to me he has taken hold of the matter by the right end, and the establishment of a course similar to that he suggests would not only be of value to future librarians by giving them wider opportunities for general training than they can get in special schools, but would also

prove helpful to advanced students in all departments of study. I hope some university will take the matter up. I am in sympathy with any instruction, formal or informal, which brings instructors and students to a better knowledge of how to use the library and the books.

#### COURSES AT OTHER COLLEGES.

Mr. ROOT gave in detail the work he is doing at Oberlin in this line. He said:

We offer at Oberlin a course in bibliography in each college year. The first year the work has to do with the use of libraries, with questions of classification and cataloging, and is designed to aid the new students in becoming familiar with the methods in use in our own library and also with accepted methods in all well-conducted libraries. The course in the second year has to do with the history of books and of printing. This work is almost entirely historical. Some study is given to the process and history of binding, with examples of famous bindings. The third year work deals with palæography and the history and development of handwriting, illumination, and work with manuscripts in general. The fourth year work is in the nature of a seminar and is devoted to instruction in bibliography. After an outline of the leading national and trade bibliographies, problems in bibliography are handled and discussed. The courses fill half of the college year, one lecture per week being given. The work is entirely elective and the completion of all of it enables a student to elect one-eighth of his course in this subject. I should be glad to see recognition by the leading library schools of this work, perhaps giving students advanced credit when work has been satisfactorily done at any reputable college.

WALTER M. SMITH, librarian of the University of Wisconsin, briefly outlined the elementary work done there with new students, and maintained that formal lectures were not so good as practical instruction in the use of the library both from the librarian's desk and from the reference desk.

Miss SHARP, librarian of the University of Illinois, stated that a one-hour course was given there for the general student body in the use of the library. Regular university credit is given, but students may attend these lectures optionally and many do so.

ANDREW KEOGH, of Yale University Library, described a short course in the use of the li-

brary offered at that university. Two lectures are given, one in the class room and one in the library, accompanied with actual demonstration with the books. Some further and more elective work is given as graduate work at Yale, but the elementary work is compulsory with all new students.

A letter was read from Dr. H. P. TALBOT, of the Massachusetts Institute of Technology, giving full description of his

#### COURSE IN BIBLIOGRAPHY OF CHEMISTRY.

My attempts to interest my students in books and bibliographies are briefly these: For one term of 15 weeks of the junior year the students of the course in chemistry devote an hour each week (with two hours assigned for preparation) to practice in reading chemical German. The subject matter assigned is either from some work on general or analytical chemistry or from some current journal. Of late I have confined myself mostly to a work on inorganic chemistry. The purpose here is not at all to attempt to teach German, but to assist the students in acquiring a moderate facility in reading, that is, sufficient to enable them to get the *essentials* from an article, rather than to make a finished translation.

During the term following this, there is assigned to the class one or more (usually two) topics, and they are required to prepare and submit for inspection a bibliography of the journal literature upon these subjects. This year the topic assigned to the whole class was the "Determination of sulphur in irons and steels." The class (of 30) was divided into squads, and to each squad a second topic was assigned, such as "The use of sodium peroxide in analytical chemistry," "The preparation and analysis of persulphuric acid and the persulphates," "The recovery of molybdic acid from residues," etc.

General directions are given as to procedure in the compilation of the bibliography, the use of such periodicals as the *Centralblatt* as a starting point, and also the way to record and classify the references found.

This year we have used library cards for the recording of the references for the first time, with marked success. Each card was to bear the original reference, the *Centralblatt* or *Jahresbericht* reference, the title of the article (if possible) and a very brief statement

of its contents. The cards were then to be grouped according to a classification to be worked out by the student.

Each student had finally about 200 cards, often with several references on a card. They were allowed to divide the journals among the members of a given squad, and to exchange cards.

The results are most satisfactory. The work has been well done as a whole, and already I hear of resolves on their part to keep up a card catalog of interesting articles, which is a promising symptom.

Each year for some time, I have devoted a single hour near the close of the year to a brief discussion of books, from the point of view of the needs of a person desiring to collect a small library. In this connection I have put into the students hands a list of "Standard works" citing the essential reference books on the subject, and have commented briefly on the list. Please understand that this list is not by any means infallible, and that there are doubtless other works just as good as those mentioned.

Our senior students are all required to compile a bibliography of the literature of the subject chosen as a thesis, and to prepare a brief review of all recorded work, before they can begin their investigation, and the way in which they attack this work seems to indicate that the familiarity with journals and methods gained in the work of the junior year outlined above stands them in good stead.

In connection with the instruction in the history of chemistry, frequent preparation of memoirs and a study of works in this field is also required.

The list of books referred to in Dr. Talbot's letter was divided under the following heads: History of chemistry, Physiological chemistry, Organic chemistry, Technical chemistry, Agricultural chemistry, Analytical chemistry, Biography, Dictionaries, Tables, Dyeing, Foods, General chemistry, Toxicology.

J. I. WYER, librarian of the University of Nebraska, outlined a course of 16 lectures which are given there during the first semester of every alternate year, embracing national and trade bibliography, reference books, and thorough drill in subject bibliography. The work is primarily given as part of the apprentices' training for the library, but is at-

tended by advanced and graduate students in other departments. Regular university credit is given for the work.

W. STETSON MERRILL, of the Newberry Library, read a paper, entitled

#### A DESIDERATUM FOR LIBRARY SCHOOLS.

As I am desirous that you should apprehend precisely what it is that I am to suggest as a desideratum for the library schools, I will ask to be permitted to lead up to my point, rather than state it at the outset.

We are all of us daily impressed with the rapidity of change and enlargement in the arts, sciences and various achievements of knowledge to-day. In some departments, indeed, such as the natural sciences, we expect the accepted opinions of one decade to give place to others in the next decade. But we perhaps hardly realize that there is a similar progress in the historical, sociological and religious sciences, and in the fine arts. New facts are discovered, verdicts of history are reviewed, new schools of thought and methods of study are established; new men, new theories, new things come up every year, almost every day.

Now, a librarian is expected to bring the stores of knowledge to an inquiring public; to render available the resources of accumulated wisdom which but for him would be like gold hidden in the veins of the rock. To perform this function requires of course primarily a certain amount of educational training. A library assistant should be at least a high school graduate; the librarian of a library of research should be a college bred man, as such collegiate training will be found to his own advantage and to that of his library.

But how after all their training and preparation are librarians, library workers or students of library science to keep abreast of the time? This is really the problem in what may be called the higher education of the library profession. It may be thought that the reading of annual cyclopedias, periodicals and the latest treatises will suffice to keep members of the profession posted upon all subjects of importance. Yet a little consideration will show that by such means much time and labor are sacrificed. A library worker reads in such a case, not for general information, but to ascertain definite and pertinent facts of importance to him in his special field of work. What he wishes to know

are indeed the new discoveries, facts and opinions; viewed, however, not in themselves as events in the progress of the sciences, but as bearing upon the classification and nomenclature of the respective sciences which treat of them, and upon the relations which those sciences bear to others. He needs also an up-to-date acquaintance with the great men of the time, not in a personal way, but through the contributions which they have made to knowledge. Otherwise he will not discern the authority upon any given subject from a tyro or an ignoramus. A true knowledge of bibliography does not consist merely in knowing lists of books or in knowing where to find such lists. It implies an acquaintance with the relative values of books as well.

A thoroughly equipped reference attendant or cataloger should also be familiar with the shibboleths and theories of the schools and with the opinions of scholars upon questions of the day. Now how is he to learn all this? He cannot learn it before he begins to study library work, because it is a growing, living thing—this mass of current fact and opinion. Yet he has no time to master each science for himself, and in merely cursory reading he will miss the point which is to be of most use to him in his particular line of work.

I reply that he needs the spoken word of the expert, framed and directed to meet the special requirements of his case. The expert who knows his subject in all its bearings can tell us at once just what we want to know, if we have a chance to ask him.

Let us have then before our library schools and—I may add also—our library clubs and associations, periodical talks by specialists upon their respective subjects, presenting in a concise form the progress of these sciences and arts with special reference to the needs of library workers, as outlined above.

Such a presentation will enable the librarian, the reference attendant, the cataloger or the classifier to perform his work with an assurance and a facility that can be acquired in no other way. He will be acting under expert advice. The special points to be brought out will be presented to the lecturer beforehand; he will prepare his statement, deliver it, and later answers inquiries which may have arisen. We all know how much easier it is to ask somebody about something than it is to look it up in some book. Let

questions be noted as they occur and the class be given a chance to ask them of an authority.

These lectures or talks need not and should not be confined to student class rooms. Let them be public lectures which library workers outside the school may attend upon payment of a small fee. The intrinsic interest of a lecture upon some topic of the day whether literary, historical, political, or scientific, would attract in a way that a course upon pure bibliography can never do. As our library schools are so integrally a part, as a rule, of some system of collegiate instruction, there should be no difficulty in securing the services of different members of the faculty. I may repeat also that no more useful program of work for a library club during a season could be planned than a course of just such talks as I have described. To tell the truth, the matter of this paper first occurred to me in its bearings upon the work of library clubs. To them and to the directors of our library schools it is presented for their consideration.

Following this the representatives of the various library schools were asked to describe the

#### WORK OFFERED IN BIBLIOGRAPHY AT THE LIBRARY SCHOOLS.

Mr. BISCOE described the work at Albany, running through two years, the first being taken up with trade bibliography and the second with reference work and subject bibliography. The large resources of the New York State Library enable the students to see, study and use almost all books taken up and the work is accompanied with many problems. Further elective work is also offered to students desiring to specialize along this line.

Miss PLUMMER spoke for the Pratt Institute School. During the first year a general course of instruction in bibliography is offered, beginning with trade bibliography, students being referred to the leading works of reference in English, French and German through lectures and problems given during the year. Each student is required to prepare a reading list on a selected subject, requiring considerable research work, which must be satisfactory to the instructor. The leading national and subject bibliographies are included in the lectures, and the problems frequently require consultation of these. Ten lectures are given on the history of books and printing. This is merely an outline course offered partly that

students may discover any latent inclination toward the historical course, that they may know there is that side to their work. "In the special lessons in French and German cataloging which we expect to undertake this fall," she said, "a study of foreign catalogs will be a prominent feature, and the students will collect for themselves a vocabulary of bibliographical terms in these languages. In the broad sense of the term bibliography, as we find it in the 'Century dictionary,' the subject is fairly well covered by the second year's historical course. Through the courtesy of the New York Public Library the class has had opportunity to do most of its work at the Lenox Library where there is a fine collection of reference books. The course begins with a study of reference books on the history of printing, bibliographies of the 15th century, etc., and books such as Hain, Panzer, etc., and the more general bibliographies, *e.g.*, Brunet, Graesse. The history of bookmaking is studied from the period of the manuscript through the 15th century, and some work with American and other books has been done each year. The materials used in the earliest times, the methods of production and the steps leading to the invention of printing are all treated. The history of printing is studied by country, town, and printer, chronologically, and a study of the types used by different printers is made. For practical work the class catalogs 15th century books. The books used for consultation in this course have been very numerous, and perhaps a good working knowledge of them has been the most important feature of the work. The class was not and could not be limited to books in English, but used and in part translated books of reference in foreign languages. In the work with manuscripts the historical course depends upon instruction given by Prof. Egbert, professor of Latin palæography of Columbia University, who has made up a course especially adapted to the object of our work and to the time we have to give. Twenty-three lectures, only a few of which are devoted to the bibliography of the subject, comprise the instruction, two hours' work outside being necessary on each lecture. Much more is usually done by the students, who generally live in New York city while taking the historical course. The study of successive handwritings and abbreviations as illustrated by blue-prints

furnished by the professor, leads naturally to early printed books, whose types were modelled after the handwriting of the period. Reports of the work of this class have been very satisfactory."

Miss KROEGER, of the Drexel Institute Library School, described a course of 15 lectures on the history of books and printing, given at her school.

The lectures embrace the following subjects:

- I. The development of language, oral and written. Ancient systems of writing. Derivation of the English alphabet. The preservation of literature. Earliest forms of permanent records, literature, books, and libraries in the ancient civilizations of the east.
- II. The literatures of Greece and Rome. The book in the classical age. Alexandria as a literary center. Barbarian invasions of the Roman Empire. Decline and extinction of ancient culture. Destruction of books and libraries.
- III. The book in the Middle Ages. The preservation and the production of books in the monasteries. Development of the illuminated manuscript. The early Renaissance in its relation to literature and books.
- IV. The later Renaissance: revival of learning. Recovery of ancient literature. Rome, Florence, and Venice as the centers of activity. Multiplication of manuscripts. The formation of modern libraries.
- V. The art of engraving as the precursor of printing. The invention and diffusion of printing. The chief centers and the great masters of printing. The printed book and its influence upon civilization.
- VI. Book illustration in ancient, medieval, and modern times.
- VII. Books and libraries in Europe and the United States. Types of modern public libraries.
- VIII. Makers and lovers of books, and their libraries.

Miss SHARP told of the instruction in bibliography given to the students in University of Illinois Library School by the professors at the university. Several of the professors

give lectures on the bibliography of their various subjects; a subject is assigned to the students before the lecture, they are required to examine bibliographies, reviews, and the books themselves, as far as accessible in the library, and to select ten books which they would buy first for a library of 10,000 vols. This selection is criticised by the professor, who meets the class, gives them an outline of his subject, speaks of the principles of selection, mentions the writers who are considered authorities, and calls to the attention of the students valuable material not to be found in the trade lists. This is in the first year; in the second year the professors give their lectures first and the class will select their books for criticism afterwards. The professors have given most generous co-operation in the work; but their work has been uneven and many of them fail to catch the librarian's and bibliographer's point of view, and most of them acknowledge that their studies are limited to the advanced works, so that they do not know what to recommend for the small public libraries.

An interesting discussion followed as to the relation between university librarians and professors in mutual co-operation in bibliographical work.

Miss KROEGER suggested that library students who felt a special inclination for some scholastic subject might take up such study as a supplement to the library school course.

To this Mr. HASKINS remarked that the proper way would rather be the opposite, namely that the student of history, for example, who wished to take up library work, might take a course in library economy as a supplement to his university studies. He pointed out that a university graduate did not at all need to spend two years in getting familiar with library technique.

Mr. HANSON, of the Library of Congress, Mr. ANDREWS, of The John Crerar Library, and Miss CLARK, of the Department of Agriculture Library at Washington, all emphasized the need of scientific experts who should also be trained in bibliography and library economy. The opinion was strongly expressed that there was no greater desideratum in instruction in library work at present than a course offered to trained scientists who would be willing to add to their scientific training a fair knowledge of library methods.

## TRANSACTIONS OF COUNCIL AND EXECUTIVE BOARD.

**M**EETINGS of the Council of the American Library Association were held in connection with the Waukesha conference, on July 4, 5, 6, 9 and 10, in all six sessions being held. There was also a short meeting of the executive board on July 9.

Of the 25 members of Council 15 were present, as follows: C. W. Andrews, R. R. Bowker, W. H. Brett, H. J. Carr,\* F. M. Crunden, J. C. Dana, Melvil Dewey, Electra C. Doren, W. I. Fletcher, J. K. Hosmer, George Iles, Mary W. Plummer, Herbert Putnam, Katharine L. Sharp, Charles C. Soule. In addition, the members of the executive board served as *ex officio* members and officers of Council. They included the president, Henry J. Carr; ex-president, R. G. Thwaites; secretary, F. W. Faxon; recorder, Helen E. Haines; treasurer, Gardner M. Jones. The first and second vice-president — E. C. Richardson and Mrs. Salome C. Fairchild — were not present during the conference.

## PROCEEDINGS OF COUNCIL.

*Place of next meeting.* Invitations for the 1902 meeting of the American Library Association were received from Detroit, Mich.; Charleston, S. C.; Memphis, Tenn.; Brevard, N. C.; from a New Hampshire Board of Trade, suggesting a resort in the White Mountains, and from the Massachusetts Library Club, urging that the meeting be held on the eastern coast, near Boston. It was *Voted*, That place and date of next meeting be referred to the executive board, with recommendation to meet at a resort on the New England seaboard near Boston.

*Nominations for officers.* It was *Voted*, That the ex-presidents present at the meeting be appointed a committee to submit nominations for officers for 1901-2. This committee reported at a later session of the Council, and the nominations submitted were adopted, with the provision that the ticket include also without distinction names sent in on nominations signed by five members of the Association.

\* Also, as president, *ex officio* member of executive board and council.

*By-laws.* H. M. Utley, chairman of the Committee on By-laws, reported the draft of by-laws prepared by that committee. This was discussed and amended, each section being separately considered and voted upon. It was *Voted*, That the entire body of by-laws, as amended, be adopted, subject to such arrangement of sections as may be made by the president and secretary.

The by-laws were later presented to the Association in general meeting. (*See Proceedings*, p. 129.)

*Endowment Fund and Publishing Board.* Charles C. Soule, trustee of the Endowment Fund, reported that the income of the fund now on hand and to accrue during the year amounted to about \$1000, and recommended that the sum of \$500 be added to the principal of the fund, unless required by the Publishing Board or for other purposes of the Association.

W. I. Fletcher, for the Publishing Board, stated that the board would need during the ensuing year an appropriation as ample as could be secured; and it was *Voted*:

That the trustees of the Endowment Fund be authorized to transfer to the Publishing Board the income of the Endowment Fund now on hand and to accrue during the coming year.

*Reduced postal and express rates on library books.* Recommendations were submitted from the Round Table Meeting on state library commissions, as follows:

1, That the Council be requested to arrange for securing reduced rates from the express companies for travelling libraries;

2, That the Council be requested to give its support to the Jenkins bill providing for the transmission of library books by rural free delivery;

3, That the Council be requested to actively interest itself in securing lower postage rates on library books.

After discussion it was *Voted*, That a committee of five of the Council be appointed on express and postal rates for library books, to negotiate with the express companies, to co-

operate with regard to Congressional legislation, and to report further to the Council as to the postal question.

The committee was appointed as follows: E. H. Anderson, chairman; J. S. Billings, W. C. Lane, R. R. Bowker, Johnson Brigham. It was *Voted*:

That in case of the inability of any member of the committee to serve, the retiring president be authorized to fill vacancies.

*Relation of libraries to the book trade.* It was *Voted*, That the executive board be requested to appoint a committee of five to consider and report upon the relation of libraries to the book trade.

*Cataloging rules for printed cards.* It was *Voted*, That the Council authorize the promulgation of the proposed A. L. A. cataloging rules for printed cards, so soon as the Publishing Board and its special advisory committee, and the Library of Congress, shall have agreed upon the details of same;

That the committee on cataloging rules for printed cards be requested also to formulate the variations from those rules which they recommend for manuscript work.

*List of American dissertations.* The College and Reference Section submitted the following communication:

"To the Council of the A. L. A.:

"The College and Reference Section, at its recent meeting, appointed the undersigned, a committee to prepare and report to the council the draft of a request with reference to an annual list of American dissertations for the degree of doctor of philosophy or science. We would, therefore, respectfully ask that the approval of the Council be given to the plan outlined herein, viz:

"To send to such institutions of learning in the United States and Canada as confer the degree of doctor of philosophy or science, after residence and examination, the following circular letter:

"To the President and Faculty of \_\_\_\_\_.

"GENTLEMEN: The College and Reference Section of the American Library Association, with the approval of the Council of such Association, respectfully requests that your institution publish in its annual catalog, or corresponding publication, a list of the dissertations accepted from persons who have been granted the degree of doctor of philosophy or science during the preceding academic year,

and a supplementary list of all dissertations printed since the publication of the last annual catalog. This list should contain the following particulars: The full name and year of graduation of the author; the full title of the dissertation; the year of imprint, and, if a reprint, the title, volume, and pagination of the publication from which it was reprinted.

"We also request your institution to require a title-page for each dissertation, giving, in addition to the full name of author and title of dissertation, the year in which the degree was conferred, and in which the dissertation was printed, and, if a reprint, the title, volume and pagination of the publication where it was first printed.

"A compliance with these requests will be a most valuable service to the college and reference libraries of the country."

The section further instructed us to suggest to the Council the desirability of the compilation and publication of a complete list of such dissertations to July, 1900.

BERNARD C. STEINER, WALTER M. SMITH, CLEMENT W. ANDREWS,	}	<i>Committee.</i>
--	---	-------------------

It was *Voted*,

That the circular letter prepared by the Committee of the College and Reference Section be approved, and that the executive board authorize the necessary slight expense of printing and postage required;

That a committee of the College and Reference Section be appointed to secure the publication of the list of dissertations referred to without expense to the A. L. A.

*Prosecution of book thieves.* Communications were read from C. K. Bolton, recommending that the Council appropriate, when necessary, from the income of the Endowment Fund, money to be used in the detection or prosecution of book thieves. It was pointed out that "a few men systematically rob libraries, particularly in small poor towns that happen to have some rare books. To gather evidence and rid us of these men requires money, and seems very properly to come within our field of work." No action was taken on the subject.

*Minute on John Fiske.* The memorial minute on John Fiske, prepared by the special committee, consisting of J. K. Hosmer, George Iles and R. G. Thwaites, was submitted to the Council and recommended for

presentation to the Association, to be spread upon the records. (*See Proceedings*, p. 130.)

#### TRANSACTIONS OF THE EXECUTIVE BOARD.

*List of American dissertations.* In accordance with vote of Council, the following committee from the College and Reference Section was appointed to arrange for the publication of the list of dissertations proposed by the section: B. C. Steiner, C. W. Andrews, W. M. Smith.

*Committee on resolutions.* A committee on resolutions to serve during the Waukesha conference was appointed, as follows: Herbert Putnam, Mary W. Plummer, J. C. Dana.

*Secretary's expenses.* A communication

was received from the Finance Committee, recommending that the sum of \$425 be allowed for the expenses of the secretary's office for the year ending July 16, 1901. It was *Voted*, That \$100 additional be also appropriated for the secretary's expenses for the past year.

*Non-library membership.* It was *Voted*, That the names of 38 persons not engaged in library work, as presented by the treasurer, be accepted for membership in the Association.

No meeting of the incoming Council or executive board was held, and the appointment of special and standing committees, reporters, etc., was therefore deferred.

HELEN E. HAINES, *Recorder.*

#### ELEMENTARY INSTITUTE.

An Elementary Institute, for the presentation of "first principles" in library work, was held in the assembly room of the Fountain Spring House on Tuesday evening, July 9. In the absence of Miss Cornelia Marvin, chairman, Miss L. E. Stearns presided. The meeting was quite informal, and there were no prepared papers, except one by Miss GRATIA COUNTRYMAN on

#### OPPORTUNITIES.

(*See p. 52.*)

An introductory speech was made by Mr. Dewey, who spoke of the educational force

that libraries should exert in the community, and the varied field before the public library of to-day. There was some general discussion, in the course of which J. C. Dana read a letter describing pioneer library work carried on in the Yukon district of Alaska, and E. P. McElroy told of some interesting incidents connected with the work of his library at Algona, Iowa.

An early adjournment was made to attend the display of stereopticon views of library buildings which was given on the same evening.

#### ILLINOIS STATE LIBRARY SCHOOL ALUMNI ASSOCIATION.

A MOST enthusiastic reunion of the alumni of the Illinois State Library School was held at Waukesha on July 5, in connection with the meeting of the A. L. A.

Forty-seven members of the Alumni Association sat down to a long table which had been spread for them in the dining-room of the Fountain Spring House, where a very pleasant hour was passed in renewing old friendships and hearing about the work of classmates who had gone out to make themselves famous in the library world.

Following the dinner a business meeting was held, after which the members listened to a most interesting report by Miss Featharine L. Sharp, director of the Illinois State Library

School, on the growth and present condition of the school, showing the changes which have come to it from its connection with the University of Illinois.

Miss Sharp gave an outline of each course as it is now given in the school, noting the changes which have been made and the reasons for these changes. The report was of especial interest to the early graduates of the school, who could follow the changes made in the course of instruction, the general development in scope and methods, and could so well comprehend the great growth of the school since its establishment at Armour Institute of Technology, in Chicago, in 1893.

MARGARET MANN, *Secretary.*

## THE SOCIAL SIDE OF THE WAUKESHA CONFERENCE.

BY JULIA T. RANKIN, *Carnegie Library, Atlanta, Ga.*

TO chronicle the social side of the twenty-third annual meeting of the American Library Association is a pleasant duty. To recall all of the courtesies extended to us by our hosts of the Middle West would take more time than is at my disposal and more space than the Proceedings allot to the frivolous recreations of the strenuous librarians. Through the entire period of the meeting, the good people of Waukesha did everything in their power to make the time pass pleasantly and Mr. Walker, the proprietor of the Fountain Spring Hotel, worked early and late to make the members comfortable. Golf had a few members marked for its own, and these were not deterred by the 110°-in-the-shade-conditions. Dancing was in order every evening after the meetings (Sunday excepted) and the gentleman from Washington is said to have solved the problem of how often a man can dance with the same girl in a given evening. The piazzas were ample and as each led to some spring sooner or later, the "water habit" became popular. The dining-room was, in the language of the daily papers, "taxed to its utmost," but all shortcomings were treated with good-natured indifference when it was understood that the hotel had never accommodated so many people in its history, and the management promptly increased its force of servants to meet the occasion.

According to the program the social side of the conference should have begun on the evening of July 3 with "friendly greetings" at 8.30 p.m.; but as the New York party did not arrive until 9 p.m., and the New England party not until 2 a.m., it will readily be seen that the friendly greetings had to be postponed. Social amenities, however, commenced on the morning of "the Fourth" when the proverbial early bird, arrayed in cool flannels or faultless duck, promenaded the long veranda of the Fountain House and greeted the later arrivals. As the "later arrivals" had almost all come from a distance during one of the hottest weeks of the hottest summer known, and were consequently covered with dust and cinders, it was tantalizing to see the

earlier arrivals in such cool array, and welcome speeches were cut short until the dust of travel could be removed.

The coolness of the evening found a refreshed, summer-attired conference wending its way to the Methodist Church where the public meeting was held. The speeches were interrupted repeatedly by the festive small boy and his Fourth of July crackers. The explosions caused untimely mirth when they punctuated or emphasized the well rounded periods of the orators. The formal meeting was followed by informal groups on the veranda of the hotel and at the springs where thirsty mortals never tired of drinking the "fizzy" waters, that have made Waukesha famous as the "Saratoga of the West," and, indeed, the place has many features similar to its famous Eastern prototype.

Friday evening was devoted to various dinner parties of the alumni of the library training schools, and the dining-room with its long tables and flowers presented a festive scene. College yells and class cheers resounded through the halls. One got a good idea of the number of technically trained library assistants now dispersed over the country.

Saturday evening the hotel management provided a dance for the guests and the great dining hall was transformed into a gay ballroom. Although Mr. Cutter was absent the dancing contingent was ably represented, and a delightful evening was enjoyed.

The program meetings were well attended and the many papers presented during the sultry days of the first week made Sunday a welcome day. The Rest Cure seemed to be the order of the day until after lunch, when most of the members went to Milwaukee to see the public library, where an informal reception was held. Misses Stearns, Dousman, Van Valkenburgh and Stillman entertained a party of 40 at White Fish Bay. A trolley ride to Milwaukee and on to this beautiful bay proved a good appetizer for the very excellent lunch provided. The view of the lake was keenly enjoyed and the day was clear and cool. Twenty miles home and an early supper, and most of us were willing to retire ear-

at Milwaukee to take the lake trip to Buffalo en route to our homes.

We stood in silence as the big white *North-west* loomed in sight. This ship and its twin-sister the *Northland* represent the perfection of modern lake travel and rival the trans-Atlantic liners in elegance and comfort. It was a sleepy party that sought staterooms early. The morning came fine and cloudless, and although the dawn and sunrise on the water seemed to come very early in this high latitude, it was a thing of beauty—an aquarelle of Nature's best workmanship. The trip to Mackinac was marked by the organization of the Infinite Eight, a secret society having blood-curdling ritual and banded together for offensive and defensive tactics in the war upon the cuisine—led by the gallant survivor of the "Adventures of a house-boat." This company attacked everything that was before it and demolished everything within its reach. Not until the last day were any reverses recorded and then Neptune with his trident reduced the gallant band to four. In memory of this glorious record the survivors have applied for arms consisting of a ship rampant on a field azure and the motto

Puellæ Pallidæ non ad cenam veniunt.

When Buffalo was reached the Pan-American exhibition claimed everyone's attention. Most of the party were there by eleven o'clock and spent the rest of the day. Mr. Elmendorf claimed a number of the men and gave them a delightful dinner in "In Nuremburg," and everyone was in front of the great pilons in time to see the electricity turned on at 8.30, after which the gondoliers became popular. It was Georgia Day at the Exposition and the A. L. A. members who had attended the Atlanta conference were greeted by a familiar figure in the person of Mr. Cabiniss, who had addressed the Association at Atlanta and was one of the orators of the day. The most popular part of the proceedings, however, was the singing of the refrain

"He laid aside a suit of gray  
To wear the Union blue"

which was cheered and encored many times.

Sunday was spent at Niagara Falls by most of the survivors and everything was accomplished, even to going under the American Falls. Many goodbyes were said in the Nuremburg restaurant at the Exposition that evening and the shutting off of the electric light closed one of the pleasantest post-conference trips in the history of the Association.

## OFFICERS AND COMMITTEES

SERVING IN 1900-01 AND DURING WAUKESHA CONFERENCE.

*President:* Henry J. Carr, Scranton Public Library.

*First vice-president:* Ernest C. Richardson, Princeton University Library.

*Second vice-president:* Salome Cutler Fairchild, New York State Library.

*Secretary:* Frederick W. Faxon, Boston Book Co.

*Treasurer:* Gardner M. Jones, Salem Public Library.

*Recorder:* Helen E. Haines, *Library Journal*, New York.

*Registrar:* Nina E. Browne, A. L. A. Publishing Board, Boston.

*Trustees of the Endowment Fund:* Charles C. Soule, Brookline; John M. Glenn, Baltimore, Md.; G. W. Williams, Salem, Mass.

*A. L. A. Council:*\* Henry J. Carr, John C. Dana, Melvil Dewey, George Iles, Mary W. Plummer, R. R. Bowker, C. A. Cutter, W. I. Fletcher, W. E. Foster, Caroline M. Hewins, Wm. H. Brett, F. M. Crunden, Frank P. Hill, Hannah P. James, J. N.

Larned, C. W. Andrews, John S. Billings, Electra C. Doren, Wm. C. Lane, J. L. Whitney, C. H. Gould, J. K. Hosmer, Herbert Putnam, Katharine L. Sharp, Charles C. Soule.

*Executive Board:* President, ex-president (R. G. Thwaites), vice-presidents, secretary, treasurer, recorder.

*Publishing Board:* Chairman, W. I. Fletcher; W. C. Lane, George Iles, R. R. Bowker, Melvil Dewey.

STANDING COMMITTEES.

*Finance:* James L. Whitney, George T. Little, Charles K. Bolton.

*Co-operation:* W. L. R. Gifford, W. R. Eastman, Electra C. Doren, J. G. Moulton, Agnes E. Van Valkenburgh.

*Public Documents:* R. R. Bowker, Adelaide R. Hasse, W. E. Henry, Johnson Brigham.

*Foreign Documents:* C. H. Gould, C. W. Andrews, L. B. Gilmore, James Bain, Jr.

*Co-operation with Library Department of N. E. A.:* J. C. Dana, Melvil Dewey, F. A. Hutchins.

\*Also includes members of executive board.

## SPECIAL COMMITTEES.

*By-Laws:* H. M. Utley, W. C. Lane, B. C. Steiner.  
*Gifts and Bequests:* Reporter, George Watson Cole.  
*Handbook of American Libraries:* F. J. 'eggart, T. L. Montgomery, C. W. Andrews.  
*International Catalog of Scientific Literature:* John S. Billings, C. W. Andrews, Cyrus Adler.  
*International Co-operation:* E. C. Richardson, R. R. Bowker, S. H. Ranck, Mary W. Plummer, Cyrus Adler.  
*Library Training:* John C. Dana, W. H. Brett,

Electra C. Doren, Eliza G. Browning, E. C. Richardson.

*Title-pages to Periodicals:* W. I. Fletcher, Thorvald Solberg.

## SECTIONS AND SECTION OFFICERS.

*College and Reference Section:* Chairman, W. I. Fletcher; secretary, Olive Jones.  
*State Library Section:*\* Chairman, L. D. Carver; secretary, Maude Thayer.  
*Trustees' Section:* Chairman, H. M. Leipziger; secretary, T. L. Montgomery.  
*Catalog Section:* Chairman, A. H. Hopkins; secretary, Agnes E. Van Valkenburgh.  
*Children's Librarians' Section:* Chairman, Annie C. Moore; secretary, Mary E. Dousman.

# THE AMERICAN NEWS COMPANY,

## BOOK DEPARTMENT.

HAVING successfully conducted an extensive Library Department for the past several years, handling with complete satisfaction the entire library business of some of the largest libraries of the country, we call to your attention the elaborate facilities at our disposal ; not only as to the prompt and complete despatch of all such business, but the great saving to the library in the matter of receiving exceptional discount. A request for estimate on any miscellaneous list of publications will receive the same painstaking care and minute attention that an order involving thousands of dollars would receive. Books published abroad are secured within a very short time after order is placed—our own branch houses in London, Paris, Berlin, as well as two Canadian houses, enable us to accomplish this.

We solicit correspondence, and extend a most cordial invitation to all interested in the Free Public, School, Circulating, or Private Libraries to visit our mammoth establishment, where the thousand upon thousands of miscellaneous volumes are at your full access.

Yours very respectfully,

THE AMERICAN NEWS COMPANY,

39-41 CHAMBERS STREET, NEW YORK.

**We Say It,** and with some emphasis because true, that **THE RAPID GUIDE** is the best and most economical Library Guide in the world. It is substantially made of pressed cardboard with metal projection in which a removable label is used. It thus provides for the exchange of one heading or title for another. **THE RAPID GUIDE** is practically indestructible, although very light in weight. There is no pasting, no breaking down, no wearing out, no rough edges. It is compact, economical, and was designed for the special requirements of the Library. It so far excels other known guides as to leave no room for comparison.

We shall gladly forward a sample of **THE RAPID GUIDE** to any Librarian making the request.

Also Manufacturers  
Complete Filing Systems,  
Cabinets, Cards, Etc.

**Clarke & Baker,**  
Incorporated,  
280 Broadway, New York.

# CEDRIC CHIVERS,

Portway, Bath, England.

BOOKSELLER { Library Books,  
Reference Books, AND BOOKBINDER { Duro-Flexile,  
Belles-Lettres. Vellucent,  
Rellure de Luxe.

*"Buy Your Popular Books and Your Costly Books*  
**in Duro-Flexile Binding."**

I OBTAIN books from the publishers in sheets and bind them "ONCE FOR ALL." This binding lasts longer than the leaves of the book, and the leaves of the book are preserved and their life immeasurably lengthened by this binding. Librarians cannot persuade publishers to print special editions for them, but I supply books specially bound for them.

If the paper is bad I sew and forward the book so that the leaves are subject to no strain and are indeed strengthened in the folds. If the paper is very stout I sew the book and forward it in a special manner adapted to the thickness of the paper, in other words I adapt Duro-Flexile binding to both good and bad paper with the results that the utmost service and the longest possible life are obtained for both.

No binding in the world is adapted to the varied qualities of the paper as is Duro-Flexile.

The service obtained from a book of bad paper when supplied bound in this way will surprise you.

A papier maché box and a steel safe are not hinged in the same way. Thin tough paper and thick spongy paper also require very different treatment, and with Duro-Flexile they get it.

**TIGHT BACKS** are used for books of a thickness and quality of paper best suited for such treatment.

**LOOSE BACKS** are given where such are better suited.

My bookbinding is in short adapted in its every detail, both of material and method, to the requirements of a Public Library Book.

500 Public Librarians in all parts of the English speaking world buy these books.

## POPULAR BOOKS AND COSTLY BOOKS

bought of me, bound from the quires, give 50% more service.

*A catalogue of Standard Fiction and popular recent books priced net delivered free to your Library will be sent on application.*

# FALL ANNOUNCEMENT OF NEW BOOKS.

## LINCOLN'S PLAN OF RECONSTRUCTION.

By *CHAS. H. McCARTHY, Ph.D.* Never before have Lincoln's preliminary plans for reconstruction been adequately treated. (8vo. About \$3.00 net.)

## THE LIFE OF THE MASTER.

By *Rev. Dr. JOHN WATSON* (Ian Maclaren). A work which is deeply reverential in feeling, noble in sympathy, and pregnant in meaning. 16 full-page illustrations in colors from pictures made in Palestine especially for this work. (8vo. About \$3.50 net.)

## LIFE OF SAMUEL JOHNSON.

By *JAMES BOSWELL*. A new and unequalled edition containing 100 drawings of localities connected with Johnson and his times, and 10 photogravure portraits. (Per set, 3 vols., 8vo, \$9.00 net.)

## REMINISCENCES OF GEO. S. BOUTWELL, (Ex-Gov. of Massachusetts).

Rich in anecdotes, in bits of unpublished history, in clearly expressed opinions; they are a substantial addition to the historical literature of the last 50 years. (8vo. About \$3.00 net.)

## LIFE ON THE STAGE.

By *CLARA MORRIS*. The reminiscences of this great actress, so delightfully told, constitute a classic of the American stage. (12mo. About \$1.50 net.)

## LIFE OF PASTEUR.

By *R. VALLERY-RADOT*. Translated from the French, by H. C. Devonshire. (Per set, 2 vols., 8vo, \$7.50 net.)

## SEEN IN GERMANY.

By *RAY STANNARD BAKER*. The author writes entertainingly of all sides of German life, telling things which the untravelled do not know and those who travel do not see. (12mo. \$2.00 net.)

## COLONIAL FIGHTS AND FIGHTERS.

By *CYRUS TOWNSEND BRADY*. The second of a series of stirring stories of American history. (\$1.20 net.)

## ANIMALS OF THE PAST.

By *Prof. FREDERICK LUCAS*, of the U. S. National Museum. A book on prehistoric animals by one of the world's leading authorities. (12mo. About \$2.00 net.)

## FICTION.

### TRISTRAM OF BLENT.

By *ANTHONY HOPE*. A novel of unique plot and most interesting complications, showing fully the versatility of the author. (\$1.50.)

### THE WESTERNERS.

By *STEWART EDWARD WHITE*. A mining story of the Black Hills in a most picturesque decade. (\$1.50.)

### BY BREAD ALONE.

By *I. K. FRIEDMAN*. A timely story of the steel workers. (\$1.50.)

### SONS OF THE SWORD.

By *Mrs. MARGARET L. WOODS*. The action takes place on the continent of Europe during the Napoleonic period. It is a tale of marked strength and originality. (\$1.50.)

### JOHN FORSYTH'S AUNTS.

By *ELIZA ORNE WHITE*. A collection of New England sketches so related as to practically form a continuous story. (\$1.25.)

## VERSE.

### LINCOLN AND OTHER POEMS.

By *EDWIN MARKHAM*. The book contains the best of this popular poet's recent verse. (\$1.50.)

### SONGS OF NATURE.

Edited by *JOHN BURROUGHS*. An anthology of the best and truest English nature poems. (\$1.00 net.)

*Our new illustrated catalogue is ready and will be sent postpaid upon request.*

**McCLURE, PHILLIPS & COMPANY, New York.**

BENJAMIN FRANKLIN STEVENS.

HENRY JOHN BROWN.

# B. F. STEVENS & BROWN,

American Library and Literary Agents,  
4 TRAFALGAR SQUARE, CHARING CROSS, LONDON.

THIS Agency was established in 1864 for supplying American Public Libraries, Institutions, and Book Collectors, with English and Continental Books, Manuscripts, Drawings, Philosophical Apparatus, etc., at the lowest London prices.

Special attention is paid to the selection and purchase of rare old books and manuscripts. Auction sales are carefully watched and good knowledge kept of the stocks of the old Booksellers of Europe.

Lists of Desiderata have the best attention and Librarians are respectfully requested to test the value of the Agency by sending trial orders on by submitting lists for Estimates for goods to be delivered, either free in London or New York, as desired.

Auction Catalogues when printed in advance and Catalogues issued by Publishers and Second-hand Booksellers are mailed to Customers when desired.

Periodicals are supplied either direct by mail from London or by mail from New York Agency at lowest rates for prompt and efficient service. Send for Lists.

Payments may be made either direct to London or in U. S. Currency through our New York Agency.

*Just Ready. 100 Copies Printed for Subscribers Only.*

## B. F. STEVENS'S Facsimile of the Unpublished British Headquarters Coloured Manuscript Map of New York and Environs (1782)

Reproduced from the Original Drawing in the War Office, London.  
24 sheets. Scale,  $6\frac{1}{2}$  inches to a mile. 10 feet by 4 feet. . . .

The successive British Commanders-in-Chief in America, Generals Sir William Howe, Sir Henry Clinton, and Sir Guy Carleton, during their respective occupations of New York and Environs in the Revolution, caused this manuscript plan from time to time to be kept up.

The plan extends from below Guanas Bay to the Heights of Spikendevil, a distance of about eighteen or nineteen miles. It shows the Fortifications, Defences, Topography, Streets, Roads, etc., of the whole of the Island of New York with the Harbor, Islands, Water Ways, and River Frontages on the Hudson and East Rivers, the Military Works on Long Island including Brooklyn, the Works in Paulus Hook and parts of the Jersey Shore. It has a copious Table of References to various works (British and American), some of them with notes as to the time of their construction or destruction.

The Original Drawing, ten feet by four feet, is on a scale of about six and a half inches to a mile. It is handsomely reproduced for subscribers only, in careful facsimile on 24 sheets which can be joined up and mounted like the original as a Wall Map or mounted on linen if desired. It will be issued either mounted on linen to fold in book form with leather (slip) case, 13 x 10 inches, or the 24 sheets (22 x 15 inches each), will be supplied in a portfolio.

No more than 100 copies have been printed and the engravings were erased as each sheet was printed off.

A few extra copies of sheet 8 have been printed so that it can be sent as a specimen on application from intending subscribers.

### Prices to Subscribers

Mounted on linen to fold in book form with leather (slip) case. . . \$30 net.

Unmounted, on 24 sheets in portfolio. . . . . \$25 net.

The above prices include delivery to any Public Library or Institute in the United States or Canada, but private subscribers must also pay the duty.

**B. F. STEVENS & BROWN, 4 Trafalgar Square, Charing Cross, London, W. C.**  
New York Agency, 45 William Street.

# EDW. G. ALLEN'S

## London Agency for American Libraries

28 HENRIETTA ST., COVENT GARDEN, LONDON.

### Special Notice to Librarians.

Mr. E. G. ALLEN desires to lay before you the advantages of using this Agency for procuring English and Foreign Books, Magazines, Periodicals, etc., and for General Library Work in Great Britain.

Long existing relations with the Booksellers and Publishers of the United Kingdom enable him to execute orders of any magnitude promptly and economically. All important books collated before delivery.

Specialty is made of the finding of Out of Print Books. His success in this department is unrivalled, possessing unique means of search, by which he is able to supply scarce books expeditiously and at moderate prices.

A good selection of Second-hand Dealers' Catalogues is sent to clients by every mail, and no commission charged on orders from them.

New Books supplied on the most advantageous terms, and the Full Trade Discount allowed off the published price.

Auction Catalogues Mailed, Sales Attended, and Commissions Executed with Care and Judgment.

Defects of Rare Books Reproduced in Facsimile.

Long Sets of Scientific and Other Periodicals Supplied. Imperfect Sets Completed.

Large consignments sent by fast steamers at through rates. Small orders can be sent by mail or by express system at low charges.

Special note is kept of all continuations of serials, which are forwarded immediately on publication.

Bookbinding in every style, Cheap and durable for library use. Dilapidated old binding skilfully repaired. Pamphlet binding at specially cheap rates.

Should you at present be without the services of a London Agency, MR. ALLEN would be pleased to answer any inquiries. All orders receive his personal attention, and with an experience of forty years in library business, and the thorough equipment of his agency, he believes himself capable of meeting every library requirement in a satisfactory manner.

**References permitted to first-class Libraries.**

**Special terms for large orders.**

**FOUNDED IN 1856.**

# Bibliographic Publications.

For all American books as they appear, take **THE PUBLISHERS' WEEKLY**; for an hour's glance each month at the important books and magazine papers, take **LITERARY NEWS**; for library matters take **THE LIBRARY JOURNAL**; for magazine articles in general, consult **THE ANNUAL LITERARY INDEX**; for books in print or issued of late years, see **THE AMERICAN AND ANNUAL CATALOGUES**.

**THE PUBLISHERS' WEEKLY.** Established in 1872, with which was incorporated the *American Literary Gazette and Publishers' Circular* (established in 1852.) Recognized as the representative of the publishing and bookselling interests in the United States. Contains full weekly record of American publications, with monthly cumulative indexes, etc. Subscription, \$3.00 a year, postpaid; to foreign countries, postpaid, \$4.00 a year; single numbers, 10 cents, postpaid.

**THE LIBRARY JOURNAL.** Official Organ of the American Library Association. Chiefly devoted to library economy and bibliography. Established in 1876. Published monthly. Subscription, \$5.00 a year, postpaid; single numbers, 50 cents. Price to Europe, or other countries in the Union, 20s a year; single numbers, 2s. (*LITERARY NEWS is sent free to subscribers of THE LIBRARY JOURNAL.*) Teachers may be interested in the "School Number" published in the spring of each year.

**GENERAL INDEX TO THE LIBRARY JOURNAL,** vols. 1-22, 1876-1897. Arranged to serve as an index to succeeding volumes or for other sources of professional information. 4°, in sheets, or paper binding, \$2.50; A. L. A. half leather, \$3.00.

**LITERARY NEWS.** A Monthly Journal of Current Literature. Contains the freshest news concerning books and authors; lists of new publications; reviews and critical comments; characteristic extracts; sketches and anecdotes of authors; bibliographical references; prominent topics of the magazines; portraits of authors, and illustrations from the newest books, etc., etc. Subscription, \$1.00 a year, postpaid; single numbers, 10 cents.

**THE AMERICAN CATALOGUE** of books in print and for sale July 1, 1876, compiled under the direction of F. LEYFOLDT, and its supplements, 1876-84, 1884-90, 1890-95, and 1895-1900, compiled under the editorial direction of R. R. BOWKER, aims to present all the bibliographical features of the books in the American market, arranged in the first part alphabetically by both *authors and titles*, and in the second part alphabetically by *subjects*.

The Catalogue and its supplementary volumes form the only approximately complete guide in existence to the American books of the day, so arranged as to make reference easy from whatever direction the inquiry may come, whether from that of the author, or the title, or the subject. It not only furnishes the desired information about any particular book of which the consulter is in search, but shows what others there are by the same author or on the same subject in which he is interested. To the bookseller, therefore, it is valuable both in filling orders and in stimulating business; to the librarian, in supplying gaps and proportioning his collection; and to all who are practically concerned with books, in furnishing information which nowhere else is obtainable by so convenient a method, if obtainable at all.

The author-and-title volume of the 1876 volume is out of print. A limited number of the subject volume may be had in half leather binding at \$15.

The volume covering the period 1876-84 is also out of print.

- , 1884-90, 4°, hf. mor., \$25. (1 copy only remains.)
- , 1890-95, 4°, hf. mor., \$15.
- , 1895-1900, 4°, hf. mor., \$15.00; sheets, \$12.50.

## THE ANNUAL AMERICAN CATALOGUE.

Being the full titles, with descriptive notes, of all books recorded in **THE PUBLISHERS' WEEKLY** during the calendar year, with author, title, and subject index, publishers' annual lists and directory of publishers. Published annually since 1886. 8vo, sheets, *net*, \$3.00; half morocco, \$3.50.

**THE ANNUAL LITERARY INDEX**, including Periodicals, American and English; Essays, Book-Chapters, etc., with Author-Index, Bibliographies, Necrology and Index to Dates of Principal Events. Edited, with the cooperation of members of the American Library Association and of *The Library Journal* staff, by W. I. FLETCHER and R. R. BOWKER. 8°, cloth, \$3.50.

**THE PUBLISHERS' TRADE LIST ANNUAL.** Contains: The latest catalogues of nearly 200 American publishers, contributed by themselves and arranged alphabetically by the firm-names and smaller lists at the end of the volume. These lists, all bound in one volume arranged alphabetically for ready reference, with marginal index, guiding the finger at once to the right letter, present in their combination so convenient and time-saving a working-tool as to make it indispensable to every one who has any interest in the purchase or sale of books. Large 8vo, with "Duplex Index," cloth, *net*, \$2.00.

**THE AMERICAN EDUCATIONAL CATALOGUE.** Contains a price-list of all the text-books in use in the United States, arranged alphabetically by author's or editor's name, and a detailed subject-index, referring from each specific subject to authors of books on that subject. 8vo, leatherette, 50 cents.

**THE ENGLISH CATALOGUE** [Annual] giving full titles classified under author and subject in one strict alphabet, with particulars of the size, price, month of publication, and name of publisher of the books issued in Great Britain and Ireland, in the calendar year, being a continuation of the "London" and "British" Catalogues. [London: Sampson Low, Marston & Co.] 8vo, paper, *net*, \$1.50. **THE ENGLISH CATALOGUE and THE ANNUAL AMERICAN CATALOGUE** bound in one volume, half leather, \$5.00.

**PUBLICATIONS OF SOCIETIES:** a provisional list of the publications of American scientific, literary, and other societies from their organization. Compiled under the editorial direction of R. R. BOWKER. Schedules over 1100 societies issuing publications, and gives title-entries of all their publications, as far as data could be obtained from the societies and from libraries. 4°, paper, \$2.50; cloth, \$3.00.

**STATE PUBLICATIONS:** a provisional list of the official publications of the several States of the United States from their organization. Compiled under the editorial direction of R. R. BOWKER. Pt. 1: New England States—Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut. 4°, \$2.00. (For complete work, \$5.00.)

**LIST OF AMERICAN PUBLISHERS, 1890-1895.** The street address is given in nearly every case, and the abbreviation under which the firm's books are entered in the "American Catalogue," 1890-95. 4to, pap., \$2.00.

**UNITED STATES GOVERNMENT PUBLICATIONS.** July 1, 1890 to June 30, 1895. Compiled, under the editorial direction of R. R. BOWKER, by J. H. HICKCOX. 60 pp., 4to, pap., \$1.50.

**THE SUNDAY-SCHOOL LIBRARY.** By Rev. A. E. DUNNING. 16mo, cloth, 60 cents.

**THE PROFESSION OF BOOKSELLING:** a handbook of practical hints for the apprentice and bookseller. By A. GROWLL, managing editor of **THE PUBLISHERS' WEEKLY**, and author of "A Bookseller's Library." "Book-trade Bibliography in the United States in the XIXth Century," etc. Pts. 1 and 2. 134 p. Large 8°, hds., each, \$2.00. (*Concluding part in preparation.*)

Address the **OFFICE OF THE PUBLISHERS' WEEKLY,**

P. O. Box 943.

298 Broadway, New York.

# CARD INDEXING ON THE

## REMINGTON

### COMPTROLLER'S OFFICE,

State of New York, Albany, October 28, 1897.

"This office had occasion to use the Remington Typewriter for writing over 40,000 library cards in indexing Revolutionary Manuscripts, and it gave perfect satisfaction."

Wm. J. Morgan, Deputy Comptroller.

The Remington machine equipped with special card cylinder is endorsed by leading dealers in library supplies, and is in growing and successful use by many of the largest business concerns.

Wyckoff, Seamans  
& Benedict,

#327 Broadway,  
New York.

## Strong Features

of our LIBRARY DEPARTMENT are

1. **OUR EXPERIENCE**, extending over many years and fitting us to supply ready information with regard to Authors, Publishers, Titles, Editions, and Bindings.
2. **THE STOCK** to which we have access, comprising more of the standard and worthy publications of English and American houses than can be found elsewhere in the United States.
3. **OUR SPECIALTY** of finding and importing **RARE BOOKS**—duty free—for Libraries.
4. **PROMPTNESS** in filling orders, and **Satisfactory Prices**.

THE LIBRARY DEPARTMENT

**A. C. McCLURG & CO., : : Chicago**

 Hayden, Virginia Genealogies.  
**Librarian, Univ. of Wisconsin, Madison, Wis.**  
 Poor's Manual of Railroads, vols. for 1868-69, 1869-70, 1870-71, 1871-72, 1896, 1897, 1898, 1899, and 1900.

## SITUATIONS WANTED.

**YOUNG WOMAN**, having had experience in small library, desires position. Has taken short course in library economy, worked with Dewey system, has good education. Good references. Address F. G., care of LIBRARY JOURNAL.

**YOUNG WOMAN**, thoroughly acquainted with latest library methods, an experienced organizer (Dewey Decimal Classification) and now librarian in Western library, would like position in South or East. References. Address H., care of LIBRARY JOURNAL.

**WANTED.**—Librarian (young man) of nine years' experience in a small library, now numbering 8000 volumes, using the Dewey Decimal Classification, desires a position in a larger library offering opportunities for advancement. Address F. W. H., care of LIBRARY JOURNAL.

**WANTED.**—A lady with nine years' experience in a small library, three years as librarian, desires position as librarian or assistant in a larger library. Can hold present position longer if she desires to, but is anxious to change. Good references. Address B. H., care of LIBRARY JOURNAL.

## SPECIAL NOTICES.

**CHARLES ALEXANDER NELSON**, Library Expert and Consulting Librarian. Seven years at the Astor Library; Ex-Assistant Librarian of the Newberry Library, Chicago; since 1892 Deputy and Reference Librarian at Columbia University Library, New York City. Open to a library or other engagement. Address COLUMBIA UNIVERSITY LIBRARY, New York City.

# HENRY MALKAN,

## Library Department.

**L**IBRARIANS! Are you aware of the fact that we can supply you with Books in all Departments of Literature at the lowest prices ever given libraries? If you are in a hurry to have your order filled and cannot wait to get quotations, we will take your order on condition of furnishing every book at the right price, and will take back any book which proves unsatisfactory from any cause whatsoever. This is an offer without a precedent in the annals of bookselling, and one which clearly proves the enterprise and aggressiveness back of our Library Department. To substantiate our claim of selling lower than any other house, we mention the following bargains:

**Encyclopædia Britannica.** 9th Edinburgh Edition, with 4 vols. of American Supplement. Making 29 vols. Full sheep. In Fine Condition. Pub. at \$200.00. Our net price, \$77.50.

**Chambers' Encyclopædia.** Latest Revised Edition. Pub. at \$40.00 *net*. Our net price, \$24.50.

We have lots of other Encyclopædia and Subscription Books which we can furnish equally low.

The following list of books, in the original edition, listing at \$1.25 and \$1.50 each, we can furnish for 45 cents per copy:

“Philip Winwood,” “Continental Dragoon,” “Amateur Cracksman,” “Dead Men Tell No Tales,” “Edward Barry,” “Trooper Galahad,” “Rough Riders” (\$2.00 Edition), “Art of Entertaining,” and a good many other titles.

A trial order will convince the most skeptical that we are in a position to furnish books at prices never before quoted. Send lists for quotation.

---

## HENRY MALKAN,

I WILLIAM AND 67 STONE STREETS, NEW YORK.

TELEPHONE 5121 BROAD.

ESTATE  
GUSTAV E. STECHERT.

BOOKS AND PERIODICALS.

ALFRED HAFNER.

## G. E. STECHERT.

The **only Importers** in America who employ **no Agents**, but have their **own** offices at :

LONDON: . . . . . 2 Star Yard, Carey St., W. C.  
PARIS: . . . . . 76 Rue de Rennes.  
LEIPZIG: . . . . . Hospital Str. 10.

where experienced clerks and assistants attend carefully to the orders from New York.

That such orders can be filled **better, cheaper** and **quicker** and with less trouble and work to the Librarian, than if the books were ordered from European Agents, a trial order will convince.

We carry in New York a very large and well selected stock of **German Books**, always including a number of copies each of the latest important works, and thus we are enabled to fill at once a large part of the orders that daily come to us.

**French Books** supplied with equal promptness, and when it is desired they will be bound abroad in any style at very low rates.

**Books published in England** imported duty free for libraries upon the shortest notice.

**Rare Books** searched for with greatest care and orders kept on file until the books are found.

**New York Auctions** regularly attended; bids solicited.

We have on hand many complete and partial sets of **Foreign Periodicals** at prices generally below those charged by the dealers in Europe.

**1856—1901.**

# THE LIBRARY JOURNAL

VOL. 26.

SEPTEMBER, 1901.

No. 9

THE science of library statistics is beginning to have enough statistics, in continuity of record, to be of value in reaching results. The United States Bureau of Education has been giving attention yearly or biennially to the statistics of libraries since 1870, and in the new report of the commissioner for 1899-1900, now in course of issue, the library record is brought up to 1900, the century year, with a schedule of 5383 public, society and school libraries having 1000 volumes and over. There is a graphic showing of the development of libraries in proportion to population in the past 25 years which tells a remarkable story. In 1875 there were, approximately, 11,000,000 volumes in the libraries and 43,000,000 population, or about one volume to four persons; in 1900 there were 45,000,000 volumes to 76,000,000 population, or one volume to less than two persons. The picture table, showing growth in the semblance of volumes, shows as fat a volume for the additions of 1895-1900 (11,539,979) as for the total number of volumes in libraries (11,487,778) in 1875. The volume total is now 44,591,851, exactly four-fold that of 25 years ago. The report is summarized elsewhere, but as it is in itself a condensed statement it must be directly and carefully studied for full appreciation.

SOME other interesting statistics are presented in the *Library Bulletin* of the San Francisco Mechanics' Institute. These draw comparisons between public libraries and subscription libraries, to the considerable advantage of the latter in several respects, particularly the average daily circulation compared with number of volumes in the library, and the percentage of expense for salaries as against that for books and periodicals. The tables are not on "all fours" with each other, because in the case of the public libraries total expenditures are given, whereas in the subscription libraries only receipts from membership are shown in place of total expendi-

tures, the receipts from membership being in many cases less than the receipts from endowment funds. Nevertheless, the figures given are suggestive, and might well lead to discussion pro and con which should throw light on the interesting question whether the subscription library is doomed to disappear before the advance of the free public library, or whether it will hold its own as affording special privileges to its supporters.

THE present issue of the JOURNAL is in a measure a bibliographical number, and indeed the year promises to be notable throughout for bibliographic publication. Already its record includes the "American Catalogue, 1895-1900," the abridged "Poole," and the new "A. L. A. index"; and it is hoped that it may include the great evaluation work in American history, promoted by Mr. Iles and edited by Mr. Larned. Mr. Johnston's summary of the bibliographical undertakings now in process shows how widely this list will be extended in the immediate future, and is useful in fulfilling one of the first purposes of co-operation—that of preventing duplication of work by notifying workers of what is going on in their own field. Mr. Swem supplements Mr. Ferrell's word of what is as to national bibliography with some suggestions as to what should be in state and local bibliography. As is pointed out, every library may, if it will, do important work in preserving and presenting in available form the printed records of its state or town, and the value of these records in varied political and commercial activities is growing more and more evident. The New York Public Library has from the first publication of its monthly *Bulletin* made contributions of importance to state and city bibliography, and for the smaller libraries, lacking such collections and facilities, the example of the Kansas City Public Library, whose Missouri list marks commendable enterprise in this direction, might well be followed, in principle if not in detail.

## Communications.

### THE VICE-PRESIDENT OF N. E. A. LIBRARY SECTION — A CORRECTION.

THE name of the vice-president of the Library Section of the National Educational Association is Reuben Post Halleck, superintendent Boys' High School, Louisville, Ky., and not "Jallect," as was incorrectly printed in the report in July L. J.

H. L. ELMENDORF.

PUBLIC LIBRARY,  
Buffalo, N. Y.

### TRAVELLING LIBRARIES IN MONTANA.

PAGE 2 of the Montreal Conference Proceedings places Montana in the list of states having a travelling library system. We have nothing like it at all. We have an excellent law in our state giving each town permission to vote a tax for library — and nearly every county seat now has a good library started, and persons through the county may borrow from that library. In several small towns not county seats, energetic women are conducting public libraries, by membership fees, entertainments, etc.

LAURA E. HOWEY.

MONTANA HISTORICAL SOCIETY.

### DR. ELY AND BIBLIOGRAPHY.

THE attack made by Dr. Ely upon the system of book annotation at the Waukesha conference was of interest to me for three reasons: first, because I am much addicted to that form of literature myself; second, because I am interested in the book annotations of others, including those by Dr. Ely; and third, because the attack emanated from a representative university man — and it is from that source that Mr. Iles expects most assistance.

In consequence of Dr. Ely's remarks I have examined his bibliographic work and desire to make a few observations concerning it.

In his "Socialism and social reform," New York, 1894, there is a "Bibliography," pp. 399-442. This is a classified annotated list. In it appear such items as "Proudhon, Pierre Joseph, Œuvres complètes. 33 vol. Paris, Lacroix, 1868-1876. Of Proudhon's works, the most influential were: Qu'est-ce que la propriété?, 1848; Système des contradictions économiques, 1846; la révolution sociale, démontrée par le coup d'état, 1852. The doctrines of Proudhon may be regarded as the beginning of modern anarchy." Titles of translations are also added. In his "Introduction to political economy," new and revised edition, New York, 1901, on the other hand, the "Bibliography" consists of a bare list of titles, and the notes to Proudhon are, of course, left out.

Now, for my part, and I think that libra-

rians will agree with me, I prefer the former Ely to the latter. The fault I found with his work of 1894 was that he didn't take me far enough. For example, he named the lives of Robert Owen by Booth, 1869, and by Jones, 1892; he further said that Booth, while not an adherent, was sympathetic and fair-minded; but regarding Jones he gave nothing beyond the date to show why he included that in the list in addition to Booth, or in place of the other lives of Owen by Sargent, Holyoake or Packard. In short, I am discontented because he did not give me some such bibliographical assistance as Leslie Stephen does in the "Dictionary of national biography." I should not, however, complain of Dr. Ely on this score, because he did then, perhaps, all that he could do and do well.

But when I take up his later work I am disposed to complain and complain loudly. His list of references — for it is not in any proper sense a bibliography — carries me only a little way; nay, worse, it carries me into the midst of difficulties, and then leaves me to extricate myself. In fine, the bibliographic work which he now refuses to do I have to do myself.

Annotations of books on political economy were a necessity to Dr. Ely a decade ago; they are a necessity to the majority of people to-day and always will be. Dr. Ely passed through the bibliographic stage in his study of political economy, he has become an authority himself and does not require information regarding authorities other than himself. But most of us have nothing in ourselves by which to judge of a work in political economy; we have to accept the judgment of others and we wish that judgment to be expressed briefly and clearly, that is, we desire that the description of the book shall not be confused with an account of personal experiences or a discussion of the subject of the book or of some phase or phases of it. We desire, general readers and bibliographers alike, that a distinction shall be made between bibliographical criticism and literary or historical or biological or other criticism. What was good for Dr. Ely a decade ago is good for others now, and is, indeed, good for all time. We will not abolish the Ely of 1894, but we will improve him. And how?

Not by depending upon the teacher of Latin or history or sociology, but by developing scientific professional bibliographers, and by encouraging the specialist among librarians and the libraries with specialties. It is not the man with a text-book, but the man with a library who is to lead us in the path of knowledge. The responsibility of the teacher is great, but the responsibility of the librarian, he who must both provide and direct, who shall measure it?

W. DAWSON JOHNSTON.

LIBRARY OF CONGRESS,  
Division of Bibliography.

## THE PUBLIC DOCUMENTS OF THE UNITED STATES.\*

BY L. C. FERRELL, *Superintendent of Documents.*

THE public documents of our government date from the first Continental Congress, in 1774. In 1833 a contract was made with a publishing company in Washington for the publication of the Documentary History of the American Revolution. The work was to comprise six series, "consisting of a collection of authentic records, state papers, debates and letters, and other notices of public affairs, the whole forming a documentary history of the origin and progress of the North American colonies, of the causes and accomplishment of the American Revolution, and of the constitution of government for the United States to the final ratification thereof, covering the period from the discovery and settlement of North America to the ratification of the Constitution of the United States."

The fourth series, in six volumes, and a portion of the fifth series, in three volumes, were the only portions of the work that were published. They were issued under the title "American archives."

Of the documents covering the period 1774 to 1789, there are nearly 300 bound volumes of manuscripts filed in the State Department. They are rich in historical matter that has not only never been printed, but which few living men have examined. I would like to suggest to the librarians of the country that they should make a united effort to get Congress to take up and finish the great work of publishing the Documentary History of the American Revolution on the lines laid down in the Act of 1833. Most of the material is ready at hand in these two or three hundred bound volumes of manuscripts in the files of the State Department.

From the establishment of the government, under its present form in 1789 to 1817, documents were printed without any system, documents and reports being bound up together indiscriminately under the general designation of "American state papers." But many documents were not printed at all, and others that were printed have been either lost or destroyed by fire. The most complete set of

these early documents was printed 1833-1861, in 38 folio volumes known as "American state papers." They are largely reprints from the original editions, but many of them were printed from the manuscript files of Congress and the State Department.

No one knows what constitutes a complete set of United States public documents covering the period 1789-1817, and there is no complete set in any library, so far as I can learn, of those known to have been printed. General A. W. Greeley, chief signal officer of the government, is probably better informed concerning these documents than anybody, as he has been engaged for some years in compiling a bibliographical list of the documents of the early Congresses. The results of his labor will soon appear as Senate Document, vol. 36, 56th Congress, first session.

It is a great misfortune that we have no complete file of the public documents of our country covering the most interesting period in its history. The establishment of a republican form of government, on the lines of the Declaration of Independence and of the Constitution, was deemed absolutely impossible, not only by the wisest men of Europe, but also by many eminent men in America. The eyes of the world were upon us; those who believed in despotism and monarchical governments hoping we would fail, while the down-trodden, liberty-loving people the world over were praying for our success. The greatest documents of all the ages were to be either the subject of ridicule by kings and courts, or they were to serve for all time as models upon which nations unborn shall be established. I say that it is a great misfortune that every scrap of every document of this period when our fathers were building the greatest nation in the world's history should not have been preserved and printed, so that the students of all countries might be able to read how the untried problem of free government was solved.

It was not until the beginning of the 15th Congress that Congress began the systematic numbering of reports and documents. The plan then devised has continued up to the present time, with comparatively few changes.

\* Read before District of Columbia Library Association, April 17, 1901.

Some years ago Dr. Ames, chief of the Division of Documents, Department of the Interior, devised a system for designating congressional numbered documents by serial numbers. His "Checklist" has been of great assistance to librarians. Serial numbers have been applied only to documents of the 15th and succeeding Congresses. A second edition of the "Checklist" was published in 1895 by Mr. Crandall, in which the serial numbers feature is retained and enlarged upon.

Since the 15th Congress about 4000 volumes have been published in the sheepbound congressional set.

Many librarians have told me that life is too short for them to attempt to unravel the public documents puzzle. I think they have overestimated the difficulties of the task. However, the public documents scheme is a labyrinth of mysteries, and I do not know anybody who is able to explain some of the practices that have, like Topsy, "just growed." I cannot, within the scope of this short paper, do more than to refer in a general way to the present methods of printing, binding and distribution of the public documents of the United States.

Congress has construed the term "public document" to mean any document printed upon the order of Congress, or of either house thereof. As a matter of fact, however, all printing for the government is done directly or indirectly upon the order of Congress. A broader construction is, therefore, given by bibliographers, and the term is very generally understood to mean that any printing done for the government that is for the information of the public, whether for gratuitous distribution or for sale, is a public document.

Prior to 1895 there were three series of documents in addition to the journals and the *Congressional Record*. These were: Executive documents, miscellaneous documents, and reports. There are now but two series — documents and reports.

Printing for the government may be ordered in the following manner:

First: In pursuance of a general law.

Second: By joint or concurrent resolution of Congress or by resolution of either house.

Third: By the requisition of the head of a department or office.

The annual reports of the executive departments, the reports of important bureaus

and independent offices, and certain statistical and scientific compilations are included in the first class. These are the government periodicals.

Anything that Congress may see proper to print is included in the second class. The annual reports of the several departments and other periodicals are, as stated, printed under the general law, but sometimes extra copies are ordered to be printed by resolution. The following are examples of some of the special publications ordered by resolution of Congress: The messages and papers of the Presidents; a revision of Wharton's "Digest of the international law of the United States"; Moore's "History and digest of the international arbitrations to which the United States has been a party," and the like. A chapter of the Bible, one of Shakespeare's plays, a poem, or anything else may be ordered printed as a document. A few years ago the history of an excursion trip taken by the members of the Pan-American Congress was printed as a document. Perhaps the greatest document ever printed by any government has just been completed by the War Records Office. Its preparation was begun about 20 years ago under a special resolution of Congress. I refer to the official records of the Union and Confederate armies in the War of the Rebellion. The set comprises 128 volumes, an index and three volumes of atlases.

Whenever any document or report is printed periodically, under a general law, or is ordered specially by Congress, what is known as the "usual number" is printed in addition to the special number named in the act or resolution, unless it has previously been printed or the law states specifically that it shall not be printed. The usual number is fixed by law at 1682 copies. So that, if 5000 copies are ordered, the actual number printed will be 6682.

The usual number was devised to provide with certainty for the regular distribution of documents to state and territorial libraries, institutions designated by members of Congress, the libraries of the two houses, the Library of Congress and its foreign exchanges, and for the immediate use of Senators and Representatives.

Congressional numbers are assigned to documents printed in the usual number only, consequently the congressional series is limited

to 1682 copies. The sheepbound congressional numbered set is limited to 582 copies, the remainder of the usual number, 1100 copies, not being bound at all except upon special orders of officers and members of Congress.

For convenience, the Documents Office has classified all documents not bearing Congressional numbers as the "Departmental series," and those bearing Congressional numbers as the "Congressional series." Some librarians designate the former as the cloth-bound set, and the latter as the sheepbound set. Neither of these classifications is correct. In the first place, but a fraction of the documents printed upon the order of Congress bear the Congressional number, and in the second place many documents not bearing Congressional numbers are bound in sheep.

The annual appropriation for printing and binding is made in a lump sum, and is apportioned among the several departments and offices. The head of a department may order anything printed he chooses within the limit of his allotment. As a rule, however, no more than 1000 copies of any one document may be printed. The exception to the rule is the publications of the Department of Agriculture.

The report of the census of Cuba, the census of Porto Rico, the bulletins of the Department of Agriculture, the publications of the Military Information Division, War Department, and the like, are examples of documents of the third class.

Documents printed upon the requisition of the head of a department, if bound at all, are usually bound in cloth, the exception being documents of a legal character, such as Decisions of the Treasury Department, Wharton's Digest, Decisions of the Comptroller of the Treasury, and the like.

One thing that has always perplexed librarians is the varying titles that appear on the backs of bound volumes of the public documents. Before the "Message and documents" series was discontinued certain periodicals were issued in four editions, each having the same text but bearing four entirely different endorsements on the backs. Such cases are limited to a few important bureau publications, however. They occur in the following manner: The head of a bureau publishes his report; it is subsequently issued as a part of

the departmental report, which, in turn, is printed as a Congressional numbered document, and is finally included in the "Message and document" series. Each of these four editions are printed from the same plates, the headings and titles being changed to suit the case.

It is needless to say that these complications make the work of the cataloger very difficult, and that the work of cataloging government publications is very largely increased.

Besides the increased work and increase in the cost of preparing the government catalogs, caused by the several editions of the same document under different titles, there is great waste in the distribution of such documents by duplication. For instance, a librarian may desire the report of the Bureau of Education, the reports of the Department of the Interior, and a set of Congressional documents. If he succeeds in obtaining copies of each he will have, in the lot, three copies of the Education Report, each title differing from the other.

No good reason has ever been given, so far as I know, why this method, or lack of method, should be continued. Dr. Ames, chief of the Document Division, Department of the Interior, tried for 25 years to get the law amended; Mr. Crandall, while Superintendent of Documents, did all he could to bring about a reform in the binding and titling of documents, and, as his successor, I have tried to do the same. Neither Mr. Crandall nor myself have been able to accomplish much in that direction. Dr. Ames is entitled to the larger share of the credit for the law of Jan. 12, 1895, which insures the permanent publication of catalogs of government publications, and more than doubled the number of documents to be regularly distributed to designated depositories. The gratuitous distribution to these institutions now aggregate 500 volumes of books a year to each library.

It is scarcely credible that the United States Government was more than 100 years old before any permanent provision was made for properly cataloging its publications. The printing act of 1895 makes it the duty of the Superintendent of Documents to prepare and publish three catalogs, each serving a particular purpose. The monthly is intended for immediate use, and is required to show where

and how documents may be obtained and the prices of those available for sale. The edition of 2000 copies is so small, however, as to largely defeat the object of its publication. The annual catalog is officially known as the "Comprehensive index," but it is published under the title of "Document catalogue." It is a simple dictionary catalog; a volume contains entries of all documents printed by the government during a fiscal year, with the exception of Congressional documents which are all included in the volume covering the fiscal year in which the session begins, notwithstanding the session may continue beyond the close of the fiscal year. The "Consolidated index" is published under the title "Document index," and contains a list of Congressional documents and reports ordered printed during a session. The list is arranged alphabetically by subject, author and

title. The number of the document or report is given, together with the number of the volume in which it is bound. Librarians may ascertain with certainty from the "Document index" the documents and reports that will appear from time to time in the sheep-bound Congressional set.

The greatest reform in the printing laws was the provision requiring the publication of these catalogs. It is to be hoped that Congress will, ere long, grant us a reform in the binding and titling of documents, so that each and every copy of a document or report will be bound uniformly, in a suitable color, and bear the same title on the back; also, that the number of independent distributing agencies will be decreased, thus insuring economy in distribution, and preventing duplication. Toward these improvements the influence of librarians may well be urged.

#### PRESENT BIBLIOGRAPHICAL UNDERTAKINGS IN THE UNITED STATES.

BY W. DAWSON JOHNSTON, *Library of Congress, Washington, D. C.*

It is the wish of the librarian that the Division of Bibliography in the Library of Congress shall supply bibliographers throughout the country with necessary bibliographic information. For this reason the following tentative survey of present bibliographic undertakings in the United States, based upon information received from the various bibliographers, has been drawn up.

The Division hopes to receive further information regarding bibliographic work throughout the United States, both regarding work in progress and work already completed but still unpublished. When full information has been received an official report upon unpublished bibliographical work will be made.

The object of this preliminary paper and of the projected report is to avoid duplication of bibliographical work—the duplication of work which has been already done or is being done. It will supplement the Division's projected report upon printed bibliographies.

The most important bibliographic undertaking at present is the compilation of a descriptive catalog of the library of Mr. Ed-

ward E. Ayer, of Chicago. This will be in effect a bibliography of the American Indians, and will be as large as Winsor's "Narrative and critical history of the United States." Full title pages are to be given, with exact collations of some 15,000 or 16,000 items. There are to be biographical, historical, critical and bibliographical notes, historical and bibliographical references and a chronological and subject index, with reproductions of 700 or 800 title pages of the most important nuggets and of a few rare maps. Among those preparing notes are Messrs. F. W. Hodge, James Mooney and W. H. Dall, of Washington; Mr. R. G. Thwaites, of Madison; Mr. George Parker Winship, of Providence; Mr. Wilberforce Eames, of the Lenox Library, Mr. Lindsay Swift, of the Boston Public Library; Mr. Alexander Brown, of Virginia; Mr. C. F. Lummis, of California; Mr. Thomas McAdoy Owen, of Alabama; Professors Garrison and Bugbee, of the University of Texas; Miss Francis F. Victor, of Oregon, and Mr. A. J. Rudolph, of the Newberry Library.

The most interesting enterprises to the mere bibliophile are those of Mr. John Thom-

son and of Mr. Sidney Lee. Mr. Thomson's list of incunabula in American libraries is in progress. The Bibliographical Society of Chicago will contribute to it a list of local incunabula. In his census of extant copies of the Shakespeare first folio Mr. Lee has sent to all owners of the first folio a circular containing a schedule of particulars of the first folio, with a collation, mainly from Lowndes's "Bibliographer's manual." The results of this census are to be published with the Clarendon Press facsimile in the autumn of 1902. Mr. Lee is being assisted in the American census by Miss M. E. Blatchford, of Cambridge, and Mr. W. H. Fleming, of New York.

Of greatest interest to librarians is the "Handbook of American libraries," now almost completed. It has been edited by Mr. Frederick J. Teggart, of San Francisco, and will be published for the American Library Association. It is intended to contain in addition to library statistics a list of all publications of libraries, and of all books and articles concerning them.

In the principal centers of bibliographical activity the following work is in hand. In Washington, in the Library of Congress, the Division of Bibliography has in preparation lists of books and magazine articles upon Alaska, British Columbia, the Philippines, proportional representation, irrigation, the negro question, state and local archives, sugar bounties, postal affairs, land tenure in the east, municipal ownership, special bibliographies in the Library of Congress, and new editions of the lists upon Hawaii and Cuba; the Periodical Division is supplementing the list of bound files of newspapers of the United States in the library by a list of foreign newspapers in the library; the Document Division is preparing a list of the serial publications of foreign governments; the Division of Maps, a list of all the atlases in the library. Mr. P. Lee Phillips is making, for the Bureau of American Republics, a list of books, magazine articles, and maps relating to Central America, as well as a list relating to Chili. Mr. Hugh Morrison, Jr., is at work on a bibliography of American almanacs of the 17th and 18th centuries; Mr. McKenzie, upon a list of American newspapers, with notes; Mr. Ritchie, upon a Lincoln bibliography, based upon the large Lincoln collection in the library; Mr. Jones,

upon a University of California bibliography; Mr. Neumann, upon a list of the leading dictionaries and grammars for the study of language; Mr. Jahr, with Mr. Strohm, of the Armour Institute, upon a list of articles on international bibliography, co-operative cataloging, and printed cards, to be published by the A. L. A.; Mr. Slade, upon a King Alfred bibliography; the present writer, upon a bibliographical account of American travels in England and studies in English literature and institutions, including contributions to a bibliography of Shakespeare and a bibliography of Irish literature.

In the library of the Department of Agriculture work is progressing upon bibliographies of irrigation, of tobacco, and of roads.

In the library of the Coast and Geodetic Survey, Mr. Burchard is preparing a bibliographic account of the Mason and Dixon state boundaries, comprising books, periodical literature, documents, letters and maps relating chiefly to the surveys of the boundaries of Delaware and of Pennsylvania.

In New York, the Public Library has in preparation a bibliography of the literature relating to the boundaries of the United States, a bibliography of the boundaries of the states of the United States, an index to United States documents relating to foreign affairs, and check lists of legislative proceedings of European countries and of government reports upon finance. Mr. R. R. Bowker has almost completed the second part of his list of state publications, the middle and middle west states. He has also in preparation a list of the publications of the national political parties. In this he has the assistance of William Potts, of Worthington C. Ford, and of the Library of Congress. Mr. M. H. Saville, of the American Museum of Natural History, has in press a work on the ruins of Mitla, containing an Oaxaca bibliography, referring especially to the Zapotec-Mixtec culture. Besides, he has been engaged for eight years on a Maya bibliography which he hopes to publish in the near future, and has collected materials for a bibliography of Mexican archæology which form a practically complete bibliography of the best-known ruins of Mexico. Mr. Elliott D. Curtis is engaged upon an Eliot bibliography, which is to include the eleven Eliot Tracts, with a comparison of their differences, other books by Eliot, in English, a

list of all letters written by him or documents to which his name is signed, and a list of all material relating to Eliot, biographical and historical. Mr. George Watson Cole's Bermuda bibliography now numbers 1052 titles, most of which are analyticals.

In Chicago, the Bibliographical Society has undertaken a card index to some 20 bibliographical serials, to be edited by Mr. Josephson and published by the American Library Association, and, with the Chicago Library Club, a list of serials in public libraries in Chicago and Evanston, under the direction of Mr. Andrews. Of the resident members of the society, Mr. Josephson is preparing a bibliography of New Sweden, also a list of bibliographies of serials and indexes to periodical literature; Mr. W. S. Merrill, a bibliography of general and national bibliographies; Mr. C. B. Roden, a bibliography of early Chicago imprints, and one of the Chicago fire; Mr. J. W. Thompson, a bibliography of Anglo-French relations in the 14th and 15th centuries; Mr. J. I. Wyer, a bibliography of current educational literature in English; Professor J. T. Hatfield, of Evanston, a bibliography of Wilhelm Müller; Miss Roper, a bibliography of national and international arbitration.

In Boston, in the Public Library, a list of Italian fiction is in press, and new lists of German and English fiction are in preparation. The most important work in hand, however, is a catalog of the Allen A. Brown library of music. This is expected to be the largest of the library's special catalogs. At Harvard, a list is being made of the English chap-books in the Boswell collection, including others to be found in the university library. At the Library Bureau Miss James and Miss Sargent are at work upon their index to library periodicals; and at the office of the Boston Book Company, Mr. Soule is preparing a new edition of his "Lawyer's reference manual of law books and citations."

At the New York State Library School, students have ready for the press lists on biographies relating to the Civil War, monopolies and trusts in America, 1895-99, the negro question, the single tax, history of the 16th century, Maine local history, Froebel and the kindergarten, the Pre-Raphaelites, and Russian realists, and a reading list for the children's librarian: they have in prepara-

tion lists on glaciers, missions, the sweating system, Florence, Scotland, municipal buildings, art in the public schools, household economics, Justin Winsor, a select list of books on ethics, a list of maps of New York state previous to 1775, a select list of periodicals, classified and annotated, and a classified list of articles on education in non-professional magazines for the past 20 years. Mrs. Fairchild is working upon a bibliography of R. W. Emerson; Mr. Judson Jennings, upon a bibliography of Albany.

The following work is being done in local bibliography in different parts of the country, in addition to that already mentioned: Thomas L. Bradford, of Philadelphia, is compiling a bibliography of state, county and town histories that have been published in the United States. Materials for a New Hampshire bibliography are being gathered by the state librarian. Mr. Clarence S. Brigham, librarian of the Rhode Island Historical Society, has compiled a list of between 1500 and 2000 titles on Rhode Island history. Miss Mabel E. Emerson, of the Providence Public Library, is preparing a bibliography of Rhode Island Indians. Mr. Fred A. Arnold, of the same city, is working upon the early Providence printers. Mr. Bernard C. Steiner of the Enoch Pratt Free Library, Baltimore, has a collection of materials upon Maryland bibliography amounting to about 4000 titles. Professor H. B. Adams at the time of his death had in preparation a bibliographical account of Johns Hopkins University's contributions to historical literature, including books and magazine articles written by members of the university. Mr. Stephen B. Weeks continues to add to his "Bibliography of North Carolina," a catalog of all books, pamphlets, and magazine articles of importance published by or about North Carolinians or North Carolina, with collations and sketches of authors, and has nearly ready for the press an index to the North Carolina Colonial and State Records, 20 volumes, 1886-1901. Mr. A. V. Goodpasture, of Nashville, has taken up the Tennessee bibliography, relinquished by Mr. J. W. Caldwell. Mr. William Beer, of New Orleans, continues to work upon his Louisiana bibliography; Mr. H. M. Utley, of the Detroit Public Library, upon his Michigan bibliography. Mr. Henry E. Legler, of Milwaukee, is making a bibliography

of Wisconsin writers of verse. Mr. Francis D. Tandy, formerly of the Denver Public Library, has a check list of all the territorial and state documents of Colorado. The Library Association of California has in preparation a bibliography of California.

Among special bibliographies, in addition to those already mentioned, are an "Annotated bibliography of American history," edited by Mr. J. N. Larned and to be published by the American Library Association. The work on this is being done by some forty experts connected with different libraries and universities, and will embrace over 3000 items. Mr. Stephen B. Weeks is collecting material for a bibliography of the Confederate Press. Mr. J. M. Callahan is preparing a bibliography of the Confederate States, including official literature, general literature, pamphlets, speeches, etc., relating to the social, civil, and diplomatic history. Professor Callahan also has in hand a bibliography of the diplomatic history of the United States. Mr. Charles T. Harbeck, of Islip, New York,

has some 1200 titles relating to the navy of the United States, supplementing the catalog of works by American naval authors, compiled by Lieut. Lucien Young. The Federation of Graduate Clubs is keeping a list of thesis subjects, chosen by candidates for the Ph.D. degree in different American universities. The Cornell University Library is preparing a catalog of the works on superstition and persecution in the White Historical Library. Mr. E. C. Frost is making a catalog of the valuable Shakespearean Library of Mr. Marsden J. Perry, of Providence. Professor L. H. Bailey, of Cornell, expects to publish a complete bibliography of American horticultural literature, as a supplement to volume 4 of his "Cyclopedia of American horticulture." The unpublished material of Mr. J. C. Pilling, of the American Bureau of Ethnology, is in the custody of Mr. G. P. Winship, who has in hand a bibliography of Mexican languages. Mr. H. F. Legler is working upon a bibliography of James Gates Percival; Mr. Beer, upon voodooism.

#### STATE AND LOCAL BIBLIOGRAPHY.\*

By EARL G. SWEM, *Public Documents Library, Washington, D. C.*

THE expression "state bibliography" as here used means the inspection and cataloging, with necessary annotation, of the following: all literature, whether published separately or in periodicals, which has for its subject the history or the geography of the state, using the terms "history" and "geography" with the broadest signification. Subdivisions may be made as follows:

a. Literature of natives of the state and of those native elsewhere who resided in the state at the date of publication of their literary productions. The native authors are listed primarily to show the development and strength of the literary spirit within the state. We have then one specific feature of the social life of the state as subject of this division.

b. Literature, including newspapers, published in the state by residents. Newspaper and book production, one of the many elements of the commercial life of the state, is the subject here.

c. Publications about the state, written by non-residents. The state in general is the subject.

d. Literature of which the state or some smaller political division is the author, *i. e.*, official documents. Not only must the state be considered the author of official publications, but also the subject; such literature is the state's autobiography. The state in general, or some specific form of the state's life, being the subject of all four divisions, we combine them and form one class, the description of the literature of which we call state bibliography.

Mr. P. G. Thomson in the preface to his "Bibliography of Ohio," published in 1880, makes the following statement: "Three state bibliographies only have been issued in book form, *viz.*: Massachusetts by Jeremiah Colburn, Rhode Island by J. R. Bartlett, and Minnesota by J. F. Williams; six have been published in other works, *viz.*: Wisconsin by D. S. Durrie in the *Historical Magazine*, New Hampshire in Norton's *Literary Letter*, Maryland in the *Historical Magazine*, Maine by Wm. Willis in the *Historical Magazine*, Maine

\* Read before the District of Columbia Library Association, March 13, 1901.

in Norton's *Literary Letter*, and Vermont by M. D. Gilman in the *Argus and Patriot* of Montpelier, Vermont." This represents approximately the condition of state bibliography 20 years ago. Concerning this subject, G. W. Cole, in his article, "American bibliography, general and local" (*LIBRARY JOURNAL*, v. 19, p. 5), says: One is surprised in looking over Ford's "Check list of bibliographies, catalogs, reference lists, and lists of authorities of American books and subjects" to find how little has actually been done and what a small share of that which is already accomplished is worthy of commendation. It is refreshing to find among these efforts some examples that are worthy of praise, such for example, as Hildeburn's "Issues of the Pennsylvania press," Bartlett's "Bibliography of Rhode Island," and Thomson's "Bibliography of Ohio." This article includes a brief survey of the work of Norton, Colburn, Perkins, Griffin, Winsor, and Sabin. The most typical and most comprehensive of the state bibliographies, in addition to those named, are Williamson's Maine, Raines' Texas, Owen's Alabama, Owen's Mississippi, Gilman's Vermont, Weeks' North Carolina. The works covering a narrower field of state life are more numerous. The best types are Hildeburn's "Issues of the press in Pennsylvania, 1685-1784," and Bates' "Connecticut statute laws."

In the middle west the period of organized state government has been so short that the opportunity for bibliographical work, while much of the material is accessible, seems unusually good. A bibliography of Iowa or of South Dakota, as nearly complete as a compiler can hope to have any bibliographical work, would be much more feasible than a similar comprehensive work of Massachusetts or of Virginia. The discussion of the bibliography of these midland states is especially opportune from the fact of the extensive preparations already made for the exposition celebrating the centennial of the Louisiana Purchase, to be held in 1903. If we are to believe newspaper accounts, sixteen millions of dollars have already been subscribed for the expenses. This, with the experience gained from the Columbian Exposition, will be sufficient to create an exposition more elaborate than any heretofore on the continent. In what way, more satis-

factory to state pride, could one of the Louisiana states spend a part of its appropriation for this exposition, than in preparing a bibliography, which would show not only the growth of the literary spirit in the state, but also the advance in agriculture, in commerce, and in all the activities that make up the life of the state? At the World's Columbian Exposition several of the states exhibited collections of books of native authors. Some bibliographical work was accomplished in connection with these collections. Wisconsin, with its usual vigor in library and literary matters, prepared for the exposition a bibliography of Wisconsin authors. The suggestion here made is, then, not new, nor too fanciful. If the work for the whole field would seem to be too expensive and altogether too ambitious, at least one of the special phases of a more comprehensive work might be undertaken and completed. The fact that the history of each state of the Louisiana Purchase overlaps that of its neighbors, reduces the bibliographical problem considerably. Work for all of these states, if planned and guided at a central bureau, could probably never again be so easily and so thoroughly done. Co-operation among librarians, scientific and historical students, would of course be available; but why depend altogether upon the uncertainties of co-operation. Why should not such work be put upon a strictly business basis, ranking in importance with the exhibit of agricultural resources, or of manufactures, of both of which indeed, bibliography is the most effective and lasting exponent and record? Why not official bibliographers, as well as superintendents of the fruit exhibit, of the mineral resources, or of animal industry?

Aside from state bibliographical effort in connection with the Louisiana Purchase Exposition, let us consider the bibliographies of special departments of state literature, each of which might very properly be undertaken by individuals or by societies; such special bibliographies would not only be useful in connection with the immediate scientific or historical subject of which they treat, but of much prospective value, as the elements from which a more comprehensive work may be compiled.

1. The state author list. As a provisional work this is especially important. A list of

native authors, with their productions duly cataloged, contains a large number of the most important publications on state history and geography. Such a list, with an index, well worked out under the state, is the best substitute for a general bibliography. The bibliography of Wisconsin authors, mentioned before, though without an index of the kind suggested, is a good illustration of the possibilities of such a work. The question of just what authors should be included, arises here. Should an author born in the state, who did all of his literary work elsewhere, be placed properly in the state list? Mr. Williamson in his "Bibliography of Maine," which is superior in exhaustiveness to any of the general state bibliographies, includes only those productions of an author written when a resident in Maine, written about Maine, or published there. This is generally accepted as the correct method. The line of exclusion must be drawn somewhere. It should hardly be attempted in an author list of a state to enumerate the works of all the authors born there. Such a list would include the names of hundreds who emigrated from the state in early manhood; these should be classed properly as the authors of that state with which the productive period of their lives has been identified. State pride may object to this, but it is good bibliography nevertheless. It is justified by its sound economy. The bibliographer of Iowa can more easily trace and more correctly catalog, than the bibliographer of Maine, the productions of an author born in Maine, but doing his literary work in Iowa, 1st, because the chances are that the writer's works were published in Iowa, and 2d, if not published in the state, there is some record or trace of them in local Iowa literature, inaccessible to the worker in Maine. If this manner of treatment is followed out consistently by all state bibliographers, the problem of a national author list would be nearer solution than it could ever be otherwise. To some the classification of authors by states may seem too arbitrary. The use of the same language in each state helps to conceal the fact that each state has its own characteristic life. It is well to remember, however, that a list of native state authors, in addition to exhibiting the growth and condition of literary culture, is a means of *registration* of literature, convenient and easy, simply on

account of its arbitrary limits, the state boundaries. Such a state author list brings to light a host of minor writers, known hardly in their own state, who have published oftentimes uncopyrighted editions of poems, addresses, essays, or treatises on every subject. The fact that such publications are uncopyrighted makes the local registration the more important. The date of birth and death, the place of residence, the years of residence in the state, and occupation of the writer, should be mentioned whenever possible, followed by title in full with all the data of imprint recognized as necessary by catalogers. For the best method of compiling the material, see the article by G. W. Cole, mentioned before. For a model in annotation see S. B. Weeks' "Historical literature of North Carolina."

2. A bibliography of some geographical feature would be useful. Because of its direct bearing upon the commercial interests of a locality, work in this line would be immediately and generally appreciated. To arouse interest in the whole subject of state bibliography, some such work, admirably done, would be the best means. Any one of the following subjects would be useful: the geology of the state, the climate, the state as a winter or summer resort, agriculture in the state, transportation in the state, including in this rivers and harbors, lakes, canals and railroads. This is a meager list. The opportunities are unlimited. Local conditions determine the suitability of every subject.

3. Some special event in the state's history or some phase of its social life may be a proper and interesting subject. Among many such subjects that at once suggest themselves are the following: the state in any one of the wars of the United States, the Indians of the state including the archaeology, the early explorations of the state, the educational system, the religious societies, taxation in the state, the political parties.

4. A bibliography of the state in United States publications. Such a work would register and weigh the United States public documents upon the organization of the state as a territory, upon its admission into the Union, and upon the subsequent relations of the state to the Union. Even in the best of the existing state bibliographies, a thorough presentation has not been made of the state's

relation to the national government, as contained in the public documents. In this should be included, publications of the different government scientific bureaus, treating of the state or parts of the state. Here is room for investigation with many surprises in store for the explorer. For an example see the "Check list of public documents relating to Oregon" in *Our Library*, Dec., 1895, published by the Portland Public Library.

5. The bibliography of the press of the state. This would cover so much of the entire field of a general state bibliography that its practicability is well worth considering. We recall, in connection with this, Hildeburn's "Issues of the press in Pennsylvania, 1685-1784," which is the best example of its class. Here are cataloged 4500 titles, representing about two-thirds of the output of the Pennsylvania press during this time. It well illustrates the limitation of bibliography, for its compilation was made without any restriction of labor or expense. A bibliography of the press of any one of the older states, for a limited period of its early history, would be of great value, though its incompleteness would be noticeable. Work of this nature, covering the whole period of the state's history, it would be unwise for one of the newer states of the midwest to attempt, rather than a more comprehensive general bibliography. As most of the native authors have published from local presses, and as a great deal of what has been written about the state has been published in the state, a record of the press would be so nearly a general bibliography, and yet miss the mark slightly, that it would be better to extend the scope to a general bibliography. A separate treatise on the newspapers of the state would be without the objections incident to a record of the entire press.

6. A bibliography of state official publications, including legal works. Much work has already been done, good examples being Hayes' "Publications of state of Ohio, 1803-1896"; Cole's statute law lists of several states, and the elaborate undertaking of Mr. Bowker, successfully carried out so far in regard to the New England states. Most of the lists are in a correct sense check lists. Catalogs of state publications should be forthcoming and no doubt will follow the lists. In such catalogs there should be a complete analysis of the reports of the geological survey, labor

commission, superintendent of public instruction, state university, state experiment station, and of the many other departments of equal importance. Why not a state document catalog to correspond to the United States document catalog? The official publications of the states will increase enormously in the future, as paternalism, with its commissions for the establishment and inspection of new activities, becomes more and more the prevailing policy. Why not look ahead and make provision for this growth by some systematic attempt at cataloging? There properly belongs here the consideration of documents of smaller political divisions, the county, town, and city. In a good state bibliography the documents of each city will be cataloged. Local work of this character demands, as a preliminary, a complete collection of ordinances, reports of school trustees, police, fire, engineer departments, etc. Few of the smaller public libraries have such collections, mainly due to the universal feeling that any publication with an official stamp on it is dry, and that the smaller the political division, the dryer the document. It is just this literature with which the people are most vitally concerned, for it contains all the facts of local taxation. A collection of local documents, with an accompanying guide to it, is a business record of the city, or rather an abstract, exactly similar to the books kept by a business house. Their absence indicates lack of foresight and bad management, even if their presence is not taken notice of more than once in 20 years. Where, of all places, should a complete collection of city documents be found, if not in the public library supported by city funds?

I am well aware that "If to do were as easy as to know what were good to do, chapels had been churches, and poor men's cottages, princes' palaces," but this has not prevented me from offering some suggestions, which perhaps may seem somewhat visionary. In regard to the accomplishment of any of these suggestions, no one, or no body of persons, would be better adapted for it than the state library commission, or state library association. At least the subject of state bibliography, and the manner of compilation, whether through individuals working alone, or through state aid, is worthy of discussion in the state association meetings. Even if the bibliography backward cannot be accom-

plished, the listing of the annual product of state literature could be undertaken, with the intention of compiling such lists later into one catalog. If the annual work could not be done by either of the library bodies, one of the state scientific or local historical societies could assume the responsibility. An annual key to what the state has published, to what has been written about the state, and to what has been published in the state, is surely as valuable as any treatise on its mineral wealth, or sketch of a pioneer. If such work is done, each bibliography should be published separately.

Local bibliography as here briefly outlined derives its importance from the wide extent of it; subject, *i.e.*, the state or any other given locality. Included in this subject then would be all natural and applied science relating to the place, and all sociological science concerning the people who live in it. From its breadth arises the advantage to the worker of easily determining whether he should include any given title. We must look upon the states, for bibliographical purposes, as distinctive units, just as we think of the nations of Europe. Notwithstanding that the language spoken in all the states is the same, separate accumulations of book titles of each state will become as important as the national trade bibliographies of the countries of Europe. This is apparent from the great increase of publications, and from commercial considerations. The increasing debt of interstate and international commerce to bibliography is so fully recognized that it needs no amplification here.

A national bibliography carried out in regard to the United States, with the same comprehensiveness aimed at by Williamson or Gilman, would be impracticable, at least until the work for each state had been done. Even if that should be done by each state, the compilation of these into one catalog is almost enough to bewilder the imagination, though such a national compilation is the ideal of some bibliographers. If such a scheme ever be attempted, it would be by far the best way to work from a small geographical division, the state. But why should such an attempt be made in any other way than in having full separate state bibliographies? A bibliography, composed of 45 distinct bibliographies, would be just as truly national as if it were one immense compilation.

#### LEATHER FOR BOOKBINDING.\*

EVERY librarian knows that after a few years the leather in the binding of many of his books decays and crumbles into dust. This decay in leather has been observed and discussed for more than half a century, hardly any two authorities agreeing as to the cause. In 1842 Michael Faraday was a member of the committee which investigated the condition of the library of the Athenæum Club, London. This committee blamed illuminating gas as the cause of the decay of the bindings of the books. One of the results of this investigation was the invention of a lamp by Faraday so devised as to carry out of the building the products of combustion. In 1854 Dr. Henry Letheby made further investigations along the same line, again blaming gas.

In 1859, on the occasion of the reading of a paper by John Leighton before the Society of Arts (*Journal*, 7:209) "On the library, books, and binding, particularly with regard to their restoration and preservation," a general discussion of the subject took place. This discussion was continued through many numbers of the *Journal*, and various other causes of decay besides gas were mentioned.

The matter was discussed at the conference of librarians in Philadelphia in 1876 (the beginning of the A. L. A.), when all agreed that the leather bindings of books decayed. Mr. Winsor blamed it on gas, Mr. Cutter and Mr. Poole on heat, and Mr. Edmunds on dryness. In 1878 Professor Wolcott Gibbs (*L. J.*, 3:229) placed the blame on the character of the tanning of the leather, and in 1880 Prof. William Hand Browne (*L. J.*, 5:50) placed it on the dressing or staining of leather, while Mr. Henry A. Homes (*L. J.*, 5:213) named three causes: tanning, split skins and the gas that escapes from heating furnaces.

When so many doctors disagreed it was difficult for ordinary mortals to decide. Many were beginning to feel that the case was hopeless, that it was a matter to be endured with Christian patience, as we were in the habit of enduring mosquitoes and other visitations of a like nature. The subject was discussed from time to time by the A. L. A.

\* Report of the Committee on Leather for Bookbinding. (In *Journal of the Society of Arts*, July 5, 1901. 49:621-638.)

and the L. A. U. K., but with little practical result.

Some two years ago, under the chairmanship of Mr. Cobden-Sanderson, a meeting of persons specially interested in the question was held at the Central School of Arts and Crafts, London. This meeting resolved itself into a committee to encourage the production of sound and durable leather for bookbinding. The committee held several meetings and some of its members carried on a good deal of investigation and experiment, resulting in the conclusion that the subject was too big for such a body. The committee then asked the Council of the Society of Arts to undertake a thorough investigation and then to report thereon. The Council of the Society granted this request in February, 1900, and the *Journal* of the Society for March 30, 1900, published Mr. Douglas Cockerell's reasons why such an investigation should be made. (See L. J., July, 1900, 25:332.) Mr. Cockerell's paper was an indictment of modern bookbinding leather, cited for trial before a committee of the Society of Arts. In the present report of the Society's committee, published in July of this year, we have the first and only comprehensive and scientific discussion of the whole subject. It is of the greatest value, and will be reprinted as a pamphlet and published by George Bell & Sons; price one shilling.

The committee appointed by the Council of the Society consisted of nineteen persons—librarians, bookbinders, leather manufacturers, chemists—all authorities in their respective lines. This general committee appointed two sub-committees and the respective reports of these sub-committees are printed as appendixes 1 and 2. The general report is based on these two reports. Appendix 3 is "Hints to owners and keepers of libraries," by the chairman of the general committee, Viscount Cobham. Appendix 4 is the circular to libraries, and replies. These replies are also tabulated.

The duties of Sub-committee No. 1 were "to visit libraries and to ascertain the comparative durability of various bookbinding leathers used at different periods and preserved under different conditions." This committee was composed of Mr. Cyril Davenport, of the British Museum Library; Dr. J. Gordon Parker, director of the London Leather Industries Research Laboratories; Mr. A. Seymour-Jones, leather manufacturer; Mr. Walter James Leighton, bookbinder; and Mr. Douglas Cockerell, bookbinder.

This committee visited the private library of Mr. Huth, the libraries of the Chemical Society, Athenæum Club, British Museum, the Patent Office, and the libraries at Oxford and Cambridge. In every library they found evidences of decay of bindings of all periods represented; but books bound during the last

80 or 100 years showed far greater evidences of decay than those of an earlier period. On this point their report may create a wrong impression, to the effect that *all* leather bindings of a century or more ago were of the best. Naturally the poor leathers of other centuries are not here to condemn their tanners; but because they do not now exist does not prove that there was no bad tanning in the "good old days." It is safe to say that poor bookbinding leather did exist, for in 1604 Parliament passed an act to punish with a fine and the pillory "divers tanners" who "for greediness of gain do overmuch hasten the tanning of their leather," making it to seem "fair and well and sufficiently tanned within a short space."

To return to our report. Many recent bindings showed evidence of decay after a period of from five to ten years. It is a difficult matter to fix the date of the beginning of the deterioration, but it becomes more general in some leathers, calf especially, after 1830 and in all leathers after 1860. In libraries in which there was no artificial light and in which ventilation was good the bindings are in much better condition than elsewhere. Where gas is or has been used bindings are in the worst condition, especially on the higher shelves. Tobacco smoke is injurious to books. Ordinary daylight has a disintegrating effect on *certain* leathers. Direct sunlight acts more rapidly and according to all the members of the committee, with but one exception, affects all leathers injuriously. In the opinion of one member of the committee direct sunlight is not always injurious. The injury, he thinks, may be caused by the changes in temperature brought about by the direct action of the sun. Dust causes leather to decay. As a rule books kept on shelves with glass or other doors are in far better condition than those directly exposed to the atmosphere. Damp, excessive dryness and the absence of ventilation may, however, cause great injury in connection with books kept in close-fitting cases. Of the old leathers (15th and 16th century) pigskin has proved the most durable. Vellum seems to have lasted fairly well where not too long exposed to light. Instances were noted where vellum bindings on the sides exposed to the light had become as brittle as eggshells, while the other side remained sound. Morocco bindings of the 16th, 17th, 18th, and early 19th centuries, sumac tanned, were in good condition. After 1860 many of them were rotten. Since 1830 hardly any real calf, it seems, has been used, as nearly all of it, whether thick or thin, has perished. Sheepskin bindings of the early part of this century are often found in good condition. Since 1860 sheepskin as sheepskin is hardly to be found. It is usually grained in imitation of other leathers, and these imitations are almost uniformly bad. Genuine pigskin un-

died seems to have lasted very well, but colored pigskin was found to have "utterly perished." Modern leathers dyed black seem in nearly all instances to have decayed, although old black morocco of the 16th, 17th, and 18th centuries was found in good condition. Russia leather was found in nearly every instance to have become wholly rotten, except on books that were much handled.

As to the blame for the condition in which bindings were found, "the investigations of the sub-committee serve to show that the book-binder must share, in no small measure with the leather manufacturer and the librarian, the blame for the premature decay of leather bindings." After pointing out various faults in binding the committee gives specifications for binding heavy or valuable books, and ordinary books. These specifications are so important that we give them in full:

**SPECIFICATION FOR BINDING HEAVY OR VALUABLE BOOKS.**

*Sheets and Plates.*—All sheets broken at the back to be made sound with guards. Any single leaves or plates to be guarded round adjoining sections. Folded plates to be guarded with linen at folds. No pasting-on to be allowed.

*End Papers.*—End papers not to be pasted on or overcast, but to be made with stout linen joint and sewn on as a section. Some system of folding or zigzagging which allows a little play without danger of breaking away is advocated. End papers to be made of good paper.

*Sewing.*—Sewing to be flexible, round the bands and all along the section. Thread to be unbleached linen, and bands to be of stout hempen cord and at least five in number.

*Boards.*—To be of best black millboard. The edge of the millboard in the joint to be slightly rounded, instead of perfectly sharp as at present. The sharp edge sometimes cuts the leather.

*Lacing in Slips.*—All five slips to be laced into each board and not reduced unduly. It would be better to sink places in the board to receive the slips than to weaken them by injudicious fraying out.

*Cutting.*—This will depend on the librarian's orders.

*Headbands.*—Headbands to be worked on stout cord, vellum, or catgut, with very frequent tie-downs, and to be firmly set with stout brown paper, linen or leather.

*Lining up.*—If it is necessary to line up the back it is best done with leather or linen, leather for preference.

*Covering.*—Leather not to be unduly pared down and not made very wet before covering. Care to be taken not to stretch the leather more than necessary. No hollow backs to be used, but the leather to be attached to the back.

*Leather.*—See report of Sub-committee [No. 2.]

*Handles for Pulling Out of Shelf.*—In the case of very large books that are likely to be much used, it is advisable to have a strap of leather going loosely across the back and each end fastened to a board of the book. The Sub-committee saw some such arrangement at one or two of the libraries visited, and it seemed that a great saving of the binding resulted from the use.

*Note.*—That manuscripts on vellum, or books of special value will, of course, require special bindings designed to meet the special conditions.

**SUGGESTED SPECIFICATION FOR ORDINARY LIBRARY BINDING.**

*Sheets and Plates.*—All sheets broken at the back to be made sound with guards, any single leaves or plates to be guarded round adjoining sections. Folded plates to be guarded with linen at folds. No pasting-on to be allowed.

*End Papers.*—To be of good paper sewn on. No pasting-on or overcasting to be allowed.

*Sewing.*—To be sewn on not less than four unbleached linen tapes, with unbleached linen thread of suitable thickness. Books to be glued up and backed in the ordinary way, or left square.

*Boards.*—To be made "split boards" like those the vellum binders use. Straw board lined with a thin black board liner.

*Cutting or Treatment of Edges.*—To depend on orders.

*Attaching Slips.*—Slips to be pasted on to waste end papers which should be cut off about two inches from the back and inserted with slips in the center of split board. The board to be left about  $\frac{1}{8}$  inch from the back of the book to form a French joint.

*Head-binding.*—Headbands to be worked on round cord or gut with frequent tie-downs, so as to be able to bear the strain of the books being taken from the shelf, or in cases where the expenses of a worked headband is thought to be too great, a piece of string may be inserted into the fold of the leather at the head or tail.

*Covering.*—Leather not to be unduly pared down. The French joint should make it possible to use far thicker leather than is usual. As there are no raised bands on the back the leather need not be unduly stretched in covering. For small books leather from comparatively small skins that will need but little paring should be selected.

Sub-committee No. 2 investigated the scientific side of the subject. The members of this committee are Dr. J. Gordon Parker, Mr. Henry Richard Procter, professor of Leather Industries at Yorkshire College, Leeds; and Mr. A. Seymour-Jones. Their

report is based on practical experience and on a very large amount of careful experimental work, carried out for the purposes of this inquiry. Chemical examinations were made of a number of samples of decayed leather bindings and experimental investigations were also made on both rough and finished skins. The report of this sub-committee is arranged under the following heads: Nature of the decay; Preparation of leathers suitable for binding; Bookbinding; Preservation of books; General conclusions. The most prevalent decay is red decay, old and new, the latter dating from about 1830. The former leaves the fibers of the leather in their natural position, but much weakened; the latter destroys the fibers absolutely. The discussion of "Preparation of leathers suitable for binding" is of especial interest to the manufacturer of leather. The points considered are Raw skins, Cure, Soaking, Liming, Tanning, Finishing, and Dyeing and finishing. It is in this process of dyeing that sulphuric acid enters the leather. Used in the dye bath to liberate the color it is at once absorbed by the leather, and "no amount of subsequent washing will remove it. In a very large proportion of cases the decay of modern sumac-tanned leather has been due to the sulphuric acid used in the dye bath and retained in the skin." With reference to bookbinding the report calls attention to the use of oxalic acid for washing the backs of books. This is fatal to their durability. Vinegar, even in its pure state, is injurious; and much more so is vinegar containing sulphuric acid. The sprinkling of leather with ferrous sulphate (green vitriol) to produce "sprinkled" or "tree" calf, is most strongly condemned. Stale paste should not be used, as it is liable to undergo an acid fermentation and to favor the growth of injurious moulds and bacteria. The stretching of wet leather tightly over books is condemned.

The most interesting part of the report of this sub-committee is under the head "Preservation of books." A series of most careful experiments, not yet completed, has been made by the committee. The results show conclusively that catechol tannins are unsuitable for bookbinding leathers where durability is expected, and that sumac yields a much more permanent leather. Cassia bark, the tanning material employed for East India sheep and goat skins, leathers largely used in bookbinding, was proved to be very unreliable. Thirty days' exposure to the fumes of a very small gas jet rendered East India leather perfectly rotten, while on leather tanned with sumac it had comparatively little effect. Thirty days' exposure to sunlight showed similar effects, the sumac leathers being least affected. Serious effects, very similar to those of light, were produced by exposure during the 30 days to air at a tem-

perature not exceeding 110° to 120° Fahr., dry air being apparently the most injurious. Experiments with light passed through different colored glasses showed that blue and violet glass pass light of nearly as deleterious quality as white glass, while leathers under red, green, and yellow glasses were almost completely protected. This effect was true not only of East India tanned skins but of those tanned with sumac; but the latter was much less affected, as usual. "There can be no doubt," says the report, "that the use of pale yellow or olive-green glass in library windows exposed to direct sunlight is desirable." "An easy method of comparing glasses is to expose under them to sunlight the ordinary sensitized albumenized photographic paper. Those glasses under which this is least darkened are also most protective to leather." The experiments made by exposure to various kinds of artificial light were inconclusive. Further investigations along this line are in progress. Ammonia vapors and tobacco smoke caused leather to decay. "Tests were made with the Niger red goat-skin, now so largely used for high-class bookbinding, by exposure to light, air, gas fumes, and dry heat, by none of which it seems to be much affected, and the opinion of the bookbinders is confirmed, that it is one of the most durable tannages."

Several substitutes for leather for bookbinding were examined, with the result that they are found to be not so durable as properly prepared leather, but more durable than "Persians" or improperly prepared leather. It is to be regretted that the details of the experiments on substitutes for leather are not given. This is certainly a promising field for exploration and one in which nearly all librarians and owners of books generally are interested. The sub-committee reserve their report on the durability of colors applicable to the dyeing of leather and they hope in a future report to be able to suggest a suitable dressing for preserving leather, something that will act on leather like the grease from the hand on books much used.

"Hints to owners and keepers of libraries" contains nothing new to the librarian, even though he often neglects them. "The better adapted a room is for human occupation, the better for the books it contains," is the "hint" of greatest importance.

Although the committee found so much to condemn in our modern bookbinding leathers, the case is not hopeless. Durable leathers can and are being made to-day. It is of the greatest importance for bookbinders and librarians to know these particular leathers and to use them. In the meantime we shall await with much interest the further reports of Sub-committee No. 2, which promise additional light on a subject that has long been enveloped in darkness. SAMUEL H. RANCK.

## REPORT OF THE A. L. A. COMMITTEE ON LIBRARY TRAINING.\*

THE by-law establishing this committee and defining its duties, says:

"There shall be a committee of five members on library training, which shall visit each year the several library schools and training classes, as far as possible, make a report on the condition and character of the schools and classes which it visits, and present such recommendations as it sees fit."

Under the provisions of the above clause of the constitution, the committee is precluded from reporting upon any school for library training which it has not visited or upon any other aspect of library training not presented in such schools as are actually visited. Only one member of this committee has been able to visit any of the library schools, and his report upon the same is transmitted herewith.

ELIZA G. BROWNING,  
E. C. RICHARDSON.

### REPORT OF E. C. RICHARDSON ON PRATT, ALBANY AND DREXEL LIBRARY SCHOOLS.†

I wish to express my great pleasure in the progress, condition, attitude and prospects of the library schools. All three (Pratt, Albany, Drexel) are careful in their selection for entrance and sufficiently rigid in the matter of their degrees and promotions. The pupils are in a strict sense a select body of promising candidates, noticeably alert and on the whole decidedly above the average efficiency of technical or classical schools of their grades. At Albany every one of the nearly fifty members has had some college training and most of them are graduates.

In respect of the training itself, the methods and courses are more or less various and cannot be compared on a level, but they are nevertheless more similar than I had supposed and there are few good things in the matter of practical training taken up with one which are not soon adopted by the rest. For example the really fine training in the estimate of books in Mrs. Fairchild's seminar now has its counterpart in some degree in each of the others, so that their training in ability to select current books is as it seems to me very much improved. I was impressed with the alertness all round and the disposition to examine the very newest methods,

especially and properly now those for work with children and the schools.

I do not think it too enthusiastic to say that the teaching is thorough and excellent in the matter of personal inspiration, for what they respectively attempt in each of the schools. On account of their situation in large cities and their connection with institutes and their practical relation with active circulating libraries in which their students get a large amount of actual work thoroughly well organized in each case to give real experience, as I satisfied myself by careful observation in many departments, Pratt and Drexel seem almost better adapted than Albany for the single year training which may fit for position of assistants in city libraries and even headship of small public libraries, for which there is a real demand. The larger and in some respects extremely fine faculty at Albany on the other hand fits it decidedly better for the higher or second year work. Miss Plummer's fine ideal for her second year work is however by no means to be overlooked. She is after something of real importance to the library profession and she is accomplishing it at least as a matter of holding out an ideal in a very interesting and not unpractical manner in the matter of her incunabula and palæographic instruction. I believe, however, if this kind of work were adequately attempted by Albany and Illinois that Pratt would not insist on maintaining this historical course. It would be much better to have this work associated with Albany and Illinois and not undertaken by Pratt at all, but meanwhile, merely by virtue of attempting it, Pratt is doing a very high work for American library interests.

I find uniformly a thorough disposition to conform the curriculum to the real needs of the profession, and only anxiety to find what is the best thing to do. I ventured to criticize the amount of time which was scheduled for typewriting as a thing important enough; but not important enough as a part of technical library training to be acquired as such at so great length. I found no hypersensitiveness as to criticisms; but only a natural and more or less legitimate disposition to feel that under any generalization of criticism each fault has its extenuating circumstances.

On the whole, as to the feeling which I have gotten from the use and observation of graduates, I am very strongly convinced of the practicality and excellent conduct of these schools, even in the matter of the single year course. I repeat that the character and enthusiasm seem to me above the average of that of technical schools; that the instruction seems to be adequate and able to inspire active attention; that the standards are high and fairly rigid; that the authorities are on the whole on the sympathetic lookout for things which will improve their courses; that there is a growing sympathy with the historical

\* Presented at Waukesha conference, American Library Association, July 6, 1901. See Proceedings, p. 124.

† The personal form and colloquial manner of this report are due to the fact that it was written as a personal report to the chairman of the committee, for his information and use, and not as a formal public report for the Association. E. C. R.

and larger aspect of things, and that they are on the whole in the lead of the general spirit of the Association in the demands for a higher bibliothecal culture. I would myself like to see Drexel and Pratt undertake only the technical training which gets right down to the business of making selected, bright students just as familiar with library technology as can be done in a year's time: the proper work, as I should judge, of an institute school. I would like to see, farther, Albany and Illinois develop as they already have, the facilities for taking the scientific aspect in a still higher degree, specifically in the matter of training in proper cataloging of rare books, not incunabula alone, but in all departments, and in the knowledge of same. I incline to think that I would like to see the matter of palæography, beyond the mere cataloging of manuscripts, left to post-graduate university work and not made a part even of a two years' course, but of this I do not feel clear. I feel somewhat interested in the idea of the possibility of having in our universities post-graduate courses in highly scientific bibliographical lines leading to a Ph.D. I would like to see, for example, a course in which palæography might be made the major, with minors in language and literature. However, I do not have very strong convictions on this matter.

I suppose it is hardly wise to urge on the schools a uniform curriculum at the present moment, but I do hope that the time will come when the first year courses shall have pretty much the same character in all the schools and second year courses shall be developed into high character courses sustained in only a few schools but there sustained on a high level.

E. C. RICHARDSON.

#### BOOKS THAT ARE NOT READ.

THE custom of printing lists of the books most frequently borrowed, followed by many libraries, is reversed in the recent (7th) report of the Lincoln (England) Public Library. This includes, instead, a list of books which have never left the shelves, "many of these," it is significantly added, "being gifts to the library." The list covers the classes of Arts and industries, Literature, Drama, History and biography, Natural and mathematical sciences, Philosophy and theology, Sociology, law and commerce, and includes Maskell's "Ivories," Goethe's "Letters to Zelter," Steuart's "Letters to living authors," Xenophon's minor works, Schiller's dramatic works, Schlegel's "Philosophy of history," Morris's "Early Hanoverians," Swedenborg's "Coronis," "Edersheim's "Law and polity of the Jews," Walpole's "Foreign relations," and Jevons' "State in relation to labor." In fiction, juveniles and travel, there are no books that have not circulated.

#### THE NEW GOVERNMENT REPORT ON LIBRARIES.\*

THIS fourth government report upon the general condition of the public libraries of the United States (taking the term in its broader sense) is a welcome addition to the professional records of the year, bringing, as it does, library statistics to the opening of the new century. The report is wholly statistical, covering 242 pages as against the 260 of the report of 1897, which, it will be remembered included also a general review of library legislation. As usual public, society, and school libraries of over 1000 volumes are recorded, the total being given as 5383. This shows an increase of 1357 libraries in less than five years. The ratio of increase is more evident when it is noted that the 1897 report which recorded 4026 libraries (giving statistics for 1896) showed for a like period a gain of but 523 over the number given in the 1893 report, which gave statistics of 3503 libraries for the year 1891. The number of volumes in the 5383 libraries reported upon is given as 44,591,851, a gain of 11,539,979 or almost 35 per cent. in the five years. The growth in volumes by five-year periods is made still clearer by a diagram showing a pile of six volumes of varying sizes, representing 30 years in five-year periods, the top volume being the largest of all, and exceeding with its record of 11,539,979 additions for that period the total number of volumes (11,487,778) reported in all the libraries of the country in 1875.

The form of preceding reports has been followed, giving statistics in various tabulations, by geographic divisions, by states and territories, and in the full alphabetic record by name of place, arranged by states. The North Atlantic division maintains its first rank, with 2473 of the 5383 libraries and a million more than half the number of volumes in the United States. New York alone has 718 libraries with 7,496,509 v.; Massachusetts, 571 libraries with 6,633,285 v., and Pennsylvania 401 libraries with 3,974,577 v.

The North Central division has 1728 libraries, with 11,211,710 volumes. Illinois has 309 of these libraries, with 2,472,710 volumes; Ohio, 266 libraries, with 2,055,589 volumes; Michigan, 193 libraries, with 1,298,708 volumes.

The South Atlantic division has 421 libraries, with 5,303,237 volumes. Maryland has 80 of these libraries, with 1,175,253 volumes; the District of Columbia 74, with 2,504,783 volumes, 1,000,000 of these being in the Library of Congress. The South Central division has 374 libraries, with 1,886,731 volumes. Kentucky has 76 libraries, with 425,729 volumes; Tennessee, 77 libraries, with 392,221 volumes. The Western division has

\* U. S. Bureau of Education. Chapter from the report of the Commissioner of Education. [Advance sheets.] Chapter xvii: Public, society, and school libraries. Washington, Gov. Print. Office, 1901. p. 923-1165. O.

387 libraries, with 2,779,596 volumes. California has 212 of these libraries, with 1,781,858 volumes; Colorado 54, with 363,866 volumes.

The percentage of increase for the whole country was almost 35; for the North Atlantic division, nearly 33; for the South Atlantic division, 32; for the South Central division, nearly 39; for the North Central division, almost 40; for the Western division, about 38. Oklahoma shows the greatest per cent. of increase — 379. The following states and territories show percentages of increase above 100: West Virginia, Arkansas, Indian Territory, Oklahoma, North Dakota, South Dakota, and New Mexico.

Of the 5383 libraries, 3036 had 209,412 periodicals in their reading rooms, 3684 had added 2,156,992 volumes during the year, and 1455 had added 549,326 pamphlets. The number of volumes issued for home use during the year by 2405 libraries was 48,410,128; and the number issued for use in 783 libraries was 9,609,632.

Only 1040 libraries occupy their own buildings; 592 occupy rented buildings. Of 3751 not answering the question in regard to this item, school, college, and other libraries, occupying buildings or rooms rent free comprise the greater proportion. The number of libraries supported by taxation is 2375; the number by subscription 2870. 138 are reported as being supported by both taxation and subscription. The number reported as entirely free to the public is 2734; the number free for reference only, 1735; the number of subscription libraries, 914. There are 447 libraries classed as circulating, 1148 as reference, and 3788 as both circulating and reference.

There are 1979 general libraries, 1725 school, and 689 college libraries. The remaining libraries are divided among 15 classes. There are four libraries having over 500,000 volumes each, three between 300,000 and 500,000, and 47 between 100,000 and 300,000. The number of libraries having below 5000 volumes is 3654.

There is one library to every 14,118 people in the United States, and there are 59 books to every 100 population. The North Atlantic division has a library to every 8510 persons; the South Central division a library to every 37,647 persons. The District of Columbia has 899 volumes to every 100 of population; Massachusetts, 236; New Hampshire, 176; Connecticut, 170; Rhode Island, 163; Nevada, 157; California, 120; New York, 103; Maine, 101 volumes to each 100 population.

The statistics thus summarized are presented both in abstract and in tabulation, and other details, as to endowments, collections of less than 1000 volumes, etc., are given. In view of the interest and usefulness of the report, it is to be hoped that a sufficiently large edition, in convenient separate form, has been issued to make it of full service.

FREE LIBRARIES AND SUBSCRIPTION LIBRARIES: SOME COMPARISONS.

THE *Library Bulletin*, issued by the Mechanics' Institute of San Francisco, contains in its August number a general review of the work and administration of the library, in which it is stated that "libraries under private administration are managed more economically and achieve better results, comparatively, than those under municipal control." Comparative statistics for 1900 for five leading subscription libraries are given, as follows:

	New York Mercantile.*	Philadelphia Mercantile.	Brooklyn Library.	St. Louis Mercantile.	Mechanics' Institute.
Volumes.....	263,217	189,046	149,676	110,485	85,191
Members.....	3,255	2,274	2,473	3,473	3,807
Average daily circulation.....	308	221	284	336	431
Receipts from membership.....	\$15,281	\$3,965	\$8,985	\$6,089	\$18,739
Expenditures: \$					
Books and periodicals.....	35.77	25.25	24.35	36.08	26.76
Salaries.....	39.62	31.72	46.92	41.81	36.35
Taxes and insurance.....	....	4.53	....	4.29	8.61
Light, heat and repairs.....	....	19.60	14.00	3.65	10.47
Printing and binding.....	14.32	15.30	7.53	9.42	11.22
Sundries.....	10.29	3.60	7.20	4.75	6.59
	100	100	100	100	100

\*Excluding branch circulation and expenditure.

This showing is compared with the following figures of five free libraries, taken at random:

	Boston.	Chicago.	Cincinnati.	Minneapolis.	Providence.
Volumes.....	579,635	258,498	197,551	119,346	93,368
Average circulation.....	1,187	2,001	1,233	816	305
Expenditures: total.....	\$210,709	\$213,051	\$60,913	\$41,197	\$27,982
Percentages:					
Books and periodicals.....	13.47	7.71	12.27	14.35	9.23
Salaries.....	56.49	61.52	66.09	50.15	....
Expense.....	30.04	30.77	21.64	35.50	....

Excluding branch and delivery station circulation and expenditure.

As a result of the comparison it is pointed out that the Boston Public Library, for instance, "with a total expenditure ten times as great as that of the Mechanics' Institute, and with almost seven times as many volumes, circulates less than twice as many books. The Providence Public Library, considered a model of good administration, with a larger expenditure, has a smaller circulation than even our curtailed record for last year and less than half of our present aver-

age. This, too, when the free libraries have from ten to thirty times as many cardholders as the subscription libraries.

"In the proportion of expenditures there is an equally important difference. While the subscription libraries mentioned spend an average of 29.64 per cent. for books and periodicals, the free libraries spend but 11.41. While the former average 39.28 per cent. for salaries, the latter average 58.56 per cent. for the same purpose.

"But while the management of subscription libraries is more economical than that of the municipal free libraries, it is also more conservative. The most vulnerable spot in the life of the subscription library is the disinclination of its members to change, and the consequent neglect of its administration to embrace improvements in library economy."

#### NOTES ON THE CARE OF MAPS.

In reply to many requests for information received since I have been arranging, classifying and cataloging the maps and charts in the New York Public Library, which amount to over 20,000 pieces, I may venture to summarize my experiences in that work, the more so as my connection with that institution officially ceases in the present autumn.

1. As to arrangement. It is easier and more economical to divide a collection of maps and charts broadly into three groups of (a) sheets, (b) dissected or folded maps, (c) roller maps.

a. Sheets. These should be kept as far as possible in the state of original issue, *without any folds*, as every fold eventually tends to weaken the sheet. Our largest drawers are about 53 inches long, 40 inches from back to front, and two inches deep, *inside* measurement. This size enables us to keep nearly all U. S. coast survey, hydrographic office and foreign charts unfolded, although in some cases they have to be folded in half. *Sets of charts*, like the two foregoing, are kept in *numerical* succession, agreeing with numbers of the printed catalogs of their respective departments, and are not included in any geographical subdivision, as is the case with loose miscellaneous maps; but inasmuch as the scales of these maps all vary, they are also all card cataloged in detail. On the other hand, *collections* of government maps, or even those of private firms, on a uniform scale, are not cataloged as to each sheet, but one reference card refers to the whole series, and itself refers to the catalog or index map issued with the maps by the governments or firms issuing them. As, for instance, the various states of the U. S. Topographical Survey, issued by the Geological Department, are represented by one card only for each state. The same rule applies to the counties of England and Ireland; but

France, Germany, Switzerland and Greece are given only one card each for their several surveys, embracing hundreds of sheets each. These sets of sheets are not mixed up geographically with the miscellaneous sheets, but are stacked to suit convenience of size.

In no case should sheets on a uniform scale be bound up, as they are meant to be placed side by side when consulted, and their value is greatly impaired unless this is possible. Miscellaneous sheets should all be arranged in manila paper, in whatever geographical arrangement seems best to the librarian, and no arbitrary rule can be laid down, as it must entirely depend upon the extent of the stock as to what subdivision is necessary. For instance, New York state might originally contain maps of New York City and environs, and various cities and towns; but as the collection increases it will be found necessary to separate New York City, and even Brooklyn, from the main group and give them folios of their own. All maps should have their dates carefully pencilled on a given position, as I have arranged all such sheets strictly "chronologically"; and of course great care must be taken that these dates coincide with those on the card.

While I have adopted the general idea of keeping all sheets of a given continent together as far as shelves, etc., would permit, I have frequently had to break up a regular volume and adapt myself to the necessities of the fixtures supplied by the library.

b. Dissected or folded maps. These are of such an extremely varied character that I have adopted pamphlet boxes, as far as possible, to receive the various waifs and strays of all sizes below a certain standard, and placed those boxes with the larger maps of that character in their geographical sequence, not A B C.

c. Roller maps, whether mounted on muslin, with rollers and ledges; or not mounted and without such attachments, I arrange strictly in A B C order, regardless of geographical position or chronological order, as their number is comparatively so small that a more detailed subdivision or analysis would merely be waste of time. For these maps I arrange a sort of framework about three feet or 40 inches from the ground, with another one of about 12 inches only, the upper divisions to have movable fronts, so that if a map is too long to be put over the rack into its proper place it can be laid into it. These divisions should be large enough to hold about 12 maps, and their number must necessarily depend upon your stock. I use two old cupboards, but they have not afforded me as many divisions as I should have.

2. As to classification. I have generally adopted the rule of the British Museum map catalog, placing every map strictly in A B C order according to its title; but inasmuch as that institution does not recognize Saint,

San, Santa, Cape, Old, New, North or South as parts of the title, but only adjuncts, I have to some extent departed from their rule in favor of that adopted in Lippincott's Gazetteer, the U. S. Postal Guide and Bullinger's list of places in the United States and Canada. In cases where a map covers many states of this country, it is generally entered as *United States, Parts of*; or if it embraces indiscriminately parts of Canada, United States and Mexico, it would be classified as *North America, Parts of*. I have found it extremely difficult satisfactorily to dispose of the earlier maps of this country, which, under the name of Canada, Louisiana, New Netherlands, New Belgium, New England etc., cover ground which varied in its significance and area at different periods of history. I have endeavored to meet such cases by cross-reference cards, maintaining, as far as possible, a uniform standard of nomenclature.

THOMAS LETTS.

*New York Public Library, Lenox Building.*

#### CO-OPERATION AMONG STATE LIBRARY COMMISSIONS.

*From Quarterly Bulletin of Iowa Library Commission, July, 1901.*

THE desire on the part of the commissions of Minnesota, Wisconsin and Iowa to co-operate in all practical ways possible has been the subject of much correspondence during the past few months. It was seen that many lines of commission work are in common and could be greatly advanced with less expense by combining energies. The preparation and printing of a suggestive list of books, monthly lists of new books, commission handbook, statistic blanks, record blanks, etc., were manifestly subjects for co-operation. Then the possibility of printed catalog cards in connection with the suggestive list and monthly lists was a logical part of plans for co-operation. Hence, at a conference of the commission secretaries of these states during the A. L. A. meeting at Waukesha, it was decided to undertake at once practical co-operation along these lines. Briefly the plan is this: Each month a carefully selected and recommended list of the new books suited to a small library will be issued jointly by the three commissions. Printed catalog cards for these books will be prepared and printed by the Publishing Board of the A. L. A. for the commissions, at the rate of one-third of a cent per card (on 1 catalog stock), this price being made possible because by co-operation of the three states a larger number of cards are assured. Work on the suggestive list of books (about 1000 vols.) will in the meantime be pushed as rapidly as possible and printed cards will be prepared for these. A library just starting will be able by means of this to secure the catalog cards at the time of the

purchase of the books, at a rate so much cheaper than it would cost to write catalog cards in the usual manner, that the advantage is at once evident.

The average number of cards necessary for each book is difficult to name. The author, title and one subject card would serve as the smallest basis for the ordinary book, thus making the cards for that book cost one cent, but a very large number of books will need many more cards; such books as collective biography and books of essays often taking 40 to 50 cards to bring out each specific subject or person as a heading. The plan is to have the cards on sale at this rate with a large jobbing firm such as A. C. McClurg & Co., Chicago, or the St. Paul Book and Stationery Co., at the price above named (one-third of a cent per card), so that the cards may be sent out with the book. It is hoped that this plan for the monthly list of new books and the printed cards for same may be put into active operation this fall.

#### THE NEW CHECK LIST OF U. S. PUBLIC DOCUMENTS.

*W. L. Post, in Index and Review, June, 1901.*

NEARLY two years ago there was begun in the office of the Superintendent of Documents a revision of the "Checklist" issued from that office in 1895. It was at first thought the work would be completed in a year, but the subject has so developed and the scope so enlarged, that only one division of the work is as yet ready for publication.

The statement that this work, when completed, will list all the publications of the U. S. Government, both "Congressional" and "Departmental," from 1789 to 1900, conveys not a faint idea of the magnitude of the work; and even an outline of the contemplated contents will be inadequate to convince one of the vastness of the undertaking.

The study of our public documents naturally divides itself into three distinct sections, namely: the "Papers of the first fourteen Congresses," the "Congressional series" and the "Departmental series," and under these headings the "Checklist" work is being pursued.

No complete list or file of the "Papers of the first fourteen Congresses" exists; but by carefully sorting and comparing the scattered volumes, a comparatively complete list of these valuable historical documents can be obtained. The list is now being rapidly augmented by the hearty co-operation of the librarians, and as soon as completed will be issued in pamphlet form for the convenience of librarians in general, and in the hope that many additions will be made to it before its final incorporation in the main volume.

The "Congressional series," which is composed of what is known variously as the

"Congressional set," "Sheet-set," and "Sheep-bound reserve," including all the numbered Congressional documents and reports from the beginning of the 15th to the close of the 52d Congress, has been fully indexed, and these "Tables and index" are shortly to appear in separate form as the first contribution toward the main work.

There are 96,875 separate documents in the period covered, of which 50,000 have been included in the index, after omitting private claims, minor appropriations, and other unimportant reports. The value of such a publication needs no comment to those who use this heterogeneous collection.

The "Departmental series" includes all reports, bulletins, circulars, orders, and other miscellaneous publications of the several Executive Departments and minor Government bureaus. A list and index of the publications of any one of these offices, with historical and bibliographical notes, would be in itself a valuable accession to the information on the interesting, though little understood, subject of public documents, while a complete bibliography of all, as is contemplated, will be of inestimable value. The work of classifying, to facilitate listing and indexing, has been completed, and the bibliography will be published as soon as completed, to attract additions and corrections.

The consolidation of these three publications in one grand work, with systematic arrangement and a single index to the whole, will consummate a task of the greatest practical value to all interested, and make the long dreamed of "Bibliography of United States public documents" a reality.

#### LIBRARY ASSISTANTS' ASSOCIATION.

THE sixth annual report of the [English] Library Assistants' Association appears in the June issue of the *Library Assistant*, the organ of that body. The association now numbers 196 members, being an increase of 23 during the year. Its fifth annual meeting was held June 30, 1900, when the Cotgreave prize and the two junior prizes were awarded to the successful competitors in the prize-essay contest. The usefulness of the *Library Assistant* has been increased by its presentation of the subjects treated in the L. A. A. Study Circle, established for the private study of professional subjects. The library of the association now contains 256 volumes, 28 being accessions of the year covered in the report.

#### WHY WE DO IT.

THE object of classifying and cataloging is to reduce a library to an encyclopedia.

H. H. BALLARD,  
*Librarian Berkshire Athenaeum.*

### American Library Association.

*President:* Dr. J. S. Billings, New York Public Library.

*Secretary:* F. W. Faxon, 108 Glenway St., Dorchester, Mass.

*Treasurer:* G. M. Jones, Public Library, Salem, Mass.

#### MEETING OF EXECUTIVE BOARD.

A meeting of the executive board of the A. L. A. has been called, to be held at the New York Public Library, beginning at 10 a.m., Monday, Sept. 30.

#### WAUKESHA PROCEEDINGS.

The proceedings of the Waukesha conference have been mailed to all members of the A. L. A. who have paid the dues for 1901. Other members will receive the volume on payment of the annual dues (\$2) to the treasurer, Gardner M. Jones, Public Library, Salem, Mass.

#### SPECIAL NOTICE.

A valuable pin was found at the close of the A. L. A. conference at the Fountain Spring House, Waukesha. Owner may have same on application to

L. E. STEARNS,  
*Wisconsin Free Library Commission*  
*Madison, Wis.*

#### A. L. A. PUBLISHING BOARD.

#### PRINTED CATALOG CARDS FOR BIBLIOGRAPHICAL SERIALS.

The Publishing Board of the American Library Association invites subscriptions to the printed catalog cards for the articles in 21 bibliographical periodicals, as per list appended.

Two cards of each title will be furnished, one to serve as the author, the other for the subject entry. Distribution of cards will be made twice a month, and bills will be rendered quarterly for the cards distributed.

Price, \$2.50 per 100 titles (two cards for each title); 40c. per 100 cards for extra cards, 3, 4, or more to each title. If more than 25 subscriptions are received, the price will probably be reduced.

The Bibliographical Society of Chicago will index the periodicals, sending the manuscript to the Publishing Board for printing.

It is estimated that the number of titles furnished annually will be about 430, making the annual cost about \$11. For the first year should be added 89 titles to be furnished for 2 completed sets—*Bibliographica* and *Revue Internationale des Archives*—and 628 titles for recent back numbers of a few periodicals, indicated on the list, which it seemed best to index, making the total expense the first year about \$28.

The issue will be begun when enough subscriptions have been received to warrant the undertaking. Subscriptions should be sent to A. L. A. Publishing Board.

State Library Commissions.

IDAHO FREE LIBRARY COMMISSION: Mrs. E. J. Dockery, secretary, Boise.

The handbook of the Idaho library commission, recently issued, is mainly devoted to the subject of travelling libraries. It includes the act creating the commission, with the other library laws of the state, a short sketch of the travelling library movement in Idaho, and notes on how to arouse local interest in free libraries. To secure the commission's travelling libraries it is required that a local library association of not less than six persons should be organized, to assume control of and responsibility for the books.

IOWA LIBRARY COMMISSION: Miss Alice S. Tyler, secretary, State Library, Des Moines.

The quarterly *Bulletin* of the Iowa library commission, for July, contains short articles and notes of general library interest, among them being "Things every one should know," by John C. Dana, "Suggestions regarding library architecture," and "Reading for young people," by Mary E. Ahern.

NEBRASKA PUBLIC LIBRARY COMMISSION: Miss Edna D. Bullock, secretary, Lincoln. Miss Edna D. Bullock, graduate of the

New York State Library School, class of 1894, and a graduate of the University of Nebraska, was on Sept. 5 elected secretary of the Nebraska library commission. J. I. Wyer, Jr., librarian of the University of Nebraska, is president of the commission.

State Library Associations.

ILLINOIS STATE LIBRARY ASSOCIATION.

President: A. H. Hopkins, John Crerar Library, Chicago.

Secretary: Miss Eleanor Roper, John Crerar Library, Chicago.

Treasurer: Miss Anna Hoover, Public Library, Galesburg.

The Illinois State Library Association held a special meeting of a purely business character on the afternoon of July 4 at Waukegan, during the session of the A. L. A.

The library commission bill for the state having been for the third time defeated in the legislature, in the previous spring, it seemed a desirable time to review the work of the legislative committee. There seemed to be conflicting ideas upon several points, and it was thought if a complete history of the work of this committee could be given it might enable the association to start upon its fourth attempt with a clear idea of what was to be done. Therefore Miss Katharine L. Sharp, who has been on the committee since its formation, gave a very full history of the proceedings of the different committees, including a comparison of the bills presented at the several legislatures.

In 1895 the first movement for a library commission in Illinois was started by a few Chicago people, which resulted in the formation of the Illinois State Library Association in 1896, whose objects were the formation of a state library commission and to provide an information bureau. Committees for both were appointed. The Information Bureau was established in connection with the Library School at Armour Institute, and in Nov., 1896, the legislative committee sent out a circular stating the object of a commission and the plans for obtaining one for Illinois. At the second meeting of the state association the committee reported, presenting the draft of a bill for presentation at the coming session of the legislature. This bill desired a board of five members. It was to give the usual advice and counsel to libraries and to make an annual report to the governor. No member was to receive compensation, but the sum of \$1000 was asked for travelling and incidental expenses.

The report of the committee was accepted and the committee discharged. The executive committee was then authorized to prepare the bill for presentation to the legislature, and the executive committee was increased by three members of the original committee.

At the second annual meeting of the association at Springfield, Jan. 20, 1897, the executive committee of seven reported that the bill had been referred to Senator Macmillan, who was to put it into proper form, but no real progress was reported. At this meeting it was voted that a committee should be formed, consisting of the president, Col. J. W. Thompson, and the three members of the original committee, Mr. Hopkins, Dr. Wire, and Miss Sharp, with such others as they should see fit to appoint, to attend to the matter of a library commission; shape the bill, see to putting it through the legislature and to carrying it out. There is no record that this committee was ever discharged. They prepared a bill which was revised by Judge Neely and Mr. H. W. Jackson, vice-president of the John Crerar Library. This bill was practically the same as the first draft of 1896. It was introduced by Representative Rowe and Senator Stubblefield, March 11, 1897. Later Col. Thompson went before the Senate committee and found the sentiment favorable, yet at the meeting of the state library association at Peoria, May 13, 1897, the president received a telegram saying the bill was again reported unfavorably and there was no hope. The bill presumably was lost because of the \$1000 appropriation.

In October, 1897, the Illinois Federation of Women's Clubs pledged its support to the library commission bill and appointed a library committee for this purpose. In 1898 Judge Neely was appointed to serve on the legislative committee in place of Dr. Wire, who had removed from the state.

At the fourth annual meeting of the association at the University of Illinois in 1899, Mr. E. S. Willcox presented resolutions for the creation of a state library commission, especially mentioning travelling libraries as one feature of its work and also increasing the appropriation to \$5000.

The president then appointed Mr. E. S. Willcox, Mr. C. W. Andrews, and Miss Katharine L. Sharp a committee to prepare a bill and present it to the legislature. At the close of the association meeting this committee met and drafted a bill incorporating the substance of the resolutions and basing it on former bills. The bill was sent to Springfield and introduced. In spite of the combined efforts of librarians, teachers, and women's clubs it was lost by four votes. The reason assigned unofficially was that the legislators were opposed to more commissions. It was then that the Illinois Farmers' Institute promised to work for a commission in 1901. In December, 1899, the Illinois State Teachers' Association appointed a committee of five to co-operate with similar committees from the Illinois State Library Association, the Illinois Federation of Women's Clubs, and the Illinois Farmers' Institute, to form a joint committee on library legislation in 1901.

At the annual meeting of the library asso-

ciation at East St. Louis in 1900, the following committee on library legislation was appointed: Mr. E. S. Willcox, Miss Katharine L. Sharp, Miss M. E. Ahern, Hon. A. S. Draper, and Mr. A. H. Hopkins. There is no record of the previous committee having been discharged. There was no formal meeting of this committee but the chairman reported that he had consulted the individual members. On Nov. 9, 1900, there was a meeting of the joint committee, chairman Mr. O. F. Barbour, of Rockford, for the teachers, Miss Frances Le Baron, of Elgin, for the women's clubs, and Mr. E. S. Willcox, of Peoria, for the librarians. A bill was drafted, based upon the one presented at the previous session.

Mr. Barbour had 1000 copies printed at the expense of the state teachers' association for use of the sub-committees. In the first 100 there were typographical errors. When Mr. Willcox's copies were sent to him some of the imperfect copies were included by mistake. This circular also contained some bills which were not approved by the library sub-committee. For these several reasons Mr. Willcox had copies of the library commission bill printed and distributed and in addition to the bill a descriptive page called "Objects of the proposed bill." This bill was entitled "An act to create a State Board of Library Commissioners whose duty it shall be to provide travelling libraries for the rural districts of the state, and promote the establishment and efficiency of free public libraries." It called for five members, one of whom was to be the president of the university and another the state superintendent of public instruction, ex-officio, the term of office to be four years. Travelling libraries were made the first clause in the duties of said commission. No member was to receive compensation but a competent librarian was to be appointed. \$5000 was asked as an appropriation.

The sub-committee from the state teachers' association thought that it had the endorsement of the state federation of women's clubs and stated this in a letter accompanying its bill which was sent throughout the state. When the sub-committee from the federation received this circular, they tore off the bill for woman's suffrage before distributing it. When these circulars, therefore, came in contact, small wonder that many thought them conflicting bills. The bill for a state library commission was identical in all of the circulars.

This bill was presented to the legislature by Representative E. D. McCulloch and Senator J. O. Putnam. At the annual meeting of the library association at Lincoln, 1901, the legislative committee reported progress.

It was learned that the Farmers' Institute committee had introduced an independent bill asking for \$2500 for travelling libraries. In the discussion which followed, the strong desire was expressed that the different com-

mittees should combine or compromise, but nothing definite could be decided.

Mr. Willcox visited Springfield twice, appearing before three committees. The House library committee approved the bill with one slight amendment, the Senate appropriations committee referred it to a sub-committee which reported adversely on account of the appropriation, and the full committee concurred. At the same time the legislature gave the Farmers' Institute \$2500 for travelling libraries.

The open questions now are:

1. Shall the bill ask for a library commission and risk losing the travelling library clause, or shall it ask only for travelling libraries to be placed by some existing organization? Consideration should be given to the fact that the travelling library is only one part of the work of a commission.

2. Shall the bill ask for an enabling act alone and depend on voluntary subscriptions for expenses? Shall it ask for \$5000, or shall it ask for \$10,000 in the belief that its importance will be better appreciated?

3. If there be an appropriation, shall the bulk of it be devoted to travelling expenses of commissioners who use their personal influence to arouse interest in libraries, or shall it be used for books?

Appended to Miss Sharp's report was a report from Mr. E. S. Willcox, chairman of the legislative committee.

It was decided that Miss Sharp's paper be considered an official report of all the existing library legislative committees and that they all be discharged and a new one appointed by the chair. Mr. Hopkins explained that the fault of past failures did not rest with any one or two persons but from a variety of reasons, that if a commission was obtained in 1903 it would be because each individual member did his part and that success or failure rested in the hands of the association. He explained that his idea was not to create a bill establishing travelling libraries or public libraries, but to get a commission and let the commission organize its own work. He further stated that to him a commission meant an educational body which should assist in the other educational work of the state, that it should be a central bureau radiating its threads from north to south and from east to west. Eventually he hoped that we might follow in the footsteps of educational bureaus with one national bureau and each state having its own branch bureau.

The next question taken up was an amendment to the constitution creating a life membership upon the payment of \$5. This sum was considered too small, but upon its being increased to \$10 the amendment was carried.

Mr. Hopkins, chairman of the committee on statistics, reported that the material collected in regard to the library statistics of Cook county had been incorporated into a thesis by Mr. Waters, of the Illinois Library School, and the whole had been turned over

to the association. He pointed out the value of such material to the whole library world and asked if the association were going to sit still or if it could not undertake to publish these statistics of Illinois libraries. All that was necessary was a little editing.

After some discussion it was decided that the chair appoint a committee of three to investigate and report on methods and expense of such publication.

The time and place of the next meeting were discussed. Evanston and Quincy both gave cordial invitations. Some thought Decoration Day might be a better time than Washington's Birthday, because of the weather, though nothing definite was decided. The treasurer then wanted some information in regard to the time that should elapse upon the non-payment of dues before a member was dropped, if removal from the state constituted a resignation, etc., which resulted in appointing a committee to make by-laws considering especially all lapses of membership.

The meeting then adjourned sine die. On the following Sunday evening all librarians from Illinois dined together at the hotel. One hundred and three responded to the call. The different courses were interspersed with toasts, responded to on the spur of the moment. Miss Ahern made a delightful toast-mistress, introducing each speaker with some apt remark. At the adjournment the hope was expressed that the next state meeting would be as largely attended, when the pleasant acquaintances made in Waukesha might be renewed. ELEANOR ROPER, *Secretary*.

#### IOWA LIBRARY ASSOCIATION.

*President:* A. P. Fleming, Des Moines.

*Secretary-Treasurer:* Miss H. L. McCrory, Public Library, Cedar Rapids.

The 12th annual meeting of the association will be held at Burlington, Oct. 9-11, as previously announced in these columns. It is expected that Herbert Putnam, librarian of Congress, will be present and make the chief address. Miss Dousman, children's librarian of the Milwaukee Public Library, is expected to present a paper on children's work, and other subjects of timely interest will be presented by Iowa librarians and trustees that will make the program eminently practical.

#### MAINE LIBRARY ASSOCIATION.

*President:* Mrs. Mary H. Curran, Public Library, Bangor.

*Secretary:* George T. Little, Bowdoin College, Brunswick.

*Treasurer:* Miss Alice C. Furbish, Public Library, Portland.

The annual meeting of the Maine Library Association was held at the Bowdoin College Library, Brunswick, on Sept. 3. The attendance of those directly engaged in library work was larger than at any previous gathering of this character. A paper by Mr. John Haley, of the Dyer Library of Saco, gave an account of an unsuccessful endeavor, un-

dertaken at some expense, to encourage the reading of books in the outlying districts of that city by means of travelling libraries. The indifference met with seemed due partly to preference for periodical literature, partly to the comparative ease with which books could be borrowed directly from the main library.

A paper on "Book reviews from the librarian's standpoint," by Frank H. Whitmore, assistant librarian of Bowdoin College, set forth the conditions of present-day reviewing, pointing out the presence of a commercial element which has deflected reviewing from its proper course and made it more serviceable to the publishing house than to the librarian. The review being an indispensable adjunct to the librarian's work, it remains for him to take up and to emphasize the scattered complaints of independent persons against the present state of criticism if reviews are to be of any real assistance. A short historical sketch traced the review from its origin, as an independent form of literature, in the *Journal des Savants* of Paris, up through the period of the patron, then of the old quarterlies to the spread of reviewing through the weeklies and dailies of the present time. The difficulties of reviewing were examined and set over against its achievements, with the conclusion that with the enormous output of books and the pressing demand of the public for reviews the criticisms often become superficial and incomplete. Then followed an analysis of what the librarian asks for in relation to new books, with the view that in thus formulating his demand, which on inspection does not differ widely from that of the discriminating reader, there might be given to reviewing more definiteness and coherence. An extended list of reviewing periodicals was given, followed by a characterization of the more important ones, closing with a statement of the need for more men among reviewers, for a longer and more careful training on the part of the critic, and for the signed review.

An earnest plea for attendance upon the meetings of the A. L. A. was made by Mrs. Mary H. Curran, of the Bangor Public Library, in her paper on the "Advantages of library association." She spoke of the inspiration and practical help derived from the national meetings, and of their great value in maintaining the spirit of fellowship among librarians.

The larger part of the three sessions held during the day was devoted to the informal discussion and interchange of experience on seven topics, previously selected by members of the association as of practical interest to them. Of these the three following may be mentioned as eliciting somewhat divergent opinions: Can the card catalog be made a successful substitute for the printed list in a small library? What reference books should be bought first? What per cent. of fiction should be added to a town library?

#### MICHIGAN LIBRARY ASSOCIATION.

*President:* H. M. Utley, Public Library, Detroit.

*Secretary:* Miss G. M. Walton, State Normal College, Ypsilanti.

*Treasurer:* Miss N. S. Loving, Public Library, Ann Arbor.

The association has issued in a neat pamphlet the Proceedings of its 10th annual meeting, held at Albion, Nov. 9-10, 1900. In addition to the report of sessions, and the papers read, there is appended a "History of the development of libraries in Michigan," with full statistical tables, by Olive C. Lathrop, of the Illinois State Library School.

#### MISSOURI LIBRARY ASSOCIATION.

*President:* F. M. Crunden, Public Library, St. Louis.

*Secretary-Treasurer:* J. T. Gerould, State University Library, Columbia.

The annual meeting of the association will be held in Kansas City, Oct. 24-25, 1901.

#### NEW YORK LIBRARY ASSOCIATION.

*President:* H. M. Elmendorf, Public Library, Buffalo.

*Secretary:* Miss M. E. Hazeltine, Prendergast Library, Jamestown.

*Treasurer:* E. W. Gaillard, Webster Free Library, New York City.

The date for "library week" to be held at Lake Placid as the annual meeting of the New York Library Association has been put one week earlier than first announced, the week as finally determined being Sept. 21-30. This change was made necessary by the earlier opening of the library schools of the state, whose instructors and students desire to attend the conference, and by general request from many in other states. The meeting promises to be a most successful one, the advance registration on Sept. 1 being considerably in excess of 100.

The program has been carefully planned with reference to the needs of the state, chief among the topics to be considered being Library institutes, Library architecture, Literature and the children, Reading lists and Book selection. There will be no formal papers, but short opening talks to introduce the topics with ample time for discussion, the program being elastic, so that if a subject proves of special interest and profit, the discussion can be prolonged.

The sessions are planned for one each day from Sept. 23-28; but if the weather should prove stormy, the time will be filled with meetings, leaving the other days for personal conferences, or excursions and recreation.

The New York Central Railroad has confirmed the announcement of a one-fare rate from all points on its lines. Tickets will be good for purchase and departure any time on and after Sept. 15 to 25, and will be good returning any time before Oct. 15. These rates are good on the Boston & Albany Rail-

road, as well as on all branches of the New York Central.

The Lake Placid Club give half regular rates on rooms, making the cost of rooms from 25 cents to \$2 a day. Comfortable rooms, accommodating two, average about \$1 a day. Table board is 50 cents a meal or \$10.50 a week.

It is most important for the comfort of all that the club should know as early as possible how many guests it must care for, and all who expect to attend are asked to notify the secretary promptly. All who wish to engage rooms are requested to write to Mr. Aşa O. Gallup, manager, Lake Placid Club, Morning-side, Essex Co., N. Y. All desiring further information should write to Miss Mary E. Hazeltine, secretary, James Prendergast Library, Jamestown, N. Y.

#### OHIO LIBRARY ASSOCIATION.

*President:* A. S. Root, Oberlin College Library.

*Secretary:* Miss Olive Jones, State University Library, Columbus.

*Treasurer:* Miss K. W. Sherwood, Public Library, Cincinnati.

The seventh annual meeting will be held at Sandusky, O., October 1-4, 1901. The following program has been prepared:

#### Tuesday, October 1.

- Evening:* 1. Address of welcome. Rev. Winfield Baer.  
2. President's address. Prof. A. S. Root.  
3. Evolution of the library in Sandusky. Rev. Charles Martin.  
4. Inspection of library.

#### Wednesday, October 2.

- Morning:* 1. Reports of secretary and treasurer.  
2. Reports of committees.  
    (a) Relation of libraries to schools.  
    (b) Library training.  
    (c) Library extension.  
3. The American Library Association. Miss Electra Doren.  
4. Bibliography in the small library. Miss E. L. Abbott.

*Afternoon:* Out-of-door excursion.

*Evening:* Reception.

#### Thursday, October 3.

- Morning:* 1. Business session with reports of auditing committee and committee on necrology.  
2. Section meetings.  
    a. Small Library Section.  
        (1) Selection of books for the small library. Miss Mary C. Parker.  
        (2) Reference work in the small library. Miss Anne C. Granger.

- (3) The library and the community. Miss Mildred C. Wood.

#### b. College Section.

Subject for discussion: What should be the ratio between the expenditure for books and the expenditure for administration in a college library?

- Afternoon:* 1. Exposition of existing library laws. Judge Tod B. Gallogway.  
2. Symposium, led by Mr. W. T. Porter. Subject: What has been done in various communities under these laws?  
3. Report of legislative committee.

*Evening:* 1. Music.

2. Address. Mr. R. R. Bowker, Editor LIBRARY JOURNAL.

3. Music.

4. Address. Mr. Herbert Putnam, Librarian of Congress.

5. Music.

#### Friday, October 4.

- Morning:* 1. Business session.  
2. Librarians and teachers. Miss Emma Graham.  
3. Collection of historical material by libraries. Mr. E. O. Randall.  
4. Question box. Miss M. E. Ahern.

#### WISCONSIN STATE LIBRARY ASSOCIATION.

*President:* Dr. H. H. Hurd, Chippewa Falls.

*Secretary:* Miss B. M. Brown, Public Library, Eau Claire.

*Treasurer:* Miss Tryphena Mitchell, Vaughn Library, Ashland.

The Wisconsin meeting arranged in connection with the A. L. A. conference, was held at the Fountain Spring House, on the afternoon of Thursday, July 4.

The meeting was opened by introductory remarks by F. A. Hutchins, who outlined the great need of more public and travelling libraries in Wisconsin. A large map was exhibited, showing the areas not reached by any library agency.

This talk was followed by L. M. Newman, of Chippewa Falls, on "The delivery of library books by rural mail delivery." Mr. Newman spoke of the bill which is to be introduced at the next session of Congress pertaining to free transportation of library books from rural communities upon which postage has been paid one way. The bill is meeting with general favor by congressmen, and its passage is hoped for by those interested in the extension of library privileges to farming or isolated communities.

Judge J. M. Pereles, of Milwaukee, then read a paper upon "German travelling libraries," showing the good done by the little col-

lections of books among foreigners that cannot speak our language. Judge Pereles has been a large contributor to the work of travelling libraries in the state, and his words carried conviction with them.

Hon. P. V. Lawson, of Menasha, explained the workings of the new law, which enables counties to make appropriations for systems of county travelling libraries, and told with what enthusiasm the matter had been taken up in Winnebago county, an appropriation of \$500 having been made by the county board for the purpose, followed by the circulation of 25 boxes in the county.

Miss Bertha M. Brown, librarian at Eau Claire, spoke of the good work done by little boxes of books placed in the outlying districts of large towns, and emphasized the importance of such extension to those who find it difficult to reach the main library.

Mrs. Edward Porter, librarian of a travelling library at Estella, Wisconsin, then gave one of the most inspiring talks of the afternoon. She told of the hunger for books in the northern part of the state, and of the good done by the travelling libraries. She cited an instance where the reading of "Widow O'Callaghan's boys" had reformed an entire household. Mrs. Porter's word pictures of the need of good books brought tears to many eyes and the truth to many hearts that it is, after all, not the few great libraries but the thousand small ones that may do most for the people.

Miss L. E. Stearns, of Wilwaukee, continued the subject of travelling libraries, taking as her text Horace Mann's words, "Had I the power I would scatter libraries over the whole land, as a sower sows his wheat field."

Mrs. Charles S. Morris, of Berlin, then told of the reference libraries for study clubs which the Wisconsin State Federation of Women's Clubs had sent out to clubs and communities not blessed with library privileges.

Miss Cornelia Marvin, of Madison, recited the good work done through encouraging small communities to start libraries with the offer of travelling libraries to supplement the little local collections. She showed how the offer of a box of such books had been the means of starting a little public library in a community of 400 people, that within a year raised \$1176 for library purposes.

Hon. J. H. Stout, of Menomonie, spoke of the value of travelling libraries to rural communities. Upon the conclusion of the address, it was moved and carried that a committee be appointed whose object it shall be to raise \$10,000 for travelling libraries for Wisconsin. Another committee was appointed to co-operate with the office of the state superintendent of public instruction in urging upon the state the formation of educational taxing districts for the greater extension of library and other education interests.

L. E. STEARNS.

## Library Clubs.

### BIBLIOGRAPHICAL SOCIETY OF CHICAGO.

*President:* Camillo von Klenze, University of Chicago.

*Secretary:* A. G. S. Josephson, John Crear Library.

*Treasurer:* C. B. Roden, Public Library.

The society has published a well printed and interesting Year-book for 1900-1901, following the general plan of its previous Hand-book, somewhat extended. It contains abstracts of the proceedings through the year, the second annual report of the council, papers by T. W. Stevens "On some American bookmakers," and R. C. H. Catterall on "Some recent literature on Oliver Cromwell," and lists of officers, members, by-laws, publications, and of bibliographies in course of preparation by members.

### WESTERN MASSACHUSETTS LIBRARY CLUB.

*President:* W. I. Fletcher, Amherst College Library.

*Secretary:* Ida F. Farrar, City Library, Springfield.

*Treasurer:* Mrs. A. J. Hawks, Meekins Library, Williamsburg.

The executive committee at a recent meeting outlined in a general way the year's work of the club. It is hoped to reach all sections of the four western counties either by a regular meeting or by an institute and to adapt the program to meet the needs of all the members as well as those of the particular place of meeting. The first regular meeting will be held at Huntington, Oct. 18, the second probably at Worcester in midwinter, the third at Orange in June.

At the fall meeting the following will be the topics under discussion: "How can the usefulness of the reading room be increased?"; "Helps for the modern library, such as library clubs, journals, schools, indexes, bulletins, etc.;" "The best books of 1901 for a small library to buy."

## Library Schools and Training Classes.

### AMHERST SUMMER SCHOOL OF LIBRARY ECONOMY.

This school, which has heretofore been conducted as a department of the Sauveur Summer School, now suspended, held its 11th session this summer as an independent school, for five weeks, from July 15 to Aug. 16, under the direction, as usual, of Mr. W. I. Fletcher, librarian of Amherst College.

The attendance of pupils, numbering 50, has been equalled but once, namely in 1899. The class, coming from 13 states from Maine to Louisiana, was one of the best the school has ever had, in previous training and in

ready grasp of the work. As usual about one-half of the class were already in library work and several of the others took the course as preparatory for further study at one of the regular schools.

Dana's "Library primer" and Cutter's "Rules" were used as the principal text-books, and a surprisingly large amount of work, both theoretical and practical, was gone over. Visits were made to the libraries in Northampton, Easthampton and Springfield, and at the end of the session a party of 20 accompanied Mr. Fletcher on a trip to Boston, where the Public, the Athenæum, the State, and the Harvard University libraries were inspected, and visits were made to the Library Bureau and the Riverside Press.

The extreme heat of the season was well offset by the comparative coolness of the rooms in the stone building of the college library where the sessions were held, and relieved by several excursions to the famous hill-tops of Mts. Tom and Holyoke and other near-by resorts. The list of students is as follows:

Florence E. Abbe, Springfield, Mass.  
 Edith M. Baker, Amherst, Mass.  
 Mabel E. Banister, East Brookfield, Mass.  
 Bertha Bardwell, Malden, Mass.  
 Katherine Beardsley, Roxbury, Ct.  
 Agnes Benoit, Springfield, Mass.  
 Mamie S. Bennet, Lewiston, Me.  
 Teresa P. Bergamini, N. Y. City.  
 Florence T. Braniff, N. Y. City.  
 Jeanie Bruce Brown, Boston, Mass.  
 Waldo C. Brown, Somerville, Mass.  
 Warren B. Brown, Hanover, N. H.  
 Edith H. Cobb, Acushnet, N. H.  
 Edith A. Demeritt, Durham, N. H.  
 Helen W. Dodd, New Orleans, La.  
 Jean Ely, Flushing, N. Y.  
 Mrs. Cora Frothingham, Boston, Mass.  
 Charlotte L. Greene, Clinton, Mass.  
 Zaidee Griffin, Brooklyn, N. Y.  
 Bertha Harlow, Amherst, Mass.  
 F. Edward Kaula, Somerville, Mass.  
 Helen W. Kelley, Concord, Mass.  
 Ellen King, Germantown, Pa.  
 Mr. F. W. Lewis, Boston, Mass.  
 Lucy A. Mayo, Holyoke, Mass.  
 Hugh N. Mighill, Amherst, Mass.  
 Miss A. T. Montague, Sunderland, Mass.  
 Edith A. Moses, Hartford, Ct.  
 Katherine Powell, Amherst, Mass.  
 N. Edna Read, Newton, Mass.  
 Carrie E. Read, Westford, Mass.  
 Minnie A. Rice, Castleton, Vt.  
 Caroline Roberts, Baltimore, Md.  
 Dora Roberts, Canton, Ill.  
 Jeanette Roberts, Champaign, Ill.  
 Alice M. Robinson, Derby Line, Vt.  
 Frederick W. Schenk, Cambridge, Mass.  
 George Dana Smith, Burlington, Vt.  
 H. Leonora Stiles, Monson, Mass.  
 Florence Stoddard, East Brookfield, Mass.  
 Lulu M. Stone, Brooklyn, N. Y.  
 Charlotte A. Thompson, Durham, N. H.

Mabel E. Townsead, Somerville, Mass.  
 Elizabeth F. Van Boskerck, Plainfield, N. J.  
 Mary Warren, Leicester, Mass.  
 Miss J. C. White, Brooklyn, N. Y.  
 Edwina Whitney, Storrs, Conn.  
 Katherine Wilcox, Westboro, Mass.  
 Belle Williams, Columbia, S. C.  
 Mary S. Woodman, Somerville, Mass.

#### CARNEGIE LIBRARY TRAINING SCHOOL.

The Carnegie Library of Pittsburgh has issued an announcement of the 1901-1902 session of the training school for children's librarians conducted under its direction. This school "was organized in response to the demand, both in this city and elsewhere, for librarians specially trained to work with children. It devotes its energies to that specific purpose, not competing in any way with the general library schools." A two year course is outlined, the second year being optional; certificates will be given to students successfully completing the first year. For the first year course the general subjects are: Ordering and accessioning, cataloging and shelving, classification, loan work, reference work, planning and equipment of children's rooms, administration of children's rooms, literature for children, bulletin and picture work, story-telling and reading aloud, relations between libraries and schools, home libraries, psychology. In the second year topics include cataloging and indexing, classification, administration of children's departments, literature for children, story telling and reading aloud, relation between libraries and schools, civic education, psychology. Practice work is given in the six children's rooms of the Carnegie Library and its branches, in the management of the home library system, and in the sending of books to the city schools; and experience will also be obtained in the summer playgrounds where small libraries are maintained for the children. Information as to requirements, fees, etc., may be had by addressing Mabel A. Frothingham, secretary Training School, Carnegie Library, Pittsburgh, Pa.

#### CHAUTAQUA LIBRARY SCHOOL.

The Chautauqua Library School was inaugurated as one of the departments of the Chautauqua Summer Schools, by a five weeks' session held at Chautauqua, N. Y., from July 11 to August 15. The attendance was double the number expected for the first year, and this made an auspicious opening. Forty-one students from twenty different states were registered, and all but seven of these completed the required work.

Principles of cataloging, including accession and shelf-department, classification, reference and loan work, and many practical details were taught. The cataloging and classification were taught at Chautauqua, while the class used the James Prendergast Free Library for reference and practical work.

Mr. Dewey, general director of the school,

spent a number of days at Chautauqua for its organization, and gave the opening lectures, establishing at once a high standard for the school. His addresses were inspirational, their central theme being "Qualifications of a librarian." The other special lecturers were H. L. Elmendorf, of the Buffalo Public Library, on "Selection of books," "Relations with the public," "Children's departments"; W. R. Eastman, state inspector of libraries, on "Library buildings and government"; and A. L. Peck, of the Gloversville Free Library, on "Relations of the library and study clubs" and "Relations of the library and the schools."

The routine instruction was divided between Miss Foote and Miss Hazeltine, who found the class so enthusiastic and so eager to study, that it was possible to cover much ground in the few weeks. Since many of the class came with no idea of taking the entire course, but of getting certain lines of work most needed in their home libraries, the fact that so many decided to take the prescribed course was gratifying in itself. An optional examination was offered at the close of the term for all who desired certificates, and twenty-seven members of the class received them. Of these eleven acquitted themselves so creditably that a certificate "with honor" was awarded them.

The registration of the class follows:

Abell, Mary L., Oneonta, N. Y.  
 Ainsworth, Marguerite, Assistant, Toledo (Ohio) Public Library.  
 Bissell, Estelle A., Substitute, Corning (N. Y.) Free Library.  
 Bowden, Marguerite M. I., Assistant, Helena (Mont.) Public Library.  
 Bunker, Cora H., Assistant, Toledo (Ohio) Public Library.  
 Burrows, Dorothy E., Librarian, Rutherford (N. J.) Free Public Library.  
 Caldwell, Mary P., Librarian, Tome Institute, Port Deposit, Md.  
 Carothers, Wilhelmina, E., Assistant librarian, Grand Forks (N. D.) Public Library.  
 Dewees, Watson W., Librarian, Westtown Friends' School, Westtown, Pa.  
 Dow, Mary E., Librarian, Midland (Mich.) Library Association.  
 Frazier, Jessie B., Librarian, Bureau of American Republics, Washington, D. C.  
 Garrott, Susan H., Librarian, Woman's College, Frederick, Md.  
 Heyward, Maude, Assistant librarian, Georgia Historical Society, Savannah, Ga.  
 Hough, Clara, Ex-librarian, West Virginia University Library, Morgantown, W. Va.  
 Hoyt, Carrie E., Librarian, High School Library, Jamaica, N. Y.  
 Kniest, Adele L., Assistant, Free Public Library, Colorado Springs, Col.  
 Knight, Lulu M., Assistant, Newton (Kan.) Public Library.  
 Laundon, Leonora, Librarian, Wellington (Ohio) Public Library.  
 MacIntyre, Anna L., Librarian, College for

Women, Western Reserve University, Cleveland, O.  
 McSurely, Ella G., Assistant, Miami University Library, Oxford, O.  
 Mosher, Bessie B., Assistant, Oberlin College Library, Oberlin, O.  
 Naeseth, Charles A., Librarian, Luther College, Decorah, Ia.  
 Nicholl, Mary W., Librarian, Bellevue College, Bellevue, Neb.  
 Palmer, Carolyn, Librarian, John B. Stetson University, Deland, Fla.  
 Parkinson, Margaret B., Assistant, Helena (Mont.) Public Library.  
 Potter (Mrs.) Elizabeth H., Trustee, Tyler (Texas) Library.  
 Randall, Clara H., Assistant, Morse Institute Library, Natick, Mass.  
 Reed (Mrs.) Ella C., Librarian, Boise (Idaho) Circulating Library.  
 Reeder, Louise M., Librarian, Public School Library, Williamsport, Pa.  
 Reynolds, S. Janette, Librarian, Brockport (N. Y.) Normal School Library.  
 Rick, Bertha A., Jamestown, N. Y.  
 Rushworth, Mabel L., Substitute, High School Library, Jamestown, N. Y.  
 Sherwin, Hetty M. B., Jamestown, N. Y.  
 Sisler, Della J., Cataloger, Kansas State Normal School, Emporia, Kan.  
 Smith, Cornelia G., Assistant, Warren (Ohio) Public Library.  
 Smith, Edith J., Assistant, Public Library, Rockville, Conn.  
 Totten, Bessie L., Assistant librarian, Antioch College, Yellow Springs, O.  
 Triepel (Mrs.) Emma M. V., Assistant, Treasury Department Library, Washington, D. C.  
 Underhill, Hannah L., Librarian, Davenport Library, Bath, N. Y.  
 Van Scooter, William B., Librarian, Y. M. C. A. Library, Buffalo, N. Y.  
 Waters, Alice G., Librarian, Essex Institute, Salem, Mass.

MARY EMOGENE HAZELTINE,

*Resident Director.*

NEW YORK STATE LIBRARY SCHOOL.

PERSONAL NOTES.

*Class of 1901.*

Barker, Miss Emma E., continues her duties as librarian of the Young Men's Association Library, Albany, N. Y.

Bascom, Miss Elvira L., has been appointed printing and indexing assistant in the N. Y. State Library.

Brown, Mr. Charles H. has been appointed assistant in the catalog department of the Library of Congress.

Hyde, Miss Sara G., has been appointed assistant in the catalog department of the N. Y. State Library.

Lyman, Miss Mary A., has been appointed assistant in the N. Y. State Home Education Department.

Sanderson, Miss Edna M., has been ap-

pointed assistant in the N. Y. State Library.

Springer, Miss May Z., 1899-1900, has begun a six months' engagement to catalog the Reuben McMillan Free Library, Youngstown (O.)

Yust, Mr. William F., has been appointed sub-inspector in the N. Y. State Public Libraries Division.

Whitmore, Frank H., has been appointed assistant librarian of Bowdoin College Library.

Nutting, Miss Gertrude B., has been appointed general assistant in the library of the University of Wisconsin, of which she is a graduate.

#### *Class of 1902.*

Cramton, Miss Ellen B., has been appointed librarian of the Levi Heywood Memorial Library, Gardner, Mass.

#### SUMMER COURSE.

The following names should be added to the list of summer course students for 1901.

Cochran, Alice Augusta, Westchester, Pa., Librarian Westchester State Normal School.

Hanna, Augusta Priscilla, Canandaigua, N. Y., Assistant librarian Canandaigua Academy Library.

McLachlan, Nancy Caldwell, Fort Wayne, Ind., Assistant Fort Wayne Public Library.

#### PRATT INSTITUTE LIBRARY SCHOOL.

SPECIAL COURSE FOR BROOKLYN PUBLIC LIBRARY APPRENTICES.

The trustees of the Brooklyn Public Library having decided that applicants for library positions must take a six-weeks' course in library science during their apprenticeship, in order to be eligible for appointment, the preliminary civil service examination was given on June 24 and those who stood the test satisfactorily formed a class.

The course was given from July 8 to Aug. 16 in the Library School rooms of the Pratt Institute Free Library, and was conducted, under the general direction of Miss Plummer, by Miss Frances B. Hawley, of the Brooklyn Public Library, a graduate of the Pratt Institute Library School.

The class consisted of nine students, covering a wide range in both age and education, and reading among them six foreign languages.

The aim of the course was two-fold: to give the students that information and practice which would best fit them to perform the duties likely to fall to them in the Brooklyn Public Library, and to arouse their interest in the broader aspects and ultimate objects of library work.

The course included the principles of classification, cataloging, reference work, and library economy, including library handwriting, joined and disjoined. In classification, the Abridged Decimal Classification was the textbook used, and the students classified about 250 books according to its tables. Almost

half of each day was devoted to cataloging. The reference lectures were given by Miss Florence Russell, of the Pratt Institute Free Library, and about 100 reference books were reported on and searched for answers to problems. In library economy, one lesson to a subject was found sufficient except in the case of Book-numbering, Shelf-listing and Charging-systems, when two lessons each were required.

The class hours were long and were devoted chiefly to full discussion of the whys and wherefores of library methods and the pros and cons of disputed points, each student's opinion being listened to and considered. The class was usually able to think out the best way of doing things and to formulate simple rules before textbook study of a subject.

In practical work, absolutely free use of notes and text-books was allowed; very short time was given, in order that the habit of quickness should be formed; all work was done independently by each student and the frequent asking of questions was discouraged.

All quizzes were given unexpectedly. Aside from these quizzes, there were no reviews. Examinations were given with short notice or none at all, and students were advised not to cram for them. Examination per cents. ranged from 99 to 83.

FRANCES B. HAWLEY.

UNIVERSITY OF ILLINOIS LIBRARY SCHOOL.  
NEWS AND NOTES.

The university begins instruction September 18. Students are expected to register September 16 and 17.

Mr. Herbert Putnam of the Library of Congress is expected to visit the school in October.

Miss Grace Bryant, '97, has resigned her position as librarian of the Collège of Physicians and Surgeons to marry Mr. Willis P. Hutson, of Chicago, September 11.

Miss Grace O. Edwards, B.L.S., '97, has resigned her position as cataloger in the University of Illinois Library to travel in Europe for a year.

Miss Cecilia McConnel, '00, has resigned her position as reviser in the University of Illinois Library School.

Mrs. Adele Cooper Reed, '00, was married on September 1st to Mr. James Brown Scott, Dean of the College of Law of the University of Illinois.

Miss Elma Warwick, B.L.S., '97, has resigned her position as librarian of the Northern Illinois Normal School, De Kalb.

Miss Lucy B. E. Willcox, B.L.S., '00, has resigned her position as loan desk assistant at the University of Illinois to marry Mr. Joseph T. Wallace, of Champaign, September 12.

The following appointments have been made since the June report:

Miss Sarah Ambler, B.L.S., '00, assistant in Iowa Summer School.

Miss Alice P. Bixby, '00, assistant librarian, Chemistry Division, Dept. of Agriculture, Washington, D. C.

Miss Elizabeth Branch, B.L.S., '00, assistant librarian, Eastern Illinois Normal School, Charleston.

Miss Adelaide M. Chase, B.L.S., '01, cataloger for Stone & Webster, Boston.

Miss Linda M. Clatworthy, B.L.S., '00, head cataloger, Public Library, Dayton, O.

Miss Madeleine W. Milner, B.L.S., '97, librarian, Northern Ill. Normal School, De Kalb.

Miss Minnie E. Sears, B.L.S., '00, assistant cataloger, University of Illinois.

Miss Blanche Seeley, B.L.S., '00, assistant, John Crerar Library.

Miss Frances Simpson, '00, head cataloger, University of Illinois.

KATHARINE L. SHARP, *Director.*

### Reviews.

FLETCHER, W. I., and Poole, Mary. Poole's index to periodical literature: abridged edition, covering the contents of 37 important periodicals, 1815-99. Boston, Houghton, Mifflin & Co., 1901. 8+843 p. 1. O. \$12 net.

The advent of the "condensed Poole" has been eagerly awaited, and it will be welcomed as one of the reference works indispensable in almost every library. While it cannot take the place of the full series of index volumes, covering, in seven separate alphabets for as many periods, the contents of over 400 different periodicals, it will be of the greatest usefulness in its own field, as a single-volume index to the complete sets of 37 leading periodicals, covering the period 1815-1899. The periodicals indexed are: *American Historical Review, Arena, Atlantic, Book Buyer, Bookman, Century, Chautauquan, Contemporary Review, Cosmopolitan, Critic, Eclectic, Education, Educational Review, Engineering Magazine, Fortnightly, Forum, Geographical Journal, Harper's Monthly, Lippincott, Littell's Living Age, McClure's, Magazine of Art, Nation, National Magazine, National Review, New England Magazine, New World, Nineteenth Century, North American Review, Outing, Outlook, Political Science Quarterly, Popular Science Monthly, Quarterly Journal of Economics, Review of Reviews, Scribner's*. The intention in selecting was to include two classes of periodicals—those of general, popular scope and interest, and certain ones which should represent special fields of knowledge and discussion. The indexing of the complete sets of the *Living Age* and *Eclectic* provides for the inclusion of the chief contents of the English quarterlies and other periodicals.

The plan followed is that adopted in the previous Poole volumes, the work of compilation having consisted mainly in culling

from the complete "Index" volumes and supplements, to the end of 1899, all the references to the periodicals included in the abridgment. The volume is prefaced by the familiar "List of periodicals indexed" and "Chronological conspectus." There is, of course, to be made of it the same criticism that has always applied to the original work, in the lack of author references and of indication of periodicals by month; but it can be seen that the former feature would probably be impracticable on account of the increased bulk, while the latter would have entailed a great amount of extra detail. In short, the work is exactly what it purports to be, namely an abridgment and not a re-making of the original volumes. Nevertheless, librarians will still cherish the hope that some day these changes may be incorporated in "Poole," perhaps as one of the possibilities of future co-operative work. It is most interesting to observe, in turning the pages of this volume, how wide and varied are the subjects treated in periodical literature, and how essential familiarity with this literature must be to readers and students in almost every field. The abridged "Poole" gives a short-cut to as much of this literature as will be desired by the majority of library users, and it will be of the utmost value in the many small and medium-sized libraries which contain from three to 30 sets of periodicals, where the full "Poole" series are not only luxuries but are disappointing in their many references to periodicals not contained in the library. It is, in fact, one of those books that no library can afford to be without, even though the price is necessarily considerable; and most libraries should have two copies, one to be kept for the service of the librarian and staff, and the other to be worn out by the public in the periodical room.

ST. NICHOLAS. Index to *St. Nicholas*: a complete comprehensive index and dictionary catalogue to the first 27 volumes of *St. Nicholas*; comp. by Harriet Goss and Gertrude A. Baker. Cleveland, O., Cumulative Index Co., [1901.] 234 p. O.

Children's librarians and all who have to meet demands for literature for young people, will welcome this key to the contents of *St. Nicholas* since its establishment in 1874. The Griswold and Sargent indexes, and the yearly or half yearly indexes to the bound volumes have heretofore been the chief guides to the stores of this children's treasurehouse, and there is certainly a place for the present compact and comprehensive volume.

The index is arranged in dictionary catalog form, following closely the "A. L. A. list of subject headings," including also such general divisions as "Animals," "Seasons," "Names of holidays," etc., and form divisions, as *Adventures, Dialogues, Fables, Fiction, Puzzles, Riddles, etc.*, the usefulness of which

to the busy teacher or librarian planning special lists, "composition" material, or supplementary reading, will be at once apparent. The entries are of the briefest, but include indication of illustrations, and for serials note beginning and end of instalments; inclusive paging is uniformly given. The printing is evidently linotype work, and there are no variations of type, but the general effect is clear and sufficiently effective. The index seems, indeed, to be throughout a careful and intelligent piece of work, most creditable to its compilers; and it should prove an indispensable "library aid" in its particular field. Certainly no library working with children directly or through the schools can afford to be without it.

ZEDLER, Gottfried. Gutenberg-Forschungen. Leipzig, Otto Harrassowitz, 1901. 8+166 p. +4 pl. O. pap. 7 marks.

This collection of studies, by Dr. Zedler, librarian of the Landesbibliothek of Wiesbaden, is a welcome supplement to the quincentenary Gutenberg literature published last year, because it happily performs the services of a gleaner and throws new light on some obscure points connected with the beginnings of printing at Mayence, either superficially treated or entirely overlooked by the authors of more bulky works or dissertations, and opens the way for further investigation. This does not imply that the present work deals with trivialities—on the contrary, the author treats the seven subjects of Gutenberg's connection with the art of printing exhaustively and in a most scholarly fashion. In the first essay Dr. Zedler treats of the origin of printing through the medium of dies or stamps which were singly impressed upon paper much as the book binder now letters books. A facsimile is given of a fragment of a *Messbuch* printed in this manner in the 15th century. The author then describes Gutenberg's first experiments, and discusses the vexed question of the priority of the 36-line and the 42-line Bibles. While Dr. Zedler thinks that the claim for the 42-line Bible is well-founded, he is inclined to support the theory that the type of the 36-line Bible is the older. In the other chapters of his book, the author throws interesting light on the Gutenberg-Fust printing office, the printing of the 42-line Bible, and the printing of the indulgence; Pfister's office at Mayence, the printing of the 36-line Bible and the other Mayence impressions from the same type; Gutenberg as director of Humery's printing shop at Mayence, and later as manager of Bechtermünze's establishment at Eltville, the printing of the "Catholicon," and a description of the earliest Eltville typographical products. In his last chapter the author gives a plausible reason for accepting the legend of the Gelthuss inscription in honor of Gutenberg as the inventor of printing. A very full index completes the book.

## Library Economy and History.

### GENERAL.

The *Centralblatt für Bibliothekswesen* for August-September is almost wholly devoted to the proceedings of the second annual meeting of the Association of German Librarians (Verein Deutscher Bibliothekare) held at Gotha, May 30-31, 1901. The papers and report of sessions cover p. 337-463.

CONGRES INTERNATIONAL DES BIBLIOTHECAIRES, tenu a Paris du 20 au 23 aout, 1900. Procès-verbaux et mémoires, publiés par Henri Martin, Secrétaire général du congrés. Paris, H. Welter, 1901. 8+267 p. O. 10 fr.

This handsome volume of the Papers and Proceedings of the International Congress of Librarians, held last year in connection with the Paris Exposition, is an important addition to library literature. It includes full regulations and program of the congress, with officers and attendance register, followed by a condensed report of the several sessions, and full publication of the various papers presented. The latter, while emphasizing the bibliographical and antiquarian aspects of library work, are of much varied interest.

The *Library* for July, which makes a somewhat belated appearance, is a most interesting number. The frontispiece is a portrait of Panizzi, which is accompanied by a biographical sketch; and the contents include "Some popular errors as to old bindings," by Cyril Davenport; "The faculty library," by Melvil Dewey, who suggests the organization of a body of librarian specialists in the various fields of bibliography; "Notes on the introduction of printing presses into the smaller towns of England and Wales, after 1750 to the end of the 18th century," by W. H. Allnutt; "The central catalogue of the Prussian libraries," by X.; and "Mechanical book-carriers in the Library of Congress," by R. Garnett and B. R. Green.

The *Public Library Bulletin* is a new monthly devoted to library interests, published by the Library Press, 226 Tremont St., Boston. Its second number, for August, is largely devoted to a condensed report of the Waukesha conference of the A. L. A., including a reproduction of the group photograph. The summer library training course at Chautauqua is described; and the Sheldon Memorial Library at St. Paul's School, Concord, N. H., and the Brooklyn Park libraries are noted in short illustrated articles. Under the heading "Library bulletins" is a department devoted to general news and notes about libraries.

STONE, H. H. Country life and travelling li-

braries; from *The Methodist Review*, July-August, 1901. p. 576-594. D.

Mr. Stone is president of the board of education of Newton county, Ga., and instructor in Emory College. He points out the isolation and often deadening influences of country life, the lack of books and intellectual stimulus, and the value of the traveling library in improving these conditions. Travelling libraries have for two years past been sent out from the office of the school commissioner of Newton county to the various schools of the county, with most successful results, and letters from several school officials are cited, urging the value of this work. Mr. Stone says: "A consolidation of reports from nine schools shows the following to be the order of popularity of subjects, (1) biography, (2) adventure, (3) fiction, (4) history, (5) nature, (6) travel, (7) miscellaneous, (8) poetry. It shows also that 90 per cent. of the books contained in the libraries are read, and that 96 per cent. of the pupils read the books."

#### LOCAL.

*Akron (O.) P. L.* The librarian's report for the year ending June 30, 1901, as printed in the local press, gives the following facts. Added 1467; total 20,357. Issued, home use 57,743 (fict. 30,132; juv. 16,746.) No. card-holders 4884.

*Boston (Mass.) P. L.* (49th rpt.—year ending Jan. 31, '01.) Added 37,179; total 781,377. Issued, home use 1,251,541, of which 820,554 were issued through branches and stations; recorded lib. use (central lib. only) 367,063. 394 v. were sent as inter-library loans to other libraries. New registration 2377; total "live" cards in use 65,540. Receipts \$334,853.24; expenses \$309,186.24, the nominal balance of \$25,666.90 being mainly income from trust funds, subject to outstanding obligations and special restrictions.

Accessions to the library during the year showed a gain of 6673 v. over the previous year, and the sum expended for books, periodicals, and newspapers was \$42,998.48. To this should be added \$1141.49 paid by the Fellows Athenæum for books for the Roxbury branch, and \$435.23 from a special appropriation for one of the station collections, making a total that has only twice before been equalled in the history of the library. The special fiction committee passed upon 683 books, of which 346 were accepted by the trustees, 3191 copies being bought at a cost of \$2750.68; "this year for the first time children's books have been read by the committee."

The library now maintains 87 agencies, a gain of 15 over the preceding year. The report of Langdon L. Ward, supervisor of branches and stations, printed separately in the appendix, gives an interesting review of

the activities of this important department of the library service. "The branches and stations are advertised from time to time in various ways—by placards and circulars, by articles in the newspapers, metropolitan and suburban, and by personal effort, especially at the schools. This year, in addition to the usual means, a general card was prepared, and placed in waiting rooms and car-houses of the Elevated Railway, the Western Union Telegraph offices, the engine-houses, the police stations, the public schools, and many other places. This card shows the location of all the branches and stations of the library, and by underlining the name of a branch it becomes an advertisement of that one in particular."

In addition to the children's room at the central library, children's reading rooms or departments are now maintained in six of the branches and stations. The total issue of children's books was 105,901 v., of which 60,223 were drawn from the children's room in the main library.

An interesting course of free lectures was given in March and April, 1900, in the new lecture room. The speakers and subjects were: Col. T. W. Higginson, Education and the Public Library; James L. Whitney, Incidents in the early history of the Boston Public Library, and other libraries; Otto Fleischer, The Public Library and art education; Rev. Jesse H. Jones, Wendell Phillips, an address in connection with the presentation to the library of a bronze bust of Wendell Phillips; Lindsay Swift, The Public Library in its relations to literature; Worthington C. Ford, The Public Library in its relations to the state; Dr. William Everett, Reminiscences of Hon. Edward Everett; C. W. Ernst, World literature and the postal service; Rev. Dr. Edward Everett Hale, Benjamin Franklin.

Mr. Whitney's report is supplemented by the report on branches, already noted, a report by W. C. Ford on the Department of Documents and Statistics, the report of the examining committee, and the usual statistics. The Department of Statistics shows gratifying growth, in contents and in usefulness, and an interesting announcement is that indexing of the statistical series and periodicals is now in progress. The examining committee recommends increased purchases of French and Spanish literature, and deprecate the accumulation of large numbers of copies of popular fiction. They suggest greater liberality regarding fines, and urge the extension of work with the schools.

*Bowdoin College L., Brunswick, Me.* (18th rpt.—year ending June 1, 1901.) Added 2913, of which 1414 were purchased, at an average cost of \$1.64 each; total 70,159. Issued, 7380, "a marked increase over that of the preceding year." In the method of book se-

lection—heretofore wholly in the hands of the librarian—a change is contemplated, owing to the large growth of the library that will undoubtedly result from its installation in the new Hubbard building, and that is indeed, already noted. It is now proposed to refer book selection to the library committee, which is to meet each week during term time, no books to be added without the approval of two members of the committee. "To make this plan more practicable, the committee has unanimously approved in advance the following when received as gifts: 1, All publications of the United States government in its various departments; 2, All publications of the State of Maine and of any municipality or organization therein; 3, All books and pamphlets published by alumni of the college or by residents or natives of the State of Maine. From the last mentioned class the librarian is authorized to purchase books, to the full extent of the annual income of the Packard Memorial Fund. The committee has also approved, subject to reconsideration at any time, all periodicals, serial publications, and annuals which are included in the 'Bibliographical contributions no. 10,' or which were taken by the library on the first of January, 1901. The librarian is to buy, without waiting to consult the committee, books needed at once by any member of the faculty, provided the total cost of these in any one year does not exceed \$25. He is also expected to expend the income of the George S. Bowdoin fund in the manner desired by the donor without particular approval of the books so purchased."

The new Hubbard library building, now in course of erection, is described, and illustrated by plans and an exterior sketch; and Mr. Little presents a cogent statement of the increased administration that the new facilities will make necessary. He estimates the minimum administrative force as a librarian, assistant librarian, reference librarian, two catalogers, two pages, and a janitor, at a total cost of \$6000 yearly, instead of \$3700 as at present. He suggests that the college mark the completion of its first centenary in 1902 by the publication of a new general catalog, giving biographical and bibliographical record of all who have received its diplomas. A separate report of the library of the medical school is appended; its collection, excluding duplicates, now numbers 4122 v.

The cornerstone of the Hubbard library building was laid on Aug. 15. The actual work of placing the stone in position was done by Noel Little, youngest son of G. T. Little, the librarian.

*Bradford, Pa. Carnegie L.* The handsome Carnegie library building was dedicated on July 1, the chief speaker being W. I. Fletcher, librarian of Amherst College, whose son, Robert S. Fletcher, is librarian of the Bradford library.

*Brooklyn (N. Y.) P. L.* The form of the proposed contract between Andrew Carnegie and the directors of the Brooklyn Public Library, for the establishment of the Carnegie libraries in the borough of Brooklyn, was, it is understood, presented personally to Mr. Carnegie for approval and suggestion, by Dr. J. S. Billings of the New York Public Library, during his absence abroad this summer. The contract, as summarized in the *Brooklyn Eagle*, is to be made between the city of New York by the Board of Estimate and Apportionment, party of the first part, and David A. Boody, Daniel W. McWilliams, R. Ross Appleton and John W. Devoy, directors of the Brooklyn Public Library, parties of the second part. After reciting the conditions of the donation of \$5,200,000 for public libraries by Mr. Carnegie and the legal and other steps taken to consummate the agreement, the contract provides that the city shall proceed to acquire by gift, purchase or condemnation, such sites as may be necessary, not "unless by mutual consent" to exceed 20 in number; that the library authorities shall thereupon "proceed with the erection and equipment of library buildings thereon" from the Carnegie funds, no more than seven libraries to be begun in a single year; and that the city shall annually provide for the maintenance of the libraries "a sum not less than 10 per cent. of the amount expended by Andrew Carnegie," although it may also appropriate "any larger sum, if in its discretion additional appropriation should be required." Provision is made for the opening of the libraries from 9 a. m. to 9 p. m. on week days and on Sundays "as may be determined by the Brooklyn Public Library." Other conditions follow the general lines of the contract prepared for the Manhattan and Bronx systems. This contract has been approved by Mr. Carnegie, together with the contract for Manhattan, Richmond and the Bronx, as noted elsewhere.

The matter of general library consolidation in Brooklyn, by the merging of the Brooklyn Public, Brooklyn Library, and Long Island Historical collections was again brought up in August, and has evoked much newspaper discussion. Henry Sanger Snow, of the Brooklyn Public Library Board, in an interview on Aug. 6, gave strong arguments for such consolidation, and it is understood that the matter will be submitted to the library and city authorities in the early autumn. In an interview in the *Eagle* of Aug. 8, Mr. F. B. Pratt, of Pratt Institute, expressed his interest in the question, and spoke of the possible co-operation of the Pratt Institute Library in the direction of training library assistants, and specializing in reference work.

The library system has been increased during the summer by the transfer to its control of the Tompkins Park Library, formerly maintained by the Brooklyn Public Library Association, and the Astral branch of the Pratt Institute Library.

The library budget for the year 1902 was submitted to the city board of estimate by the treasurer, John W. Devoy, on Aug. 28. It calls for a total appropriation of \$195,956, of which \$18,540 are for two proposed branches, \$20,475 for general administration, \$8695 for the cataloging department, and the remainder divided among the 18 branches of the library. The appropriation of the preceding year was \$80,000, with \$20,000 additional for the maintenance of the five independent libraries consolidated during the year. Mr. Devoy points out that "the budget makes provision only for the present branches and two additional ones very much needed. It is not affected in any way by the proposed construction of Carnegie libraries nor does it take into consideration the possible consolidation with the Brooklyn and Historical Society Libraries. It is possible that with the speedy co-operation of the board of estimate seven Carnegie libraries may be built and opened to the public by the latter part of 1902. The maintenance of such Carnegie libraries must be furnished by the cities according to the contract the city must furnish a sum not less than 10 per cent. of the amount expended by Andrew Carnegie, which sum shall be provided as rapidly as such libraries are constructed."

*Buckfield, Me. Zadoc Long F. L.* The memorial library building, given to Buckfield by Hon. John D. Long, of Hingham, Mass., was dedicated on Aug. 17.

*Canton (O.) P. L.* The city council on July 8 accepted the Carnegie offer of \$50,000 for a public library building, and authorized an annual appropriation of \$5000 for library maintenance. It was decided not to change the name of the Canton Public Library on account of Mr. Carnegie's gift.

*Cleveland (O.) P. L.* (32d rpt. — Sept. 1, 1899-Dec. 31, 1900.) Added 24,645; total 170,123. Issued, home use, 4 months of 1899, 276,854, year 1900, 958,737 (Eng. fict. 37.5%; juv. fict. 20%). New registration 3651; total "live" cards 54,066. Expenses \$30,126.16 (books \$13,715.66; periodicals \$2654.92).

This report covers 16 months, in order to bring the library year, heretofore ending Aug. 31, in accord with the calendar year. It is an interesting report, especially in its clear presentation of "opportunities and needs." It is prefaced by a striking frontispiece diagram, showing the ratio of distribution of each dollar of Cleveland taxes among the various city departments, the board of education leading and the library with its 1.3 cent ranking the lowest of any except the elections and dredging allotments.

The most important event of the year was naturally the selection of new quarters, made necessary by the selling of the building occupied for the past 22 years. It was decided to erect a temporary building at Wood and Rockwell streets, north of the city hall, the

plans of A. A. French were accepted, and work was begun in the autumn. It had been hoped to arrange for joint occupancy of the new building by the Case Library and the Public Library, but the project was abandoned after several conferences of both boards. "The new building, although intended for only a few years, is nevertheless provided with a stack room entirely separated by a fire wall from the main library and affording much greater security from fire than the present building. It will also have greatly increased stack and shelf room for books."

The most marked features of the library's recent history has been the development of branches and distributing agencies. In 1892 the first branch was opened; in 1895 the library system included the main library, two branches, and 72 school collections deposited with teachers; the system now comprises, in addition to the main library, four branches in independent buildings, four sub-branches, 19 deposit stations, 13 delivery stations, 47 school collections, and 26 engine-house collections — "a total, aside from the main library, of 113 library agencies." Mr. Brett adds: "Although the extension of the work of the library by branches and other agencies has been so important a feature of the work of the years just past, and although 61% of the issue of books for home use is made outside of the main library, either directly from the branch and station collections, or from the main library through them, the field is not nearly occupied. The value of an adequate system of branches developed throughout the city, aiding and supplementing the work of the schools, is incalculable. This will not, however, in the least lessen the value or the necessity of an adequate central library, but will rather increase it. The main library must always be the headquarters for administration, for book buying, binding, and cataloging, and for the storing and supplying of books for the branches and stations. It will be the main circulating library, containing in addition to a collection of the lighter and more popular books much larger than can be placed in any branch, the general collections on the more important subjects, such as history, biography, travel, literature, philosophy, religion, and science, which it is impossible to duplicate on account of their extent and expense. In this and in its reference library, it will be the storehouse and workshop of the scholar and the student. As the administrative center of a system of branches it will require even more ample housing than if its work were only that of a reference and circulating library for those who are able to visit it. The experience of other large cities as well as Cleveland is that the use of the main library is not decreased by the opening of branches, but that the branches increase the use of books by bringing them within the reach of those who are not able to use the main library."

Details of the various departments, of the work with schools, with children, in the reference library, etc., are given, of which adequate record is impracticable; and the report should have careful reading as an interesting and suggestive library document.

*Cohoes, N. Y. Carnegie L.* A site for the proposed Carnegie library building has been given by Charles R. Ford.

*Conway, Mass. Field Memorial L.* The new library building, the gift of Marshall Field, of Chicago, was dedicated on July 13. The library is given by Mr. Field in memory of his parents, John and Fidelia Nash Field. The building, together with over 6000 books which are included in the gift, cost over \$100,000, and there is an endowment fund of \$52,000. The structure is in classic style, of limestone and gray granite. On the frieze is the inscription, "Field Memorial Library," and just over the entrance are the words, "Free to All." The names of the citizens of Conway who lost their lives in the Civil War are inscribed on the front of the buildings. The corner stone was laid on July 4, 1900.

*Fairfield, Me. Lawrence F. P. L.* The library building given to Fairfield by Edward F. Lawrence, was dedicated on July 24. The building was erected at a cost of \$15,000 on a lot presented to the town by Mrs. Louise E. Newhall. Both Mr. Lawrence and Mrs. Newhall, in addition to the site and the library building, subscribed \$1000 for books. There are now 3300 volumes on the shelves. The building is 30 x 72 feet, built of slate rock uneven in size, irregular in shape and of various colors. The interior is artistically decorated and all the appointments are convenient and modern.

*Grand Rapids (Mich.) P. L.* A site for the public library building, to be erected by Martin Ryerson, of Chicago, was purchased on July 15.

*Guildhall (Vt.) P. L.* The new public library building, the gift of E. C. Benton, of Boston, was presented to the town on the afternoon of July 10, the exercises bringing to a close a two days' Masonic festival. The presentation of the keys by Mr. Benton to the town officers was followed by the dedication of the library proper. Then came a collation and public exercises in the Congregational church, where W. H. Rangor, superintendent of education, made the principal address. The program was ended by a fireworks' display in the evening.

*Hagerstown, Md. Washington County F. L.* The library was opened on the morning of Aug. 27, without formal exercises, and in the evening a general public reception was held, when the building was inspected by many interested visitors. 268 persons were registered as borrowers during the first day; and the record for the second day was 195.

The library is proving its value on all sides. On Sept. 1, Miss Titcomb wrote: "Although we have been open but five days we already have applications for four branches. I cannot help feeling that the library is destined to be a real help to this section of the country. Anything of the kind is so new to people in this region that their pleasure and surprise are delightful to witness."

*Hampton Falls (Mass.) F. L.* The new library building given by John T. Brown, of Newburyport, was dedicated on Aug. 30. The building is a remodelled chapel, erected in 1835.

*Hartford (Ct.) P. L.* The branch library established in Elizabeth Park in June has proved most successful. During its first two months 1294 books were issued. The little library has a good collection of novels, new and old, short stories, books for children, out-of-door books, essays, poetry and current magazines. The last are so popular that they are worn almost in pieces before the month is over. On July 24, out of 41 books and 12 magazines taken, 32 were children's books and four children's magazines. The various colored fairy books edited by Andrew Lang are very popular, and so are Gelett Burgess's "Goops," "The outdoor handy book," "The jungle book" and "The April baby's book of tunes."

The room is very attractive, with its soft-tinted walls, willow furniture, plants, and photographs. Its establishment was due to Mrs. Henry Ferguson, chairman of the Park Section of the Civic Club.

*Litchfield, Ct. Noyes Memorial L.* The handsome library building erected as a memorial to Mrs. William Curtiss Noyes, by her grandson, was dedicated on July 5. It is a plain, fireproof structure, handsomely equipped, and well adapted to its purpose as a library and as headquarters of the Litchfield Historical Society. The stack room has capacity for 8000 v. The building cost about \$20,000.

*New York City. Aguilar F. L.* (11th and 12th rpts., 1899-1900.) Added 30,049; total 76,530. Issued, home use 1899, 583,440; 1900, 672,108. Receipts \$71,296.02; expenses \$68,147.52.

An interesting report, showing increased activities and development, despite the serious reduction of the city appropriation for library maintenance. There has been a marked increase of circulation at each of the four branches, and the percentage of books other than fiction that are drawn out is constantly increasing. The open-shelf system has been adopted in three of the libraries, with satisfactory results. "The strain on our staff in many respects has been lessened, the readers come in contact with books hitherto unknown to them, and books of a more serious character are now more frequently circulated

than hitherto. The comparative loss due to the disappearance of books is slight compared with the great gain." The establishment of children's rooms in the several libraries has also proved most advantageous. "Co-operation with the public schools, free lectures, and vacation schools, is constantly growing, and our library is in line with all movements that tend to bring the book and the reader as close as possible." The work done at each of the libraries is reviewed separately, special emphasis being laid upon reference use and the work with children. From the travelling library department 26,568 v. were issued to 33 schools and clubs, 850 v. being sent to 11 vacation schools. In the cataloging department the union index, begun June 20, 1898, was finished August 1, 1900.

The most important event during the period covered was the transfer of the 110th street library from a little shop to a well-equipped library building. This building is briefly described by the architects and by Dr. Leipziger, chairman of the library committee. Its site was a single city lot, 25 feet wide, so that the questions of arrangement, distribution of space, etc., were unusual. The total cost of construction was 20,810.60, and of equipment \$4409.80. The building is three storied, with a cellar, semi-fireproof, of Indiana blue limestone. On the first floor there is also a mezzanine floor and in the rear of the building the walls have been carried up, forming the third story and providing for janitor's apartments. The main entrance opens into a waiting room, in the rear of which are stack room and work room; stacks are also installed upon the mezzanine floor. On the second floor is the reading and reference room, well lighted by the glass front of the building, and toward the rear is the spacious children's room.

*New York P. L.* On July 17 Andrew Carnegie's gift of \$5,200,000 to the city of New York for the establishment of 65 public libraries in the five boroughs was formally accepted at a meeting of the Board of Estimate. The meeting was held for the purpose of acting on the agreement and contract, which had received the approval and signature of Mr. Carnegie. In signing the Manhattan contract Mr. Carnegie wrote:

"This contract seems to be in every way admirable and is heartily approved.

According to the provisions of the contract the city of New York is the party of the first part, and the trustees of the New York Public Library, Astor, Lenox, and Tilden foundations, are agents for Mr. Carnegie, and have the power to prepare the plans and have 42 public libraries erected in the Boroughs of Manhattan, the Bronx and Richmond, and equipped at a cost not to exceed \$80,000 each.

The new Carnegie libraries are to be kept open from 9 a.m. to 9 p.m. every day in the

year except Sundays. No more than 10 new library buildings are to be commenced in any year.

The agreement sets forth the offer of Mr. Carnegie to provide the funds necessary for the building and equipping of 65 branch libraries of the New York Public Library, the new building of which is now being erected in Bryant Park, at 42d street and Fifth avenue. The agreement then recites that the city must provide ground on which the buildings are to be erected. The enabling act of the legislature by which the city of New York was authorized to accept Mr. Carnegie's offer is printed in full.

The contract then states that the city shall proceed to acquire by gift, condemnation, or purchase such sites as may be necessary, not to exceed 42 in Manhattan, the Bronx, and Richmond. The city is authorized, by the unanimous vote of the Board of Estimate and the Sinking Fund Commission, to use any real estate now owned by the city and not used for other purposes for a library site under the contract.

The city vests the right and title of all these sites in the trustees of the New York Public Library so long as the property is used for the purposes designated in the agreement. As soon as the title of a site is acquired by the city it is to be vested in the trustees of the Public Library, "and the said trustees shall proceed immediately to the construction thereon and equipment of one of the free public libraries," the entire cost of the construction and equipment to be paid out of funds to be provided by Mr. Carnegie. It is provided in the contract that the construction and equipment of the buildings shall proceed as rapidly as possible. The management of the libraries and the employment and discharge of all librarians and attendants is vested in the trustees of the New York Public Library.

By the terms of the agreement the city is to provide in the annual budget for the entire cost of the maintenance of the libraries from the time they are opened to the public. It is also provided that the appropriation for maintenance must not be less than 10 per cent. of the amount spent by Mr. Carnegie, so that when the \$5,200,000 is spent the lowest amount which the city can appropriate each year for maintenance of the libraries will be \$520,000. The city is required to furnish water free to all the libraries, and the trustees of the New York Public Library are required to report every year to the Board of Estimate an itemized account of the expenditures of city moneys and all balances shall be returned to the general fund of the city treasury.

An objection to the acceptance of the \$5,200,000 gift was made at the time of the offer on the ground that the city would bind itself to maintain forever library buildings which on account of shifting population

were useless. This objection has been overcome in the contract. There is a clause allowing the agreement to be amended and annulled by the consent of the library trustees and the members of the Board of Estimate.

This contract deals only with the libraries to be established in Manhattan, the Bronx, and Richmond, the matter of arranging for the 23 libraries assigned to the boroughs of Brooklyn and Queens, having been treated separately. After acceptance by the board of estimate the contract was forwarded to Mr. Carnegie, in Scotland. It was received again, with the Brooklyn contract, by Controller Coler, on Sept. 9, with the following note from Mr. Carnegie:

"Yours of July 30 received. I have much pleasure in inclosing the two contracts approved. I am quite sure that the authorities will take the wisest possible action in all cases."

Dr. Billings, who has been abroad since the latter part of July, has been in consultation with Mr. Carnegie regarding the general disposition of his gift.

The contract for the construction of the main library building in Bryant Park was on Aug. 22 awarded to Norcross Brothers for \$2,865,706. This bid, which was first selected some weeks previously, was \$77,000 higher than that submitted by another bidder, Eugene Lentilhon, and the latter promptly secured an injunction against its acceptance. On argument the injunction was dismissed, as it was shown that by a special law the Board of Estimate was not obliged to select the lowest bidder. It was stated that Norcross Brothers included in their bid Vermont marble and Lentilhon an inferior stone. Following the decision of the court the Park Board awarded the contract.

*Newark (N. J.) F. P. L.* (Rpt., 1899-1901.) The main facts of this report, prepared in connection with the resignation of Mr. F. P. Hill from the librarianship of the Newark library, have already been noted in these columns (L. J., July, p. 412.) It is a general summary of the history of the library from its organization, with statistics of accessions, circulation, and readers for the period.

One of the most interesting recent publications of the library was the "Special number for boys and girls" of the *Library News*, containing a short sketch of the children's room, and a "partial list" of the books there shelved.

*Oklahoma City, O. T. Carnegie L.* The new Carnegie library building was dedicated on the evening of Aug. 29 with elaborate exercises.

*Oyster Bay (L. I.) P. L.* The new public library was dedicated on Aug. 15. One of the contributors to its establishment was Andrew Carnegie, who gave \$1000 to the building fund.

*Pennsylvania Home Teaching Soc. and F. C. L. for the Blind.* (Rpt.) "This society was founded in 1882, with the object of providing a library of embossed books in the Moon type, and sending teachers to the homes of the blind for the purpose of teaching them to read, and periodically exchanging their books. For 16 years the work was most successfully carried on in Philadelphia, under the superintendence of Mr. John P. Rhoads, the treasurer of the Philadelphia Bible Society; but in order to place it upon a more permanent basis, the society was re-organized in 1898," when the Free Library of Philadelphia undertook the control of the society's collection of embossed books, as well as the superintendence of their issue, all expense connected with the home teaching part of the work and the circulation of books outside of Philadelphia being borne by the Home Teaching Society.

"The library of embossed works has been transferred to the Free Library, where the books are kept in a room especially set apart for the purposes of this work. The room is also open to the blind as a reading room, and such persons are welcome to the free use of the library."

*Philadelphia, Apprentices' L.* (81st rpt. — year ending March 31, '01.) Added 1290; total not given. Issued, home use 67,235 (fict. 71%); readers in ref. dept. 5690. New registration 1742. In the children's library 12,181 v. were issued, and 19,961 readers were recorded. Receipts \$6874.73; expenses \$6122.11.

Great economy in administration has been necessary, and in consequence purchases of new books have been somewhat curtailed. The removal of the library to its present location resulted in an increased number of readers, but the library is now barely able to supply the demand it has created, and a falling off in circulation has resulted. The cost per volume circulated is given as less than seven cents. Special effort is made by the librarian and her assistants to establish cordial personal relations with all readers.

*Philadelphia F. L.* (5th rpt., 1900.) The statistics given in this report are almost wholly those of circulation, which now reaches close upon the 2,000,000 mark. During 1900 there were issued 1,826,637 v., showing a gain of 48,250 over 1899. The total stock of books in use on Dec. 31, 1900, was 234,221. Four new branches — Paschalville, Thomas Holme, H. Josephine Widener, and Frankford — were opened, bringing the total number now in operation to 15. There were 95 travelling libraries in constant use, and many applications for these libraries, for school deposits and for branches, have been necessarily refused owing to lack of funds.

The matter presented with most urgency is the great need of an adequate central building. Mr. Thomson again points out the

obvious fact that the present building, originally a concert hall, "is wholly insufficient in floor space for the work that is being carried on. On a recent Saturday 4912 v. were distributed from this one building in the 12 hours during which the library was open, the distribution throughout the system reaching the total of 14,871 volumes issued for home use on that one day." It is impossible, owing to the crowded conditions, to make adequate provision for reference or reading room use, or to meet the needs of the children's department. The report includes a review of the plans of the state library commission in regard to the establishment of a travelling library system.

The department for the blind was open 305 days, and 2326 v. were issued on 111 readers' cards. "The co-operative work between the Home Teaching Society for the Blind and the Free Library has been continued with excellent results. Work which the Free Library could not undertake on behalf of persons desiring to use the library, who live outside the limits of the city has been well attended to with the aid extended by the Home Teaching Society."

*Pittsburgh, Pa. Carnegie L.* (5th rpt.—year ending Jan. 31, '01.) Added 28,342; total 118,068. Spent for books, \$17,982.65. Issued, home use 428,686 (fict. 66.97%), being a gain of 24% over the previous year. New registration 8444; total registration 35,681. Attendance in ref. dept., 22,718; books used 125,034; reading room attendance, main lib. and branches, 491,851. Receipts \$147,235.75; expenses \$138,280.04.

A compact, well-arranged report, showing constantly expanding activities, and including plans and brief descriptions of the Mount Washington and Hazelwood branches, established within the year. A general tabulation of registered borrowers by occupation is given, showing "that 71 per cent. of the total number are employees in the various industrial and mercantile establishments of the city, not including managers and superintendents."

The juvenile circulation for the year was 160,061, an increase of 32,018 over the previous year; the attendance in the children's rooms was 269,956, an increase of 32,560; over 2000 new juvenile borrowers were registered. "During the early part of the year, both the use of the children's room at the central library and the juvenile circulation fell off alarmingly and the fiction percentage rose steadily. The cause of this was that the children could not examine the books before they were charged on their cards. In October we removed the reference collection from the few shelves in the children's reading room and put in its place all the juvenile non-fiction books and a good selection of juvenile fiction. These books are charged in

the children's room at the desk of the children's librarian, but other books of fiction must be called for in the usual way by call slip at the general loan desk. As a result the figures since October show a marked increase both in attendance and circulation, and a decrease in the fiction percentage. During the year systematic preparation was made for the weekly 'story hour.' An outline of sixteen stories from the Iliad and Odyssey was prepared, and the stories told simultaneously at the central library and branches. The children's librarians attended seven lectures on Homer, given at the central library for our training class. These lectures were designed solely to arouse a literary interest in the Homeric epics and serve as inspiration, the story tellers later adapting the stories to the capacity of children. Stories from Greek mythology and Homer, were placed on special 'story hour' shelves, and, as a result of the interest aroused by the story telling, were circulated 2051 times."

The training class for children's librarians proved most valuable in training assistants for this special work.

There are now 8453 v. in the school duplicate collection, from which 39,138 v. were circulated; 1300 pictures were also loaned for school work; and 51 educational institutions were supplied with books.

Mr. Anderson calls attention to the need of larger quarters. "Every department is reduced to temporary expedients to tide over the time till the proposed extension is complete. The book stacks are so crowded that we have been compelled to send more than one thousand volumes of Government documents to the attic, to make room for more important books. Our set of British patents is stored in the basement in what was once a part of the newspaper room. Another portion of this room was taken during the year for a bookbindery. The children's room is too small and not at all adapted to the purpose for which it is used. It is a makeshift, and gives a wrong impression of our work with children. The periodical room now has five racks containing about 500 current periodicals. It has a seating capacity of *thirty-two!*"

*Pittsfield, N. H. Carpenter L.* One of the features of "old home week," celebrated August 19-23, was the dedication on Aug. 21 of the handsome library building, given to Pittsfield by Josiah Carpenter, of Manchester.

*San Francisco, Cal. Mechanics' Institute L.* The *Mechanics' Institute Bulletin* for August reviews some features of the work and administration of the library. Comparative statistics for 1900, printed elsewhere, are given for the New York Mercantile, Philadelphia Mercantile, Brooklyn, St. Louis Mercantile, and Mechanics' Institute libraries, the

latter leading in membership, circulation and receipts. The library now contains 85,191 v., has 3807 members, and an average daily circulation of 431 v. The receipts for membership are given as \$18,739. The library staff was recently reorganized, with a view to improving the delivery desk work; "as a result the circulation has increased in a remarkable degree, and in July, which usually has the lowest average of the year, 709 books a day were given out, a record which has been exceeded in but one month in the last six years."

A dictionary catalog was begun in November, 1900, and is complete for all accessions since that date, and for many of the old books, which are being recataloged as rapidly as possible. At the same time the old catalog is kept up to date by the insertion of brief author and title entries for all new books. The reclassification and renumbering of the entire collection should, it is urged, be carried through as promptly as possible.

*Sandusky, O. Carnegie L.* The handsome new Carnegie library was dedicated on the evening of July 3, when exercises were held in the auditorium of the building. Governor Nash made a short address, the speaker of the evening being Dr. W. O. Thompson, president of the Ohio State University, whose topic was "An educated citizenship."

The new library was erected at a cost of \$50,000, given by Mr. Carnegie; the library association furnished the site, and the city council pledged \$3000 for support. In addition to the fireproof stack room, library, and reading rooms, there is an auditorium with a pipe organ, and art room, and rooms for women's clubs.

*Sedalia, Mo. Carnegie L.* The \$50,000 library building given by Andrew Carnegie to the people of Sedalia, Mo., was dedicated Tuesday evening, July 30, 1901, and opened then for the first time to the public. The exercises were held in the art room on the second floor of the building, where about 400 of those who visited the building, were seated. Besides the speeches by men of the city, a brief paper on "Responsibility" was read by John Lawrence Mauran of the firm, Mauran, Russell & Garden, of St. Louis, architects of the building. He spoke of the responsibility of the architect in giving to the people a building that should be "instructive by reason of its dignity, and elevating by reason of its refinement." F. M. Crunden, librarian of the St. Louis Public Library, gave the address of the evening on "The public library as a paying investment."

The building is 113 feet long, and stands on a half block, 270 x 130 feet, allowing 75 feet of lawn at each end of the building. The foundation and the four columns at the entrance of the building are of Carthage stone. The walls and the ornamentation are

of white terra cotta, which gives the effect of stone. The front entrance leads into a main hall 32 feet square. In this hall, opposite the entrance, is the delivery desk. Stairways lead from the hall to the second floor and to the basement. Opening from either side of this main hall are the reading and reference room and the children's room, the two of equal size and well lighted, having windows on three sides. From the delivery desk to the stack room at the back of the building is a passageway 15 feet long and eight feet wide. Shelves in this passage accommodate about 600 volumes, and to these the public are given access. The stack room has a capacity of 50,000 volumes and is fireproof. The librarian's room and the cataloging room are back of the delivery hall, on either side of the passage to the stack room.

On the second floor a light well in the central hall admits light from the sky-light above to the main hall on the first floor. The art room, occupying one end of the second floor, is already furnished with more than 100 framed photographs of European art and scenes, the gift of Mrs. Smith and Mrs. Cotton, of Sedalia. The director's room and two small rooms, to be used ultimately as map and study rooms, occupy the other end of the second floor.

In the basement are rooms for government documents and storerooms. The building will be heated by hot water furnished by a public plant.

The wood finish of the building is golden or Flemish oak, and the furniture, procured from the Library Bureau, is of the same material. The tinting of the walls has added to the attractiveness of the building. The walls of the main hall and the halls of the second floor are painted vermilion. The reading and children's room are pea green with buff ceiling, and the librarian's and the cataloging rooms are painted in buff with ivory ceiling. The art room is finished in magenta.

*Syracuse (N. Y.) P. L.* Contracts for the erection of the new \$200,000 Carnegie library building were awarded in July, and the work of removing the library from the old building to its temporary quarters was carried on through August. The tearing down of the old buildings will be undertaken as soon as possible, and it is hoped to have the work of construction under way before long.

*Trinity College L., Hartford, Ct.* (Rpt. — year ending May 31, '01.) Added 491; total 27,090. Issued 1222; attendance 3313.

The rearrangement of the library, made possible by the addition of a new room to its quarters, has resulted in an increased use of books. The year was marked by generous gifts in books and money, notable among the former being Audubon's "Birds of America" presented by Dr. Gurdon W. Russell of the

class of 1834, and one of the finest of all existing copies. A new dictionary catalog has been undertaken. A special appropriation for binding, of \$150 annually, is recommended, as is a special appropriation of \$125 for cases necessary in rearranging and systematizing the library's rich collection of public documents. Mr. Carlton also suggests that the library begin the publication of bibliographical lists of its rarer books; "there are one or two subjects upon which we have material well worthy of such treatment."

*Wesleyan Univ. L., Middletown, Ct.* The university *Bulletin* contains a short report on the work of the library. From Nov. 1, 1900, to April 30, 1901, the sum of \$559 was added in subscriptions to the Alumni Library Endowment, which now amounts to \$29,515.70. During the year ending April 30, 1901, the library received gifts of 1003 v., 3099 pm. and periodicals, and 192 maps.

"Owing to the growth of the library and the work of reclassification, additional shelves for books have become necessary. To meet this need double tiers of shelving are to be built in the alcoves on the second floor. The shelving between the alcoves is in four tiers, each tier being three feet in width. The new shelving will be placed in the center of each alcove, beginning at the railing and running toward the outer walls of the building. There will be only three tiers instead of four, however, and a table will take the place of the fourth tier. This arrangement will render each alcove available for study as heretofore. The additional shelving will accommodate about 12,000 volumes."

*Westfield, N. Y. Patterson L.* (4th rpt. —year ending June 30, 1901.) Added 1019; total 11,399. Issued, home use 21,899 (fict. 10,220; juv. fict. 5259.) Cards issued 231; total registration 1877.

*Wilmington (Del.) Institute F. L.* In the latter part of August it was discovered by the librarian, G. F. Bowerman, that a systematic mutilation of library volumes had apparently been in progress for many months. Over 1000 volumes were found to have been mutilated by the clipping out of engravings, plates, and extracts from the text, and it is not yet known how many books as yet unexamined have suffered in the same way. The fact that vandalism of this kind existed became known to Mr. Bowerman in April, shortly after he was appointed librarian to succeed the late Mr. Doane. One day there came to Mr. Bowerman's notice the fact that a frontispiece — a steel engraving of some value — had been removed from an autobiographical work. An investigation was begun, which gradually brought to light the fact that at least 1000 volumes in the collection had been mutilated in a like fashion. Many magazines were included in the list, and a notice was then posted, requesting patrons of the library to

take volumes to the tables after removing them from the alcoves, instead of remaining near the alcoves to read the books. This method, it was thought, would minimize the possibility of further deprecations.

Careful watch was kept, and the matter was finally put in the hands of the police, with the result that on Aug. 27 the home of a man under suspicion was searched by Mr. Bowerman and the detective engaged. Here an immense pile of clippings, engravings, photogravures and plates from old books was found in one room. From this collection, Mr. Bowerman selected a bundle of clippings and illustrations that he believed were taken from books at the library; later he fitted the illustrations in the library books that had been damaged, and found that they corresponded exactly.

The clippings were mainly in the fields of science, art, music, history and biography. Autobiography was especially attractive to the collector, who had accumulated portraits from most of the biographical works in the library. Sometimes five and six pages at a time had been removed, scientific subjects being generally taken in this manner. Of the 15 photogravures in the Tennyson "Memoirs" but one was left in the volume, and the 16 illustrations in Carey's "Tennyson" were all removed. The old *Knickerbocker Magazine* had several leaves removed, and the *Mirror*, *Putnam's* and other publications of the earlier decades of the nineteenth century, were mutilated in the same manner. Warrants have been issued for the arrest of the man suspected, John A. Rollo, who, however, has not so far been found. On Sept. 4 Mr. Bowerman received a letter from Rollo, postmarked Philadelphia, stating that a local lawyer had been engaged to represent him in transacting "certain business matters" as to "alleged charges" made against him in connection with the mutilation of library books.

Mr. Bowerman has received a large collection of engravings and other plates from a Wilmington resident and finds that many of them were taken from the library books. They were bought from Rollo, and were given to Mr. Bowerman that he might try to identify the Institute Library property, as soon as the wholesale despoliation was announced in the press.

*Windsor (Vt.) L. A. E. N. Goddard*, librarian, writes to correct the note regarding the Mary L. Blood Memorial Library, given in the July issue of *LJ.*, p. 416. He says: "The Mary L. Blood Memorial Library is not at Windsor but at West Windsor (Brownsville, P. O.) and is a new foundation. The library of the Windsor Library Association at Windsor has more than 9000 volumes still housed in temporary quarters, while a fine site owned by the Association still waits for some one to adorn it with a suitable building."

## FOREIGN.

*Birmingham (Eng.) F. Ls.* (39th rpt.—year ending March 31, '01.) Added ref. lib. 5300; total 153,020; issued (exclusive of books from open shelves) 305,508; average daily attendance 800; Sunday issue 32,859. The 10 lending libraries contain in all, 106,120 v., of which the central library has 31,408; and from them 921,674 v. were drawn for home use. The total issue of books from all the libraries was 1,260,041. New registration is given as 16,049, and total cards in force as 30,006.

The library received during the year the bequest, from the late H. Payton Bodley, of a well-selected private library of about 7000 v. This will be kept as a separate collection, to be known as the Bodley library. It also received a bequest of £105 from the late J. D. Mullins, long chief librarian, to be invested and the income devoted to the purchase of books for the Shakespeare Memorial Library.

*British Museum L.* (Return—year ending March 31, '01.) Added 25,285 v. and pm.; 62,838 parts of volumes or periodicals; 1309 maps; 5562 musical publications; 3400 newspapers, comprising 220,369 nos. Issued to readers 1,336,147. Attendance 198,566, or a daily average of over 655, with an average of almost seven volumes daily for each reader. In the newspaper room there were 25,423, or a daily average of almost 84. With the completion of the printing of the catalog, begun in 1881, progress has been made in the preparation of a supplement, recording all additions from 1882-1899; seven printed parts covering A-Bibi, were issued during the year.

Accessions of special interest are noted, among them being 130 incunabula, including a Boccaccio, "Ruine des nobles hommes et femmes," printed by Jean Du Pré, Paris, 1483; Franciscus de Platea, "Opus restitutionem," Cracow, 1475, the first book printed at Cracow; "Vita della Vergine Maria," printed by Giovanni Leon Longo, Vicenza, 1477; and Albertus Magnus, "De animalibus." There were also added 250 volumes impressed with armorial bearings on their covers, forming a part of the valuable collection of books with heraldic devices gathered by the late Sir A. Wollaston Franks, and containing many rare book stamps of English collectors. The library has received the bequest of the private library of the late H. S. Ashbee, amounting to 8764 works in 15,299 v., and especially rich in Cervantes and Don Quixote literature.

*Frankfurt a. M. Freiherrlich Carl von Rothschild'sche öffentliche Bibliothek.* (Rpt., 1891-1900.) Dr. Berghoeffer, librarian of the Rothschild Free Library, has prepared a handsome report, covering a decade of the library's history. It opens with a fine frontispiece view of the building, and includes

plans of site and interior, portraits of the founders, and interior views. Since its establishment in 1837 the library has accumulated a collection of 41,230 v., of which 20,669 were gifts.

*Lincoln (Eng.) P. L.* (7th rpt.—year ending May 9, '01.) Added 903; total 10,538. Issued 71,263. New cards issued 277; total cards in force 2417.

On April 1, 1901, Henry Bond, librarian of the library since its organization, resigned that position to become librarian of the Woolwich Library. He was succeeded on April 23 by Albert R. Corns, formerly of the South Shields and Wigan public libraries. An annual lecture, upon a literary subject, is given at the library by some distinguished speaker. That for 1900, delivered in June of that year, was by Sidney Lee, on "England's debt to Shakespeare," later printed in the *Cornhill Magazine*. The 1901 lecture was delivered on May 9 by Sir Frederick Bridge, organist of Westminster Abbey, whose subject was "Shakespeare and music." It was interpreted by musical illustrations and accompaniments.

---

## Gifts and Bequests.

---

*Evanston (Ill.) P. L.* William L. Brown of Evanston has contributed \$1000 towards the fund for the purchase of the proposed new library site, which makes the total subscription \$12,000.

*Irvington, N. Y.* On July 4 the town trustees announced that Frederick W. Guiteau, of Irvington, had given \$10,000 to establish a public library.

*Sharon, Pa.* Frank H. Buhl, president of the Sharon Steel Co., has offered to give to that town the sum of \$200,000 for a public library building.

*Tyngsboro, Mass.* Miss Mary E. Bennett has subscribed \$1000 toward a new public library building, provided the town will raise \$5000 additional for the purpose.

*Wellington, O.* Col. M. T. Herrick has arranged to erect a library building, as a memorial to his father and mother. It will cost \$15,000.

### *Carnegie library gifts.*

The following gives the record of recent library gifts made by Andrew Carnegie. Unless otherwise stated, the gifts were made upon the usual conditions, that the city furnish a site and guarantee a yearly maintenance fund amounting to 10 per cent. of the sum given by Mr. Carnegie.

*Annan, Dumfriesshire, Scotl.* July 13. £3000.

*Beloit, Wis.* Aug. 30. \$25,000.

Accepted Sept. 3.

*Burlington, Vt. Fletcher F. L.* Aug. 7. \$50,000.

Accepted Aug. 14.

*Chatham, N. Y.* Sept. 4. \$15,000.

*Coatbridge, Lanark, Scotl.* July 12. £15,000.

*Collingwood, Ont., Can.* July 24. \$10,000.

*Covington, Ky. Carnegie L.* July 16. \$35,000 additional to original gift of \$40,000, to permit addition of an auditorium to building plans.

*Dalkeith, Scotl.* Aug. 23. £4000.

*Detroit (Mich.) P. L.* July 1. \$750,000 for a central library and branches, sites for which must be furnished, and \$75,000 annually guaranteed for maintenance. Accepted by library commission on July 9, when a resolution was passed requesting the common council "to immediately adopt a resolution submitting to the electors of this city at the next general election, the question of issuing bonds to the amount of \$500,000 for the purpose of complying with the conditions imposed by Mr. Carnegie." The Carnegie offer has been strongly condemned by the local labor council, which passed resolutions requesting "the mayor and other officials interested to assert their manhood and independence by refusing to accept of Andrew Carnegie his offer of unjust gains."

*Great Falls, Mont.* July 9. \$30,000.

Accepted July 16.

*Greenville, O. Carnegie L.* \$10,000 additional to original gift of \$15,000.

*Griffin's Corners, Delaware Co., N. Y.* \$5,000.

The library is to be a memorial to the late Dr. A. J. C. Skene, of Brooklyn, N. Y. No conditions were attached to the gift, save that it bear the name of Dr. Skene.

*Henderson, Ky.* July 30. \$25,000.

Accepted Aug. 16, provided that the next general assembly pass an amendment to the charter giving the city the legal right to make the appropriation required for the maintenance of the library.

*Joplin, Mo.* Aug. 7. \$40,000.

*Kansas City, Kan.* July 16. \$75,000.

Accepted Aug. 7. A site has already been secured.

*Kent (O.) F. P. L.* Sept. 1. \$10,000.

*Leadville, Colo.* July 12. \$100,000.

Provided the city furnish \$2000 a year for maintenance.

*Mattoon, Ill.* July 15. \$20,000.

*Miles City, Mont.* Aug. 1. \$10,000.

*Moline, Ill.* Aug. 30. \$37,000.

*Montreal, Can.* Aug. 4. \$150,000.

*Norwalk, Ct.* Aug. 30. \$20,000.

*Pembroke, Ont., Can.* July 15. \$10,000.

*Pensacola, Fla.* Aug. 16. \$15,000.

Before Mr. Carnegie was approached a bill was secured from the legislature, "authorizing the city of Pensacola to levy a special

tax for the support of a free public library, and to authorize said city to enter into an obligation for the support thereof."

*Portsmouth, O.* July 18. \$50,000.

*Racine, Wis.* Aug. 5. \$50,000.

*Riverside, Cal.* Sept. 2. \$20,000.

*Rutherglen, Lanarkshire, Scotl.* Aug. 29. £7500.

*San Francisco, Cal.* July 5. \$750,000.

Mr. Carnegie recommends that "about half (not more, I think less) of this sum should be expended on the central library and the remainder on branch libraries. The site for the central library should be amply sufficient to provide for additions in the future, for San Francisco is a growing city." The gift was accepted by the city board of supervisors on July 15, when an ordinance to that effect was passed. Previous to its acceptance, on July 12, the San Francisco Labor Council, by a nearly unanimous vote, passed a resolution strongly urging the rejection of the gift.

*San Juan, Porto Rico.* July 30. \$60,000.

The San Juan council has agreed to appropriate the \$6000 annual maintenance fund.

*Valley City, N. D.* July 20. \$15,000.

*Walpole, Mass.* Aug. 5. \$15,000.

*Washington, Ind.* Aug. 11. \$5000 additional, making a total of \$20,000.

*Winnipeg, Manitoba, Can.* July 25. \$100,000. Accepted.

---

## Librarians.

---

**BANKS, Mrs. M. H. G.**, who has been for the past four years at the New York Public Library, has left there, and has resumed her specialty of organization work. Her address is now Dyer Library, Saco, Maine.

**BEACH, Miss M. Elizabeth**, has resigned her position as librarian of the Jervis Library, of Rome, N. Y., owing to ill health. She has been succeeded by Miss Eugenia Stevens, who has served as acting librarian since March 1, during Miss Beach's leave of absence.

**CALDWELL, Miss Mary R.**, has been elected librarian of Tome Institute, Port Deposit, Md., her appointment to begin with the opening of the autumn term.

**DANIELS, Joseph C.**, formerly librarian of the State Normal School, Greeley, Colo., has been appointed librarian of the State Agricultural College, Fort Collins, Colo.

**DUVAL, Dr. Edward P.**, state librarian of Maryland from 1880 to 1892, died at his home in Annapolis, Md., on Sept. 5, aged 75 years.

**FOSTER, William E.**, librarian of the Providence (R. I.) Public Library, received the degree of L.H.D. from Brown University at the Commencement exercises on June 19.

GAY, Miss Helen Kilduff, of the N. Y. State Library School, class of '95, has resigned her position as librarian of the Mt. Vernon (N. Y.) Public Library to become librarian of the New London (Ct.) Public Library, succeeding Miss Mary A. Richardson.

GORDON, Dr. Leonard J., long president of the board of trustees of the Jersey City (N. J.) Public Library, and actively interested in its administration, has been voted a salary of \$3000 a year by the local board of finance, and will assume the office of director of the library. Miss Esther E. Burdick will remain in charge, as librarian.

GREEN, Miss Caroline, formerly assistant in the Bangor (Me.) Public Library, has been appointed librarian of the Bangor Theological Seminary.

HALL, Mr. Drew Bert, B.L.S., N. Y. State Library School, class of 1901, has been appointed librarian of the Millicent Library, Fairhaven, Mass.

HAWLEY, Miss Frances B., Pratt Institute Library School, class of 1897, has joined the staff of the Brooklyn (N. Y.) Public Library, having had charge, under Miss Plummer's direction, of the special course for apprentices in that library, given at the Pratt Institute Library School from July 8 to Aug. 16.

PARVIN, Theodore Sutton, librarian of the Iowa Masonic Library, at Cedar Rapids, died at his home in Cedar Rapids, June 29, aged 84 years. Mr. Parvin had been for years an enthusiastic worker in the library cause in Iowa, and he had made the Iowa Masonic Library one of the best known collections of its kind in existence.

STEVENS, William F., for eleven years librarian of the Railroad Branch Y. M. C. A. Library, of New York City, has accepted the position of librarian of the Carnegie Library, Homestead, Pa.

STROHM, Adam J., B.L.S., University of Illinois Library School, has been appointed librarian of the Trenton (N. J.) Free Public Library, succeeding Miss Sarah C. Nelson. Mr. Strohm is a graduate of the University of Upsala, Sweden, and was formerly librarian of Armour Institute of Technology, Chicago.

UTLEY, George B., for the past two years assistant librarian at the Watkinson Library, Hartford, Ct., has accepted a call to the librarianship of the Maryland Diocesan Library in Baltimore, succeeding Mr. W. F. Koopman, who died last April. Mr. Utley graduated from Brown University in the class of 1899, and succeeded Mr. W. N. Carlton, at the Watkinson Library.

## Cataloging and Classification.

The CARNEGIE L. OF PITTSBURGH has concluded the reading lists on "Contemporary biography," printed in its *Monthly Bulletin*. "Statesmen and warriors" were treated in the June number. The July issue contains a good annotated list on Photography, recording about 100 titles.

CINCINNATI (O.) P. L. Quarterly bulletin. April-May-June, 1901. 32 p. 1. O.

ENOCH PRATT F. L. OF BALTIMORE CITY. Finding list, Central Library. Sixth edition, pt. 4: Biography. Baltimore, July, 1901. p. 641-802. O.

INTERNATIONAL CATALOGUE OF SCIENTIFIC LITERATURE. Williams, Talcott. The international catalogue of scientific literature. (*In Science*, Aug. 30, 1901. N. S. 14:328-329.)

A criticism of the classification of the International Catalogue, especially with reference to botany and geology.

JAMES, M. R. Western mss. in Library of Trinity College, Cambridge, vol. 2. London, C. J. Clay & Sons, 1901. 8°. 12s. 6d.

The NEW YORK P. L. *Bulletin* for July contains an interesting list of the manuscript collections deposited in the Lenox Library. These are recorded alphabetically by countries, the American collection being divided under general, colonial, revolutionary (with subdivisions), post-revolutionary, and then alphabetically by states and South American countries. The foreign list follows in a separate alphabet, the latter including collections dealing with the Canary Islands, Ceylon, Korea, the Philippines, Tahiti, etc.

The KANSAS CITY (Mo.) P. L. *Quarterly* for July is a most interesting number. It is devoted to "Missouriana," and is a welcome addition to the scanty literature of state bibliography. Besides short articles giving chronological and historical information regarding the governors, county names, and newspapers of the state, there is a sketch of the state university, biographical notes, and similar items. The bibliography proper covers 32 pages, and records the material available in the Public Library. It includes books, in a classed author list; state reports, U. S. government documents, Missouri magazines; magazine articles, including references to articles not in the library; and newspaper clippings, portraits and biographical sketches. The list would have been improved by fuller entries, and better bibliographical work, but it is nevertheless a creditable production.

LIBRARY OF CONGRESS, *Division of Bibliography*. Union list of periodicals, transactions and allied publications currently received in the principal libraries of the District of Columbia; comp. under direction of A. P.

C. Griffin, chief of Division of Bibliography. Washington, Gov. Print. Office, 1901. 6+315 p. 1. O.

This volume, which is uniform in size, style and binding with the "Check list of American newspapers," is a preliminary edition of the general union list of periodicals and serials, contemplated for several years for the libraries of the District of Columbia. It is the most comprehensive record of the kind to appear since the issue of the Boston Public Library list, and contains about 11,000 titles—nearly twice the number included in the Boston list—being practically an index to the great mass of periodical literature, useful beyond the local field for which it is originally designed. In its present form it is meant as a basis for corrections and additions and to aid in such use it is printed on writing paper with wide margins for annotations, the text being confined to the standard type measure of the Library of Congress publications. The record is as brief as possible, by first word of title; societies are entered by title, with cross-reference from place; society publications are entered under name of society, with reference, when necessary, from name of publication; publications of observatories are entered under name of place, or of university with which they are connected. The list covers publications received by 15 libraries of the District (including the Library of Congress.) All of these are government collections, the Public Library not being included. Government documents taken by the Library of Congress are not recorded, as it is intended to give them in a later special list; but they are included when received by the other libraries represented. In its revised and corrected form the list will include a classified index, which should prove a most desirable addition.

LIBRARY OF CONGRESS, *Periodical Division.*

A check list of American newspapers; compiled under the direction of Allan B. Slau-son, chief of Periodical Division. Wash-ington, Gov. Print. Office, 1901. 292 p. 1. O.

This check list will be useful in all libraries containing special newspaper collections. It makes an imposing volume, well printed and bound, the list being printed on alternate pages with the right-hand column left blank for additions and annotations. The list is alphabetical by states and cities, but in the record of individual titles a rather unusual method has been adopted. These are alphabetical by the word regarded as "most descriptive in common usage," this word being printed in small capitals. Thus, for Huntsville, Ala., *Huntsville* ADVOCATE precedes *THE* DEMOCRAT; for Jacksonville, Fla., *The Florida* REPUBLICAN follows *THE* NEW SOUTH, etc. This differs from the practice of the Wisconsin State Historical Society and other libra-

ries, and while sufficiently logical it gives an appearance of confusion to the longer lists, as of Chicago and New York. Following the main list is an excellent alphabetical title index to the newspapers recorded, with sufficient cross-references, which is followed by an alphabetical index to cities (over 600 in number). The list is as compact as possible, but it includes brief annotations giving change of title, successors, etc., and indicates form of issue, and when practicable, date of establishment, and political or denominational character. It is brought down to the close of the 19th century, and is compiled from the extensive annotated manuscript catalog prepared during the past three years by the Periodical Division of the Library of Congress.

NEWARK (N. J.) F. P. L. Finding list (new series) no. 2: History, travel and description. May, 1901. 12+120 p. O.

A simple D. C. classed list, well printed.

The SAN FRANCISCO (Cal.) MECHANICS' INSTITUTE L. *Bulletin* began a new series with its June issue, including more pages, literary and miscellaneous notes, and a special cover. The July number contains a three-page reference list on petroleum, referring particularly to its distribution and use in California.

SOUTH KENSINGTON (London) BOARD OF EDUCATION. National Art Library, Victoria and Albert Museum. Classed catalogue of printed books: Heraldry. London, Wyman & Sons, Ltd., 1901. 8+186 p.+16 pl. O. 2s.

An excellent classed list, including references to articles in transactions, serials and periodicals. The classification gives first general divisions of the subject (treatises, dictionaries, collections), followed by country divisions, and special classes of heraldic works (as Ecclesiastical, Orders of chivalry, Shield shapes and supporters, Armorial bindings, etc.) Heraldic bibliography and periodicals are also recorded. Two compact indexes, to authors, heraldic artists, etc., and to subjects follow, and a series of interesting and curious plates of standards, bearings, and devices concludes the list.

VICKERY, James H. Analysis of law literature. (*In Legal Bibliography*, July, 1901. p. 9-10.)

The general outline and three of the subdivisions of the classification of jurisprudence are given, with reasons for the scheme.

The WESTFIELD (Mass.) ATHENAEUM *Bulletin* suspended publication with the July issue, which completed its first year. Its cost for the year is stated to have been \$244.71, of which \$95.20 was collected from advertisers, \$55.80 is due from advertisers, and \$93.71 was paid personally by the librarian, Mr. Stockwell.

## FULL NAMES.

The following are supplied by S. C. Stunts, Library of University of Wisconsin.

Abbott, Alexander Crever (Hygiene of transmissible diseases);  
 Aldrich, Morton Arnold (American federations of labor);  
 Andrews, Charles McLean (Historical development of modern Europe);  
 Arnold, Benjamin William, jr. (Tobacco industry in Virginia since 1860);  
 Babcock, Clinton Leroy (Study in case rivalry);  
 Batten, Loring Woart (Old Testament from the modern point of view);  
 Bigelow, Melville Madison (Law of torts);  
 Bovey, Henry Taylor (Strength of materials);  
 Buck, Albert Henry (Reference handbook of medical science);  
 Chapman, James Wilkinson, jr. (State tax commissions in the U. S.);  
 Chamberlain, Charles Joseph (Gymnosperms);  
 Clapham, John Harold (Causes of the war of 1792);  
 Clark, Frederick Converse (Commerce);  
 Cooley, Charles Horton (Personal competition);  
 Corlett, William Thomas (Complete treatise on the exanthemata);  
 Dana, Charles Lovrius, rev. (Kirke's handbook of physiology);  
 Ernst, Harold Clarence (Prophylaxis);  
 Erwin, Frank Alexander (Cases on torts);  
 Gardner, Harry Norman, ed. (Jonathan Edwards);  
 George, John Edward (Saloon question in Chicago);  
 Gordy, John Pancoast (Political parties in the U. S.);  
 Gray, Louis Herbert (Indo-Iranian phonology);  
 Kittredge, George Lyman (Words and their ways);  
 Grout, Abel Joel (Mosses with a hand-lens);  
 Haab, Otto (Atlas and epitome of ophthalmoscopy);  
 Herrick, Francis Hobart (Home life of wild birds);  
 Hill, Joseph Adna (English income tax);  
 Holgate, Thomas Franklin (Elementary geometry);  
 Kinder, Francis Shanor (Effects of recent changes in monetary standards);  
 Marchmont, Arthur William (In the name of a woman);  
 Merriam, John Campbell (Contribution to geology of the John Day basin);  
 Moore, Vida Frank (Ethical aspect of Lotze's metaphysics);  
 Platner, John Winthrop (Early Christian literature);  
 Plehn, Carl Copping (General property tax in California);  
 Richert, Johan Gözta (Artificial underground water supply);

Russell, Harry Luman (Public water supplies);  
 Rutter, Frank Roy (South American trade of Baltimore);  
 Sergi, Guiseppe (Mediterranean race);  
 Shuckburgh, Evelyn Shirley (Short history of the Greeks);  
 Shipley, Arthur Everett (Introduction to zoology);  
 Slichter, Charles Sumner (Four-place logarithmic tables);  
 Speirs, Frederick William (Street railway system of Philadelphia);  
 Squair, John (French grammar);  
 Thompson, Silvanus Phillips (Optical tables);  
 Underhill, George Edward (Commentary on Xenophon's Hellenica);  
 Woodruff, Edwin Hamlin (American cases on contract);  
 Woodworth, Jay Backus (Elements of geology).

## Bibliography.

- ALCOHOLISM. Schmidt, P. Bibliographie des alkoholismus der letzten 20 jahre (1880-1900.) Teil 1: Deutsche litteratur. Dresden, V. O. Böhmert. 4+70 p. 8°. 1.80 m.
- AMERICAN DIPLOMACY. Hart, Albert Bushnell. A trial bibliography of American diplomacy. (*In American Historical Review*, July, 1901, 4:848-866.)  
 Professor Hart notes the fact that as yet there is no systematic bibliography of American diplomacy and that the investigation of it is swamped by the wealth of materials. The present effort is "to classify, enumerate and describe the most serviceable books and collections bearing on American diplomacy, though space does not allow any attempt to include the large literature of periodical articles, or to analyze the collections either topically or chronologically. This bibliography is therefore simply a check list of the more accessible books, with such brief comment as may show their value and their bearing." Attention is called to works of especial significance and usefulness.
- CANADA. Biggar, H. P. The early trading companies of New France: a contribution to the history of commerce and discovery in North America. (University of Toronto studies in history.) Toronto: University of Toronto Library. 1901. 12+308 p. 4°. The appendix, p. 171-296, discusses the sources, under three heads: 1, official; 2, narrative; 3, anonymous.
- CARDUCCI, Giosuè. Salveraglio, Filippo. Saggio di bibliografia Carducciana; Giosuè Carducci nelle letterature straniere. (*In Rivista d'Italia*, May, 1901, 4:208-224.)

- CONFEDERATE STATES OF AMERICA. Schwab, John Christopher. The Confederate States of America, 1861-1865: financial and industrial history of the South during the Civil War. New York, Charles Scribner's Sons, 1901. 11+332 p. 8°. There is an 11-page list of authorities.
- DAWSON, S. E. The prose writers of Canada. Montreal, E. M. Renoué, 1901. 2+39 p. O. 10 c. Dr. Dawson's valuable address on Canadian prose literature, delivered before the A. L. A. at Montreal, in 1900, is issued in neat pamphlet form, revised and extended. The lecture was later delivered to the teachers of the city and district of Montreal.
- DIBDIN, Charles. Dibdin, E. Rimbault. A bibliographical account of the works of Charles Dibdin. (*In Notes and Queries*, July 13, 27, 1901. 9th series. 8:39-40, 77-78.) A preliminary bibliography of the compiler's great-grandfather. He asks for assistance in completing it for the life of Charles Dibdin now well in hand. The instalments in *Notes and Queries* are to be continued.
- INDIANS. James, George Wharton. Indian basketry. New York, Henry Malkan, 1901. il. 238 p. 8°. Contains a 2-page bibliography.
- MISTRAL, Frédéric. Downer, Charles Alfred. Frédéric Mistral, poet and leader in Provence. New York: Columbia University Press, 1901. 10+267 p. 12°, (Columbia University studies in romance, philology and literature.) Contains a 5-page bibliography.
- POETRY. Lachevre F. Bibliographie des recueils collectifs de poésies publiés de 1597 à 1700, donnant: 1° la description et le contenu des recueils; 2° les pièces de chaque auteur classées dans l'ordre alphabétique du premier vers, précédées d'une notice biobibliographique, etc.; 3° une table générale des pièces anonymes ou signées d'initiales (titre et premier vers), avec l'indication des noms des auteurs pour celles qui ont pu leur être attribuées; 4° la reproduction des pièces qui n'ont pas été relevées par les derniers éditeurs des poètes figurant dans les recueils collectifs; 5° une table des noms cités dans le texte et le premier vers des pièces des recueils collectifs, etc. Paris, Leclerc, 1901. 12+414 p. 4°.
- SOUTH AMERICA. Beach, Harlan P., and others. Protestant missions in South America. New York: Student Volunteer Movement for Foreign Missions, 1900. 7+239 p. 12°. Contains an 8-page bibliography.
- STEEL WORKS. Brearley, Harry. A bibliography of steel works analysis. Pt. 9. Phosphorus. (*In Chemical News*, June 21, 28, 1901, 83:289-292, 307-310.)
- VIRGINIA. Virginia newspapers in public libraries: annotated list of Virginia newspapers in the Library of Congress. (*In Virginia Magazine of History and Biography*, July, 1901, 9:1-11.)
- WOMAN. Mehler, H. J. La femme et le féminisme: collection de livres, périodiques etc. sur la condition sociale de la femme et le mouvement féministe, faisant partie de la bibliothèque de M. et Mme. C. V. Geritsen (Dr. Alatta H. Jacobs) à Amsterdam. [Leipzig, Karl W. Hiersemann, 1901.] 240+104 p. 4°. INDEXES.
- JAGGARD, William. Index to the first ten volumes of "Book prices current," 1887-96; constituting a reference list of subjects and incidentally a key to anonymous and pseudonymous literature. London, Elliot Stock, 1901. 8+472 p. 21s.
- JORDELL, D. Répertoire bibliographique des principales revues françaises, pour l'année 1899. 3e année. Paris, Per Lamm, 1901. 14+357+8 p. l. O. This third annual volume of M. Jordell's valuable index to French periodicals records in two alphabets, by author and subject, articles appearing in 346 periodicals during 1899. In compactness and general form it follows the excellent model set by its predecessors.
- REVIEW OF REVIEWS, London. Index to the periodicals of 1900. London, [*Review of Reviews*,] 1901. 8+246 p. O. 15s., net. The 11th annual volume in this series, indexing the contents of some 190 British and American periodicals. The completion of the first decade of its existence is marked by a short preface by W. T. Stead, pointing out the value of files of periodicals to literary investigators. The introduction reviews the changes and additions made in the world of periodicals during the year covered, and record is made of the various general indexes to individual periodicals published since 1896, and of the bibliographies of special subjects issued in, or in connection with, the periodicals of 1900.

# THE AMERICAN NEWS COMPANY,

## BOOK DEPARTMENT.

HAVING successfully conducted an extensive Library Department for the past several years, handling with complete satisfaction the entire library business of some of the largest libraries of the country, we call to your attention the elaborate facilities at our disposal; not only as to the prompt and complete despatch of all such business, but the great saving to the library in the matter of receiving exceptional discount. A request for estimate on any miscellaneous list of publications will receive the same painstaking care and minute attention that an order involving thousands of dollars would receive. Books published abroad are secured within a very short time after order is placed—our own branch houses in London, Paris, Berlin, as well as two Canadian houses, enable us to accomplish this.

We solicit correspondence, and extend a most cordial invitation to all interested in the Free Public, School, Circulating, or Private Libraries to visit our mammoth establishment, where the thousand upon thousands of miscellaneous volumes are at your full access.

Yours very respectfully,

THE AMERICAN NEWS COMPANY,

39-41 CHAMBERS STREET, NEW YORK.

BENJAMIN FRANKLIN STEVENS.

HENRY JOHN BROWN.

**B. F. STEVENS & BROWN,**  
 American Library and Literary Agents,  
 4 TRAFALGAR SQUARE, CHARING CROSS, LONDON.

**T**HIS Agency was established in 1864 for supplying American Public Libraries, Institutions, and Book Collectors, with English and Continental Books, Manuscripts, Drawings, Philosophical Apparatus, etc., at the lowest London prices.

Special attention is paid to the selection and purchase of rare old books and manuscripts. Auction sales are carefully watched and good knowledge kept of the stocks of the old Booksellers of Europe.

Lists of Desiderata have the best attention and Librarians are respectfully requested to test the value of the Agency by sending trial orders on by submitting lists for Estimates for goods to be delivered, either free in London or New York, as desired.

Auction Catalogues when printed in advance and Catalogues issued by Publishers and Second-hand Booksellers are mailed to Customers when desired.

Large shipments are sent by cheapest and quickest route, or as ordered. Small shipments are made weekly through our New York Agency, at a minimum of expense and trouble to purchasers, or single books are sent by mail on receipt of order.

Special attention is given to Bindings in all styles.

Periodicals are supplied either direct by mail from London or by mail from New York Agency at lowest rates for prompt and efficient service. Send for Lists.

Payments may be made either direct to London or in U. S. Currency through our New York Agency.

*Just Ready. 100 Copies Printed for Subscribers Only.*

**B. F. STEVENS'S**

**Facsimile of the Unpublished British Headquarters Coloured  
 Manuscript Map of New York and Environs  
 (1782)**

Reproduced from the Original Drawing in the War Office, London.  
 24 sheets. Scale, 6½ inches to a mile. 10 feet by 4 feet. . . .

The successive British Commanders-in-Chief in America, Generals Sir William Howe, Sir Henry Clinton, and Sir Guy Carleton, during their respective occupations of New York and Environs in the Revolution, caused this manuscript plan from time to time to be kept up.

The plan extends from below Guanias Bay to the Heights of Spikendevil, a distance of about eighteen or nineteen miles. It shows the Fortifications, Defences, Topography, Streets, Roads, etc., of the whole of the Island of New York with the Harbor, Islands, Water Ways, and River Frontages on the Hudson and East Rivers, the Military Works on Long Island including Brooklyn, the Works in Paulus Hook and parts of the Jersey Shore. It has a copious Table of References to various works (British and American), some of them with notes as to the time of their construction or destruction.

The Original Drawing, ten feet by four feet, is on a scale of about six and a half inches to a mile. It is handsomely reproduced for subscribers only, in careful facsimile on 24 sheets which can be joined up and mounted like the original as a Wall Map or mounted on linen if desired. It will be issued either mounted on linen to fold in book form with leather (slip) case, 13 x 10 inches, or the 24 sheets (22 x 15 inches each), will be supplied in a portfolio.

No more than 100 copies have been printed and the engravings were erased as each sheet was printed off.

A few extra copies of sheet 8 have been printed so that it can be sent as a specimen on application from intending subscribers.

**Prices to Subscribers**

Mounted on linen to fold in book form with leather (slip) case. . . \$30 net.

Unmounted, on 24 sheets in portfolio. . . . . \$25 net.

The above prices include delivery to any Public Library or Institute in the United States or Canada, but private subscribers must also pay the duty.

**B. F. STEVENS & BROWN, 4 Trafalgar Square, Charing Cross, London, W. C.**

Belles-Lettres.

AND

BOOKBINDER { Duro-Flexile,  
Vellucent,  
Reliure de Luxe.

*"Buy Your Popular Books and Your Costly Books*

## **in Duro-Flexile Binding."**

I OBTAIN books from the publishers in sheets and bind them "ONCE FOR ALL." This binding lasts longer than the leaves of the book, and the leaves of the book are preserved and their life immeasurably lengthened by this binding. Librarians cannot persuade publishers to print special editions for them, but I supply books specially bound for them.

If the paper is bad I sew and forward the book so that the leaves are subject to no strain and are indeed strengthened in the folds. If the paper is very stout I sew the book and forward it in a special manner adapted to the thickness of the paper, in other words I adapt Duro-Flexile binding to both good and bad paper with the results that the utmost service and the longest possible life are obtained for both.

No binding in the world is adapted to the varied qualities of the paper as is Duro-Flexile.

The service obtained from a book of bad paper when supplied bound in this way will surprise you.

A papier maché box and a steel safe are not hinged in the same way. Thin tough paper and thick spongy paper also require very different treatment, and with Duro-Flexile they get it.

**TIGHT BACKS** are used for books of a thickness and quality of paper best suited for such treatment.

**LOOSE BACKS** are given where such are better suited.

My bookbinding is in short adapted in its every detail, both of material and method, to the requirements of a Public Library Book.

500 Public Librarians in all parts of the English speaking world buy these books.

## **POPULAR BOOKS AND COSTLY BOOKS**

bought of me, bound from the quires, give 50% more service.

# HENRY MALKAN,

## Library Department.

We take pleasure in informing our friends, the Librarians, that we have just made a most important purchase, amounting to 30,000 vols. in round numbers. The lot comprises the cream of a very large Jobber's stock, which we purchased at such a rate that we can afford to sell it at prices that were never before given to a Library. When possible we would be very glad to have Librarians call and examine the stock and get our quotations. We do not feel like mentioning titles or quoting prices, as we purpose selling these books at such a rate that it would be putting the credulity of any man who knows the value of books to a severe test to believe that these books, which are absolutely new and fresh, could be sold at any such prices. We therefore earnestly solicit a personal call.

*Estimates Furnished on Any List.*

## HENRY MALKAN,

I WILLIAM ST. AND 67 STONE ST., N. Y. CITY.

### THE BAKER @ TAYLOR CO.

#### LIBRARY DEPARTMENT

We have sold books to librarians for fifty years.

We have the largest stock in the largest book market of the country.

We fill orders promptly, completely, and intelligently.

We have classified our stock of books and knowledge, FOR YOUR CONVENIENCE, into

- (1) A Standard Library Catalogue of 2500 Books—a model library.
- (2) Semi-Annual Clearance Catalogues of Book Bargains.
- (3) Special Lists with Special Prices.

## LIBRARY AGENTS.

**M**ESSRS. PUTNAM have peculiar facilities for handling all library business intelligently and to the best advantage of their customers.

Their Branch House in London (through which they receive English orders for American books) enables them to supply, promptly, English books, without the commission usually paid by American dealers.

Their extensive miscellaneous and retail business makes it practicable to buy all books at the lowest prices, to carry a large stock of standard books in every department of literature, and to keep in touch with the current publications of the day. Their business experience covers more than half a century.

ESTATE  
GUSTAV E. STECHERT.

BOOKS AND PERIODICALS.

ALFRED HAFNER.

## G. E. STECHERT.

The **only Importers** in America who employ **no Agents**, but have their **own** offices at:

LONDON: . . . . . 2 Star Yard, Carey St., W. C.  
PARIS: . . . . . 76 Rue de Rennes.  
LEIPZIG: . . . . . Hospital Str. 10.

where experienced clerks and assistants attend carefully to the orders from New York.

That such orders can be filled **better, cheaper** and **quicker** and with less trouble and work to the Librarian, than if the books were ordered from European Agents, a trial order will convince.

We carry in New York a very large and well selected stock of **German Books**, always including a number of copies each of the latest important works, and thus we are enabled to fill at once a large part of the orders that daily come to us.

**French Books** supplied with equal promptness, and when it is desired they will be bound abroad in any style at very low rates.

**Books published in England** imported duty free for libraries upon the shortest notice.

**Rare Books** searched for with greatest care and orders kept on file until the books are found.

**New York Auctions** regularly attended; bids solicited.

We have on hand many complete and partial sets of **Foreign Periodicals** at prices generally below those charged by the dealers in Europe.

OCTOBER, 1901.

No. 10

NEXT to the national convention at Waukesha the recent meeting of the New York Library Association at Lake Placid must take its place in the record of the year's activities. It seemed indeed an A. L. A. conference, in little—and an illustration of the seven year change of which the old saying tells. For it was in 1894 that the American Library Association met at Lake Placid, with an attendance of 200; and now, seven years later in the same place a meeting of a single state organization brought together an attendance of one hundred and fifty. To a large degree the meeting was a vacation outing, and no pains were spared to make it most thoroughly an enjoyable one; yet on the professional side it was of genuine interest and importance. This is a fact to be emphasized. There is always the underlying feeling that it is impossible for pleasant things to be altogether profitable, and the vacation features of library meetings are often dismissed as what city fathers love to term "junketing trips." Yet it must not be forgotten that the spirit and force underlying the best library work of the present time have been almost wholly a result of the cordial personal relations, mutual confidence and good-will developed through the personal and informal associations that have from the beginning been a special feature of library organization.

THREE definite lines of work were outlined at the meeting, which are likely to have interesting results. These are, briefly, the publication of short reading lists on selected subjects, to be available in quantities by public libraries at a minimum subscription price; the promotion of general knowledge regarding the library movement, through special articles in the newspaper and periodical press; and the establishment of a series of "library institutes" in the more remote districts of the state. In districting the state for these institutes the state association has left out of consideration the sections adjacent to the

local library clubs of Buffalo, New York City and Long Island (Brooklyn), with the thought that any work in these districts should be committed to the local body, and toward this end steps are already on foot. The institute plan is not a new one. It has been a feature of various state library associations, particularly in the west, and has been used with admirable results in Wisconsin and more recently in western Massachusetts. The fact that of over 400 free public libraries in New York state, but 21 were represented at the meeting of the state library association is sufficient argument for the need of measures that will bring the state association more closely in touch with the libraries of the state.

DR. RICHARD GARNETT, who won the affectionate esteem of all librarians and readers who ever came in contact with him during his long period of service at the British Museum and who is by virtue of that service the dean of the English library profession, has been held in the constant affection of his fellow-craftsmen since the retirement which has enabled him to devote himself more fully to literary work. It is the more to be regretted, therefore, that his name should be used in a cheap advertising way by the exploiting side of enterprises with which he has editorial connection, as in the case of the so-called "Anthological Society," which seems to be one of the ordinary devices for selling a set of books. There is, of course, not the same objection to the use of Dr. Garnett's name in this connection that there has been on this side to the use of the name of Mr. Spofford, because the latter is still an official of the national library. But it is a pity to have a respected name thus misused for merely commercial ends, and his American friends will wish that Dr. Garnett, who quite possibly knows personally about it, could cause his name to be withdrawn from the kind of exploitation now going on.

## Communications.

### PRIVATE MAILING CARDS IN FOREIGN CORRESPONDENCE.

LIBRARIANS will save their European correspondents much annoyance if they will not use the "private mailing card." Extra "due" postage is collected by the English and French post-offices, and probably by the German and Italian also.

J. C. ROWELL.

Berkeley, Cal.

### GIFTS TO PRINCETON THEOLOGICAL SEMINARY.

Will you kindly make the following correction to the statement on page 95 of the JOURNAL for August, under the heading New Jersey? The two items: Bequests of 2739 volumes and 860 pamphlets, from Prof. William Henry Green, and Gift of 255 volumes, from Prof. Henry Van Dyke, are not gifts to Princeton University, but to *Princeton Theological Seminary*. They were reported to Mr. Cole by me in response to his circular request. Evidently he shares the common ignorance of the fact that Princeton Seminary is not a department of Princeton University, but an entirely distinct institution, and that this library has no other relation to the library of the university than that of comity.

J. H. DULLES, *Librarian*.

### ADDENDA AND ERRATA—WELSH'S "ENGLISH MASTERPIECE COURSE."

IN connection with reference work on Tennyson, I send you a note of corrections and additions to the useful book—"English Masterpiece course," by Alfred H. Welsh, Silver, Burdett & Co. Pages 108, 109, *North American Rev.*, vol. CXXX., 102, 104 should read vol. CXXXIII, 102-6. To this may be added another useful reference—vol. LXXXIII, *North American Rev.*, p. 115, Welsh, p. 196-198.

The reference to Kingsley's "Miscellanies," 1-218, may be found also in Kingsley's "Literary and general essays." London, Macmillan, 1880, page 103.

New Orleans, La.

### ANNE MANNING—A QUERY.

CAN anyone tell me where I can find some account of Anne Manning, authoress of "Maiden and married life of Mary Powell," "Household of Sir Thomas More," etc.? I wish to know whether or not she afterwards became Mrs. Rathbone, as stated in the "American catalogue, 1895-1900," and in Kirk's "Supplement to Allibone." I think they have confused her with Mrs. Rathbone, authoress of "Diary of Lady Willoughby." There is a notice of her in "Women novelists

of Queen Victoria's reign," by Mrs. Oliphant and others, in which she is always called Miss Manning. She died Sept. 14, 1879. The British Museum and other catalogs which I have consulted put her novels under Manning, Anne, with no reference from Rathbone, so that I am inclined to believe she lived and died Miss Anne Manning. CATALOGER.

### CHICAGO UNION LIST OF PERIODICALS—A CORRECTION.

I WISH to correct a misunderstanding of Mr. W. D. Johnston in his survey of bibliographies in course of publication, in the September LIBRARY JOURNAL. The forthcoming union list of periodicals in Chicago libraries, which probably will be ready for distribution by the time this letter appears in the JOURNAL, is due to the Chicago Library Club alone, and in no way to any co-operation of the Bibliographical Society of Chicago. The reason why it was mentioned in the list of bibliographies in course of preparation by members of the latter society was that the chairman of the committee in charge of the work, Mr. C. W. Andrews, is a member of the society. At the same time I might perhaps be allowed to state that the bibliographies listed in the yearbook of the society are not all meant to be issued by the society.

AKSEL G. S. JOSEPHSON,  
*Secretary Bibliographical Society of Chicago.*

[A further correction to Mr. Johnston's article is made by Miss M. S. R. James, who states that the consolidated index to library periodicals, in preparation by herself and Miss Sargent, is not an enterprise of the Library Bureau, but is a private undertaking.—Ed. L. J.]

### A COMMISSIONER OF BIBLIOGRAPHY AT THE ST. LOUIS EXPOSITION.

MR. SWEM's proposition that some common effort at bibliography be made in connection with the St. Louis exposition is certainly very pertinent. The successful carrying out of the scheme necessitates, however, some sort of supervision in order to avoid duplication and waste.

Why should not a commissioner of bibliography be appointed? Such a commissioner should not merely supervise the bibliographical works undertaken in connection with the exposition, but also be charged with the compilation of a complete bibliographical catalog of all productions of the printing press issued for the exposition.

Most important of all, he should arrange a bibliographical exhibit, as comprehensive as possible, not only of American endeavor but of European and international productions as well.

AKSEL G. S. JOSEPHSON.

## A CHILD'S THOUGHTS ABOUT BOOKS AND LIBRARIES.\*

BY NEWTON MARSHALL HALL, *Springfield, Mass.*

If we could get back to the mind of the child we might be able to solve a great many perplexing problems. Unfortunately an impassable barrier is often raised between childhood and maturity. It is not only that the "visions splendid,"

"Fade into the common light of day."

There seems to exist in many cases a psychological impediment, which prevents the mature mind from understanding or sympathizing with the child's mind. For example, I know a person whom I will call the "Pious Lady," who is the mother of a child whom I will call "Araminta." Now Araminta is not always herself. She is sometimes Mrs. Jones, and sometimes a butterfly, and sometimes the queen of the Carraway Islands. She receives much company; stately ladies in rustling silks stoop to kiss her, the fairy prince alights at her door, and his team of six white mice wait patiently while he pays his respects to Araminta. All this is trouble and vexation of spirit to the Pious Lady. She rebukes poor Araminta for telling such outrageous lies, and she wonders how she ever happened to have such a child. The trouble is this: when the Pious Lady left the House of Childhood, she locked the door, and threw away the key, and never went back. If she would occasionally wander down the lane on which the house stands, to see how the flowers are growing, and even peep in through the windows, both she and Araminta would be happier.

It is a good thing, it seems to me, to take little journeys back to the childhood days and the childhood ways. It is possible, then, that you whose work is with books and libraries, may care to listen to some recollections of how a certain child regarded books and libraries; a child who was born after the thunders of the Civil War had died away, and who was brought up in a literary atmosphere. I shall call this child the "Boy," and speak of him in the third person, for even with the imagination of the child, I cannot quite believe that he and I are one and the same.

The Boy has been told that his appreciation of literature began at the early age of

two, when a certain young minister, now a distinguished New England clergyman, used to bring each week the current number of the *London Punch* for his delectation. Seated on the minister's knee the young critic examined this periodical with grave approval, as befitted the serious nature of the subject. These hours of preparation for a literary career, he cannot, of course, remember, nor can he recall the process of learning to read; but his very earliest recollections are of a love of books and libraries, a love which has increased with the years, until now that the Boy has grown to manhood he does not think that he can be happy in heaven, provided he is so fortunate as to get there, unless he can read in the quiet precincts of some celestial library. The boy was fortunate in the possession of a father of fine literary taste and wisdom in the training of a bookish child. He was fortunate also in living near an excellent public library, and he was still a very small child when he began climbing its granite steps and entering its sacred portals. A public library, twenty-five years ago, was a very awful place indeed. A characteristic odor was noticeable when you entered, like the traces of incense which linger about the courts of a temple. The books were kept in a sort of holy of holies, into which no one but the librarian, or possibly the president of the board of trustees, ever penetrated. A wire fence, ten feet high, like the gratings at banks, protected the sacred enclosure. The Boy remembers flattening his nose against this fence and gazing in awe and wonder at the long rows of primly set volumes on the shelves.

The business of the librarian was to make it as difficult as possible for the public to take the books from the library. When compelled to do so, he surrendered the books reluctantly, with an air of melancholy. The books themselves were covered with stiff brown paper, the rules and regulations printed on one side. These reminded one of the ten commandments; divine decrees which could be violated only at deadly peril. One rule forbade the marking or defacing of books in any way. The Boy remembers the shocking condition of some of the books which he took

\* Address delivered before Western Massachusetts Library Club.

from that library. Greasy, dog-eared, broken-backed cripples they were, written all over with the criticisms of an intelligent public, criticisms in which pious reflections and profane objurgations mingled impartially. So far as the observations of the writer go, the modern librarian's law of love, "those who love books will treat them well," is far more effective than the threatening thunders of the old Mosaic code.

The card which entitled you to take books, was a little oblong bit of green pasteboard, on which was printed the day of the week on which the owner, for it was not transferable, would be permitted to take one volume. You could not take a book on any other day. A week sometimes seemed a long time to the Boy. Once, he remembers, he attempted to evade the rule. He was hungry for a book and nothing suited him at home. But alas, it was Wednesday, and his day was Thursday. Then he planned a deed of darkness. He would deceive the librarian, he would present his card and perhaps the day would not be noticed. With a beating heart he walked across the echoing floor, and presented himself before the awful presence. He can still see that stern face, and hear that reproving voice, "Little boy, this is not your day." Burdened with shame and guilt he hastened home. He feared that he might be arrested and imprisoned because of his rash deed. He was sufficiently punished, however, for it was a long time before he dared to venture into the presence of the stern potentate behind the high desk.

The method by which the public secured books from its own library was interesting. You wrote down a list of the numbers of books from a printed catalog, or from one of the numerous written or printed supplements. To find the number of a book, it was sometimes necessary to look through six or seven separate alphabetical lists. The additions for the current year were simply posted, without any attempt at alphabetical arrangement. You placed your slip and your card on the desk, and retired until the librarian called your name. Sometimes, in the evening, when there were many seekers at the shrine of literature, you might have to wait an hour. In this way the public received an excellent discipline in patience, and the library was made to serve both moral and intellectual ends. When the

librarian called your name, you took what was set before you, asking no questions, like the good child at the table, not for conscience's sake, however, but because you did not dare to ask for a change, if you were not satisfied. The librarian was not expected to furnish any information about the books, nor to give any advice about reading. Once, several years after his first rebuff, the Boy ventured to ask the librarian to suggest a good book for a person of his age. His temerity was very promptly and very properly rebuked. He was informed that a librarian could not spend his valuable time in finding books for boys to read, there was the catalog, he could use it, or he could go home.

One great privilege the public enjoyed. Books could be taken for use in the reading room, on any day. On many a Saturday morning did the Boy march to the desk, and demand one of the bound war volumes of *Harper's Weekly*, a book nearly as large as his small self. And then the blissful hours, in which he lived over those heroic days. He saw the mustered hosts of the North go forth to meet the men in gray. He fought with Grant, from the snows of Donelson, to the last great day at Appomattox. He was present at the battle of the clouds, and at the bloody tragedy of Fredericksburg. He saw the "high tide of the Confederacy," as it rushed up Cemetery Ridge in Pickett's charge, to break in vain,

"Amid the guns of Doubleday."

He thinks that he learned more of the Rebellion from those rough wood cuts in *Harper's* than from all the history he ever read; at least he got there the inspiration to read the history.

The Boy was so unfortunate or so fortunate, as to have been born in the mediæval age, before the days of juvenile literature. For him no prolific Henty poured forth an exhaustless flood of adventures on land and sea. He was brought up strictly on a diet in which the classic largely predominated, and to-day he doubts if Charles Lamb's recipe for the reading which constitutes a girl's education, and which applies just as well to a boy's, can be greatly improved upon. The ordinary child, or at least the bookish child, is omnivorous. He reads because his growing intellectual nature demands something to feed upon. He may just as well read Shake-

speare and Scott, and Dickens, and Hawthorne, and Parkman, as the interminable adventures of "Dashing Dick the midshipman." Some of the authors named, are, I am aware, extraordinarily old fashioned. Dickens, I believe, has been rudely pushed from the temple of fame by the author of "The elevator" and "The mouse-trap." A certain person cannot forget, however, the great pleasure which Dickens gave to an imaginative child. One morning the Boy came down to breakfast in a disconsolate frame of mind. It was Saturday, and it was raining, a combination of circumstances calculated to produce gloom in the best regulated family. In passing through the library, the Boy perceived a new book on the table. It was a book of peculiar shape, nearly square, with dull green paste-board covers, on which were depicted a series of odd looking individuals. It was, in short, the first volume of the well-known "Household" edition of the great novelist of the people. The autumn wind blew, and the rain beat against the windows ceaselessly, but it was a glorious day for the Boy, who, stretched at full length on the couch, in the characteristic attitude of young creatures when they read, made the acquaintance of *Oliver Twist*, and *Bill Sykes*, and *Fagin*, and the *Artful Dodger*, and all that delightfully wicked and interesting company.

This suggests a very interesting question. What effect has the delineation of crime upon the mind of the child? When the mature person who was once the Boy read *Ruskin's* arraignment of Dickens, he was appalled to think of the dangers through which he had passed. But upon reflection he realized that the effect had been just nothing at all. He had read "*Oliver Twist*" and "*Bleak House*" and even "*Jane Eyre*," without knowing anything about the moral questions involved. He was not interested at that time in social problems, nor in the dissection of character; the books were good stories, and that was all he cared or thought about it.

When the Boy wanted adventure he had his resources. One was a book written by a certain Anglican clergyman, who used to sit on the quays at Biddeford, and smoke his pipe, and talk with the sailors just in from the Western ocean. Charles Kingsley was his name, and "*Westward ho*" was the book. If the boy of to-day has anything better than the story of how *Amyas Leigh* and the gallant

company of the *Rose* fought the Spanish ships all day, or the chapter "How they took the great galleon," he is to be envied. Then there were books of travel, which were even more thrilling than the novels. There was a gentleman named Cummings, who used to rove over South Africa, hunting wild animals, where my Lord Kitchener is now engaged in the more hazardous occupation of hunting wild Dutchmen. Whole menageries of the most delightful beasts used to congregate to be shot by this mighty huntsman. The best of it was that the Boy could duplicate these adventures at any moment. Grown-up people are bound by the most unfortunate limitations. They have an absurd desire to see the things they read about. In order to gratify this ambition, they leave their comfortable homes and subject themselves to all sorts of annoyances; such as railway trains and steamboats, and personally conducted tours. But the Boy required only a moment's notice to prepare for the jungle.

"One morning I arose before light, and taking my elephant gun, and my repeating express rifle, I walked rapidly toward the spot where I had seen the spoor of elephants on the previous day. Hardly had I reached the forest, when a bull tusker, which, I afterward ascertained, was eleven feet high, burst from cover. He trumpeted, and charged. I waited until he was within three yards, when I discharged one barrel of my elephant gun, aiming at his wicked red eye. The huge beast fell dead at my feet. Before the smoke had cleared away, another elephant, came charging through the wood, and at the same moment an immense African lion and the largest rhinoceros I have ever seen burst into the glade from either side. For a moment I was disconcerted, but recovering, I brought down the elephant with the remaining barrel of the gun, then turning, seized my trusty express rifle from the hands of my Zulu boy. A quartering shot right and left disposed of the remaining beasts, and I returned to camp in time for breakfast, well pleased with my morning's sport."

Is this graphic picture from the works of the redoubtable Cummings? Indeed it is not, it is simply a page from the diary of the Boy, and this incident took place, not in the African jungle, but on the banks of the peaceful Merrimac.

When the summer's sport was over, there was Dr. Kane to lead one into the delightful land of icebergs and polar bears. The Boy possessed a wooden ship which he left out of doors during the winter. Many an hour he watched it from the window as the snow piled high against its sides and clung to its frozen rigging. He saw, as he watched, the dimly lighted cabin of the imprisoned vessel, in which were huddled the sufferers from scurvy, he saw the hooded huntsman go forth to seek the game which meant life or death.

History had a high place in the Boy's affections, and Motley was the prince of historians. Day and night, while he was reading the "Rise of the Dutch republic" and "The United Netherlands," the pageantry passed through his fancy. He saw Queen Elizabeth, the bloody duke of Alva, the great, sad, splendid figure of the duke of Orange, the handful of starving beggars fighting for freedom against the inail-clad hosts of Spain.

Poetry the Boy enjoyed, and his favorites were Longfellow, Whittier, Holmes and Tennyson. Such stirring ballads as "How they brought the good news" and "Horatius at the bridge," he knew of course, by heart. They were not only good to hear, but they were lovely to act. Many a time did he impersonate one of the "dauntless three," standing for his fireside and his gods, while the Tuscan army

"Rolled slowly toward the bridge's head."

The Boy had some pet aversions, without any reason which he could give for cherishing them. One was the "Paradise lost," and another was the "Pilgrim's progress." Of the latter classic, he was given a beautiful English edition with colored plates, one of which was a seductive picture of Apollyon, seeking whom he might devour. But the Boy was wary. Sermons he listened to dutifully, on Sunday; he did not care for them on week days.

As a corrective for too much reading, the Boy had the summer at the sea shore, but even here a few books were permitted, and some of the most delightful discoveries were made. Is there any joy quite like the discovery for one's self of a great book? How wonderfully Keats' sonnet expresses it—

"Then felt I like some watcher of the skies  
When a new planet swims into his ken."

One summer the Boy discovered two new

stars of the first magnitude. Some thoughtful person had left in the seaside cottage a three-volume, paper-covered edition of "Les misérables," and a copy of "Vanity Fair." To read "Les misérables" for the first time, with a boy's zest, with the fresh breeze blowing in one's face, and the thunder of the long Atlantic surges in one's ears, can any experience surpass that? And so each year the stream of literature broadened for the Boy, as the stream of his own life also broadened, until it met the sea, and boyhood days were over.

What effect has such wide reading upon the mind of a child? For this particular child the writer can answer. It was in every way beneficial. It occupied the mind, stimulated the imagination, broadened the horizon of life. Upon the utilitarian side, such a course of reading was an excellent foundation for the study of a profession. The college curriculum allows little time for general reading, and here was provided a mastery of the broad field of English literature, before college days began, affording an opportunity then, for more careful study along special lines. Professor Winchester in his "Principles of literary criticism," following Matthew Arnold, says, "literature is in general a criticism of life, or perhaps better an expression and an interpretation of life." The teacher of to-day recognizes that the true study of literature consists in an appreciation of literature itself, and not in a knowledge of the facts about books and authors. It follows I think, that a wide reading of the interpretation of life as it comes from the hands of the masters of their art must be a good training for any career, business or professional. "Breadth of life," "freshness of feeling," these are significant terms used by Mr. Mabie in his "Books and culture." These are certainly most desirable qualities; is there any better way to obtain them, to conquer the narrowness and the provincialism which are their opposites, than through a wide reading of the best literature?

How shall the child of to-day be induced to drink at the

"Well of English undefiled."

It is a difficult matter when the realm of babyhood, even, is invaded, and books containing the dreariest nonsense, written in the poorest English, are provided as a special lit-

erature of infancy. The child receives small assistance in most homes. "Yes, Johnny is a great reader," says the proud mother, pointing to a small boy doubled up in a corner over a book. The chances are that the mother does not know whether Johnny is reading the "Origin of species" or "The Red Terror of Bloody Gulch." I am watching with interest the plan to deliver the latest books at your door each week. This may prove one of the greatest intellectual blessings of the ages, but I entertain some doubts. It may serve to encourage the writers of present day fiction, though that is hardly necessary, but what effect will it have on the mind of the child? How many children will read Jane Austen

and Charles Lamb, when the modern novel, at the rate of 30,000 pages a year, is flowing in a steady stream through the home?

It seems to me that here is the great opportunity of the librarian, under modern methods of administration, working in co-operation, as far as possible with the home and with the school. To make friends with the child; to awaken the love of the best and to help to satisfy it; to introduce the eager mind to the company of the elect; to lead it forth into the fair fields of literature; and thus to enlarge its vision, to strengthen its understanding, to make its life richer and better; there can be no higher occupation than this.

### THE QUESTION OF DISCIPLINE.

BY L. E. STEARNS, *Library Organizer, Wisconsin Free Library Commission.*

IN these days of children's shelves, corners, or departments, or when, in lieu of such separation, the juvenile population fairly overruns the library itself, the question of discipline oftentimes becomes a serious one. The pages of library journals, annual reports, bulletins, primers, and compendiums may be searched in vain for guidance. How to inculcate a spirit of quiet and orderliness among the young folks in general; how to suppress giggling girls; what to do with the unruly boy or "gang" of boys—how best to win or conquer them, or whether to expel them altogether; how to deal with specific cases of malicious mischief or flagrant misbehavior and rowdiness—all these questions sometimes come to be of serious importance to the trained and untrained librarian.

It was with a view of gaining the experience of librarians in this matter that letters were recently sent to a large number of librarians, asking for devices used in preserving order and quiet in the library. The replies are of great interest, the most surprising and painful result of the symposium being the almost universal testimony that the leading device used in preserving order is the policeman! One librarian even speaks of his library as being "well policed" in all of its departments. Personally, we think the presence of such an officer is to be greatly deplored, believing him to be as much out of place in a library as he would be in enforcing order in

a church or school room. The term of a school teacher would be short lived, indeed, who would be compelled to resort to such measures. In several instances, janitors do police duty, being invested with the star of authority; and in one case the librarian, who openly confesses to a lack of sentiment in the matter, calls upon the janitor to thrash the offender! "The unlucky youth who gets caught has enough of a story to tell to impress transgressors for a long time to come," writes the librarian. "The average boy believes in a thrashing, and it is much better in the end for him and for others to administer it and secure reverence for the order of the library."

In one state at least, Massachusetts, there is a special law imposing a penalty for disturbance; and one librarian reports that he has twice had boys arrested and tried for disturbing readers. Another librarian does not go as far as this but adopts the device of showing unruly boys a photograph of the State Reform School and the cadets on parade. "The mischief is quite subdued before I am half through," she writes, "and they frequently return bringing other boys to see the photograph. This fact undoubtedly acts as a check upon the boys many times." A pleasing contrast is offered to such drastic and unwholesome methods as these by the gentle and cheery methods pursued by a librarian who says, "The children in this library talk

less than the grown-ups. When they do raise their voices, I go up to them and tell them in a very low tone that if everybody else in the room were making as much noise as they, it would be a very noisy place. That stops them. If children walk too heavily or make a noise on the stairs, I effect surprise and remark in a casual way that I did not know that it was circus day until I heard the elephants. This produces mouse-like stillness at once. Really, I know no other devices except being very impressive and putting quietness on the ground of other people's rights."

But it is not always such smooth sailing. One librarian writes: "We have had no end of trouble in a small branch which we have opened in a settlement in a part of our city almost entirely occupied by foreign born residents. A great many boys have come there for the sole purpose of making a row. We have had every sort of mischief, organized and unorganized. We have had to put boys out and we have had many free fights, much to the amusement and pleasure of the boys. We have never resorted to arrests, but instructed the young man who acted as body guard to the young lady assistants to hold his own as best he could in these melees. I finally resorted to the plan of taking the young man away and letting the young ladies be without their guard. This has resulted most satisfactorily. The order has been much better, and while I cannot say that we are free from disorder, nothing like the state of things that before existed now obtains. The manager of the Settlement House overheard a gang of these very bad boys consulting on the street a few nights ago, something in this wise: 'Come, boys, let's go to the library for some fun!' Another boy said, 'Who's there?' The reply was, 'Oh! only Miss Y—; don't let's bother her,' and the raid was not made. Of course we have done everything ordinary and extraordinary that we know about in the way of trying to interest the boys and having a large number of assistants to be among them and watch them, but nothing has succeeded so well as to put the girls alone in the place and let things take their course."

The experience of another librarian also furnishes much food for thought. She writes: "I could almost say I am glad that others have trouble with that imp of darkness, the small boy. Much as I love him, there are times

when extermination seems the only solution of the difficulty. However, our children's room is a paradise to what it was a year ago, and so I hope. The only thing is to know each boy as well as possible, something of his home and school, if he will tell you about them. The assistants make a point of getting acquainted when only a few children are in. This winter I wrote to the parents of several of the leaders, telling them I could not allow the children in the library unless the parents would agree to assist me with the discipline. This meant that about six boys have not come back to us. I was sorry, but after giving the lads a year's trial I decided there was no use in making others suffer for their misdeeds. A severe punishment is to forbid the boys a 'story hour.' They love this and will not miss an evening unless compelled to remain away. To give some of the worst boys a share in the responsibility of caring for the room often creates a feeling of ownership which is wholesome. Our devices are as numerous and unique as the boys themselves. Some of them would seem absurd to an outsider. The unexpected always happens; firmness, sympathy and ingenuity are the virtues required and occasionally the added dignity of a policeman, who makes himself quite conspicuous, once in a while."

Another reply is as follows: "Miss C— has turned over your inquiry concerning unruly boys to me to answer. I protested that every boy that made a disturbance was to me a special problem—and very difficult; and I can't tell what we do with unruly boys as a class. I remember I had a theory that children were very susceptible to courtesy and gentleness, and I meant to control the department by teaching the youngsters *self* control and a proper respect for the rights of the others who wanted to study in peace and quiet. I never went back on my theory; but occasionally, of a Saturday afternoon, when there were a hundred children or more and several teachers in the room and I was trying to answer six questions a minute, I did have to call in our impressive janitor. He sat near the gate and looked over the crowd and when he scowled the obstreperous twelve-year-olds made themselves less conspicuous. A policeman sometimes wandered in, but I disliked to have to resort to the use of muscular energy. I learned the names of the

most troublesome boys and gradually collected quite a bit of information about them, their addresses, where they went to school, their favorite authors, who they seemed 'chummy' with, etc., and when they found I didn't intend to be needlessly disagreeable and wasn't always watching for mischief, but credited them with honor and friendly feelings, I think some of them underwent a change of heart. I made a point of bowing to them on the street, talking to them and especially getting them to talk about their books; had them help me hang the bulletins and pictures, straighten up the books, etc. Twice an evil spirit entered into about a dozen of the boys and my patience being kin to the prehistoric kind that 'cometh quickly to an end,' after a certain point, I gave their names to the librarian, who wrote to their parents. That settled things for a while and they got out of the habit of talking so much. A serious conversation with one boy ended with the request that he stay from the library altogether for a month and when he came back he would begin a new slate. Once, within a week, he came in, or started to, when I caught his eye. Then he beckoned to another boy and I think a transaction of some kind took place so that he got his book exchanged. But he saw I meant what I said. The day after the month was up he appeared, we exchanged a friendly smile and I had no more trouble with him."

We deem the question of banishment a serious one. Unruly boys are often just the ones that need the influence of the library most in counteracting the oftentimes baneful influence of a sordid home life. It is a good thing, morally, to get hold of such boys at an early age and to win their interest in and attendance at the library rather than at places of low resort. To withhold a boy's card may also be considered a doubtful punishment — driving the young omnivorous reader to the patronage of the "underground travelling library," with its secret stations and patrons. Before suspension or expulsion is resorted to, the librarian should clearly distinguish between thoughtless exuberance of spirits and downright maliciousness. "If we only had a boys' room," plaintively writes one sympathetic librarian, "where we could get them together without disturbing their elders and could thus let them bubble over with their 'animal spirits' without infringing on other

people, I believe we could win them for good."

A number of librarians, however, report no difficulty in dealing with the young folks. Some state that the children easily fall into the general spirit of the place and are quiet and studious. "We just expect them to be gentlemen," says one, "and they rarely fail to rise to the demand." In such places will generally be found floors that conduce to stillness, rubber-tipped chairs, and low-voiced assistants. "Our tiled floors are noisy—not our children," confesses one librarian. The use of noiseless matting along aisles most travelled will be found helpful. But one library mentions the use of warning signs as being of assistance, this being a placard from the Roycroft Shop reading, "Be gentle and keep the voice low." In a library once visited were found no less than eighteen signs of admonition against dogs, hats, smoking, whispering, handling of books, etc., etc.—the natural result being that, in their multiplicity, no one paid any attention to any of them. If a sign is deemed absolutely necessary, it should be removed after general attention has been called to it. The best managed libraries nowadays are those wherein warnings are conspicuous for their absence. Next to the officious human "dragon" that guards its portals, there is probably no one feature in all the great libraries of a western metropolis that causes so much caustic comment and rebellious criticism as that of an immense placard in its main reading room bearing in gigantic letters the command, SILENCE—this perpetual affront being found in a great reference library frequented only by scholarly patrons. Such a placard is as much out of place there as it would be in a school for deafmutes.

The solution of the whole problem of discipline generally resolves itself into the exercise of great tact, firmness, and, again, gentleness. There should be an indefinable something in the management of the library which will draw people in and an atmosphere most persuasive in keeping them there and making them long to return. A hard, imperious, domineering, or condescending spirit on the part of librarian and assistants often incites to rebellion or mutiny on the part of patrons. As opposed to this, there should ever be the spirit of quietude, as exemplified in the words previously quoted—"Be gentle and keep the voice low."

## COLORED COVERS FOR SPECIAL SUBJECTS.

By FRANCES L. RATHBONE, *Buffalo (N. Y.) Public Library.*

As the Providence Public Library by its Standard Room has brought forcibly before us the question of presenting standard literature in a way to attract, it may be well to consider what may be done by other libraries that have not its facilities.

As a whole, such a room can but be strongly educational to all who enter it observantly. It is of value to know the extent (even shelf extent,) of an author's writings; to know who are included, who are omitted. There is much of education in the backs of books. We open shelf enthusiasts believe that. But will not those who have grown up without the atmosphere of books, who claim our attention and baffle our efforts—the public library's special public—shun the room after this cursory glance? Do long sets of books win close scrutiny? And close scrutiny and more is hoped in the creation of this room. Underlying the choice of bindings and titles and editions, is hidden the hope that an increased reading and love for the best in literature will result from the establishment of this collection. But these books need careful reading, and re-reading, and boys and girls, with school duties crowding upon them, have it not.

We have a strong prejudice to overcome, for standard literature is oftenest taken in doses at high schools, in reading courses for examinations or graduation essays, and an abridged edition is welcomed. "We have that at home" or "we had to read that in school" tells the tale, and urging only increases the unfavorable impression. What is read in this way is seldom loved and beyond this state of mind few penetrate. The librarian must depend on personal influence and his own devices to overcome the prejudice that sometimes lasts into mature life. For this, after an interest is awakened, individual acquaintance with individual books is our strongest hope—not books in sets, not sets reserved in a room, but individual books! As one librarian has said, "Many people have always in-

tended to read certain standard works sometime"; so if they see but one such book they are tempted to let this be the time and that the one, but if there are rows upon rows, they are discouraged. If this is the case, standard literature on the open shelves, definitely marked, will accomplish more than it will reserved in a special room, and standard literature bound in a way to attract individual scrutiny will have the advantage over sets bound alike.

In the Buffalo Public Library a year ago it was suggested that the dull red, uniformly used in rebinding fiction, be changed to varied colors, and soon, in the open shelf room we found an unexpected gain resulting. The fresh variety of color, in place of the monotonous shelves of dull red, called for individual attention. All of Dickens could not be recognized at a glance. Books that had long stood on the shelves unconsidered had frequent invitations out, and even in standard fiction the difference could be felt. The rebound copies were again chosen, and could hold their own against a shelf of Crawford or Parker that remained monotonously alike. The rebinding continued as wear required and the circulation of rebound books continued with it for they looked as attractive as new books in their colored covers which ranged from light to dark green, through brown, tan, and blues. In non-fiction, binding seems not to make the difference in choice. People who read non-fiction usually know better what they want and usually want the best on a subject. But in fiction the book oftener makes the appeal, and if it can be clothed in a way to attract individual attention the book will reap the benefit.

It has been suggested that this effect of color on circulation might be applied to the standard literature problem, the colored covers thus serving two purposes; that variety of color, besides attracting attention, might also mark certain classes of books. If this were done, one color, the most attractive in

the material used, could represent standard fiction, and contrasting shades of it be used to break up the monotony of sets. Covers could be used temporarily, instead of permanent bindings, where rebinding is unnecessary, or for experiment, and choice shades can be found in vellum de luxe. We have proved this, at about 14 cents per yard, by the roll, the most satisfactory for wear and permanence of color. The same color, in leather if preferred, could represent non-fiction standard literature. Another color in non-fiction would be valuable to the general public as marking conceded authorities. So few general readers know the authorities upon a subject, or in choosing realize the importance of date, title-page or index. The Buffalo plan of the open shelf room has certain advantages here. Superseded books are retired; untrustworthy books are not given a place; the collection represents virtually the assistance of the librarian given to every borrower. But if the whole library is thrown open, then covers, or stars glued to the backs, as one librarian has suggested, or some mechanical device, would help to distinguish trustworthy books from superseded ones.

In fiction a second color in its shades could well be reserved to designate stories especially enjoyable and not included in standard fiction. If, under this head one marks only the truly readable of the well-written stories he will soon have his public helping; and we know this not only concedes the hold the library has upon the helper but strengthens it. It does not take long to learn whose suggestions to forget and whose to treasure.

It may be well to classify no farther, but to use one other color, in its shades for variety's sake, for any stories one is glad to have circulate and to relegate the rest to the limbo of browns. This would bring forward in the ratio of the most attractive colors and shades the books one would most like to see read; and the key would read something after this fashion:

*Fiction.*

Standard fiction	}	covered (or) bound	} in shades of green.
More recent stories especially enjoyable	}	covered (or) bound	} in shades of blue.
Other readable stories	}	covered (or) bound	} in shades of red.

*Non-Fiction.*

Standard literature	}	covered (or) bound	} in green.
Conceded authorities	}	covered (or) bound	} in brown.
Other books to be read for pleasure	}	covered (or) bound	} in red.

Of course each library knows its own public and its own needs. Divisions that would help in one would hinder in another, and always and everywhere personal work is the vital means to our end. When one is recognized as a friend then the suggestion is taken gladly. But many are diffident about asking aid yet want books of special kinds. Here, if the book can show its kind to some extent, the public will appreciate it.

All this is but a suggestion, but it is founded upon experience and if adapted to each library's needs, would, I believe, show noticeable results.

PUBLICATIONS OF THE DEPARTMENT OF AGRICULTURE.\*

THE purpose of this statement is to present a difficulty which confronts us in the publication work of the Department of Agriculture. The Department of Agriculture, the aggregate output of whose publications is as great as that of any publishing institution in the world, reaches the great majority of its readers directly. At the same time the enormous growth of its publication business as well as the development in recent years of the interest taken by libraries in its publications, warn us of a probability at no very distant date of far greater dependence upon the libraries for reaching the public than heretofore. Abroad, of course, and our foreign exchanges are far too important to be overlooked, the libraries or educational and other public institutions probably furnish the principal channel through which we gain access to foreign readers. For these reasons it is a matter of great importance to us in the issue of our publications, to, if possible, meet the views of librarians as well as those of the individual readers whom we reach directly. Hence I am glad of an opportunity to submit to an audience of librarians the difficulty that confronts us.

I cannot explain this difficulty better than by quoting what I had to say in regard to it in my last annual report:

"One of the difficulties attending the wide extension of Department work and the mul-

\* Presented to District of Columbia Library Association, April 17, 1901.

tiplication of its various bureaus, divisions, and offices, is occasioned by the unfortunate adoption, in 1883, of separately numbered divisional series of publications. The result of this has been to bring about a sort of bibliographical chaos of department publications. The confusion resulting from having numerous department bulletins bearing the same number has been carried still further by changes which have in some cases resulted in a new series and an old series and a technical and a popular series. Librarians have frequently called attention to the difficulties attending this multiplication of series and numbers, and representatives of the Department who have visited foreign libraries report foreign librarians as confessing their inability to keep track of our publications or to know whether they have them all or not.

"The importance of proper classification and facility of reference in all libraries where our bulletins are preserved is hardly to be questioned, and promises to be still more important in the future. In the meantime, however, we ought to consider first of all the convenience of the great constituency which it is the Department's first duty and privilege to serve, and the delays attendant in filling orders by reason of the neglect or inability of an applicant to give the proper designation of a publication are very numerous and daily multiplying.

"The difficulties presented to applicants by this unfortunate system may be inferred when it is known that there are, besides a series of departmental reports numbering 1 to 65, and apart from the series known as Farmers' Bulletins and the circulars, 17 series of divisional bulletins bearing numbers 1 to 4; 16 series numbering up to 8; 14 series up to 13; 12 series up to 16; 13 series have a bulletin 17; 11 series have bulletins 18, 19, and 20; 9 series have bulletins 21 and 22; 8 series have a bulletin 23; 7 series have a bulletin 24; 6 series have a bulletin 25; 4 series have bulletins 26 and 27; 3 series have bulletins 28 to 32; 2 series have bulletins 33 to 57. Altogether, covered by numbers 1 to 57, we have 378 separate bulletins, and the confusion in our circulars is equally great, 331 separate circulars being covered by numbers 1 to 43.

"If this be not remedied, the near future will bring about a state of things which will be both aggravating and absurd; and if it is to be remedied the sooner it is done the better. The longer the adoption of a new method is postponed, the more difficult will it be to effect."

In speaking of the difficulty of cataloging the Department publications on account of the numerous series and the consequent duplication of numbers, Mr. W. P. Cutter then librarian, in his annual report for 1899, said:

"Such confusion exists as a result of the changes in names of divisions and the bewildering classification of our publications that it is becoming more and more difficult to find any particular publication or even to so ar-

range and catalog the heterogeneous mass as to insure complete sets. I would strongly urge an immediate attempt to segregate these various publications into a fewer series, in order that our published scientific results may not be entirely lost in the future."

The confusion arising from this condition of affairs is no doubt most seriously felt by the individual applicant, but we have also had frequent expressions of dissatisfaction from libraries and the difficulties arising from the multiplication of series and the numerous reports, most of them unfortunately bearing the name of "Bulletins" and many of them bearing the same number, are very generally recognized and constantly increasing. What renders the matter more serious is, that there are frequent changes arising and likely to arise in the organization of the Department, which under the present system of giving to each bureau, division, or office its own series of publications, must inevitably result in a further multiplication of series, or perhaps, as may possibly occur with the beginning of another fiscal year, in the concentration of several of the present series into one new one.

Having presented these difficulties to your consideration, I will not take up your time by a prolonged discussion as to possible remedies. I will only mention two which have been suggested:

One, and I confess that one strikes me as obviously the most natural, is to confine all numerical distinction to a few distinctive departmental series, leaving the title and authorship to indicate the particular bureau, division or office from which the publication may emanate. Under this system all department publications will be comprised in—1, the Department yearbook and reprints therefrom, unnumbered; 2, departmental reports; 3, circulars; and 4, Farmers' bulletins, confining the term "bulletin" under this plan to this series exclusively.

A second suggestion, has been to do away with the numbering altogether, distinguishing the different publications of the Department solely by their title.

While I should have been glad, should any change from the present system have been decided upon, to have had it go into effect with the beginning of a new century as a convenient chronological mile stone, the earnest desire to make no change which was not distinctly for the better and which it might not be possible to permanently adhere to, and the suggestion of our own librarian and of the librarian of the Superintendent of Documents that a change was undesirable, induced me not to press the recommendations contained in my annual report. I am the more gratified, therefore, when this opportunity is afforded me to present these difficulties directly to librarians, whose wisdom and experience may, I hope, contribute to their solution.

GEORGE W. HILL,  
Chief of Publications Division, U. S. Dept. of  
Agriculture.

## EXAMINATION OF LIBRARY GIFT HORSES.

*W. D. Howells, in Editor's Easy Chair, Harper's Magazine, September. Copyright, 1901, by Harper & Bros.*

THE gift horse, which it was once thought not quite civil to look in the mouth, has been having its teeth rather unsparingly examined of late, so far as it has taken the shape of free public libraries. In fact, a general largeness, of more than royal, of more than imperial munificence, to the Scotch universities from the same lavish hand which has scattered its peculiar benefaction broadcast over our own land, was critically studied by the authorities before a grateful acceptance closed the incident. The acceptance was not indecently delayed, however, and the gratitude was of much more apparent reality than the misgiving, so that we might well believe the Scotch universities had never the serious question which seems to have beset some American thinkers respecting our gift horse, or horses, at a somewhat later stage of events. To be sure, the Scotch beneficiaries were not pledged to such terms relating to the care and keep of the gift horses as the American communities, which, in the process of time, may find them eating their heads off.

Apart from all questions of politeness, there were some things suggested by the eminent gentlemen who have recently spoken their minds on the surplusage of free libraries among us well worthy the consideration of the friend of books. One of them went so far as to ask whether we were not in danger of reading too much and thinking too little; and he alleged the existence of such overwhelming facilities for reading in his own city as seemed to imply the submergence of thinking. Not only does a public library, with its local branches, freely offer 500,000 volumes to his fellow-citizens, but a subscription enterprise, with a system of delivery-carts, leaves books for a trifling sum at people's doors, like milk; and literature is all but laid on in pipes, like water.

The thing, it must be owned, has its grotesque side, and it may have its immoral, its dangerous side. The president of Johns Hopkins University thought the present excess of reading something in the nature of a craze, a vice; and people may be really eating literature as they eat opium, and may be as effectively drugged to stupidity with the one as with the other; but the parallel need not be pushed so far as this to be deplorable, with any one who loves books for their refining and edifying companionship. Whether the victims of the craze, the vice, would be thinking if they were not reading is another matter, and demands reflection. In the light of reflection it is not very certain what thinking is. It is a process so very obscure that many of us are apt to think we are thinking when we are merely musing, or,

to phrase it more modernly, mooning. The art of thinking is not likely to go far unless it goes hand in hand with the art of talking, which has more and more fallen into disuse since the mania for reading seized the world; and it seems to us it is this which we can profitably study anew. The trouble with people now reading the sort of books which no one ought to read is that they would not be thinking, unless they were talking, when they were not reading. These weaker brethren and sisters read because they do not like to think by themselves. But hardly any one dislikes talking, which with such people is really the only way to thinking; and if they were encouraged to cultivate the habit of talking, they would be in a fairer way to stop reading than if they tried to cultivate the habit of thinking.

If one were fairly to take his honesty in both hands, he would probably be able to confess that the influence of any powerful story on his mind was stupefying. What must be the narcotic effect of a feeble story only those now devouring weak stories by the hundred thousand can say. It is not perhaps so bad as that of morphine; but it may be something like that of cocaine, and far worse than that of cigarettes. In this sense the habit of reading inferior fiction (for out of a hundred readers ninety-nine read nothing else) is certainly a vice, without the picturesqueness of a craze. Yet if its victims propose to leave it off, to close the greatest selling book of the year, the week, the day, and take to talk, there are distinct difficulties in their way to reform. What shall they talk about, and eventually think about? Until very lately, until the popular novels began to be so tremendously popular, people who were averse to thinking before they spoke, or liked to do their thinking afterwards, usually talked of the theatre. The new play was an easy and inviting theme, especially with young people who sought the joy of each other's presence in the pretence of caring to know whether one or the other had seen it. But it is said that now they have changed all that, and people not only read the greatest selling books, but when they talk they talk about them instead of the plays. It is said that they often read them in the fear of being found out not to have read them, and are ashamed to be ignorant of what it is, in most cases, an intellectual dishonor to know. The case is hard to imagine, but with a strenuous effort it may be imagined, and after one has succeeded one may realize the vicious circle in which the victims of the reading habit revolve, with little or no hope of escape. If they leave off reading for the purpose of talking, as a preliminary to thinking, they have nothing to talk of except the books they have left off reading; and when they have talked these over they must begin reading again in order to be able to talk of something.

In earlier times people used to talk largely of religion, and in times not quite so early, of politics; but these were always probably the topics of the elder rather than the younger people, whose reform we have primarily in mind; for if the vice of reading is to be cured, we must strike at its roots in the tender mind of youth. They no longer talk of plays, and they may not talk of books, for the reasons given. It remains for them, then, to talk of themselves; and this they will naturally do if they are of the ages and sexes which satisfy their interest in one another under the mask of autobiography. But autobiography can be carried so far as to become itself a vice, or if not quite that, a bore; and the sole refuge from autobiography, in the hard conditions we are fancying, is gossip.

Good fiction is only an exquisite distillation of human facts, which biography and history more or less attractively embody; and all three are gossip depersonalized by remoteness of time and place. There is no reason why the gossip which people must fall back upon in default of other interests when they reform their vicious habit of reading should not be depersonalized to the effect of all that is charming and edifying in those forms of literature. It is perfectly feasible for the gossip to refine upon the earlier methods, to reject crude incident and cheap inference, and devote himself or herself to the more psychological moments in the experience, or the reputed experience, of his or her neighbors. It may be urged that even the most intimate fact of life is now exploited in the newspapers, and that the modern extension of journalism includes things formerly left to private comment; but it is precisely here that we wish to distinguish, and entreat the reformed reader, in turning to talk as a means of thought, to save himself by the conscientious avoidance of those things which the press makes its indiscriminate prey.

We do not wish to imply that reading the newspapers is altogether deleterious, and we do not understand that President Gilman regards free libraries as an unmixed evil. Probably he would strike a balance between the Caliph Omar and Mr. Carnegie, or would regard an era of Omarism as little less disastrous than what he calls an era of Carnegieism. But in this we necessarily speak without his authority, and for ourselves we can only urge a point against free libraries which we think can be fairly made. It seems to us that there is small use or sense in purveying gratis all the new books, as the libraries appear to do, without apparent criticism, or with worse than none. The best criticism, the criticism of time, they quite reject. But why might not the libraries beneficially make it a rule not to supply any book less than a year old? Time would sift the vast mass of literature so that only the finer and more

precious particles would pass, and would give a just protection to the authors and publishers whose industry is most injured by the libraries. These buy a few copies of a good book, which by very reason of its goodness must have a scanty sale, and still further restrict its meagre profits by offering it free to those who, if they love it, might make a struggle to get together money enough to buy it. In our generous indignation at the present wrong we are not sure but the free library is standing between such book-lovers and the plain duty of owning the books they love.

The free libraries cannot hurt the overwhelmingly popular books; the mania for these is so great that no library can supply the demand; but it can easily supply the demand for a good book. It might paradoxically, therefore, justify itself in offering only the popular rubbish to its readers, and the standard literature which has passed out of copyright. A book which is by way of being standard, or classic, may well be excluded, at least till people of taste have had time to consider whether they cannot afford to buy it and put it on their shelves, with their own book-plate in it. But if it is hastily thrust, an unsolicited alms, into a man's hand, he will read it, but he will think twice before he buys it; and we have been warned how difficult it is for the habitual reader to think even once.

If we must be specific as to the new books which the free libraries should delay at least a year in supplying, so that the reader shall be obliged to buy them for himself, we should say, first of all, travel and biography, or their synthesis, history. Poetry is a good sort of literature to buy, especially good poetry. Essays of the delightful quality which we still, though decreasingly, receive from the press, and now and then a volume of literary criticism, should be bought rather than begged or borrowed. The higher order of fiction ought to be withheld from the free libraries, in order that the reader can enjoy it with due self-respect. But the lower order of fiction, the variety that sells by the half-million, may be unsparingly lavished by the free libraries. Dictionaries, directories, catalogs, metaphysics, theology, government reports, and political speeches may be free as air; for, as it is so hard to read them, the reader may be driven to talking or thinking in sheer desperation. If he is a devourer of the greatest selling books of the year, he may as well continue to read, for upon no condition, probably, could he think.

The objection to the gift horses urged by the eminent divine who spoke against them in a baccalaureate sermon is rather more sentimental than President Gilman's. The notion of the president, so far as it may be gathered into the present figure, seems to be that in our habitual reliance upon gift horses we shall lose the use of our legs. But Dr. Grant

feels it unseemly that we should accept a gift horse upon the condition that it shall bear the name of the giver so boldly inscribed upon its barrel that the wayfaring man cannot err therein; or, in less metaphorical terms, that the giver's name shall figure upon each free library founded by him.

Dr. Grant, being promptly interviewed as to what he meant by his sermon, is reported to have said that he believed free libraries should be founded at the public expense out of the taxes paid by all the citizens. He believed, if we may trust the interviewer, that "the men in overalls" who read the books in the Boston Public Library take a just pride in the fact that it was built partly out of their overalls pockets; and there is a great deal of probability in this.

It should not be forgotten, however, that the great giver of gift horses has provided for some such pride in the overalls men, whose representatives so freely accept his bounty. This is conditioned upon their agreeing to furnish provender from the public funds indefinitely. He does not give feed with the gift horse; he does not, in fact, so much give the gift horse as give its stable; the rest must be supplied by its recipients, and there have not been wanting published estimates to show that eventually a public library is a public debt.

That is ungracious, but if a gift horse, or his stable, comes coupled with conditions, it is not so ungracious as if he, or it, came with none. Dr. Grant apparently disables the giver's taste; but about tastes there can be no profitable disputing. The question is whether free public libraries do more good or harm, and this brings us back to President Gilman and his thesis that we perhaps read too much and think too little. It might very well be, though here the fact intrudes that those who do not read seem not to think much either. We are to decide how much and what we shall read rather than abjure reading altogether. The worthlessness of most of the books that most people are now reading is no proof of the supposition that there are not as many good books as ever. Of good old books there are more than ever, for the century lately closed was richer in good literature, upon the whole, than any other century, or almost all the other centuries. The free-library reader could not go wrong if he went to the nineteenth century classics, and he would come from them not wholly disabled from thinking. The same might be hoped for him if among recent books he trusted himself to such as were in great demand after a single year. There are, in fact, books now actually in press, or issuing from it, which he might read with profit as well as pleasure, though these are comparatively few; and after what we have said we trust the managers of the free libraries will leave him to become their proud and happy possessor before he reads them.

## SOCIETA BIBLIOGRAPHICA ITALIANA.

THE eighth number of the current volume of the *Rivista delle biblioteche e degli archivi* contains a short account of the fifth annual meeting of the Italian Bibliographical Society, held in Venice, July 25-28, 1901, together with the opening address of the president, Sig. P. Molmenti. The other papers are to be published in subsequent numbers of the *Rivista*.

Fifty-four members in addition to those resident in Venice attended the sessions. As the list of members has now reached 602, it will be seen that the percentage of attendance was not high. The principal topics which engaged the attention of the society were the international catalog of scientific literature, the Italian laws of copyright, libraries in the secondary schools, the new processes of preserving paper and leather, particularly the Zapon preparation, the continuation of the valuable bibliographic dictionary of Italian authors, and uniform cataloging rules. We seem to have an echo of many A. L. A. programs in this list of subjects.

The first part of the address of the president is occupied with a graphic and clear sketch of the history of printing and bibliographic studies in Venice. This deserves to be read by every student of the art of printing for its brevity, conciseness, and vigor. The rest of the address deals with matters incident to the president's office and the membership of the organization.

W. W. B.

## INTERNATIONAL CONGRESS OF THE HISTORICAL SCIENCES.

IN the spring of 1902 there will take place in Rome a congress of experts in all branches of the historical sciences (Congresso internazionale di scienze storiche). This congress will be under the patronage of the King of Italy, who will share the responsibility for calling the congress with the Duke of Abruzzi, the minister of public instruction, and the municipalities of Rome, Naples, and Venice. A committee of about 100 distinguished scholars, headed by Senators Ascoli, Comparetti, and Villari, have the immediate direction of the details, and are hard at work on the plans. There are to be 15 sections, ranging in their field from Paletnology (classical archæology) to the history of the drama and music, and including the history of law, literature, philosophy, pedagogy, art, exploration and discovery, religion, mathematics, and kindred subjects.

The feature of this congress which will appeal especially to librarians, is an attempt to exhibit all the publications which have appeared between the years 1860 and 1900 in Italy in each of the sections of historical study which are to be represented at the con-

gress. To this end great efforts are already being put forth, and the ministry of public instruction is urging individual contributions not alone from employes but from savants not under its jurisdiction. The intention apparently is to publish lists of these books as well as to exhibit the volumes themselves. The proceedings of the congress will be published and may be obtained for the modest sum of 12 lire. The secretary-general of the congress is Prof. Giacomo Corrini, Direttore degli Archivi, Ministero degli Affari esteri, Rome, Italy, to whom inquiries for programs, dates, etc., may be addressed.

#### THE CARNEGIE BUILDING OF THE PUBLIC LIBRARY, DECATUR, ILL.

The gift of \$60,000 from Mr. Carnegie, in February of the present year, has at last made possible the erection of a building for the Public Library of Decatur, after its 27 years in rented quarters.

The site secured is well worthy of the generous gift, being 190 x 190 feet, on the corner of two main streets, and very near the business center of the town. The lot is high and has many magnificent old shade trees on it, which will add to the beauty of the lawn. It was purchased by the city, the price paid being \$15,000.

It was decided to choose an architect without competition, the selection to be made from among architects of established reputation in library architecture. The choice was narrowed down to six architects, and on June 28, the firm of Mauran, Russell & Garden, of St. Louis, was selected to do the work. On August 27, the plans, as shown elsewhere, were finally accepted.

The building, which will be of Bedford stone, brick and terra cotta, is to be 98 feet across the front and extend back 68 feet. Only the first floor will be 68 feet deep, the second floor having a depth of about 48 feet. The design is a broad adaptation of the classical style, with a view to giving the greatest possible dignity which the practical character of the plan will permit. The building is decorated with Greek detail, but its chief characteristic is its simplicity. Approaching by the broad terrace steps and mounting to the portico, one reaches through the marble vestibule, the main hall and delivery room. This hall is 37 x 37 feet and opening off it on one side is the reading room, while on the other side are the reference and children's rooms. At the back is the delivery desk with the stack room beyond. This desk is flanked on one side by the librarian's room and cataloging room, and on the other by two special study rooms. The librarian's room is so placed as to give easy access to the working and public portions of the library, at the same time giving the librarian the necessary amount of privacy which is essential. Every corner of the building is flooded with light

and particular attention has been given to the ventilation of the different rooms by the introduction of a large supply of fresh air through the heating apparatus. Every room has a wainscoting of bookcases which greatly increases the capacity of the library.

On the second floor is the hall, somewhat smaller than the main hall, and reached by an artistically designed stairway. On this floor is the large assembly room and two good sized class rooms which may be turned into club rooms. The director's room is also placed on this floor.

In the basement there is a fireproof room for the files of newspapers and other local historical matter, a room for the medical library, a commodious staff room, large storage room, a receiving and unpacking room, together with boiler rooms, janitor's quarters, etc.

A feature of the stack-room, which lies at the rear of the building, is its fireproof construction, giving full protection to the real heart of the library. Shelves will be installed to accommodate about 15,000 volumes, but there will be a total capacity provided for 45,000 volumes on the three floors of the stack-room. In addition to the housing of 15,000 volumes on the first floor stack-room, there will be shelving provided in all of the other rooms on the main floor, as well as in several rooms in the basement, making the total shelf capacity of the library as it now is, for about 50,000 volumes.

When necessary to do so, the building may be enlarged by building up the one story part and extending the rear wall back, particularly that of the stack-room. When the demands of the reading room require more space, it is intended to move it up-stairs to the room now marked for the assembly room, moving the children's room across to the room which was used as a reading room, and enlarging the reference room by removing the wall between the present children's room and reference room.

The building has been planned first of all for convenience of administration. The library will have open shelves throughout, although at first the idea of having simply an open-shelf room was considered, but was thought to be impracticable for a library of this size.

#### READING LISTS ISSUED FOR NEW YORK LIBRARY ASSOCIATION.

THE following are examples of the selected reading lists prepared by the Buffalo Public Library for the New York Library Association, and presented for discussion at the association's recent meeting at Lake Placid. Besides the lists here given, there were similar lists on "Electricity for general readers" (8 titles), "Electricity for amateurs" (11 titles), "Living and loving: books for girls" (12 titles), "Debating" (9 titles), "Fathers of mankind" (primitive man; 8 titles).

The United States Government and its Administration.

"We here highly resolve . . . that government of the people, by the people and for the people shall not perish from the earth."

"LIBRARY WEEK" OF THE NEW YORK LIBRARY ASSOCIATION.

The New York Library Association held its annual autumn meeting at Lake Placid, in the Adirondacks, during the week of Sept. 23-28. "Library week," as this meeting is generally known, may now be regarded as an established feature of the association's work, and it has been decided to make the last week of September its permanent date. The meeting had many of the characteristics of the national library conferences, although it was much more emphatically a vacation outing than a business convention; and in attendance and general enjoyment and interest it more than repeated the initial success of last year. The Lake Placid Club again extended to its library guests the privileges of its grounds and equipment; half rates were granted at the clubhouse and by the railways, and every effort was made by the club authorities and the association officers to make the meeting pleasant and profitable. The attendance was recorded as 155, among those present being Herbert Putnam, Librarian of Congress; Dr. J. H. Canfield, Melvil Dewey, C. W. Andrews, F. M. Crunden, John Thomson, Dr. Edward Nolan, R. G. Thwaites, C. H. Gould, W. C. Lane, W. I. Fletcher, Miss Hannah P. James, Miss M. E. Ahern, Miss Caroline M. Hewins, Miss Linda Eastman, Mrs. S. C. Fairchild, and many others from New York and adjoining states.

The program was so arranged that one evening session was held each day, excepting on the 24th when a morning session was provided. This left the days free for driving, walking, boating, golf, or any other bibliographical or bibliothecal employment; and for once in the annals of library conferences there were no protests against an overcrowded program. Every one of the sessions was well attended, and interest and discussion were sustained throughout, while definite work in several important directions was formulated and set on foot.

The first session was held at eight o'clock on Monday evening, Sept. 23, in the large room of the Lake Library. President H. L. Elmendorf called the meeting to order, and Melvil Dewey, on behalf of the Lake Placid Club, extended a cordial welcome to the association and its friends. Brief response was made by Mr. Elmendorf, who said that in his opinion the wisest step the New York Library Association had ever taken was its action last year in agreeing to meet permanently at an appointed time and at a central place. The program, he said, had been arranged with special reference to such perfect days as those that had greeted the visitors, that this coming together might be a library rest, a library recreation and a library conference at the same time.

The special feature planned for the session was then briefly outlined by Mr. Elmendorf in his president's address. He said:

"We librarians have been accused of taking ourselves too seriously, and much wit and some wisdom has been expended in describing our 'true moral earnestness.' A display of this, our supposed characteristic, always reminds me of a talk I once had with good old Dr. John Hall, of New York. He had just been waited upon by a most zealous and emphatic committee presenting some evangelizing plans. He said: 'Oh! these earnest Christian workers, they give me great trouble and much anxious thought.' But it is a brave man, not to say a bad man, who will dare, at this time particularly, to cast discredit upon high ideals. We should raise high the banner which stands for our war against ignorance, selfishness, and the spirit of lawlessness and unrest. We cannot catch and cage every lunatic or fanatic, but we can do much to create a state of things in which the spirit of anarchy cannot exist, to produce a community immune to its ravages. We will be most efficient when we become an organized army in our fight against evil and ignorance and put a stop to our guerilla warfare, successful as our irregular tactics have heretofore been.

"If great mercantile concerns, railroads and the like, can combine for private gain with such marvellous results, why cannot we combine for public good?

"Conference is not co-operation. Heretofore we have met in our various library conventions, have met our friends, compared our methods, discussed new plans for work, encouraged each other's hearts, and each gone back with new ideas and new enthusiasm to do better work in his own place. Still it remains individual work. Each library shines and makes its own bright place, but can we do nothing to extend the radiance, to diffuse the light?

"No one will quarrel with the idea of co-operation. We all say yes, it is a good thing; most of us will go so far as to admit that it is a necessity if we are to progress, are to live up to our opportunities. What, however, is the outcome of these admissions? Heretofore our co-operative work has been spasmodic and of little avail. Our theories have been good, but our practice has not been up to them. Nor is this said either in a fault-finding nor in a pessimistic spirit. Our work is new, our progress, we delight to say, and can say with truth and propriety, has been marvellous, but have we not now arrived at a stage of development when we should devise liberal schemes for progress on the lines of combined work? Is there no way in which the good work done, say in New York City, can be made available for Buffalo, save the old one for the librarian to study his brothers' methods and do the same thing all over for himself? I think there is, to a limited degree at least, and that the channel for its accomplishment is through the New York Library Association.

"When we speak of co-operation every mind

instantly and involuntarily calls up the subject of cataloging, and the thousands of dollars we are collectively wasting each year by each doing for himself the work which might be done, and better done, once for all by a central bureau. But this is too great a subject for us to handle. The great parent association, the A. L. A., has this under consideration, and from time to time reports progress.

"Our state association has, we think, proved its usefulness by the inspiration and enthusiasm promoted by its conventions, particularly that of last year; and if no other result were obtainable this pays for all the thought and work given to it. But we wish to take a new step. We wish to make a beginning in co-operative work. If we can practically illustrate what we believe to be possible the growth and progress will come with experience and will take care of themselves.

"To get our start, dropping platitudes and truisms, we shall present for your consideration three subjects judged by your program committee to be practical for a start in co-operative work in the coming year.

"First. — A bureau of publicity.

"Second. — Short reading lists prepared and distributed under the authority of this association.

"Third. — A system of library institutes which shall give to the librarian of small libraries an opportunity of practical instruction in elementary library economy.

"It is our plan to present the subjects of co-operative reading-list and library institutes each at a separate session. I would therefore ask the conference to confine its discussion at this time to the subject of publicity and general remarks as to whether the effort for co-operative work is expedient and timely."

The establishment of a *Bureau of Publicity* was the topic of discussion for the evening.

Dr. Canfield expressed approval of the plan, which would, he thought, be helpful in the work of all libraries. "Thus far there has not been a great deal of practical co-operation and organization, for in libraries we have a field in which the work is necessarily largely individual. The work of each library has a great deal of local color to it. It is difficult, in a general way, for a college librarian to feel that he has much in common with a town library, or for the library of a small town to feel that it could follow at all the methods of a larger library with greater opportunities. It has been difficult to see just where the points of contact were, but at the same time I think that we have magnified the differences, rather than sought for the points that were in common. The keynote sounded all through this century is that of combination. We are not willing any longer to believe that it is possible for a man to do alone that which can be quicker done by standing close together. Men have almost

passed away from the old thought of competition. We used to think that competition was the best possible thing for the advancement of men. We believe now in organization; we feel that we are going to get out of organization more than we ever have had before. We must recognize this fact in our work, just as the men in the steel business and the various manufacturing interests recognize it."

Mrs. Elmendorf and Mr. Crunden spoke briefly of the need of bringing library work more forcibly to the attention of the public. Mr. John Thomson said that the ignorance of the public in regard to library work was often brought to his attention; "it is a most difficult thing to get the general press to give space in their papers to what we call the general library knowledge. They will publish statistics, and spend much time criticising the details of the work. If anything could be done by the proposed committee to bring before the public, through the Bureau of Publicity, the work which is actually being done in our libraries, then this association will have accomplished a very important end, and I am sure that its example will be followed by other states." He suggested that such a bureau should arrange for the publication from time to time in the general press of editorials or other accounts of library activities.

Miss Hewins said: "One point on which librarians need to give the world all the publicity they can is about the industrial books they have, and about the money which they have to spend on industrial books. Very few people know what a public library really is. They have a general idea that it is a collection of books of poetry, fiction, essays, biography and history. The general reader knows nothing whatever of the technical and industrial books. He grumbles because he cannot get 'The crisis,' just as last year he grumbled because he could not get 'David Harum.' If librarians would tell their readers that the books mentioned form only a small part of the library, it would be enlightening. Give them some idea of the number of copies needed of a new novel, and the amount of money that has to be expended on each new novel. We have to supply trade journals and technical magazines, etc., of which probably a good many people have never heard. A large proportion of our yearly outlay is for books on the manufacturing interests which are growing in our city."

In response to the request of the president Miss Hazeltine told of the measures used in Jamestown to keep the local press informed on library affairs. "The librarian visited the editorial sanctum of the local paper and asked if a certain amount of space could be reserved for the library, if the library would fill it. They were glad to grant it and charge us nothing, if we would write the reports. Every Friday an article appeared on the editorial page; every Thursday night the libra-

rian burns the midnight oil and tries to have something of interest from the library, such as the number of new books received, review of new books, list of books on wood working, summer sports, outdoor books, etc., etc.; or it may be a list of books for children; the number of people who have visited the library during the summer, or some short item of the sort — something short and to the point; with good headlines; nothing startling, but dignified. During the three years this method has been tried in the library the circulation has almost doubled, and the people really know what we are trying to do. The items have been written by one who has tried to do the work faithfully and to have people understand it, and it has paid."

R. G. Thwaites spoke of the necessity of making library items interesting if they were to find a place in the newspaper press, and referred to the excellent results secured in Wisconsin by sending out articles in proof-slip form for use by local editors. Miss Ahern thought that personal influence was more effective than paper and print in awakening library interest in a community; "Miss Hazeltine says she has tried to get people interested. Do you not believe with me that it was Miss Hazeltine's personality that brought people to the library rather than the printing of her lists? The club woman, the school teachers, the workers in the shop, the business men and the commercial travellers are going to be interested in the library just as soon as they get information from some person that the library is interested in them. Then they will look with interest for the items in the papers about the library."

It was moved that a committee be appointed to consider the general subject of publicity and report upon it at a later session. The president named as the committee Dr. Canfield, Mrs. F. N. Doubleday, Miss Josephine Rathbone.

A morning session was held on Tuesday, owing to threatening weather. The meeting was called to order at 10 o'clock by President Elmendorf, who introduced as the subject of discussion *The Desk Assistant*, to be presented by A. E. Bostwick, chief of the Circulation Department, New York Public Library.

Mr. Bostwick said, in part:

"In a public library not a hundred miles from the city of Greater New York, where there is a training class, an applicant for this course was once talking to some of the assistants in the library, and on mentioning some details of the course through which the class was expected to go, she said, 'I do not suppose there is very much to learn; I suppose you have to know what aisle each of the books are in.' What an idea of the duties of a librarian!

"I am to speak about 'The desk assistant: the point of contact with the public.' Perhaps I may be allowed to amend that a little

by saying the point of *personal* contact. There are so many other points of contact; in fact, everything we have to do in a public library relates to the point of contact between the public and the library. The desk assistant is the point of personal contact, the point where the amount of pressure is greatest. The desk assistant, her training, education, and, above all, her bearing towards the public, is, so far as the public is concerned, the most important thing in library work. The position and work of the desk assistant is too often put into the background. The young girl who comes to your office to enter library work has an idea that she wants to do scholarly work, such as cataloging, reference work, or anything rather than standing behind the desk. She wants to do children's work, to make reading lists, picture bulletins, or anything but to be a desk assistant, and do the work which will bring the library into close relationship with the public. So far as the library schools are concerned, it seems to me that they ought to make a specialty of overcoming this feeling. Whether they do or not, I cannot say, but it is a fact that the library school graduate looks down upon the work of the desk assistant, and would rather do anything else. My experience has proved that this is universally the case. Must we blame the library schools or the individual pupils? It is a fact that a great many library school graduates look upon cataloging as the best thing to do, and the position of the desk assistant an inferior one, but it seems to me that if a library has to do without everything but one kind of help, a good desk assistant is the thing to have. Better do without cataloging; better do without reading lists; better do without everything in the world except good desk assistants who have a proper bearing toward the public, who have a proper conception of their work, and understand how to do that work properly. There is no doubt that the public appraises the value of the library according to the appearance of the desk assistants. It is not so much that the library has the best catalog, the best reading rooms, the best library appliances, the most successful librarian, but it is simply the manner in which the reader has been treated by the persons with whom he comes in close contact. One assistant with a disagreeable manner, imperfect training, who leads people to think that she is a sample of what the library employs in its work, can do more harm to the library than poor cataloging or anything else.

"This is more important than some of us are apt to think. Just at present there is a 'boom' in library work. In every other movement of this kind advance has not always been straight ahead, but a movement to and fro like a pendulum. There is a reaction coming in the library field. The public is going to stop and inquire, 'What are we getting for all this money we are spending for public libraries?' There is even now a dis-

position to criticise public libraries, which is going to increase, and there will be some time a reaction which we must be prepared to face, and to control, if possible. And the most effective way to meet it is to strengthen the library in all its departments, especially in the work of its desk assistants."

Mr. Elmendorf: "The address of Mr. Bostwick reminds me of a story of a prominent librarian, known to almost all of us, who said to me one day, 'Mr. Elmendorf, I care nothing for people; I am interested in problems.' Now, our duty is entirely different from that of that successful librarian. The people are our care, the people are our support, and the place where we may meet the people is through the desk assistant. Our library is just as strong as we can make the force that comes into contact with the people. This is particularly true in the free public libraries and in our educational institutions. This is just as essential for the college library as for the public library. Where the student comes into contact with the assistant is often a more important point than where the general public comes into contact with the assistant. What we should consider this morning is how we can better our desk assistant force — what can we do for them; what can they do for themselves?"

Miss Beatrice Winser: "To sum the question up in a very few words — Give the desk assistant more money."

John Thomson: "I approve of that answer most thoroughly. It is a sad thing to look at the pay rolls in many of our libraries. The average salary is absolutely inadequate, but we have to meet the difficulty of making a certain amount of money cover certain necessities. While it is the duty of every librarian to try to increase the salaries of his desk assistants, it is a very hard thing to do. I think the work of the desk assistant is probably more deserving than any other in the library; but I have found, as Mr. Bostwick says, that the first thought of young people who start in to do library work is that they ought to be in the cataloging department. I tell them not to make such a mistake; simply because they go into one library it is by no means certain that they are going to spend their lives in that library. They should look out for advancement and promotion, and perhaps to being the head of some town library. In order to obtain this they should be more thoroughly under the observation of the general officers of the library, and they will certainly be more open to their approval, more open to their reproof, at the desk than in any other position in the library. If you wish advancement, go into desk work; do it thoroughly, and promotion will come. I do not think that too much stress can be laid upon having a good head to the circulating department; assistants should not be left to work out their own salvation; there should be for head of department some one who would have

nothing of the detail work, neither the receiving or giving out books, but should have simply a general supervision of the desk.

"One other point: In my opinion the librarian should absolutely forbid the proffering of advice. If assistants are asked for advice, let them be sufficiently trained to give it readily, cheerfully and well, but proffering advice is a very bad thing."

Miss Kelso: "I would like to bring a little closer the analogy between the library and a business career. The librarian cannot help showing, in his work and in his relation to his staff, that his interests are in the cataloging and the details relating to the books themselves, and the desk assistant comes to feel that she is regarded as little better than an upper servant. In contrast, take the case of the publisher. While his special personal interest may be with books and their authors, he surrounds himself with clerks, specialists in their way, whose business is to come into contact with the outside world. They are generally the best paid people in the place; their judgment is consulted; and their experience and observation are constantly utilized. The fact is you librarians do not mean what you say. You talk about the desk assistant being such an important part of the library, but you do not treat her as if you believed that. I have never yet seen a library, and in fact know of none, where the desk assistants are made to feel that they are the most important people on the staff. In library work, as in other work, promotion means more money, better hours and more vacation and less drudgery. In the case of the desk assistant promotion generally means to be paid perhaps \$5 a month more, with no other change in condition or consideration."

Miss Josephine Rathbone: "The question of salary has been discussed, and I agree that it is most important. Much can be done to interest desk assistants without increase of salary by letting them realize the ideals and purposes that the library is working towards, and counselling with them in that work more or less. Desk assistants should be asked to discuss important questions relating to their work; it will give them better ideas of what the library is aiming at and what we are striving for. There is another thing, which can be included in this one word, *hostess*. If we do nothing that the ideal hostess would not do, and do all that she would do, we have met the public in the right spirit. Aim to be in sympathy with the public, and to have the public in sympathy with us."

Miss Ahern: "There is no question that the standing of the library in the community is gauged by the treatment which the public receives at the loan desk. The assistants at the desk are too often made to feel that they are not even a cog in a small wheel, and indeed not the very smallest part of the machinery. In personal visits to libraries I am always received kindly and courteously by the

librarians, but never see the attendants at the desk unless I ask for them. Then when I talk to them about library clubs, library associations, etc., they say that they never get a chance to go, as the librarians, catalogers, heads of departments must attend. They feel that they are upper servants, as Miss Kelso has put it; that when they have given out books and taken back books their responsibility is finished. This comes from their not being taken into the confidence of the administration. The cataloging, the technical, the professional side of the library, is emphasized at the meetings of library staffs and in the library journals and at library conferences, until the library assistant is made to feel that she is a very small part of the machinery."

Dr. Canfield: "One point has been omitted in the discussion this morning which is really quite essential. There is one characteristic very necessary to success in any undertaking—tact—the characteristic which makes one dignified and courteous and brings one in close touch with people. It is not readily found, and you cannot train it into one who does not possess it, but you can develop it if it is there. We should advance as rapidly as possible those who possess this characteristic by nature. I remember once losing patience with a janitor who had left undone some things which he should have done and had done some things which he should not have done. I asked him if he had no memory, no judgment, no initiative, no discretion, no commonsense, and a few other things of that sort. He replied, "Why, Mr. President, if I had all those things, do you think I would be a janitor?"

Mrs. Fulton: "It seems to me that the very best quality a desk assistant can have is an honest, genuine love for people. I think the tact will come if she has these. Girls who love service, who make the public feel that they are not asking too much when they offer their requests, have done more than any others to make friends for the public library."

Dr. Canfield was then called to the chair, and introduced Mrs. Elmendorf, who presented for discussion the second topic of the morning, *A New Departure in Reading Lists*. She said: "The problem of the great library with all its elaborate organization is efficiency in getting the right books into the hands of the right people. The problem of the small isolated library is efficiency in selecting the very best books in order to make its collection, though small, of the highest quality. The value of the most books for either library is not as to their adaptability to the specialist but to the general reader, and perhaps still more their attractiveness to those who do not generally read it all. We come to the same point therefore for institutions of either type—that the vital need is ready, accessible, book evaluation.

"General bibliographies are not satisfactory:

they are expensive to buy, more expensive still to check, and hard to use, save for skilled readers. Even those incomparable helps that the generosity of Mr. Iles and the wisdom of his chosen editors have given us and are to give us are not sufficient even if they covered more subjects. They tell more than the general reader can easily comprehend and they are too costly to be supplied in numbers to readers. They are, like other bibliographies, chiefly tools for the librarian rather than instant helps to readers or even desk assistants. What seems desirable is therefore information as to the value and interest of books in a form so simple that the least skilled reader will not be frightened by it; in a form so inexpensive that every library may not only possess it for library use but may give it freely to interested readers; in so fluid a state that it may readily and inexpensively be recast into another form; prepared with such care and wisdom that it shall be trustworthy and acceptable; published from so dignified a source that the excellence of the quality of the information may be vouched for.

"The program committee present as examples for illustration and for criticism the nearest answer to these desiderata that they have been able to prepare, *viz.*,—a set of seven short lists no one of them containing more than a dozen books on its subject, tastefully printed, cut to standard 33 size, which can be supplied in 2000 lots at \$1.75 per 1000; 5000 lots at \$1.25 per 1000; 10,000 lots at 90 cents per 1000; 15,000 lots at 80 cents per 1000; 25,000 lots at 75 cents per 1000.

"The lists submitted are published by the Buffalo Public Library simply because the program committee is not empowered to print anything of this kind in the name of the association.

"The Buffalo Public Library will, in case the association votes to compile by a committee and to publish such lists, subscribe for the first 2000 of 25 lists during the current year thus materially reducing the price to all subsequent subscribers. This is done by the library because it believes in the usefulness of such lists for its own work and for the work of libraries throughout the state.

"The books contained in the lists have for the most part been submitted to the popular test that they have been acceptable to a great many readers, and to the expert judgment that they have been pronounced valuable by some known authority."

A general discussion followed. It was pointed out that such lists would not only be of service in helping readers to use the library, but would aid in private book buying. They would be subject to revision at any time, and could be sent out once a month, in lots as desired, to subscribing libraries from the office of the Bureau of Publicity. They should be distributed freely to readers from the delivery desk. The omission of call

numbers from the lists, as printed, was referred to, and Mr. Elmendorf suggested that this was immaterial for such a short list. "The library can mark a single list and paste it in a prominent place and the assistants will soon learn it. To the general public call numbers mean nothing and are an abomination. They can ask for the book by the name of the author and the title. The price is given for the benefit of small libraries, that they may purchase the books if they do not have them, and as an incentive to the reader to buy his own books." A committee was appointed to report later on the subject, as follows: Miss Hannah P. James, Miss Ellen M. Chandler, Miss M. E. Hazeltine. A nominating committee was also appointed by the chair, consisting of A. L. Peck, Mrs. S. C. Fairchild, C. G. Leland.

An evening session was also held on Tuesday, in the music room of the club house, when the subject of *Book Selection* was presented by F. W. Halsey, of the *New York Times Saturday Review*. Mr. Halsey dwelt specially upon the importance of the subject and the difficulties which every librarian and every book-reviewer meets in the endeavor to include only the best. Neither the librarian nor the book-reviewer can confine his attention to the books of all time which have already made their place and reputation, but must deal with current books of timely interest but as yet untried. He spoke of the impossibility of waiting for reviews in all cases, the impossibility of reading or even seeing before purchase more than a small proportion of newly published books. But in reviewing and selecting only the best, the reviewer and librarian both could lead by way of this best current literature into the literature of life, written for all time. There was brief discussion, followed by a social hour of music, recitations and story-telling.

Wednesday evening's session opened with the *Report of Committee on Publicity*, presented by Dr. Canfield, chairman, which offered the following recommendations for action by the association:

"1. We urge each librarian to make such intelligent, tactful and systematic use of the local press as will keep constantly before the community the library, its scope and place and value, its methods and its needs, and the results of its work.

"2. We recommend that the entire question of publicity in the general field be left with the officers of the association for the coming year, with power to act along whatever may seem to be the lines of least resistance and greatest results, without more or other expense to the association than such incidental expenses as may safely be carried by the usual revenues of the association: the said officers as a special committee to report to the association at its next annual meeting the results of the year's experiment, with suggestions for future conduct and maintenance of the

work if this seems desirable and feasible." The report was adopted.

The secretary then presented the *Report of the Executive Committee on Districting the State for Library Institutes*, which offered the following recommendations:

"1. That the New York Library Association undertake the work of library institutes in this state.

"2. That this association appoint a committee of four, to consist of three members to serve one, two and three years, with an annual appointment of one member each year to serve for three years, and that the secretary of the association be *ex officio* continuing member of the committee.

"3. That this committee be instructed to divide the state into not less than six nor more than 10 institute districts, exclusive of Buffalo, Brooklyn and New York City.

"4. That the institute committee be instructed to work through library clubs where they exist, and where not, through a local secretary appointed by the committee; and that after the first institute, the institute committee and the local secretary shall organize a local library club where the same seems feasible and desirable.

"5. That the institute committee of this association be requested to hold an annual institute in each district, co-operating with the library club or local secretary of that district." The report was adopted.

Discussion of the report was opened by Mr. Dewey, who spoke most earnestly in favor of this movement. He touched first on the success of the library school which is a new institution, yet one of great influence and achieving already great results. But the library schools, limited in space and faculty, cannot reach out to all who need and desire practical instruction in new and better methods, nor can hundreds of library workers who are anxious to make their services more efficient spare either the time or the money to avail themselves of a two years' course of study. For these the summer library school has been devised and offers in its six weeks' course such assistance and direction as is practicable in so short a time. The experiment of these summer courses is significant, in that many from all sections of the country travel far and at great expense in their eagerness to get the help and instruction offered. "But there are many earnest workers who can not afford either the time or expense for the six weeks' summer course, and here we must meet the demand for help, and mobilize this library instruction, learning much from the experience of the public school system for the library movement. Our Travelling Library School will correspond to the Teachers' Institute, and I can thus far find no better name than Library Institute. Long study and trial has evolved a plan that gives admirable practical results, and we can modify and adopt that plan as experience dictates, in reaching our scattered librarians with that informa-

tion and inspiration that can be given only by personal contact.

"In holding Library Institutes, once a year in each district is probably as often as we can wisely get together. As to length of sessions, at first only a single week, and probably in many cases only two or three days, but the institute will imply at least a small faculty and a definite course of instruction. As to the place—centers must be selected where from 20 to 100 librarians, assistants, trustees and others specially interested can be brought together most quickly and cheaply."

Mr. Dewey spoke at length upon developing an institute faculty, which will be one of the first problems to solve. This faculty should be made up of a few with genius for this work, selected from the whole state or country, and this faculty should go, week after week, to new localities, carrying not only its peculiar gifts but also the experience to be gained only in meeting the manifold difficulties and problems, and broadening its knowledge of how practical help can best be given. A half dozen states could unite in organizing and maintaining a faculty better than any one could hope to do alone, and by giving a week to each district each year this faculty would be able to meet the wants of all the co-operating states.

W. R. Eastman also urged the necessity for educational and inspirational work of this kind, pointing out that of the 475 free public libraries in New York state but 21 were represented at the present meeting. "We must go out into the state and reach all these libraries. Of the 21 libraries that are represented here the smallest has 3600 volumes, two others have about 8000, and the rest more than 10,000, while two have more than 150,000. In the state, however, the majority—I should say at least three-fourths—of the free circulating libraries have less than 10,000 volumes, and a great many have less than 1000 volumes. These are the conditions we have to meet. In regard to library institutes, any plan that we adopt will be experimental. The committee must feel its way and decide about the length and character of exercises, etc. The object of library institutes is to bring together workers of every class—librarians, trustees and others interested; to bring together a circle of persons interested in the same things; to give to them evidence that they do not stand alone in their work." He outlined briefly the possible scope of an institute meeting. Its instruction should touch upon the selection of books, and endeavor to cultivate in librarians and trustees a capacity to judge and select; it should include the proper arrangement of books, elementary rules in cataloging, shelf-listing, etc.; the making of annual reports. As to time, October or November and April or May were suggested, and a session of less than a week was thought preferable. In the general discussion that followed, a number volunteered

to take their share in the institute work, if desired, and Miss Winchell described briefly the successful institute meetings conducted during the past year by the Western Massachusetts Library Club. A committee on institutes, as recommended in the report, was appointed as follows: Dr. Canfield, W. R. Eastman, A. L. Peck, and the secretary, as continuing member.

On Thursday evening a public meeting was held in the parish house of St. Eustace-by-the-Lakes. The program included music, words of greeting by President Elmendorf, and addresses on "The school and the library," by F. M. Crunden; "Local library conditions at Lake Placid," by Dr. Strock; "The Lake Placid Library," by Mr. Watson, the librarian; and an address by R. G. Thwaites.

Friday evening's session opened with the *Report of Nominating Committee*, as follows: President, Miss Mary Emogene Hazeltine, James Prendergast Library, Jamestown; vice-president, W. S. Biscoe, New York State Library; secretary, Mrs. H. L. Elmendorf, Buffalo; treasurer, E. W. Gaillard, Webster Free Library, New York City. The report was accepted, and the president was instructed to cast one ballot for the election of the officers named.

Miss James presented the *Report of Committee on Reading Lists*: "1. The committee recommends that the New York Library Association undertake the co-operative work of publishing reading lists, which shall be available at cost to all members of the association and to others desiring them.

"2. The committee recommends the appointment of a standing committee of three, this committee to have authority to publish not to exceed 25 lists during the current year at an expense to the association of \$40 above what is guaranteed by the Buffalo Public Library.

"3. The committee recommends that the reading list committee be authorized to give publicity to the lists as issued and suggestions as to their use through the library journals, the press and otherwise, and that, as far as possible, the small libraries be reached through the local secretaries of the institute districts.

"4. The committee recommends that suggestions for topics be sent to the chairman of the reading list committee."

The report was adopted, and the committee was appointed for the first year as follows: Mrs. H. L. Elmendorf, Miss Martha Wheeler, Miss M. E. Hazeltine.

Herbert Putnam made a statement regarding the *Printed Catalog Cards of the A. L. A. Publishing Board*. He said, in part: "When the Library of Congress became installed in its new building, a very natural suggestion was that this was the one library to print cards for books entered under the copyright law of the United States, and as it had to print cards for other books in process of re-classification an arrangement was suggested

by which the cards printed at that library might be printed in extra copies, to be available for subscribing librarians. That is the project which has been under discussion for the past year. Circulars have gone out which have placed the matter in one form or another, or one basis of subscription or another, to several libraries. There has been some necessary delay, owing to the process of organization of our own work at Washington. We were not prepared, even as late as last April, to say that our printing arrangements were satisfactory enough to guarantee reasonable promptness in the distribution of these cards, even assuming that our subscription list should be determined to be satisfactory." Mr. Putnam said that the Library of Congress was now, however, ready to undertake to supply the cards directly to any subscribing library, upon the basis that the cost shall not exceed the charges set forth in the second circular issued by the Publishing Board. The cards are all printed for the use of the Library of Congress, "and in adopting a form of entry we have modified our form to one that commends itself to the committee on catalog entries of the American Library Association. We have adopted the postal size card. We shall hope to have an arrangement of the entry on the card which will permit its reduction to a 32-size card without destroying any essential printed matter. We print upon the card our own call number, but we subordinate that in position to the convenience of any subscribing library." Cards will be supplied as required by subscribing libraries, which are expected to indicate their orders by checking either *The Publishers' Weekly* lists, or the record of the *Weekly Bulletin of Copyright Entries*, issued through the U. S. Treasury Department. In conclusion, Mr. Putnam stated that the next circulars issued by the Publishing Board would give definite and full information regarding the enterprise.

F. M. Crunden followed with announcement of the plans now being considered for a *Library Exhibit at the Louisiana Purchase Exposition*, to be held at St. Louis in 1903. This includes the erection of a model library building, to be ultimately used as a branch of the Public Library, in which should be installed an exhibit representative of the best modern library work.

A committee on resolutions was appointed, as follows: W. R. Eastman, Miss Hazeltine, S. H. Berry.

The subject of *Library Architecture from the Architect's Standpoint* was presented by Edward B. Green, of Buffalo, who outlined the chief requirements in the selection of an architect, choice of lot, and details of plans. A general discussion followed, bringing out many points of interest.

The final session, on Saturday evening, was mainly given to the winding up of business details. John Thomson spoke of the plans for the new Pennsylvania library association

—The Keystone State Library Association— which holds its first general meeting in Harrisburg in November; and W. C. Lane made further announcement on behalf of the A. L. A. Publishing Board.

A. L. Peck presented the *Report of Committee on Legislation*. The committee stated that during the year past "not less than 15 laws relating to library matters have been added to the statutes of the empire state. Three of these are general acts and twelve local." The various laws were briefly described, the majority having been called forth by the generous gifts for library buildings made by Andrew Carnegie in various cities and towns. Regarding these special acts the committee says:

"In some cases it is found that the wording of the special act for the respective library is almost a hindrance to its growth and future development, on account of its being drawn as an amendment to the city charter and limited strictly to the acceptance of the particular gift under stated conditions, consequently it would be somewhat difficult for either of these institutions to receive other gifts or an increased amount by taxation should the growth of the institution demand it, as in all cases the organic law or charter of the city would take precedence of general laws, and in such cases additional special legislation would be again called for.

"In order to avoid such errors, it might be advisable that this association, by its committee, issue a circular calling the attention of library trustees, as well as of the founders of libraries, to the fact that it would be in their interest if all proposed special legislation should be submitted to the department, not so much for approval as for inspection and suggestion with regard to careful wording. Some special legislation might be thus avoided, as existing laws may meet the needs of the case."

It was noted that the bill proposed by the state library department, amending the section of the university law regarding the establishment and support of public libraries had failed to become a law; and that a revival was contemplated in the next legislature of the White bill, known also as the Educational code. "Should this be the case then the Committee on Legislation should be requested to co-operate with the Library Department in securing an early passage of the bill as far as it relates to libraries." The provisions for libraries in the White act as drawn under No. 524, Feb. 5, 1900, have proven the most acceptable to all libraries, and its passage might be recommended with such slight changes only as the department and the committee might suggest and agree upon."

After some discussion the report was adopted, and a new committee on legislation was later appointed, as follows: W. R. Eastman, Dr. J. S. Billings, A. L. Peck, H. L. Elmendorf, John E. Brandegee.

President Elmendorf in a few words expressed the thanks of the officers of the association for the friendly co-operation and interest that had so greatly contributed to the success of the meeting, and called the new president, Miss Hazeltine, to the chair. The new secretary, Mrs. Elmendorf, was called to the desk, and Miss Hazeltine spoke briefly in recognition of the office conferred upon her.

The *Report of the Committee on Resolutions* was presented by the chairman, W. R. Eastman, and unanimously accepted. It was as follows:

"1. The New York Library Association at the close of its eleventh annual meeting wishes to express its satisfaction with the cordial response on the part of so many of its members to its invitation to spend Library Week at Lake Placid. It has also had the special pleasure of welcoming many librarians from other states whose presence has brought strength, valued counsel and great encouragement. The marked success of the plan of devoting the last week of September to this most profitable conference confirms the wisdom of the decision to make Library Week at this date, the last full week in September, an annual appointment for the future.

"2. The plans of co-operation which have received definite form the present week for the preparation of brief lists of books on special subjects, for giving to the public more complete information on library work and for entering on a comprehensive scheme of library institutes, are commended to the attention and support of librarians throughout the state and elsewhere, in the confident expectation that this action will mark a distinct advance.

"3. The proposal of the St. Louis Public Library to secure the erection of a model library building at the Louisiana Purchase Exposition of 1903 and to place in it a model library fully equipped and in actual operation presents an opportunity never before offered to the librarians of the country to fasten public attention on the free library and its vital relations to the national welfare. This plan has the hearty endorsement of this association and claims the support of all its members.

"4. The association records its deep sense of loss in the death in December last of its treasurer, Josiah Norris Wing, of New York. For more than seven years in this responsible office he diligently served the association. He was constant at its meetings and devoted to its interests and contributed greatly and in many ways to the success of its work. His whole-hearted faithfulness and enthusiasm for service will always be to those who knew him a precious memory.

"5. In going back to our homes refreshed and strengthened, we gratefully acknowledge our great indebtedness to the Lake Placid Club for its constant and generous devotion to the comfort and enjoyment of every member of the association."

Mr. Putnam, in a few graceful words, expressed the hearty appreciation of the vis-

itors from outside the state for the cordial welcome and the delightful privileges extended to them; and the meeting was then declared adjourned.

It is not possible to touch upon the many delightful features that made the Lake Placid meeting so thoroughly a vacation outing, as well as a professional gathering. The Adirondack country itself offered constant invitation to out-of-door life, and the brilliant autumn days were given up to mountain-climbing, to long walks and drives, to golf, tennis, and boating. One night a "cathedral fire" illuminated the aisles and columns of the woods; and on two other evenings lake fires blazed from their island brush-heaps. Trips were made to Adirondack Lodge, ten miles distant; there were special steamer excursions around Lake Placid; while the ascents of Whiteface and Mt. MacIntire were made by several parties. "Library week" will long be remembered by those who shared in it, and perhaps the best part of the memory is the thought that it may all be enjoyed over again another year.

## Library Association of the United Kingdom.

### ANNUAL MEETING.

THE 24th annual meeting of the Library Association of the United Kingdom was held at Plymouth, Aug. 27-30. This was the second Plymouth meeting of the association, the first one having been held in 1885; there was an attendance of over 200, and the conference proved most satisfactory from the points of view of business and of pleasure.

Sessions opened on Tuesday morning, Aug. 27, at the Guildhall, where the mayor, Mr. J. H. Bellamy, made a short speech of welcome, and the president, Mr. J. H. Fortescue, of the British Museum, delivered his address.

The president's address dealt largely with the work and development of the Library Association. Mr. Fortescue said that the organization had been of the greatest assistance to all, whether librarians or students. It had endeavored to teach the world how to form collections of books, and how to arrange and catalog them; how to compile bibliographies and how to use them; how best to form, enlarge, and to administer a library. But these were among the minor advantages its members had derived from the association, for the greatest work it had accomplished had been to raise the business of a librarian to the dignity of a learned profession. It served to give to the isolated unit the support and sympathy of a brotherhood of workers with common interests and common aims. It had strengthened the hands not only of every individual member of the association, but also of the whole thinking and reading community of the nation. New public libraries were springing up everywhere throughout the empire, and the utility, if not the justification,

of such libraries must depend very largely on the ability and training of the librarians who administered them. The recent history of the British Museum library was touched upon, most important in this connection being the completion of the great work of printing the "General catalogue of printed books." Many years ago an attempt had been made to produce a printed catalog, and in 1841 the first and last volume (letter A only) had been published. The Royal Commission which sat to examine into the condition of the British Museum in 1849 and 1850 had reported against any scheme of printing the catalog, laying particular stress upon the fact that no great library in Europe possessed a complete printed catalog. For many years the only effort in this direction was the old transcribed catalog, the last remnant of which had now quite disappeared from the reading room; but there never had been a copy outside the walls of the Museum. Many an able man had given the best years of his life to the work of compiling this catalog—Cary, Panizzi, Edwards, Patmore, Ralston, and others famous in the world of literature; but its very bulk rendered it anarchic, while it suffered terribly from want of editorship and general supervision. In 1880 it had reached nearly 3000 volumes. In 1881, in the face of much opposition, it was decided by the authorities of the British Museum to print the catalog, a decision which formed an era in the history of libraries, and the merit was due to the late Sir Edward Bond and Dr. Richard Garnett. The latter, as general editor, was unsparing in his labors until 1890, when he relinquished the duty to Mr. A. W. K. Miller. The printed catalog was issued to the public in 400 parts. A supplement was in course of publication which would contain the titles of all books added to the collection and not incorporated in the general catalog. For the purposes of the Museum, copies of each part were bound in about 900 interleaved volumes, and every fortnight the printed titles of accessions were incorporated. There were at present between 4,200,000 and 4,500,000 entries in the entire catalog and each year saw an addition of between 30,000 and 40,000 fresh entries. The alphabetical part of the catalog having been completed, it might be asked, What was the Museum going to do next? Experience had taught that there was no form of subject index which the public valued so much as one which gave the most recent literature on every possible subject, and to meet this want it was proposed to continue the indexes which had hitherto been published in five-yearly volumes.

In conclusion, Mr. Fortescue spoke briefly on the remuneration of librarians. Librarianship was a sadly underpaid profession. There must come a time when librarians, like the members of every other profession, would be paid in some reasonable proportion to their life work of assiduous and always increasing responsibilities. It must be confessed, how-

ever, that the duties of a librarian were exceptionally pleasant; the arranging and the cataloging of books was about the most agreeable way of earning a livelihood which the heart of man could desire. And if cataloging were a pleasant toil, what should be said of the opportunities which came to every librarian to learn more of his library than the mere backs or title-pages of his books? Whatever reading or study a librarian might follow, he was also adding to his ability to carry out his daily duties. The librarian should endeavor to be "the servant of the servants of literature," and, to sum up his experiences, the speaker would say to the young librarian, "Do not be afraid of your work; learn to love it for its own sake. Do not, as too many young men are tempted to do, scorn the seemingly commonplace or humble daily routine."

Papers were then read as follows: "The libraries, public and private, of Plymouth," by W. H. K. Wright, of the Plymouth Public Library; "Some notes on the life and work of Edward Edwards," by Thomas Greenwood; "Book reviews, their help and their hindrances to selection," by E. A. Baker, of the Midland Railway Institute, Derby; "The librarian as a help to the reader," by R. K. Dent; "The bibliography of local literature," by John Minto; and "The mutual relationship of public library and technical school," by J. J. Ogle. The remainder of the day was spent in visiting libraries and public institutions, and in a trip to view the Sound, the Hamoaze, the dockyards, the ships of war, and some of the other sights of Plymouth.

On Wednesday, Aug. 28, the general session was held in Devonport, where the association was received by the mayor. Here papers dealing with three phases of reference work were presented. The first was on "Reference libraries," by Frank Pacy, librarian of the Westminster Public Libraries and hon. secretary of the association. Mr. Pacy's paper was practically a plea for "the reference *versus* the circulating department." The former, he thought, was, except in the case of the largest libraries, too often starved to supply the lending library. It would be almost better to confine oneself to the lending library only than to make a pretence of running two departments and starving one. A mistaken policy was due to the influence of statistics and a desire for a show of large issues, and the reference library was too apt to be made the dumping ground for inconvenient gifts, to the exclusion of up-to-date works. At present, if the librarian desired to leave any record of himself, it was to the reference department he must turn. In other directions his work would be superseded, but in this department, if he began to build judiciously, any further structure must arise from his foundations. Therefore the reference department was the librarian's best legacy. Mr. Stanley Jast, of Croydon, followed with suggestions on "How to build up a ref-

erence department." He said that the idea of some librarians that the reference library was a comparatively unimportant side of their work was, in his opinion, an entirely mistaken one, and he believed that the near future would see remarkable developments in reference departments. At Croydon the committee had carried out certain changes in the reference library, which had resulted in raising their issue from a daily average of only 19 (including directories) to a daily average of 118 (exclusive of directories and similar matter). There was reason to believe that this record would be doubled in the current year. The changes referred to consisted mainly in the provision of open shelving for something like 5000 volumes, in the placing of a member of the staff amongst the readers to supervise and help them, in the abolishing of the troublesome reference ticket, and in the simplifying of regulations.

"The co-operation of adjoining towns for the establishment of reference libraries," was the third phase of the subject, presented by A. J. Caddie, of Stoke-upon-Trent. Here the suggestion was that where small towns close to each other had adopted the Libraries Act, instead of each town having a poor reference library, they should combine and establish one good joint reference library, with collections of books upon local industries and the history of the district, and important works of reference too expensive for one town alone to purchase.

In the afternoon visits were paid to the Royal Dockyard and to some warships, and in the evening the annual business meeting was held in Plymouth. The report of the council was presented and adopted. It noted, in the necrology of the year, the names of Mr. R. C. Christie, whose good-will to the association has been manifested by a bequest of £2000 after the death of Mrs. Christie; Rev. Prof. W. P. Dickson, who presided over the meeting held at Glasgow in 1888; and Sir H. W. Acland, who was one of the founders of the association, and for many years an original and striking figure in Oxford life. A warm invitation to hold the annual meeting at Birmingham in 1902 had been received from the municipal, university, and library authorities of that city. The innovation of holding monthly meetings at different important library centers had proved highly successful. Provincial gatherings had been arranged at Manchester, Darlington, Cardiff, Croydon, and Carlisle. While the council did not wish to curtail the privileges of the London members, they were of the opinion that the practice of having provincial meetings should be continued and extended. The Public Libraries Acts had been adopted in 14 places in the United Kingdom, and the association was congratulated upon the passing of the new Public Libraries Bill. The balance-sheet and accounts of the hon. treasurer showed that the financial affairs of the association were in a sound condition.

Thursday morning's session was mainly given to questions of classification and cataloging. A resolution was passed expressing the warm appreciation of the members of the Library Association of the fact that the "Catalogue of books in the British Museum" had been printed, and thereby made available for the use of scholars throughout the world. That monumental catalog was the most important contribution ever made to bibliographical science, and must rank among the great literary achievements of the 19th century. Papers were read as follows: by L. Acland Taylor on "Shelf classification, ways and means," recommending close classification and the employment of the D. C.; "The construction of the subject catalog in scientific and technical libraries," by E. Wyndham Hulme; and "Dictionary catalogs *versus* class guides for lending libraries," by W. E. Doubleday. The last paper was read by J. H. Quinn, of the Chelsea Public Library, who advocated the classified catalog as the best form for public libraries against the commoner dictionary form. He said that the dictionary catalog was the most popular at present for several reasons. These were the belief that its alphabetical arrangement caught the public taste, the difficulty of making a change from one form to the other, and more especially that librarians found it very easy to compile. It was, however, a simple matter to hide books away in it without adequate treatment, and he believed that at least 75 per cent. of the catalogs of British free libraries were wretched lists of ill-digested information. The large number of entries required to catalog books effectively in dictionary form also told against the system, and the entries and information had to be condensed to reduce its bulk and cost. Excellent schemes of classification were now formulated, and by means of these it was possible to have classified catalogs in which within small proportions a library, large or small, could be most simply and efficiently dealt with. The information conveyed was both logically arranged and exhaustive in character, whereas the dictionary catalog failed in both these respects.

The usual resolutions of thanks, etc., terminated the proceedings; and in the afternoon the delegates enjoyed a steamer trip up the river Tamar to Cotehele. In the evening the annual association dinner was held at the Hotel Continental, where President Fortescue was supported by Dr. Garnett and the chief naval and civic officials of Plymouth. On Friday an enjoyable post-conference trip was made to Endsleigh, the country seat of the Duke of Bedford.

#### YEARBOOK, 1901.

The Library Association yearbook for 1901" has made its appearance, following the plan and style of previous issues and bringing the record of membership, publications, British libraries, etc., fully up to date.

## American Library Association.

*President:* Dr. J. S. Billings, New York Public Library.

*Secretary:* F. W. Faxon, 108 Glenway St., Dorchester, Mass.

*Treasurer:* G. M. Jones, Public Library, Salem, Mass.

#### TRANSACTIONS OF THE EXECUTIVE BOARD.

A meeting of the executive board of the American Library Association was held on Monday, Sept. 30, in the office of the president, Dr. Billings, at the New York Public Library. There were present Dr. J. S. Billings, H. J. Carr, G. M. Jones, F. W. Faxon, Miss Haines. The following business was transacted:

*Place of next meeting:* In accordance with the vote of the Council that the Association hold its meeting in 1902 at a seaboard resort near Boston, the secretary reported that he had investigated two such resorts. The report was accepted and referred back to the secretary, with power to make arrangements for the meeting of the Association in the second or third week of June, 1902, as may be most satisfactory. It was decided that the meeting should, if practicable, begin on a Tuesday and close on a Friday, Council meeting and other preliminary business being set for Monday.

*Budget, 1902:* A budget was submitted from the finance committee making an appropriation of \$1860 for the various expenses of the year 1902. The estimate submitted was approved, and it was *Voted*, That appropriations be made accordingly. The consideration of appropriations for committees was deferred until a later meeting.

*Committees:* Committees were appointed as follows:

*Finance Committee:* (J. L. Whitney, C. K. Bolton, G. T. Little) continued.

*Library Administration:* (formerly Co-operation Committee, provided for in sec. 7 of By-laws) H. C. Wellman, W. R. Eastman, N. D. C. Hodges.

*Public Documents:* R. R. Bowker, chairman, with power to appoint additional members.

*Foreign Documents:* C. H. Gould, C. W. Andrews, L. B. Gilmore, James Bain, W. C. Ford.

*Co-operation with Library Department of National Educational Association:* J. C. Dana, Melvil Dewey, F. A. Hutchins, Dr. J. H. Canfield, Isabel Ely Lord.

*Library Training:* Mrs. H. L. Elmendorf, Miss Susan Randall, S. S. Green, W. H. Brett, J. I. Wyer.

*Title-pages and Indexes for Periodical Volumes:* It was *Voted*, That a committee on title-pages and indexes for periodical volumes be appointed to continue the work of the preceding committee on this subject; to perfect a form of circular to be addressed to publish-

ers of periodicals with regard to the issue of title-pages and indexes; and to report such form, on or before Jan. 1, 1902, for the consideration and action of the executive board. The committee was appointed as follows: W. I. Fletcher, Ernst Lemcke, A. E. Bostwick.

*International Co-operation:* (E. C. Richardson, R. R. Bowker, S. H. Ranck, Mary W. Plummer, Cyrus Adler) continued. It was *Voted*, That the Committee on International Catalogue of Scientific Literature be discontinued and the subject be referred to the Committee on International Co-operation, which should also report upon other movements within its scope; and that the committee should report to the Council its conclusions regarding a uniform international classification for book statistics, no action to be taken until the matter has been considered by the Council.

*Committee on Relations of Libraries to the Book Trade:* W. T. Peoples, R. R. Bowker, Millard W. Palmer, Tessa L. Kelso, John Thomson.

*Program Committee:* The recorder was appointed a member of the Program Committee (president and secretary).

*Travel Committee:* F. P. Hill, F. W. Faxon, with power to appoint additional members.

*Publishing Board:* Melvil Dewey was re-appointed to serve three years, and C. C. Soule was appointed to fill the unexpired term of George Iles, resigned.

*Gifts and Bequests:* G. W. Cole was appointed special reporter upon gifts and bequests for the year 1901-2.

*A. L. A. in Local Associations:* It was *Voted*, That the president and secretary appoint A. L. A. representatives in local associations for the coming year.

*A. L. A. Exhibit at Louisiana Purchase Exposition:* A letter was read from F. M. Crunden requesting the board to appoint a special committee to arrange for a library exhibit in connection with the Louisiana Purchase Exposition, to be held at St. Louis in 1902. Mr. Crunden's plan includes the installation of such an exhibit in a building erected with the ultimate purpose of serving as a branch library. The secretary was instructed to communicate with Mr. Crunden, and to secure from him a more definite outline of the scope and purpose of the committee desired. HELEN E. HAINES, *Recorder*.

#### A. L. A. PUBLISHING BOARD.

The A. L. A. Publishing Board met at Lake Placid, Sept. 27 and 28, in connection with the New York state "Library week." Present: Messrs. Fletcher, Dewey and Lane, and of the advisory committee Mr. Andrews. Mr. Putnam, Librarian of Congress, was also in consultation with the board, and much to their gratification announced that he is prepared to undertake the issue of printed cards for new books, probably imported as well as American, and to deal directly with libraries

desiring them. He will soon issue a circular giving particulars of the plan. The board expressed great satisfaction in transferring this work to the Library of Congress. The other business before the board was of the nature of routine, looking to the forwarding of the several unfinished undertakings still in hand, especially the "Portrait index," and Miss Kroeger's "Annotated list of reference books."

## State Library Commissions.

**DELAWARE STATE LIBRARY COMMISSION:** C. S. Freear, secretary, State Library, Dover.

A meeting of the commission was held on Sept. 26, when organization was completed and it was decided to publish a handbook containing the free library law and other matter that would stimulate the founding of free libraries. The travelling libraries committee reported in favor of being allowed to solicit funds with which to employ a library organizer.

**IOWA STATE LIBRARY COMMISSION:** Miss Alice S. Tyler, secretary, State Library, Des Moines.

The October quarterly *Bulletin* of the Iowa commission is an excellent number, with several short practical articles, library news of the state, and helpful notes.

**NEW JERSEY PUBLIC LIBRARY COMMISSION:** H. C. Buchanan, secretary, State Library, Trenton.

Owing to his removal from the state Mr. F. P. Hill, formerly of the Newark Free Public Library, has resigned from the New Jersey Public Library Commission, and Dr. L. J. Gordon, director of the Jersey City Public Library, has been appointed by the governor as his successor. The appointment, being made *ad interim*, cannot be confirmed until the Senate is in session, in January.

A list of books recommended for purchase by the small libraries of the state has been compiled for the commission by Dr. E. C. Richardson, and will be later printed by the commission.

**WASHINGTON STATE LIBRARY COMMISSION:** Mrs. K. T. Holmes, secretary.

The Washington library commission held its first meeting, in Olympia, on Sept. 25. The body is composed of State Superintendent of Education Bryan, President Graves, of the State University, President Bryan, of the State Agricultural College, and three members appointed by the governor—Miss Susan Lord Currier, of Skagit county, and Dr. F. H. Coe and Mrs. K. T. Holmes, of King county. The commission organized by electing Dr. Coe president, Mrs. Holmes secretary, and Miss Currier assistant secretary and treasurer; it will meet again, at Seattle, in October. It is granted an appropriation of \$2000 for two years' work.

## Library Clubs.

### THE LONG ISLAND LIBRARY CLUB.

*President:* C. A. Green, Polytechnic Institute Library.

*Secretary:* Miss M. S. Draper, Children's Museum, Brooklyn Institute of Arts and Sciences.

*Treasurer:* Miss Mabel Farr, Adelphi College Library.

The October meeting of the Long Island Library Club was held at Adelphi College on Thursday, Oct. 3, at 3.30 o'clock. An attractive room, known as the Girls' study room, was well filled by the members of the club, and an interesting and profitable meeting was held.

One of the most valuable features of the meeting was the report of the committee on co-operation between libraries and schools, which was read by Miss Moore, the chairman of the committee. In order to ascertain the present library facilities of the public schools of Brooklyn, a series of 11 questions was prepared by the committee, and sent to 138 schools in the city, including six high schools, and the Training School for Teachers. The questions were as follows:

1. Have you a school library to which teachers and pupils have access?
2. Does it consist only of books of reference, or is it general in character?
3. Is the library kept in one room, and is that room the principal's office, or is it distributed in various class-rooms?
4. If kept in the different class-rooms, in what grades?
5. Are the teachers and pupils allowed to take these books home?
6. Is there any attempt on the part of the teachers to influence the outside reading of the pupils by reading aloud, telling stories, or suggesting good books to read?
7. Is there a free library in the neighborhood of your school?
8. Do teachers draw books from it for use in their class-rooms?
9. Do pupils draw books from it?
10. Are the pupils of your school sent by their teachers to the free library for help in preparing lessons, such as composition, nature work, etc.?
11. Do you have any of the travelling libraries in your class-rooms? If so, in what grades?"

Reports were received from 98 schools, and furnish the basis of the following statements:

81 schools are reported as having libraries, varying in size from 40 books to several thousand, the latter number being reported by two of the high schools; eight schools have no libraries at all; nine schools report libraries to which teachers only have access.

One principal reports that he has a general library belonging to himself, containing about 300 books, which teachers and pupils are allowed to use freely.

About 75% of these libraries are general in character; 25% consist of books of reference, largely pedagogical books. At least half the collections are kept in the office of the principal; several report that some room other than the principal's office is used; while about 25% report books scattered through the various class-rooms of the buildings. As a result of the crowded condition of the public schools, some schools have reported "absolutely no room for library facilities"; while others are obliged to use the teachers' cloak-room, or a store-room, or corridor.

13 schools report that teachers only are allowed to take books home from the school collection, while nearly all the others grant the privilege to both pupils and teachers.

The replies to question 6 were very generally in the affirmative; "the course of study requires it."

45 schools report no free library in the neighborhood; 45 others report that there is one. Two state frankly that they do not know whether there is one or not.

Teachers are reported as drawing books for use in the class-room to a limited extent. One school records a regular weekly supply for this purpose.

Pupils are reported as making use of the public libraries, "too free a use" some principals feel.

About one-fifth of the schools report that their pupils are sent to neighboring libraries for assistance in preparing lessons.

Others answer in the negative or express doubt in the matter. 13 schools report that travelling libraries are sent to them, but do not state from what source. 10 libraries of 150 books each were sent out by the school board as travelling libraries, but it was decided to allow them to remain as permanent libraries in 10 schools in poor districts.

The committee concludes its report by stating that school libraries easily accessible to teachers and pupils apparently do not exist in the elementary schools at the present time; neither are there free libraries in sufficient number to make anything like general, active co-operation between libraries and schools possible; but each librarian is urged to make her library so attractive and helpful that teachers and pupils will think it worth while to come long distances in search of what they want.

The names of six persons were proposed and accepted for membership in the club, after which the regular program of the afternoon was taken up. The general subject for discussion was School libraries, and it was presented from the various standpoints of the teacher, the librarian, and the student.

The first address was by Mr. W. W. Bishop, librarian of the Polytechnic Institute Academic Department, on "Pedagogical collections in school libraries." He set forth the advantages to teachers of having a well selected library of this character, where books and periodicals can be easily picked up at

any time; it tends also to foster a professional spirit. Miss Mary A. Kingsbury, of Erasmus Hall High School, presented the subject of the work of the high school librarian. She showed how the librarian can supplement the work of teachers by stimulating and encouraging the pupils in their studies, and by teaching them the use of reference books so that in after-life they can make a more intelligent use of the public library. Miss Agnes Cowing, a graduate of Packer Institute, gave another phase of the subject, "The school library from the student's standpoint."

Mr. W. C. Lawton spoke on "The school library from the teacher's point of view." He said that the school library should not contain text-books, and should have a very moderate number of costly books. There is a wide range of books between the two which should be liberally supplied. The best translations of the classics are very desirable, especially when well illustrated. The speaker stated that beautiful books, and those having fine bindings have an educational value for students who are careless or untidy.

An interesting discussion followed on the difficulty which pupils find in the use of reference books, because of the present method of teaching reading by words without requiring the knowledge of the letters of the alphabet in their sequence. Several teachers testified to the inconvenience of this disuse of the alphabet, and several librarians spoke of the effects as observed in their libraries.

The club was well represented at Lake Placid during the recent "Library week"; and three members—Mr. Hill, Miss Rathbone, and Miss Davis—related some of the pleasant experiences of the week.

MIRIAM S. DRAPER, *Secretary*.

#### NEW YORK LIBRARY CLUB.

*President*: Dr. H. M. Leipziger, Aguilar Library.

*Secretary*: Miss Elizabeth L. Foote, New York Public Library.

*Treasurer*: Miss Theresa Hitchler, Brooklyn Public Library.

The New York Library Club held its first regular meeting of the autumn on Thursday, Oct. 10, in the Aguilar Library, 197 E. Broadway. The attendance was fully 150. The meeting was called to order at 3.15 by the president, Dr. Leipziger. After the minutes of the annual meeting in May were read and approved, the president made some remarks appropriate to the opening of the new season. He spoke of the mission of the library as an educator, of the present impetus in library matters on account of recent large gifts and the part which the club should have in this renaissance of library work in New York. As the object of the club is two-fold—the fraternal intercourse of members as well as promotion of library interests—it was suggested that a portion of the meetings be devoted to the social object. Illustrating the influence of the

library, Dr. Leipziger called attention to the work and system of the Aguilar libraries, and particularly to the building in which the meeting was held. In the midst of foreign surroundings and atmosphere, from 4000 to 5000 persons came daily to the building for educational purposes, and it is noticeable that their reading is of high character. He closed by expressing the hope that the work of the club this year should mark a step onward and upward in library progress.

Miss Haines prefaced a summary of the A. L. A. meeting at Waukesha by the remark that all the report really necessary was a cross-reference to the published proceedings. Dr. Canfield then gave a report of the state association meeting at Lake Placid, which is reported elsewhere in this issue. A recess was then devoted to social intercourse, after which the treasurer's report was read by Miss Grace Tobey. It showed a balance in the treasury of \$262.46. A resolution presented by the executive committee was adopted, providing that a committee of three be appointed to have in charge plans for library institutes in the vicinity of New York during the coming year. Mr. Bostwick, Mr. Gaillard, and Mr. Nelson were appointed such committee. After discussion of the papers, the meeting adjourned.

ELIZABETH L. FOOTE, *Secretary*.

#### WESTERN MASSACHUSETTS LIBRARY CLUB.

*President*: W. I. Fletcher, Amherst College Library.

*Secretary*: Ida F. Farrar, City Library, Springfield.

*Treasurer*: Miss A. J. Hawks, Meekins Memorial Library, Williamsburg.

The first library institute of the autumn, under the auspices of the Western Massachusetts Library Club, was held on Friday, Sept. 21, at Greenwich village. The towns of Enfield, Prescott, Pelham, New Salem, Dana, Petersham, and Hardwick were represented, and in a number of the towns the schools were closed for the day, in order that teachers might attend the meeting.

The morning session opened at 10 o'clock, George Stockwell, of Westfield, presiding. W. I. Fletcher delivered the first address, speaking on "Books and their influence," and urging the necessity of bringing the influence of books to bear upon the community. "The best books stand unused—the people unreading—the best center of influence is the schools. Certain charges are often brought against rural New England life, narrowness is one. Books broaden life, widen the horizon. In one sense the remoteness of the small town gives it an advantage over the large; the flood of papers and magazines which sometimes proves the bane of life in the large city does not reach the small town, consequently it has only the best—the book. Books are refining, making the reader live a better

life. The man of one book produces bigotry, the reading of many, charity, breadth of view."

J. C. Dana followed, with a practical talk on the subject "How to make the library attractive." This, he thought, was best accomplished, when the librarian looked upon her library as upon her own home. "The library is too often thought of as a storehouse, a barn or a cellar. The librarian who looks at her library as her own home will look for cleanliness, light, simplicity, color, interest. A person who has not tried what light will do would be surprised at the difference produced by proper shading, by letting in the light from one side only. On coming back to New England I was impressed with the multiplicity of furnishings — things kept as memorials or because they had been so for the last ten years, which would better be moved into the attic."

Dinner was served by the local hosts, and was followed by an inspection of the library, which has pleasant quarters in the town hall. The afternoon session was opened at 1.30, with an address by J. J. Williams, of Springfield, on "Books and young people." The speaker deprecated the flood of trash now thrown upon the public and emphasized the need of making connection between books and children, telling of various means he had tried in his experience as a teacher. He had suggested books by putting their names on the board, and by telling the pupils they ought to read certain books, but with no result; finally a book agent, by his persistence and tact, taught him the lesson of getting hold of the pupils. He emphasized the need of becoming interested in some one line, how when once interested the teacher learns of everything in the library on that subject and imparts her enthusiasm to her pupils. If the next teacher is interested in another line the pupils become informed as well, and so life is broadened.

Miss Mary L. Poland, superintendent of schools in towns adjoining Springfield, repeated by request a paper given at another meeting, on "How can books fulfil their mission in a small community," speaking of the need of books in the humdrum life of the hill-side farms and of the practical benefits she had seen in the travelling libraries sent out to towns coming under her jurisdiction. Many of these were made up of books discarded by the Springfield City Library, but which proved not to have outlived their usefulness. She emphasized the need of trained service among the people where such books are circulated.

Miss Cornelia Thompson, a Springfield teacher, spoke entertainingly of what she had been able to accomplish in interesting children and their parents in books, through a little collection of books from the library kept in her school-room through the school year. After discussion of the three afternoon topics, the meeting adjourned, with cordial expressions of thanks to the Greenwich Village people.

## Library Schools and Training Classes.

### DREXEL INSTITUTE LIBRARY SCHOOL.

ENTERING CLASS, 1901-1902.

Alice Cary Atwood, Rochester, N. Y., Ph.B.,  
St. Lawrence University.  
Edith Helen Cobb, Acushnet, Mass.  
Martha Jean Connor, Willow Springs, Pa.  
Ida J. Dacus, Rock Hill, S. C.  
Agnes Lee Dunlap, Brunswick, Me.  
Frances E. Earhart, Chicora, Pa.  
Rosalie V. Halsey, Baltimore, Md.  
Emily Maud Haynes, Sturbridge, Mass.  
Charles E. Janvrin, Hampton Falls, N. H.  
Mrs. J. A. Jones, San Antonio, Tex.  
Katharine McAlarney, Philadelphia, Pa.  
Euphemia D. MacRitchie, Hillsdale, Mich.,  
M.A., University of Edinburgh.  
Alice Horton Newman, Ann Arbor, Mich.  
Alice W. Reins, Baltimore, Md.  
Bertha E. Rick, Jamestown, N. Y.  
Jessie Salanda Sawyer, Evanston, Ill., Ph.B.,  
Northwestern University.  
Mary Beck Snyder, Williamsport, Pa.  
Alvena M. Surdam, Morristown, N. J.  
Miriam Burbank Wharton, Ryde, Pa.  
Bertha Wilder, Ithaca, N. Y.

### PERSONAL NOTES.

Miss Flora B. Roberts, class of '99, who was an instructor in the Library School during the past year, resigned her position to accept that of assistant in the State Library of Michigan.

Miss Julia D. Brown, A.B. Tarkio College, Drexel class of '01, has been appointed instructor in the Library School, Drexel Institute. During the summer, Miss Brown reorganized the library of Tarkio College.

Miss Gertrude P. Humphrey, class of '01, is engaged as an assistant in the State Library of Michigan.

Miss Amy Keith, class of '98, and Miss Helen Sharpless, class of '01, recatalogued the library of the American Catholic Historical Society during the summer. Miss Sharpless has been appointed assistant in the library of Haverford College.

Miss Mary Krichbaum, class of '01, is cataloging at the State Library of Pennsylvania.

Miss Minnie B. Hegeman, class of '01, has temporarily joined the staff of the Superintendent of Documents, Washington.

### NEW YORK STATE LIBRARY SCHOOL.

LIST OF STUDENTS, 1901-1902.

The fall term opened Wednesday, Oct. 2, with the following students:

#### Senior class.

Barr, Charles James, River Forest, Ill., Ph.B.  
University of Michigan, 1892.  
Burnham, Alice Miriam, Hamilton, N. Y.,  
B.A. Vassar College, 1900.

- Colcord, Mabel, New Bedford, Mass., B.A. Radcliffe College, 1895.
- Crampton, Susan Charlotte, St. Albans, Vt., B.A. Vassar College, 1894.
- Dunn, Florence Elizabeth, Waterville, Me., B.A. Colby College, 1896.
- Fuller, Frances Howard, New York City, B.A. Vassar College, 1894.
- Gay, Ernest Lewis, Boston, Mass., B.A. Harvard University, 1897.
- Hawkins, Emma Jean, Malone, N. Y., B.M. Smith College, 1897.
- Houghton, Celia Mabelle, Littleton, Mass., B.A. Stetson University, 1897; Assistant, Forbes Library, Northampton (Mass.), 1899-1900.
- Lamb, Eliza, Utica, N. Y., B.A. Western College, 1900; Assistant, Western College Library, 1896-1900.
- Mann, Olive Louise, Florence, Mass., B.A. Smith College, 1900.
- Mullon, Lydia, Lincoln, Neb., B.A. University of Nebraska, 1892; M.A., 1896.
- Rodgers, Anna Hendricks, Albany, N. Y., B.A. Mt. Holyoke College, 1900; Junior assistant N. Y. State Library for short periods, 1896-1900.
- Smith, Mary Alice, Worcester, Mass., B.A. Smith College, 1897; Assistant Worcester (Mass.) Free Public Library, 1897-1900.
- Taber, Josephine, Salem, O., Wellesley College, 1883-85.
- Thompson, Helen Morton, Cheltenham, Md., B.A. Woman's College of Baltimore, 1894.
- Wade, Edith Sutcliffe, Cohoes, N. Y., B.A. Mt. Holyoke College, 1900.
- Whittemore, Benjamin Arthur, Cambridgeport, Mass., B.A. Harvard University, 1892; M.A., 1893.
- Whittier, Florence Bertha, Riverside, Cal., B.A. Stanford University, 1899.
- Wiggin, Pauline Gertrude, Manchester, N.H., B.L. Smith College, 1890; M.A. Radcliffe College, 1895.
- Junior class.*
- Bacon, Corinne, New Britain, Ct., Packer Collegiate Institute, 1888-90; Assistant New Britain Institute Library, 1894-1901.
- Barnes, Walter Lowrie, Westerville, O., Ph.B. Otterbein University, 1898.
- Bennett, Bertha Ilione, Iliion, N. Y., B.L. Syracuse University, 1899.
- Blunt, Florence Tolman, Haverhill, Mass., B.L. Mt. Holyoke College, 1896; B.A. 1899; Assistant Haverhill (Mass.) Public Library, 1899-1901.
- Brown, Zaidee Mabel, Palo Alto, Cal., B.A. Stanford University, 1898.
- Chapman, Grace Darling, Geneva, N. Y., B.L. Lake Erie College, 1901; Cataloger Lake Erie College Library, 1900-01.
- Clarke, Mary Reynolds, Whitinsville, Mass., Wellesley College, 1876-78; Smith College, 1879-80.
- Donnelly, June Richardson, Cincinnati, O., B.S. University of Cincinnati, 1895.
- Draper, Annie Elizabeth, Auburn, N. Y., Cornell University, 1900-1901.
- Eastwood, Mary Edna, Burlington, N. J., B.A. Vassar College, 1899.
- Ferguson, Milton Jay, Norman, Okla., B.A. University of Oklahoma, 1901; Assistant University of Oklahoma Library, 1900-01; Librarian University of Oklahoma Library, 1901.
- Gibbs, Ethel Nye, Grafton, Mass., B.A. Well-lesley College, 1901.
- Greene, Elizabeth Harrington, Battle Creek, Mich., Ph.B. University of Chicago, 1899.
- Groves, Charlotte Elizabeth, Alfred, N. Y., B.A. Wilson College, 1899; Assistant Wil-son College Library, 1895-99; Assistant Al-fred University Library, 1900-1901.
- Hazeltine, Alice Isabel, Warren, Pa., Ph.B. Syracuse University, 1901.
- Hepburn, William Murray, Pictou, N. S., B.A. Dalhousie College, 1895; M.A., 1897.
- Jenks, Edwin Munroe, Boston, Mass.
- Katz, Louise Waldman, Ithaca, N. Y., B.S. Cornell University, 1900.
- Larsen, Martha Emely, Kristiania, Norway, Ph.B. Det kongelige norske Frederiks uni-versitet, 1896; Assistant in Det Deichman-ske bibliotek, Kristiania, 1899.
- McCurdy, Robert Morrill, Andover, Mass., B.A. Harvard University, 1900.
- Marvin, George Ritchie, Clinton, N. Y., B.A. Hamilton College, 1901.
- Patterson, Marian, Jamestown, N. Y., B.A. Wellesley College, 1901.
- Perry, Everett Robbins, Worcester, Mass., Harvard University, 1899-1901.
- Seligsberg, Ella Rosina, New York City, B.A. Barnard College, 1899.
- Tweedell, Edward David, Providence, R. I., B.P. Brown University, 1901; Assistant Providence Public Library, 1898-1901.
- Waters, Caroline Elmina, Chardon, O., Ph.B. Western Reserve University, 1897; Assis-tant Library of the College for Women of Western Reserve University, 1894-98; Assis-tant Adelbert College Library, 1897-1901.
- Whittlesey, Julia Margaret, Cleveland, O., B.L. Lake Erie College, 1899; Assistant Cleveland Public Library, 1900-01.
- Wyer, Malcolm Glenn, Excelsior, Minn., B.A. University of Minnesota, 1899; M.L., 1901; Assistant University of Minnesota Library, 1900-01. SALOME CUTLER FAIRCHILD.
- PRATT INSTITUTE LIBRARY SCHOOL.*
- ENTERING CLASS, 1901-1902.
- Sarah Bedell Ball, Plainfield, N. J., Cata-loger, Public School Library, Plainfield.
- Lillian Burt, Des Moines, Iowa, Graduate Iowa College, 1890; Assistant, Public Librar-y, Des Moines.
- Elizabeth Brownell Combs, Lexington, Ky., University of Chicago, 1900-1.
- Agnes Cowing, Brooklyn, N. Y., Graduate Packer Institute, 1900.

## Library Economy and History.

### GENERAL.

Maud E. Derickson, Minneapolis, Minn., 3 years University of Wisconsin; 1 year Radcliffe College; Assistant, Public Library, Minneapolis.

Harriet L. Eaton, Oshkosh, Wis., 3 years Oshkosh State Normal School; Assistant, Public Library, Oshkosh.

Adelaide T. Evans, Erie, Pa., Graduate Erie Academy, 1888.

Jane Eliza Gardner, New Bedford, Mass.

Edith Ayleworth Gillespie, Albany, N. Y., Graduate Albany Female Academy, 1899.

Alys Maude Gordon, Brooklyn, N. Y., Graduate Packer Institute.

Ruth Shepard Grannis, Saybrook, Ct., Graduate Rye Seminary.

Kate Lewis, Superior, Wis.

Louise Merrill, Haverhill, Mass.

Antoinette Putnam Metcalf, Elyria, O., Graduate Oberlin College, 1893; Assistant, Public Library, Elyria.

Hermann H. Meyer, Brooklyn, N. Y., Graduate Columbia University School of Mines.

Frances Noakes Northrop, Pittsburg, Pa., Assistant, Carnegie Library, Pittsburg.

Kate Oakley Pearson, Hudson, N. Y.

Frank Place, Cortland, N. Y., Graduate New York State Normal School, 1901.

Lillian M. Pospishil, Cedar Rapids, Iowa, Assistant, Public Library, Cedar Rapids.

Grace Imogene Rippey, Pittsburg, Pa., Assistant, Carnegie Library, Pittsburg.

Anne Walker Rosenmuller, Niagara Falls, N. Y.

Alice Elizabeth Stennett, Brooklyn, N. Y.

Maude Van Buren, Spring Green, Wis.

Cornelia Brownell Ward, Montclair, N. J., Assistant, Public Library, Montclair.

Hester Young, Toronto, Can., Graduate Collegiate Institute, Toronto, 1889.

### NEWS OF GRADUATES.

Miss Caroline Burnite, class of '93, resigned her position as librarian of the Jacob Tome Institute in June, in order to spend a year abroad.

Miss Annie Katharine Emery, 1901, Miss Margaret A. Gash, 1900, Mrs. Flora de Gogorza, 1901, Mrs. Edith Humphrey, 1897, Miss Fanny A. Sheldon, 1901, Miss Annie Mortimer Thayer, 1901, Miss Lida V. Thompson, 1899, Miss Eliza Witham, 1895, have been engaged as assistants by the Brooklyn Public Library.

Miss Harriet B. Gooch, 1898, has resigned her position as librarian at North Brookfield, Mass., and accepted that of cataloger and classifier in the Portland (Oregon) Library, recently made free.

Miss Harriot E. Hassler, 1898, has been appointed to the staff of the Buffalo Public Library, in charge of the work with the public schools.

Miss Amy Louise Phelan, 1899, has been appointed accession-clerk in the library of the University of California.

BERRY, Silas H. The Association library and reading room. New York, International Committee Y. M. C. A., [1901.] 23 p. D. 10 c.

This pamphlet gives in brief form suggestive hints for the management of Y. M. C. A. library collections. It covers the accessioning, cataloging, etc., of books, the supplies required, the class of books that are desirable in order to carry out the varied aims of the Association, suggestions for book exchanges with other libraries, etc. There are also notes on the reading room and reference departments, with appended lists of desirable magazines and reference books. A useful little work, particularly for small libraries with a limited income.

BOLTON, Charles Knowles. The planning of small libraries. (*In The Brickbuilder*, August. 10:162-165. plans.)

An interesting and practical summary of the chief points to be considered in planning a public library building, to cost between \$5000 and \$15,000. Illustrated with plans of the public libraries of Lawrenceville, Pa. (Carnegie branch), Champaign, Ill., Plymouth and South Plymouth, Mass., and the Fogg Library, of South Weymouth, Mass.

*The Library World* for September contains a variety of short interesting items, the chief contribution being an article on "The treatment of pamphlets," by L. Stanley Jast, who touches upon details of filing, dimensions of boxes, etc. He recommends that for consultation by readers pamphlets should be placed in spring-back reading cases before being allowed to be consulted, a warning notice as to careful handling being pasted on the front cover of the case.

*Public Libraries* opens the autumn season with its October issue, which is mainly devoted to a report of the Waukesha Conference of the American Library Association. The proceedings and papers are presented in somewhat condensed form, but the spirit and general characteristics of the meeting are adequately set forth.

*The Toheki*, being the official organ of the Kansai Bunko Kyokai, or Western Library Association, makes its appearance as the "library journal" of Japan, and gives practical illustration of the fact that the library movement has found a fertile soil in the Flowery Kingdom. The first number, for April, 1901, has for frontispiece a view of the Library of Congress building, and its contents include, besides various introductory and congratulatory words, articles on "The necessity of collecting books," by H. Kinoshita, and "Spe-

cial libraries in Europe," by S. Okamatsu. The news department records the libraries of Japan, the Carnegie library gifts of 1900, and incidents in Japanese library progress; there is a "reviews" column; and a department of Association notes, listing the membership of the Kansai Bunko Kyokai. The journal is edited by B. Shima, librarian of the Kyoto Imperial University, and will be issued quarterly from the University Library, at Kyoto.

#### LOCAL.

*Alameda, Cal.* The city council has voted to appropriate not less than \$7000 per year for the maintenance of the library in its new building, for which Mr. Carnegie has given \$35,000.

*American Congregational Assn. L., Boston.* (48th rpt., 1900-01.) Added 2187 (1850 unbound periodicals); total 43,239, pamphlets 49,203. "A large, regular, and discriminating outlay for books which belong to our chosen field is the true path to success in this branch of the association's work." The "Bible room" has been enriched by S. Brainard Pratt, to whose energy and generosity its collection is due. Through his efforts a "Bible Illuminators' Guild," for the revival of the ancient custom of marginal illumination, has been formed, which has its headquarters in the library building.

The library has just purchased, through Bernard Quaritch, the entire historical collection of the late Bishop Stubbs, containing more than 5000 volumes, mainly relating to English history.

*Atlanta, Ga. Carnegie L.* The 20,000 volumes of the library's collection have been removed to the new Carnegie building, which is now receiving its finishing touches and equipment. The actual removal was accomplished in less than four days. The offices on the second floor have been fitted up, and the staff is engaged in cataloging the new books that are being constantly received; over 1000 new volumes were received and cataloged in September.

*Boston (Mass.) P. L.* By an error in the summary of the 49th report, given in the September L. J., the figures of circulation for 1899-1900 were given instead of those for 1900-1901. The home use for the period should have been stated as 1,324,728 v., of which 893,071 were issued from branches and stations, being an increase of 73,187 over the previous year.

*Bridgeport (Ct.) P. L.* The 41st art exhibition to be held in the galleries of the library building will open on Oct. 21, to continue to Dec. 21, and will be devoted to original illustrations for books and periodicals. It is to be held in the new gallery completed this summer, which gives to the library the very best facilities for its art educational work.

The actual space of the picture wall in the new gallery is 220 feet long with a height of 13 feet, 6 inches, a total space for exhibiting pictures of about 3000 square feet. The under skylight has an actual surface of about 2500 square feet, while the floor is 50 by 60 feet, giving an actual space of 3000 square feet, the same as the exhibition walls. Above the picture moulding the cove of the gallery rises for nine feet, curving slightly to meet the ceiling lights, while under the picture wall is a paneled wainscoting in oak, two feet six inches in height, extending about the room.

The series of free lectures to be given during the coming season has been increased in number over those of last year. So far, arrangements have been made for 30 free lectures, most of them illustrated, to be given for adults, and 12 for children, making a total of 42 lectures in all.

*Brockton (Mass.) P. L.* (Rpt.—year ending Nov. 30, 1900.) Added 3893; total 33,988. Issued, home use 117,839 (fict. 50.09%; juv. fict. 23.73%); ref. use 2591. New cards issued 2016; total no. cardholders 14,321. There were 2602 v. issued for school use. Receipts \$11,265.22; expenses \$11,264.80.

Aside from the general work of the year which "shows steady, if not marked gains," special attention is called to the completion and revision of the two card catalogs of fiction, public and official. This work has been preparatory to the issue of a printed fiction catalog to be now undertaken. Monthly bulletins of new books have been published, and enlarged privileges in open shelves have met with general appreciation. There have been several changes in library furnishing, adding much comfort to both staff and public; but the need of a children's room each month becomes more pressing and imperatively demands attention.

Five exhibitions of the Library Art Club have met with deserved success.

*Chattanooga, Tenn.* No action has been taken by the city council toward appropriating the \$5000 yearly for library maintenance which would enable the city to accept Mr. Carnegie's offer of \$50,000 for a library building. The whole matter has been left in abeyance.

*Chicago. John Crerar L.* (6th rpt., 1900.) Added 10,560, of which 2045 were gifts; total 65,645. 2017 periodicals are currently received, of which 1618 are subscribed for at an annual cost of \$4261.27. 5431 v. were bound or rebound at a cost of \$6570.60, "an average of \$1.19 per volume." Visitors recorded 41,697; recorded issue of books 23,986, of periodicals 8667; visitors admitted to stack 1019.

An interesting report which should be read in full. The library was open every week day throughout the year, which makes possible some deductions as to holiday use. Mr. Andrews says:

"As would be expected, those legal holidays which are not generally observed show very little difference from the average of the month, while the others show a marked decrease in the attendance. Nevertheless, the total attendance would seem to justify holiday opening, especially as these figures do not tell the whole story. A detailed record of the use made of the library on Christmas and New Year's proves that the diminution in the use is much less than in the attendance. It was found, for instance, that only 7 per cent. entered the library without reading, as against 20 per cent. on ordinary days. Also the proportion of readers drawing books from the stack, which is the more serious use of the library, was distinctly greater. The proportion of women was very much less, being only 6 per cent., instead of more than 20."

A classification of the call slips shows the special character of the reading done. "The largest single subject is Engineering, the next Physics (including Electricity.\*)" The publication of the "List of books in the reading room" is noted, and the process of its preparation, from electrotyped titles, is described. Its cost was \$304, as against a probable \$352 if printed from type, and it is thought that a sufficient economy was proved to justify the continuation of the method, "provided that 700 pages of bulletins are printed each year, and provided, also, that the type from which the electrotypes are made can be obtained as now."

"The co-operative analysis of serials has been continued. This library has furnished 1172 titles, and has received cards for 3264, at a net cost of \$71.12. The classed subject catalog now contains some 26,500 titles on 49,500 cards, an average of 1.88 cards to a title; the author catalog contains the same 26,500 titles on 41,000 cards, an average of 1.56 cards to a title. Some 2300 guide cards for the alphabetical subject catalog have been printed, and it is hoped that this preliminary work can be completed in 1901 and a beginning made on the actual filing of cards in this section of the catalog.

"In preparing this subject index a difficulty was met which led to the expansion of the classed catalog in a way which is believed to be novel, and which it is hoped may prove useful. The difficulty was that of arrangement under names of countries. The elaborate scheme of the Boston Public Library was examined carefully and revised, but without satisfactory results. In the course of the discussions it became evident that the desired ends could not be reached through any alphabetical arrangement, since parts of a country would be separated from the country itself. Finally, it was agreed that the best way to obtain what was wanted would be through the classed rather than through the alphabetical catalog. Consequently, it was decided to make in the former, under the place, an additional entry of all titles capable

of this treatment, and to make a subordinate arrangement by the first three figures of the main classification. The result is not only that works on adjacent places are brought together, for example, Illinois next to Michigan; and works on part of a country immediately follow those on the whole country, for example, works on Chicago following those on Illinois; but also under each place related subjects are brought together, for example, 977.3 (570) Natural history of Illinois — 977.3 (581) Flora of Illinois — 977.3 (591) Fauna of Illinois."

*Dayton (O.) P. L.* A feature of the summer work of the library was the operation of "vacation libraries" in four public school buildings in the more remote sections of the city. In each school a collection of 600 volumes was placed on open shelves, and a teacher from each district was engaged to act as librarian, this arrangement proving also an effective means of vitalizing the connection between the library and the school. The establishment of the libraries was preceded by visits and talks by the librarian at district school and parents' meetings. Individual announcements of and invitations to the branches were prepared for each of the four districts, and over 8000 of these were sent into homes through the school children. The board of education was in hearty sympathy with the scheme and placed the school rooms needed promptly at the service of the library authorities.

*Drew Theological Seminary L., Madison, N. J.* (7th rpt. — year ending June 1, 1901.) Added 9400 v., 12,440 pm. This is entirely a record of accessions to the different departments of the library, the "marvelous growth of which is not equalled by any of the larger libraries."

*East Rutherford (N. J.) F. P. L.* The library was opened to the public on the afternoon of Sept. 24, when exercises were held in the hall of the municipal building. Here the library has attractive quarters, with all modern equipments. Funds for books and furniture were raised by a fair held last winter, which netted about \$3000 — an average of more than \$1 per capita for the entire population. The cataloging and charging systems were arranged by the librarian, Miss Ver Nooy, under the supervision of Miss Cecelia Lambert, of the Passaic Public Library. The library contains about 1300 v., and is open on Tuesdays, Thursdays and Saturdays from 3 to 5 and from 7 to 9 p.m. The reading room in connection with it is open on every week day evening from 7 to 10 o'clock.

*East St. Louis (Ill.) P. L. and Reading Room.* (Rpt. — year ending May 31, '01.) Added 2464; total 15,025. Issued, home use 49,193 (fict. 34,455; juv. fict. 49.96 %); lib. use 2052. 3526 v. were issued from the four delivery stations. New registration 2123;

cards in use 2489. Receipts \$7400.96; expenses \$7324.61.

There has been a gain of 10,526 v. in the home circulation of books, and the report gives evidence of increased usefulness and activity. The Newark charging system has been adopted, and good progress has been made in cataloging. A complete up-to-date dictionary catalog is greatly needed, as is a reclassification of the collection. Special efforts to reach the school children have met with gratifying results, and a children's room is most necessary.

*Hackensack, N. J. Johnson F. P. L.* The beautiful little library building given to Hackensack by W. M. Johnson, First Assistant Postmaster-General, was dedicated on the afternoon of Saturday, Oct. 5. The exercises were held in the rooms on the second floor of the building, and the audience overflowed into the hall and stairway. Rev. W. W. Holley, of Christ Episcopal Church, presided, and introduced Mr. Johnson, who spoke of his hopes for the development and influence of the library, and made formal presentation of its deed to the board of trustees. The other speakers were Jacob Bauer, president of the library board; Mrs. Cornelius Blauvelt, and Mrs. E. T. Royle, representing the Hackensack Library Association, which has presented its books as the nucleus of the Free Public Library collection; W. J. Comes, and John Terhune, county superintendent of schools.

The library building is 56 x 75 feet, centrally placed on ground which gives it practically a surrounding park. It is Elizabethan Gothic in style, built of rock-faced Belleville stone, and most artistic in its details of finishing and equipment. The first floor contains reading room, reference room, stack room, and offices for librarian, assistants, etc., while the second floor provides space for a museum, a small assembly room, and possibly other uses. The total book capacity is placed at 26,000 v., and there are now about 6000 v. on the shelves. The coloring, woodwork and schemes of decoration throughout the building are delightfully harmonious, and its equipment is complete in all details. The reading room is especially attractive, in shades of olive, with its open fireplace, handsome tables and armchairs, and fine reproductions of famous pictures, also the gift of Mr. Johnson. In pictures the library is richly equipped with a loan collection from Charles Scribner's Sons, consisting of original drawings in color and black and white, which may be kept as long as desired and later replaced by other examples. For the dedication the building was decorated with flowers and potted plants, and at the close of the exercises it was thrown open for general inspection and an informal reception.

The building, including equipment, is understood to have cost about \$60,000. It is maintained by town appropriation, the provisions of the state library law having been

adopted at the local spring election. The library was organized and the further cataloging necessary is being done, under the direction of Miss Mary P. Farr, of the Drexel Institute Library School, assisted by Miss Mather and Miss Neal, of the Drexel school, and by Miss Labagh, librarian of the new library. A printed finding list was ready for distribution on the day of the dedication, and it is hoped to have the card catalog completed by the close of the year. The library was open for regular work on Monday, Oct. 7.

*Hartford (Ct.) P. L.* (63d rpt.—year ending June 1, '01.) Added 6187; total "about 70,200." Issued main lib. and six branches 218,700 (fict. 115,584; juv. fict. 29,950.) New cards 1597; total cards in use 12,675. Receipts \$16,134.83; expenses \$16,065.07.

Notable in the history of a profitable year is the growing work with the schools by means of five school branches, wherein the book circulation is in the hands of the teachers, with no expense to the library. "The circulation of books through those channels has been nearly half of the whole number of books given out in a year in the old days of the Hartford Library Association."

During the past summer a branch has been in operation in Elizabeth Park, open five hours a day. A revised novel-list has been completed and is now in circulation.

*Helena (Mont.) P. L.* (14th rpt., 1899; 15th rpt., 1900; in *Bulletin* 22, July, 1901.) Added, 1899, 3973; 1900, 1381; total 30,507. Issued, home use, 1899, 89,078, 1900, 77,819 (fict. 60%). New registration, 1899, 914; 1900, 673; cards in use 6707. Receipts, 1900, \$7213.70; expenses \$7074.20.

The home use of books shows a considerable decrease within the last year covered. The turn-over of books was 3.9. While books for young people form but 17% of the contents of the library, they made 39% of the circulation in 1900.

*Indiana State L.* The library has sold a collection of several thousand volumes of duplicates to C. T. Powner, a local bookseller of Greensburg, Ind. Most of the volumes are public documents, and as many of them bear the marks of the Indiana State Library. Mr. Henry, the librarian, has formally authorized their sale or other disposition, in a certificate which is included in the dealer's circular advertising the collection.

*Jackson, Tenn. Carnegie L.* The cornerstone of the Carnegie library building was laid on the afternoon of Sept. 11, with Masonic ceremonies.

*Kentucky, Travelling libraries in.* At the meeting of the state federation of women's clubs, held at Bowling Green in September, a report was submitted by Mrs. C. P. Barnes, chairman of the travelling library committee. The committee now operates 55 travelling li-

baries of 55 volumes each, circulating in 21 mountain counties of the state. Many more applications have been received, especially from teachers, than it has been possible to respond to, owing to lack of funds. Extracts from letters written by recipients of the boxes are given, among them one from a mountain woman in Evergreen, Ky., who says:

"I received your letter and was surprised when I read your kind offer. I have talked with the people and they seem to be very anxious for the books, as we have no library in our neighborhood, and have no kind of books to enjoy. It will be good if you could send some books treating on liquor, as there is a great deal of drinking in our country. Send some good books for young men."

The report concludes: "Our object is to establish a circuit of travelling libraries in each of the thirty mountain counties, with the county seat as a distributing point; libraries of books suitable for children, such as biographies, histories, nature studies, poems and the Bible, especially the New Testament in large type; and our ultimate object is to create within the mountain people a desire for better homes, cleaner homes, a demand for common school education."

*Knorville, Pa.* The borough authorities have declined the offer of \$15,000 for a library building made by Andrew Carnegie, in response to the solicitation of citizens. The reason for the refusal is Mr. Carnegie's proviso that \$3000 annually for library maintenance must be guaranteed.

*Lawrence (Mass.) F. P. L.* (29th rpt. — year ending Dec. 31, 1900.) Added 1949; total 51,185. Issued, home use 114,908; (fict. 43.9%; juv. 31.3%); lib. use 27,659. New registration 825; total registration 10,610. Receipts and expenses \$13,731.91.

The great need of a children's room is again emphasized, and it is hoped that work with the schools may be more fully developed. "The mayor recommends telephonic communication with the schools. That, together with a daily delivery, would be a great help to the schools and increase the library circulation."

*McKeesport, Pa. Carnegie L.* Miss Emily Kuhn, of Oakland, has been elected librarian of the new Carnegie library and Miss Flora White has been appointed assistant. It is expected that the new building will be completed early in November and will be opened to the public on Jan. 1.

*Marinette (Wis.) P. L.* (Rpt. — year ending June 30, 1901.) Added 1205; total 4469. Issued, home use 26,225 (fict. 36%; juv. 54%). New registration 1262; cards in force 1467. Receipts \$2810.41; expenses \$2667.96. The library rooms have been rearranged and greatly improved, free access to all shelves being provided for, and a children's corner fitted up. A new charging system has been

adopted and the library hours extended from 2 to 9 p.m. A "duplicate collection" of popular novels has aided in meeting the demand for recent fiction. An apprentice class was established in December, with two students, who have given 1338 hours to the library in return for instruction received. From this class appointment to the library service is made. More room and more books are ever-present needs.

*Maryland, Library development in.* The Baltimore *Sun*, on Sept. 25, printed an interesting editorial on the work of the Washington County Free Library, of Hagerstown, and its possible influence on the library development of the state. It says, in part: "Hagerstown, the seat of the library, is a town of about 15,000 inhabitants, situated in the center of a rich and populous country of nearly 50,000 population. It is the design of the trustees of the Washington county library to put books within the reach of the entire population of the county, as far as is possible, using the public schools in their plan. Of course, it cannot be done at once, but the beginning is made, and in circumstances more favorable than usual. There are few counties of so large a size so accessible by railroad or other means of travel to the county seat. While there are many towns and villages scattered throughout the county, the people are essentially an agricultural people, and the hope of agriculture and the pleasure and happiness of life in the country lie largely in the public library. After the proper method of distributing books is adopted in Washington county it is likely that the work will be extended to the whole state. When the new state building at Annapolis is completed, with proper apartments for the state library, that institution can be made the center of a system of travelling libraries reaching to every part of the state. The women's federation is working intelligently to that end, and when the proper time comes they will doubtless bring their powerful influence to bear upon the General Assembly to establish the work they desire. It may be that the Washington county library will fill a more important part in this general plan than was at first contemplated, and its field of usefulness can easily be extended beyond the limits of Washington county. Besides the Newcomer endowment, which yields about \$2500 a year, Washington county and the town of Hagerstown are under a contract to contribute, the one \$1500 and the other \$1800 annually. If the legislature should desire it to become the center of a system of travelling libraries for that part of the state it might, no doubt, be accomplished by a proper appropriation."

*Meriden, Ct. Curtis Memorial L.* The cornerstone of the library building to be presented to Meriden by Mrs. Augusta M. Curtis, as a memorial of her husband and daughter, was laid with elaborate exercises on the afternoon of Saturday, Sept. 28.

*New Bedford (Mass.) F. P. L.* (49th rpt., 1900.) Added 3849; total 75,035. Issued, home use 115,763 (fict. and juv. 79%), showing a decrease of 14,253 from the preceding year. New registration 969. Sunday attendance 3180.

The report is mainly devoted to memorial tributes to the late librarian, Robert C. Ingraham. A portrait of Mr. Ingraham is given.

*New Rochelle (N. Y.) P. L.* It is probable that the library will be unable to take advantage of Mr. Carnegie's recent offer of \$50,000 for a new building. A few weeks before Mr. Carnegie's proposal reached them, the trustees had signed a 10-year lease for quarters for the library in the new Masonic hall at \$2700 a year. The trustees of the Masonic Lodge have refused to release the library trustees and the latter, rather than sacrifice \$27,000 of the public funds, will allow Mr. Carnegie's offer to pass unaccepted.

*New York City.* The Department of Education has issued the report of the free lectures to the people, delivered in the boroughs of Manhattan and the Bronx during the season 1900-1901, under direction of Dr. H. M. Leipziger. This was the 13th season that the lectures have been given; it included 1963 lectures, with a total attendance of 553,558, "the largest yet in the history of the lecture course. Lectures were delivered in 52 places. A most gratifying feature that has been especially noticed is the large number of earnest hard-working men that attend these lectures, especially the courses in practical science." Co-operation between the library and the lectures has been maintained and strengthened, especially by the action of the city administration in setting apart a generous appropriation for the establishment of libraries in connection with the lectures.

*New York City. Central Park L.* The Park department established during the summer a small public library of books on botany and natural history, which is proving most successful. It is quartered in a small school house building at the west drive and 79th street and contains about 300 volumes, mainly gifts. Sets of bound magazines such as the *Botanical Gazette*, *Journal of Botany*, *Revue Horticolore*, and *Garten Flora* make up the backbone of the collection, and only books which are related to such subjects are accepted. The room is attractive, with large windows on three sides. In winter it will be heated and kept open daily from 10 o'clock until six, just as at present. A low shed has been built on one side of the house to give protection to bicycles, and the whole building arranged as an attractive resting-place as well as a reading-room.

*New York P. L.* A special exhibition of the Rembrandt engravings from the print col-

lection of J. Pierpont Morgan was opened in the print galleries of the Lenox building on Oct. 2. The display consists of the greater part of the Rembrandts in the collection, and comprises a number of fine impressions. The most familiar etchings are shown—such as the "Christ healing the sick" (the hundred guilder print); the "Angel appearing to the shepherds"; the "Rembrandt drawing" and other portraits of himself, including the one "Leaning on a sill," familiar and often reproduced; the "Good Samaritan" (1st and 3d states); "Uitenboerd, the money weigher"; the various scenes from the life of Christ, as the "Great Ecce Homo," "Christ disputing with the doctors," etc.; the finely finished "Old man with square beard wearing a rich velvet cap," the "Three trees," "Dr. Faustus," and the portraits of Jean Cutma, Uitenbogardus, Vander Linden, Renier Anslou, Coppenol, Ephraim Bonus and the Burgomaster Six. There are five impressions of the lesser known pieces, as the "Blind Tobit," the woodcut "Philosopher and hour-glass," the small "Christ at Emmaus," and "The onion woman." The last named is rare, as are also "A Polander," "Beheading of St. John the Baptist," "The Spanish gipsy," "An old beggar with long beard and a dog by his side," and others.

The marks of Lipart, Hebich, Didot, Hoehm, Haden and other collectors are found on these prints and among the marginal notes are some very interesting ones.

*Niagara Falls (N. Y.) P. L.* (6th rpt.—year ending June 30, '01.) Added 1714; total 9582. Issued 65,881 of which 39,229 were fiction and 18,135 juvenile. New registration 3757; total since becoming a public library 11,573. Receipts \$7313.30; expenses \$5907.63.

"This has been a year of increased activity and healthful growth." The branch library and station have each shown increased use and the work with schools has already become an important and recognized feature of library energy. Six lectures, preceded by music and illustrated in several instances by lantern slides, have been of mutual benefit both to the library and to the public.

Mr. Carnegie's offer of \$50,000 has most happily made clear the way for permanent and commodious quarters.

*Norwalk, Ct.* The offer of Andrew Carnegie of \$20,000 for a public library was accepted at a special city election, held on Sept. 20, when a resolution was passed pledging the city to appropriate \$2000 yearly for maintenance. A site for the building has been given by Hubert E. Bishop, of Norwalk.

*Oakland, Cal.* It seems evident that the city of Oakland must provide from its own resources the \$20,000 required to equip the \$50,000 library building given to it by Andrew Carnegie. The site was secured by the efforts of the Ebell Society, a local women's club,

which raised \$20,000 for the purposes, and the city authorities have given very little financial encouragement to the enterprise. On the completion of the building various members of the board of trustees applied to Mr. Carnegie for money for equipment, but their requests were refused, with the suggestion that the city itself might be expected to equip and support its own library. As yet no municipal action has been taken in the matter.

*Ogden, Utah.* The cornerstone of the new Carnegie library building was laid on Sept. 22.

*Pittsfield, Mass., Berkshire Athenaeum L.* (Rpt.—year ending June 1, 1901.) Added 3125; total 38,983. Issued, home use 92,561, of which 4654 were drawn through the single delivery station and 4356 through the schools. There are 5988 card holders.

*Port Jervis, N. Y., Carnegie L.* The plans prepared for the new Carnegie Library building, by Ackerman & Ross, the architects, call for a two story and basement structure in the modern French style. The dimensions are about 90 x 60. The main entrance, with effective columns on either side, opens into a spacious vestibule leading to the delivery room which is in the center of the main floor, flanked on the left by the magazine reading room and on the right by the children's room. These rooms are separated from the delivery room by glass partitions. Directly in the rear of the delivery desk is a double tier stack with a capacity of about 30,000 volumes. On the right of the stack and opening from it are two suites of small rooms, on the right the librarian's office, coat room and toilet, and on the left of the stack, work and cataloging room, and opening from the magazine reading room, a small reference and study room. The magazine files will be shelved on the walls of the reading room, and the reference collections in the study room. The children's room will be furnished with tables and chairs of graded sizes.

In the second story will be a lecture room, with a seating capacity of 250, a room for the Minisink Valley Historical Society, and a room to be devoted to school work. The basement gives the usual provision for unpacking, storage, bicycles, and contains a public documents room and a room for newspaper files. It is hoped that work on the building may begin early in the autumn.

*Portland (Ore.) P. L.* The city council on July 17 accepted the proposal of the Portland Library Association to turn over its property on Stark street, between Seventh and Park streets, to the city on a 10 years' contract. The library will be conducted as a free public library, and will receive municipal support from a levy of one-fifth of a mill. This levy cannot be made until February, 1902.

Unless some satisfactory arrangement can be made, the library will not be opened to the public until the tax money is available, as the directors of the library will not anticipate the city revenue. It has been proposed by the supporters of the present public library in the city hall, to make the new library free on January 1, 1902. If this is done, funds will have to be raised by popular subscription to pay the running expenses of the library between January 1 and the time the city revenue will become available. When the new library is opened to the public the public library in the city hall will go out of existence.

*Providence (R. I.) P. L.* (23d rpt.—year ending Dec. 31, 1900.) Added 5298; total 93,368. Issued, home use 106,452 (fict. 36.5 %; juv. fict. 22.1 %); lib. use (3 months only, in old building) 7107. New registration 5124. Receipts \$128,305.47; expenses \$127,591.27.

An interesting and detailed report. The work of the year was naturally much influenced by the installation of the library in its fine new building. The removal of the main collection was made from March 9 to March 15, during which week the library was closed. An average of 10,000 v. per day were moved during the five days of actual removal. "This involved a carefully drilled force of men at each end, each in charge of a foreman, a set of 144 moving boxes, and a series of three teams going back and forth."

Of the children's department Mr. Foster says: "No portion of all the building has apparently given more pleasure to adult visitors, as well as to the young people themselves, than this attractive room, with its growing plants in the windows, its open book cases, its choice photographs on the walls, its picture bulletins, its low tables, its flood of sunshine, and the smiling faces of the children themselves." It contains 4718 v., of which 2602 are fiction, and the circulation from March 16 to December 31 was 24,858. "Personal contact of the child with the children's librarian has been the aim kept in view throughout, and it has been abundantly realized. The study of pictures, an hour of storytelling; an evening of lantern-slide pictures; a consultation in regard to summer trips; confidences in regard to the child's own natural bent, as for instance, mechanical ingenuity, or amateur photography, are some of the phases of this admirable intimacy between the child and his library friend. The interest of many of the parents has been strong and constant; the interest of many of the teachers has also been uninterrupted. The equipment and resources of the children's library have repeatedly been put to practical use in connection with the teaching of nature, of literature, of history, of art, and of geography. The two-book system has been of constant service, in supplying an additional book for use in con-

nection with school work. The class room, adjoining the children's reading room, has been utilized by teachers, with classes, for the study of such subjects as King Arthur, and has also been used for posting picture exhibits."

The work done in connection with the schools is also outlined, and the helpful relations existing between the library and other city institutions are touched upon.

Of the building, Mr. Foster says that it has borne the test of practical use surprisingly well, except that the need of an elevator is urgently felt. Its omission was a variation from the original plans, for "the placing of the industrial library in the third story (with its minutely studied equipment of books needed there, and in the delivery room as well, on occasion,) presupposed the existence of a swift and uninterrupted means of communication between the two. The testimony of the staff is uniformly to the effect that to the absence of such communication is due by far the greatest part of the delays caused to readers, and also that a very appreciable diminution is noticed in the number of readers who would visit the rooms in the third story, for purposes of study and research, but for the absence of an elevator." Appended to the report is a comparative list of public libraries of other cities, arranged by size of volumes and again by annual income. These figures show that the Providence Library "while standing no. 17 in number of volumes, is as low as no. 47 in annual book expenditure. Other tables [not printed] show this library as no. 47, also, in annual circulation, (indicating a close correspondence of the supply of books with the use of the books), no. 16 in the annual income, and no. 35 in the annual municipal appropriation."

*Quincy (Ill.) F. P. L.* (13th rpt. — year ending May 31, '01.) Added 1011; total 26,074, including unbound periodicals. Issued, home use 65,827; ref. use 3585. Of the total circulation the percentage of adult fiction was 47.20, of juv. fiction 20.10. New cards issued 1026; total cardholders 9256. Visitors to reading room 55,669. Receipts \$5723.35; expenses \$5339.56.

Comparison of statistics shows a steady gain in all departments, but more especially in the work with schools. The use of the travelling libraries sent to five city schools is an "interesting commentary on the value of the system." In the cataloging department, aside from keeping up with new publications, a subject list of children's books has been prepared, a periodical list completed, and about half the government documents on the shelves have been listed.

The library training class of five members, organized in December, 1900, has met with as much success as illness and other untoward circumstances would allow. It is, however, planned to continue the class in future.

*Raleigh, N. C. Olivia Raney L.* The library committee on Sept. 7 passed a resolution declining to accept a city appropriation of \$66.66 per month. This was caused by the action of the city council in passing upon the request for library maintenance. The library authorities asked for \$100 per month, but the city council would not consider creating a special library fund, and instead passed a resolution reducing the appropriation of the city hospital and assigning to the library the amount thus secured (\$66.66). The council's action is disapproved by the local press, and the *Raleigh Post* urges that it be rescinded and remarks: "Surely, surely, a city with a revenue of \$89,000 can spare the sum of \$200, and \$100 per month respectively for the support of such important institutions when they have been given the city without cost."

The library was opened on January 24, 1901. Since that time 5125 books have been taken out. The attendance has averaged 200 people a day and about 130 books are daily issued. The cost of rebinding, etc., is given at about \$10 per month. The librarian and assistant together receive \$35 a month; the other expenses are janitor, \$18 a month; light, \$5; new books, \$14; incidentals, \$15; fuel and a fireman, \$12—all amounting to \$109 a month. From rents the library has an income of \$65 a month.

*San Bernardino (Cal.) P. L.* (Rpt. — year ending June 30, '01.) Added 415; total 5203. Issued, home use 24,173 (fict. 87%, an increase of 1% over the previous year.) New membership 408; total membership 1913. Reading room attendance 9624.

During the year special teachers' cards were issued on which three books at a time might be withdrawn.

*San Francisco. Mercantile L.* The library trustees have decided to rent or sell the building on the corner of Van Ness and Golden Gate avenues and to remove the library to a central, downtown location. Arrangements have been completed for the removal and a lease has been signed for a building at 223 Sutter street. The transfer of the books to the new location will commence at once and the trustees expect to be settled in their new home within a couple of months.

*San Francisco (Cal.) P. L.* The city board of supervisors has decided to submit to general election on Nov. 5 an ordinance authorizing the purchase of the Mechanics' Institute pavilion property as a site for the Carnegie library building. The Mechanics' Institute trustees on Sept. 24 decided to offer the property for sale to the city for that purpose.

*Torrington (Ct.) L.* The handsome library building given to Torrington by the late Elisha Turner was dedicated on the afternoon of Sept. 11.

The library was organized as the Wolcott-

ville Library Association in 1864; in 1881 it was changed to the Torrington Library Association; and on May 22, 1899, it was incorporated by special charter as the Torrington Library. Its development was mainly due to the efforts and generous aid of Lauren Wetmore and Elisha Turner, in commemoration of which two bronze tablets, secured through public subscription, have been placed on the walls of the building.

The building stands in a prominent position, opposite a small park, and but slightly removed from the business center of the town. It is of white marble in a simple treatment of the Neo-Greek style of architecture, with a recessed portico of Ionic columns in the center of the front; and with its red tile roof and bronze covered doors, and the bronze grilles over them, its color effect under the tall arching elms is most attractive.

The main entrance opens into the delivery room, where tall fluted Corinthian columns carry a "dish-dome," while the outline of the dome and the panels around it are repeated in the design of the marble mosaic floor and its ornamental borders. On the left of the delivery room is the reading room, 22 feet by 36 feet, with large windows towards the front and rear, and a semi-circular bay of five windows on the side. A large fireplace at the back of the room has a chime clock set with carved Greek foliage around it in a tympanum. The ceiling is of gray quartered oak with plain panels surrounded by carved egg-and-dart mouldings, between large oak beams. The walls are panelled of gray quartered oak from floor to ceiling.

On the right of the delivery room is the reference library room, somewhat smaller than the reading room, and fitted with bookcases and cupboards and drawers. It is also finished in gray quartered oak and has decorated plaster on walls above the bookcases and in the panels between the large ornamental ceiling beams. Back of this room is the librarian's and trustee's room with a green marble fireplace. This opens into the stack room as well as into the delivery room.

Directly across the delivery room from the main entrance is the librarian's desk, so placed that from it almost all of the two reading rooms is visible. Back of the desk is the stack room, entirely shut off from the other parts of the building by brick walls and rolling steel shutters and fireproof doors. It has two tiers of book stacks and is arranged to receive another when required. The total capacity is 42,000 volumes. Under the stack room is a work room and unpacking room with a separate entrance from the street.

A wide staircase leads from the delivery room up to two picture galleries on the second floor with large skylights over them.

The building is heated by both direct and indirect steam, and is ventilated by means of large exhaust flues carried up in the chimneys. The lighting is by electricity and the

fixtures were especially designed for the building. All the interior woodwork is quartered oak, and all the flooring of the principal floors is of marble mosaic and terrazzo. The architect was Mr. Ernest Greene, of New York.

*Upper Iowa University, Fayette, Ia.* The cornerstone of the David B. Henderson library building was laid on the afternoon of Sept. 25.

*Utica (N. Y.) P. L.* Plans for the new library building were selected on July 25, the successful competitor being Arthur C. Jackson, of the firm of Carrere & Hastings, of New York.

*Vineland (N. J.) P. L.* The library was dedicated on the evening of Oct. 1. It has been established mainly through the efforts of the local women's club, its nucleus having been a donation of about \$2000 worth of books from the late N. B. Webster, of Vineland. At the dedication exercises it was formally transferred to the mayor, representing the civic authorities, by Dr. Mary J. Dunlap, president of the women's club. The city has voted to appropriate an annual maintenance fund.

*Western Reserve University, Adelbert College L.* The university has reprinted, in pamphlet form, the "Sketch of the history and present condition of the Library of Adelbert College," given in the official report of July, 1901. This is an excellent historical review of the development of the library from 1831, when it is first referred to in the college catalog, to its present condition as a collection of over 43,000 v., in the beautiful and spacious Hatch library building, which was dedicated in June, 1896. The various special collections are described, as is the library building. The relations existing between the college library and the other Cleveland libraries have been most satisfactory, and since 1890 the Hatch Library has been a delivery station of the Public Library. In conclusion, it is pointed out that "the growth of the library of this college is typical of the library experience of all the colleges of the middle west. In 1836 one large addition was made, and for the next fifty years progress was at a snail's pace, and there were long periods of stagnation. The beginning of the modern library movement, in 1876, seems to have had no effect upon the college library. It is not until seven years later that the new life of the library begins. In the 18 years which have elapsed since that date the library as it exists to-day has grown up. Within that time it has more than trebled the number of volumes, and has increased in value and efficiency in far greater proportion."

*Wheeling, W. Va.* The Carnegie offer of \$75,000 for a library building, made nearly

two years ago, has been left unaccepted, owing to opposition of the local labor unions. The terms of the gift could not be accepted without the passage of a special act by the legislature. Such an act was passed last winter, and preparations were made for a special bond election to provide \$50,000 as the city's share of the cost and maintenance. At a recent meeting of the Ohio Valley Trades and Labor Assembly a resolution was passed denouncing Mr. Carnegie's plan, and pledging every union man to vote and work against the bond issue. Since it takes a two-thirds vote to carry the appropriation, the board's library committee decided that it would be useless to hold the election, and has dropped the matter for the present.

*Wisconsin State Historical Soc., Madison.* (Rpt., 48th annual meeting, Dec. 13, 1900.) The main facts of this report have already been noted in these columns (L.J., Jan., p. 38). As printed it contains full lists of gifts, financial statement, etc., and the usual Wisconsin necrology for the year.

*Worcester (Mass.) F. P. L.* (41st rpt. — year ending Nov. 30, 1900.) Added 5819; total 131,315, of which 61,412 v. are in the circulating department. Issued, home use 201,538; ref. use 117,463; Sunday use 2893; holiday use 480. Of the home use 114,820 v. were drawn on teachers' cards and 16,561 were issued to teachers for pupils' use. 12,644 were distributed through the delivery stations, an increase of 9%. Receipts \$48,293.88; expenses \$45,670.11.

The report closes the 30th year of the librarianship of Mr. Green, during which time the size of the library has increased more than six times and its usefulness more than ten times. In spite of the fast growing population the library has increased twice as fast as the city. Each year has seen new projects undertaken for extending the scope of work. In the work with the public schools the Worcester library was a pioneer and in recent years an extended scheme for exchanges with other libraries, unrestricted use of books in some parts of the library, large collections of pictures, etc., have given evidence of the determination of Mr. Green and his associates to more than keep pace with the times.

During the last year a new delivery department and a children's room have been opened. "The children's room has been a great success. Between the hours of 4.15 and 5.45 o'clock in the afternoon accommodations are taxed to the utmost." The Worcester Medical Library has been moved into the old library building and improvements have also been made in the magazine and reading rooms, and it is now planned to build additional stacks in the upper part of the new building.

The work of reclassifying and recataloging the library, begun in 1894 and carried on from year to year with utmost speed, accord-

ing to the funds provided, is progressing satisfactorily, and a finding list of books added between January, 1896, and July, 1900, has been printed.

*Yonkers, N. Y. Carnegie L.* On Sept. 23 the common council voted to accept the southwest corner of Washington Park as a site for the Carnegie library building. The vote on the question was a tie, the deciding vote being cast by the mayor.

#### FOREIGN.

*Croydon (Eng.) P. Ls.* (12th rpt. — year ending March 31, '01.) Added 2902; total 43,791. Issued, lending libs. 315,208 (fict. 60.6%); ref. lib. 36,267. The year "has surpassed all previous years in the use that has been made of the libraries." The home circulation shows a gain of 8351 and at the same time a drop of 3.1 per cent. in fiction issues. In the reference room the issues nearly treble those of the year preceding — a result attributed to the policy of "shelving the books so far as possible in open cases, and providing comfortable accommodations for the people who consult them. No system of cataloging, no popularizing efforts, can take the place of the books themselves, which are their own best advertisements, and bad accommodation or illiberal rules will keep away all but the most enthusiastic and determined readers."

*Finsbury P. Ls., London.* (Rpt. — year ending March 31, 1901.) Added 1815 (878 to ref. dept.); total 21,803, of which 6371 are in the ref. dept. Issued, home use 99,534; ref. use 11,605; from branches 4712. Adult borrowers 3478; juv. borrowers 1058. There were 11,174 v. issued from the juvenile department, exclusive of books on open shelves for reading room use. Sunday attendance in ref. reading room for eight months, 3853; books issued 444.

The open shelf collection in the reference department numbers 1000 volumes. It was established in June, 1900, and its success "is an ample justification of the plan of allowing readers to select books for purposes of consultation without the trouble of filling up application forms."

*Montreal, Can.* No action has yet been taken on Mr. Carnegie's offer of \$150,000 for a public library building. At a meeting of the city finance committee on Sept. 6 the matter was brought up, and it was pointed out that a single public library in Montreal could never be successfully operated. The English people, it was said, would not be satisfied with a library unless entire freedom was possible as to the character of the volumes placed on the shelves; dictation from without, no matter what the source, would not be tolerated. That would be the chief objection urgeable against the Carnegie plan. If the free public library scheme were to be applied

to Montreal, with its dual population, two libraries would be essential — one French, the other English.

*St. John (N. B.) F. P. L.* The 19th report of the library, for the year ending May 31, 1901, is printed in the local press. Added 270; total 12,811. Issued, home use 32,718. New cards issued 187; total cards issued 6073. Receipts \$2192.45; expenses \$1831.03, the balance of \$361.42 being needed to defray expenses for five months following.

"Early in the present year the commissioners were hopeful that by means of an increased grant from the city it would be possible to secure larger and more convenient rooms for the library, and also to increase the number of books." At this time "it was decided to ask for legislative authority to appropriate an additional sum of \$1000. Unfortunately the measure promoted by the council did not become law, and the commissioners have in consequence been unable to carry out the needed improvements which were in contemplation."

*Westminster, City of, (London, Eng.) P. Ls.* "By the changes in local government consequent upon the London Government Act, 1899, the control and management of five public libraries, already established in the parishes of St. George, Hanover Square (two libraries); St. Margaret and St. John, Westminster (two libraries); and St. Martin-in-the-Fields and St. Paul, Covent Garden (one library), forming portions of the new City of Westminster, became vested in the Council, November, 1900." After the transfer of these libraries to their control, the Council at once enlarged the scope of work, extending library privileges to residents who are not taxpayers and including districts not originally under the Public Libraries Act. The report received, consisting almost entirely of tabulated results, contains separate statistics for each of the three parishes. Throughout these reports the fact is evident that the enlarged opportunities have already brought increased use both in the lending and reference departments. The reports for the several libraries are briefly as follows:

*St. George, Hanover Sq., P. Ls.* (7th rpt. — year ending March 31, '01.) Added 2166; total 35,889. Issued, home use 156,485 (fict. 94,303; juv. 26,183); reference use 38,078. Attendance 1,104,900, an excess of 171,000 over that of the previous year. Registration 7131.

*St. Margaret and St. John, Westminster P. Ls.* (44th rpt. — year ending March 31, '01.) No statistics of additions are given; total volumes, however, are 29,097. Issued, home use 82,770; ref. use 35,700.

*St. Martin's P. L.* (Rpt., Jan. '99-Mar. 31, '01.) Added 5418; total 34,032. Issued, home use 110,028; reference use 182,642. Total attendance, 1899, 933,562; 1900-1901, 1,380,406.

## Gifts and Bequests.

*Bay Ridge (N. Y.) F. L.* By the will of the late Norris L. M. Bennett, of New Utrecht, the library receives a bequest of \$500.

*Marinette, Wis.* On Sept. 17 Isaac Stephenson, in a communication to the common council, offered to give \$30,000 for a library building and site, on condition that the city put itself under bonds to appropriate at least \$3000 a year for its support. The proposition met with the unanimous acceptance of the council on Oct. 2. The library is to be erected some time in 1902, according to Mr. Stephenson's present offer.

*Northwestern University L., Evanston, Ill.* The class of 1895, College of Liberal Arts, has voted to present to the university, for the increase of the library, its class fund of \$543, the principal to remain intact and to be known by the class name.

*Norwich, N. Y.* By the will of the late Mrs. Jane M. Guernsey provision is made for the establishment of a public library, to be known as the Guernsey Homestead Memorial Library. For this purpose there is bequeathed real estate comprising a whole square, on which stands one dwelling besides the family homestead. The will directs that the property cannot be diverted to any other use, and that neither of the residences can be rented, but that the homestead shall be used for a library and the other residence may be occupied by the librarian. It is provided that the testator's other real estate and personal property, with the exception of paintings, pictures and furniture, are to be sold and the proceeds devoted to equipping the library.

The library is placed in charge of the local board of education, which is called upon to meet several difficulties in the discharge of its trust. It is desired to remodel the house for library purposes, and to make the homestead grounds into an attractive public park. One of the local papers says: "To meet all of these necessities the board has decided to hire a man with the most professions at his command at once. To be eligible the applicant must be a first-class librarian and landscape gardener. He must also be willing to act as janitor for both the library and the high school. The salary which will be paid to the man having all of these accomplishments has not been specified."

### Carnegie library gifts.

The record of library gifts from Andrew Carnegie, not previously given in these columns, is as follows:

*Canton, N. Y.* Sept. 19. \$30,000.

*Clinton, Ia.* Sept. 8. \$30,000.

*Larbert, Stirlingshire, Scotl.* Sept. 18. £3000.

*Pembroke, Ont., Can.* July 16. \$10,000.

## Librarians.

**BAKER-PADDOCK.** Miss Catherine Dix Paddock, N. Y. State Library School, 1898-99, and Mr. William Fleet Baker were married July 20, 1901.

**CONE,** Miss Jessica G., graduate of the New York State Library School, class of '95, began on Oct. 1 a six-months' engagement as cataloger at the Howard Library, Nashville, Tenn.

**CRAWFORD,** Miss Esther, of the New York State Library School, 1889-90, 1895-96, has resigned her position as cataloger of the Public Library, Dayton, O., to accept a position as assistant librarian at the Hatch Library, Adelbert College, Cleveland, O.

**FICHTENKAM,** Miss Alice C., by a rearrangement of the work in the Catalogue Department of the Office of Public Documents, Washington, has been placed in charge of the preparation of the annual "Catalogue of public documents," which will in future be compiled under her supervision.

**HAYNES,** Miss Frances Elizabeth, of the New York State Library School, 1896-97, has resigned her position as librarian of the Levi Heywood Memorial Library, Gardner, Mass., to accept a position as assistant librarian at Mount Holyoke College.

**JACOBUS,** Miss Sarah M., formerly assistant in the Los Angeles (Cal.) Public Library, has been appointed librarian of the Kamehameha School, of Honolulu, H. I. This institution is a polytechnic school endowed by a native princess. Miss Jacobus sailed for Honolulu on Sept. 22.

**KAULA,** F. Edward, of Somerville, Mass., has been appointed assistant librarian of the Watkinson Library, Hartford, Ct. Mr. Kaula is a graduate of the Amherst Library School, and has been assistant in the Somerville (Mass.) Public Library for the past five years.

**LA BORDE,** Miss Lavinia H., of Richland county, S. C., was on Sept. 30 appointed state librarian of South Carolina, succeeding Miss Lucie Barron, whose term expired Oct. 1. In all 25 applications had been received by the governor. Miss La Borde has for the past few years been a stenographer in the governor's office.

**NUTTING,** Miss Mary O., has resigned her position as librarian of the Mount Holyoke College Library, and has been made librarian emeritus. Miss Bertha E. Blakely, formerly assistant librarian, succeeds Miss Nutting as librarian.

**POOLE-KENDALL.** Mr. Franklin Osborne Poole, assistant librarian of the Boston Athenæum, was married, on Sept. 25 to Miss Helen Bigelow Kendall, of Malden, Mass.

**RICHARDSON,** Dr. E. C., librarian of Princeton University, will sail for Europe on Oct. 12, to be absent for about a year.

**SANBORN,** Miss Alice E., Pratt Institute Library School, class of '98, has resigned her position in the library of Princeton University to accept the librarianship of Wells College, Aurora, N. Y.

**SWEM,** Earl G., formerly of the Public Documents Library, Washington, D. C., has been appointed librarian of Armour Institute of Technology, Chicago.

**VOUGHT,** Sabra W., of the New York State Library School, class of 1901, has been appointed librarian of the University of Tennessee.

## Cataloging and Classification.

**BOSTON P. L. Branch finding list:** books added to the branches, from June 1, 1897, to Aug. 1, 1901. no. 4: September, 1901. Boston, 1901. 6+49 p. O.

Prefaced by a synopsis of the classification adopted for the branch libraries. There are 19 main classes, designated by capital letters, sub-classes being indicated by small letters; fiction has an author number only. Books for young people are recorded in their various classes, and are also given in a separate author list.

The **CAMBRIDGE (Mass.) P. L. Bulletin** for September contains a short reading list on John Fiske.

**CINCINNATI (O.) P. L. Special reading list:** Missions; comp. by Stella Virginia Seybold. September, 1901. 24 p. nar. D.

A full-classed list, arranged by countries, with sub-divisions for biography.

The **FITCHBURG (Mass.) P. L. Bulletin** for September devotes its reference list to "English art and artists," including the art poems of Robert Browning and their commentaries.

**NEW YORK P. L. Handbook of the S. P.** Avery collection of prints and art books in the New York Public Library, 1901. 84 p. 2 il. D. cl.

Samuel P. Avery to whose public spirit and generosity a number of the public institutions of New York are so heavily indebted, since 1865 made it a point to secure one or more examples of the work of nearly every contemporary artist whom he had met or of whom he had heard. The result is the collection of 17,775 etchings and lithographs and photographs, representing 978 artists, which Mr. Avery presented to the New York Public Library in May, 1900. The etchings are

by artists of our own era such as Haden, Daubigny, Whistler, Rajon and others equally well known. One of the gems in this collection is the set of Turner's "Liber studiorum," possibly the only complete set in this country. The lithographs illustrate the art from the time of its inventor, Senefelder, to the present day. The photographs are from paintings by artists with whom Mr. Avery had intimate relations and most of them bear autograph inscriptions by the artists. Besides the prints the collection includes 82 printed volumes representing 69 separate works; also, printed and manuscript catalogs, essays on the arts employed, portraits, biographical sketches and other material relating to the artists represented in the collection. The catalog is handsomely printed and serves a twofold purpose. It is intended in the first place as a guide to those who wish to study the collection by showing of what it consists and by how many examples each artist is represented; in the second place, it will serve to show what is lacking.

The NEW YORK P. L. *Bulletin* for September contains a second selection of the letters of James Monroe, of which the first installment appeared in the issue for February, 1900, (v. 4, no. 2.) Four letters are given, written in the years 1808-1809, two unaddressed, being presumably written to John Taylor or Tazewell, the others being respectively to George Hay and to Sir Francis Baring.

The *Readers' Index*, published bi-monthly by the Croydon (Eng.) Public Libraries, contains in its issue for September-October an outline sketch of representative historical novels, covering English history from the latter half of the 11th to the first part of the 19th century. The outline is intended as a skeleton plan of study. This number of the *Index* contains also reading list no. 13, on "Geology of the British isles," with annotations.

The SALEM (Mass.) P. L. *Bulletin* for September devotes its special reading lists to sculpture and John Fiske.

THOMAS CRANE P. L., *Quincy, Mass.* Classified list of new books added during the year 1900, including also all fiction added from 1898. Quincy, 1901. 32 p. O.

Fiction is given in three lists—authors, titles, and historical fiction. The latter records books also given in the preceding lists, is classed by countries (with period subdivision), and such subjects as Crusades, Reformation, etc., and briefly annotated.

U. S. DEPARTMENT OF AGRICULTURE L. Accessions to the department library, April-June, 1901. (Bulletin no. 36.) 24 p. (printed on one side) O.

#### FULL NAMES.

The following are supplied by Catalogue Division, Library of Congress:

- Allen, Mary Houston Anderson, "Mrs. William Allen" (The love letters of a liar);  
 Austin, John Gustave, and Smith, William Lee (Ohio business law);  
 Babcock, Charles Almanzo (Bird day);  
 Blocher, Samuel Joseph (A practical treatise on the civil government of Arkansas and the United States . . .);  
 Bowdoin, William Goodrich (The rise of the book-plate);  
 Bracké, Ole Olafson (Poems and prose);  
 Breen, James William (If: turning points in the careers of notable people . . .);  
 Chipman, William Pendleton, and Chipman, Charles Phillips (An aerial runaway . . .);  
 Cresee, Franklin Allison (Practical pointers for patentees);  
 Davis, Frederick Hubbard (Christmas voices and other poems);  
 Dexter, Joseph Plato (The common cause);  
 Dickinson, John Woodbridge (Rhetoric and principles of written composition);  
 Elliott, Richard Perry (Handbook of information pertinent to the making of contracts for the sale of school furniture);  
 Engle, Willis Darwin (A general history of the order of the Eastern Star);  
 Foster, Walter Bertram (The lost galleon of Doubloon Island);  
 Foster, William Augustus (The world's wild animals . . .);  
 Fuller, Henry Starkey (Ten days abroad);  
 Geers, Edward Franklin (Ed. Geers' experience with the trotters and pacers . . .);  
 Gestefeld, Ursula Newell (The builder and the plan . . .);  
 Gillespie, Mrs. Elizabeth Duane (A book of remembrance);  
 Hopkins, William John (Telephone lines and their properties);  
 Jamison, Alcinous Burton (Intestinal ills);  
 Jones, Orville Davis (Politics of the Nazarene . . .);  
 Landrum, John Belton O'Neill (History of Spartanburg County . . .);  
 Leuf, Alexander Hubert Providence (Practical first principles);  
 Lounsbury, Grace Constant (An Iseult idyll and other poems);  
 Miller, William Augustus (The involuntary forces, their use and abuses . . .);  
 Mortimer, Frederic Edward (The pilgrim's path . . .);  
 Mowbray, Jay Paul (A journey to nature);  
 Munhall, Leander Whitcomb (The convert and his relations . . .);  
 Murray, David Ambrose (Atoms and energies);  
 Nash, Eugene Beauharnais (Leaders in typhoid fever . . .);  
 Newbranch, Harvey Ellsworth (William Jennings Bryan: a concise but complete story of his life and services);

Peele, Stanton Canfield, and Deis, John Homer (The general principles of the law of insurance);  
 Remington, Edward Pym (Edward P. Remington's annual newspaper directory for 1901);  
 Sanders, Louis Milton (Annual digest of the decisions of the supreme court of the U. S. for 1900 . . .);  
 Smith, Nile Cann, *comp.* (Shapleigh's handbook);  
 Steele, Asa Manchester (A sire of battles);  
 Stone, Charles John (Stone's new superlative trouser system . . .);  
 Strait, Newton Allen, *comp.* (Alphabetical list of battles, 1754-1900);  
 Streeter, Oscar Willard (A dream of life);  
 Tomkins, Floyd Williams (Following Christ);  
 Van Praag, Francis Wells (Clayton Hallowell . . .);  
 Watt, William Edward (Conversation and effectual ready utterance);  
 Willey, William Patrick (An inside view of the formation of the state of West Virginia);  
 Williams, Frank Purdy (Hallie Marshall, a true daughter of the South);  
 Williams, Mary Emma, and Fisher, Katharine Rolston (Elements of the theory and practice of cookery . . .);  
 Woodley, Oscar Israel, and Woodley, Myra Soper (Foundation lessons in English);  
 Young, George Lindley (The doctrines of the book of Acts).

### Bibliography.

ALFRED, *the Great*. Draper, W. H. Alfred the Great: a sketch and seven studies. 2d ed., rev. London, E. Stock, 1901. il. 160 p. 8°.

Contains a bibliography.

—Manchester (*Eng.*) P. F. Ls. Alfred the Great and his times, millenary celebration, 1901: an annotated study-list of books in the reference library; *comp.* by John H. Swann. (Occasional lists, no. 7.) 12 p. O.

An excellent annotated list, classed under such headings as "His life," "His writings," "His kingdom and people," with subdivisions for Chronicles and general history, Social history, Ecclesiastical, Coins, Literature, Arts and sciences, etc.

ARMENIA. Lynch, H. F. B. Armenia: travels and studies. N. Y., Longmans, Green & Co., 1901. 2 v., 16+470; 12+512 p. 8°. \$15.

Volume 2 contains an extended classified bibliography, pages 471-496, more than half of it relating to travel and topography. The author considers this section exhaustive.

BOONE, Daniel. Miner, William Harvey. Daniel Boone: contribution toward a bibliography of writings concerning Daniel

Boone. New York, published by the Dibdin Club, 1901. 9+32 p. interleaved, 12°.

This is a reprint, with additions and corrections, from *The Publishers' Weekly* of March 2 and April 6, 1901. In its present form it makes an attractive and handy little booklet, of which only 250 copies were printed for the Dibdin Club. The titles are liberally annotated and the descriptions are reasonably accurate. We commend this contribution to the consideration of Americanists, and wish for its compiler encouragement to add to and elaborate the work for which he has laid so firm a foundation.  
 V. H. P.

BUILDING. Leaning, John. Building specifications for the use of architects, surveyors, builders, etc. London, B. T. Batsford, 1901. 13+641 p. 8°.

Pages 587-607 are bibliographical: classified trade lists, condensed bibliography of specifications, and a classified list of selected works on materials and construction, etc. The last list is especially helpful. Prices are given.

CONSUMPTION. Gardiner, Charles Fox. The care of the consumptive: a consideration of the scientific use of natural therapeutic agencies in the prevention and cure of consumption; together with a chapter on Colorado as a resort for invalids. New York, G. P. Putnam's Sons, 1900. 7+182 p. 16°. Contains a bibliography of five pages.

FOLK-LORE. Rhys, John. Celtic folk-lore, Welsh and Manx. Oxford, Clarendon Press, 1901. 2 v. 448, 320 p. 8°. Bibliography, p. xxxi-xlvi.

FOREIGN MISSIONS. Ecumenical missionary conference, New York, 1900. Report of the Ecumenical Conference on foreign missions, held in Carnegie Hall and neighboring churches, April 21 to May 1. New York, American Tract Society, 1900. 2 v. 558; 484 p. 8°.

Volume 2 contains a valuable selected bibliography of "Missionary literature of the 19th century," compiled by Rev. Harlan P. Beach, pages 435-462. About 1500 titles are included. The list is classified, and publisher and usually the price are given.

HANOTAUX, G. La Seine et les quais: Promenades d'un bibliophile. Paris, Daragon, 1901. 4+103 p. 18°. 5 fr.

KIPLING, Rudyard. The works of Rudyard Kipling: description of a set of first editions of his books in the library of a New York collector. New York, Dodd, Mead & Co., 1901. facsim. por. 8+91 p. 8°. pap., \$10; Japan pap., \$20.

An elaborate descriptive catalog of a fine

private Kipling collection, prepared by Luther S. Livingstone. The edition is limited to 77 copies, 12 of which are on Japan paper.

LACE. Jackson, Mrs. F. Nevill. A history of hand-made lace; dealing with the origin of lace, the growth of the great lace centers, the mode of manufacture, the methods of distinguishing and the care of various kinds of lace; with supplementary information by Ernesto Jesurum. London, L. Upcott Gill, 1900. 11+245 p. il. 8°.

In the chapter on the literature of lace there is a bibliography of 92 titles.

MAYFLOWER, *ship*. Ames, Azel. The *Mayflower* and her log, July 15, 1620-May 6, 1621; chiefly from original sources. Boston, Houghton, Mifflin & Co., 1901. 22+375 p. il. 4°.

Contains an interesting bibliography, p. 345-357.

MISTRAL, Frédéric. Downer, Charles Alfred. Frédéric Mistral, poet and leader in Provence. New York: Columbia University Press, 1901. 10+267 p. 12°, (Columbia University studies in romance, philology and literature.)

Contains a 5-page bibliography.

RUSKIN, John. Jameson, M. Ethel. A bibliographical contribution to the study of John Ruskin. Cambridge, Riverside Press, 1901. 12+154 p. il. D.

To say that this "bibliographical contribution" shows good intentions is perhaps the kindest comment that can be made upon it. It consists of a brief biographical sketch, followed by selected appreciations and estimates, and by lists of Ruskin's books arranged chronologically, of British editions, of foreign editions, of books of selections, quotations, etc., of books relating to Ruskin, and of magazine articles on the same subject. Unfortunately, the biographical sketch consists of facts and citations brought together without unity or form, and while the bibliographical lists assemble a large quantity of entries, they show carelessness of detail. A list of authorities used in compilation is given in the prefatory pages, wherein are to be found such entries as "Lorenz, d'Otto, 'Catalogue de la librairie Française,'" "Mather, J. M., 'Life and teaching,'" "Reclaim's universal bibliothek," "Repertoire bibliographique de revue Française." It is a pity that the industry and enthusiasm of the compiler were not combined with more accuracy and bibliographical skill. The little book is sold by the author at The Windermere, Detroit, at \$2 per copy. It is dedicated to Mrs. Zella Allan Dixon.

## Anonyms and Pseudonyms.

The "Thompson" in Ernest Seton-Thompson is a pseudonym. The writer's name is Ernest Evan Seton, 1860—, and that of his wife, Grace (Gallatin) Seton, 1872—.

Maxim Gor'ky's real name, transliterated according to the scheme of the A. L. A. Committee on Slavic, is Alexiei Maximovitch Pieshkov. A. K.

The compiler of "Seven great hymns of the mediæval church," (N. Y., Randolph, 1865), attributed in Cushing's "Anonyms" to William Cowper Prime, was Charles Cooper Nott, now Chief Justice of the U. S. Court of Claims. W: S. B.

Perceval, George, pseud. of George Procter, "History of Italy from the fall of the Western Empire to the French Revolution" (Lond., 1825.) The 2d edition (Lond., 1844) was published with his real name. W: S. B.

*The following are supplied by Catalogue Division, Library of Congress.*

Kaufman, Helen L. is comp. of "The notary's manual . . . comp. by a member of the San Francisco bar."

4-19-69 is a pseud. for Mighels, Philip Verrill. "When a witch is young . . ."

Salvarona is a pseud. for Waters, Harry Guy. "The wisdom of passion . . ."

ART METAL CONSTRUCTION CO.

JAMESTOWN, N. Y.

# THE AMERICAN NEWS COMPANY,

## BOOK DEPARTMENT.

HAVING successfully conducted an extensive Library Department for the past several years, handling with complete satisfaction the entire library business of some of the largest libraries of the country, we call to your attention the elaborate facilities at our disposal ; not only as to the prompt and complete despatch of all such business, but the great saving to the library in the matter of receiving exceptional discount. A request for estimate on any miscellaneous list of publications will receive the same painstaking care and minute attention that an order involving thousands of dollars would receive. Books published abroad are secured within a very short time after order is placed—our own branch houses in London, Paris, Berlin, as well as two Canadian houses, enable us to accomplish this.

We solicit correspondence, and extend a most cordial invitation to all interested in the Free Public, School, Circulating, or Private Libraries to visit our mammoth establishment, where the thousand upon thousands of miscellaneous volumes are at your full access.

Yours very respectfully,

THE AMERICAN NEWS COMPANY,

39-41 CHAMBERS STREET, NEW YORK.

BENJAMIN FRANKLIN STEVENS.

HENRY JOHN BROWN.

**B. F. STEVENS & BROWN,**

American Library and Literary Agents,  
4 TRAFALGAR SQUARE, CHARING CROSS, LONDON.

**T**HIS Agency was established in 1864 for supplying American Public Libraries, Institutions, and Book Collectors, with English and Continental Books, Manuscripts, Drawings, Philosophical Apparatus, etc., at the lowest London prices.

Special attention is paid to the selection and purchase of rare old books and manuscripts. Auction sales are carefully watched and good knowledge kept of the stocks of the old Booksellers of Europe.

Lists of Desiderata have the best attention and Librarians are respectfully requested to test the value of the Agency by sending trial orders on by submitting lists for Estimates for goods to be delivered, either free in London or New York, as desired.

Auction Catalogues when printed in advance and Catalogues issued by Publishers and Second-hand Booksellers are mailed to Customers when desired.

Large shipments are sent by cheapest and quickest route, or as ordered. Small shipments are made weekly through our New York Agency, at a minimum of expense and trouble to purchasers, or single books are sent by mail on receipt of order.

Special attention is given to Bindings in all styles.

Periodicals are supplied either direct by mail from London or by mail from New York Agency at lowest rates for prompt and efficient service. Send for Lists.

Payments may be made either direct to London or in U. S. Currency through our New York Agency.

*Just Ready. 100 Copies Printed for Subscribers Only.*

**B. F. STEVENS'S**

**Facsimile of the Unpublished British Headquarters Coloured  
Manuscript Map of New York and Environs  
(1782)**

Reproduced from the Original Drawing in the War Office, London.

24 sheets. Scale,  $6\frac{1}{2}$  inches to a mile. 10 feet by 4 feet. . . .

The successive British Commanders-in-Chief in America, Generals Sir William Howe, Sir Henry Clinton, and Si Guy Carleton, during their respective occupations of New York and Environs in the Revolution, caused this manuscript plan from time to time to be kept up.

The plan extends from below Guanas Bay to the Heights of Spikendevil, a distance of about eighteen or nineteen miles. It shows the Fortifications, Defences, Topography, Streets, Roads, etc., of the whole of the Island of New York with the Harbor, Islands, Water Ways, and River Frontages on the Hudson and East Rivers, the Military Works on Long Island including Brooklyn, the Works in Paulus Hook and parts of the Jersey Shore. It has a copious Table of References to various works (British and American), some of them with notes as to the time of their construction or destruction.

The Original Drawing, ten feet by four feet, is on a scale of about six and a half inches to a mile. It is handsomely reproduced for subscribers only, in careful facsimile on 24 sheets which can be joined up and mounted like the original as a Wall Map or mounted on linen if desired. It will be issued either mounted on linen to fold in book form with leather (slip) case, 13 x 10 inches, or the 24 sheets (22 x 15 inches each), will be supplied in a portfolio.

No more than 100 copies have been printed and the engravings were erased as each sheet was printed off.

A few extra copies of sheet 8 have been printed so that it can be sent as a specimen on application from intending subscribers.

**Prices to Subscribers**

Mounted on linen to fold in book form with leather (slip) case. . . . **\$30 net.**

Unmounted, on 24 sheets in portfolio. . . . . **\$25 net.**

The above prices include delivery to any Public Library or Institute in the United States or Canada, but private subscribers must also pay the duty.

**B. F. STEVENS & BROWN, 4 Trafalgar Square, Charing Cross, London, W. C.**

# CEDRIC CHIVERS,

Portway, Bath, England.

BOOKSELLER { Library Books,  
Reference Books,  
Belles-Lettres.      AND      BOOKBINDER { Duro-Flexile,  
Vellucent,  
Reliure de Luxe.

---

*“Buy Your Popular Books and Your Costly Books*  
**in Duro-Flexile Binding.”**

I OBTAIN books from the publishers in sheets and bind them “ONCE FOR ALL.” This binding lasts longer than the leaves of the book, and the leaves of the book are preserved and their life immeasurably lengthened by this binding. Librarians cannot persuade publishers to print special editions for them, but I supply books specially bound for them.

If the paper is bad I sew and forward the book so that the leaves are subject to no strain and are indeed strengthened in the folds. If the paper is very stout I sew the book and forward it in a special manner adapted to the thickness of the paper, in other words I adapt Duro-Flexile binding to both good and bad paper with the results that the utmost service and the longest possible life are obtained for both.

No binding in the world is adapted to the varied qualities of the paper as is Duro-Flexile.

The service obtained from a book of bad paper when supplied bound in this way will surprise you.

A papier maché box and a steel safe are not hinged in the same way. Thin tough paper and thick spongy paper also require very different treatment, and with Duro-Flexile they get it.

**TIGHT BACKS** are used for books of a thickness and quality of paper best suited for such treatment.

**LOOSE BACKS** are given where such are better suited.

My bookbinding is in short adapted in its every detail, both of material and method, to the requirements of a Public Library Book.

500 Public Librarians in all parts of the English speaking world buy these books.

## POPULAR BOOKS AND COSTLY BOOKS

bought of me, bound from the quires, give 50% more service.

*A catalogue of Standard Fiction and popular recent books priced net delivered free to your Library will be sent on application.*

# THE ARTS OF LIFE

By RICHARD ROGERS BOWKER

16mo, pp. viii + 306, cl., \$1.25

ALSO, FROM THE SAME, SEPARATELY ISSUED:

## OF BUSINESS

16mo, p. 54, cl., 50c.

## OF POLITICS

16mo, p. 67, cl., 50c.

"A book which may be said to fix the highest watermark of the progressive thought of the closing century. The opening sentence of the first chapter—the Foreword—contains the fundamental idea of the whole book: 'Life is an art.'"—*Library News-Letter*, Wilkes Barre, Pa.

"Life is presented through its various forms of expression as the highest of all the arts, and this art is perfected by education, not only through its technical processes but through business, politics, and religion; personality attaining its complete growth only as it is drawn out through these large activities, and only as it adequately expresses itself in these comprehensive relationships."—*The Outlook*.

"The Arts of Life' teaches that of all the knowledge in life the knowing how to live is the most important. The perfect life is that which is in accord with the underlying, pervasive, universal scheme of things."—*Public Opinion*.

"The essayist is thoughtful, original, comprehensive, and classic. In many places he is ideal, brilliant, and very suggestive, well-nigh a master in thought and expression."—*Zion's Herald*.

"Mr. Bowker's own thoughts are worth being thus recorded for the benefit of others. But the indirect interest of his book, its stimulating influence, will be to many of his readers quite as real a reason for enjoying what he has written. He writes in an easy, fluent style which still does not lack acceptable crispness and force. What he has to say is invariably said well, although with no affectation or parade."—*The Congregationalist*.

"We will not venture to say that the book contains no error; but we do say that it contains in little space very much important truth; truth well put, easily understood, and such as—to use a phrase of Lord Bacon's, of whose essays Mr. Bowker's sometimes remind us in more than their titles—comes home to men's business and bosoms."—*Boston Advertiser*.

"The whole volume is an attractive treatment of the many questions of social economics that are every day giving thinking people food for thought. Mr. Bowker is clear in his argument and charming in the purity of his diction, and the reputation of the Riverside Press for artistic work is fully maintained."—*Springfield Republican*.

"In an age so full of feverish eagerness to drink the wine of life to the lees and wait not, we may well be grateful for every such calm survey of the larger possibilities of existence and its finer aspirations, and no one can read Mr. Bowker's volume without feeling that the atmosphere of his workaday world has been cleared somewhat by the breath of some diviner air blown upon him from the heights."—*The Dial*.

## Of Education

"Very seldom indeed has a more illuminating word been written on education."—*Hartford Courant*.

## Of Business

"The essays on business and politics are the most striking and most valuable. In the former we have an admirable account of labor, capital, trusts, wages, profit—in fact, all the questions so prominent in our modern economic life."—*N. Y. Commercial Advertiser*.

## Of Politics

"The essay on politics is especially well-conceived and luminous. It is full of such information as the American citizen ought to know."—*Church Standard*, Phila.

"His essay on politics is one of the best things that we have lately read. Not that we accept all it contains; but what it presents is so clearly presented and the temper of its style is so reserved and fair that reading it is like listening to the talk of an urbane and diplomatic man of the world."—*The Independent*.

"It is the work of a thoughtful man, who would see America built up on the good which lies ready in the other nations to our hand, if we would but look for this rather than for the evil. It is throughout a book of reconciliations, and of proof that life, with many sides, has one heart."—*Chicago Evening Post*.

"It is occasion for thankfulness that there are such wise, brave, and inspiring books as 'The Arts of Life.' It is an optimistic, not an easy-going faith that influences the treatment of these subjects, and the chapter on 'Politics' is noteworthy in its firm and brilliant handling of the significance of our American form of government, with its mistakes, perils, and triumphs."—*The Living Age*, Boston.

## Of Religion

"The chapter on religion is a noble expression of broad and sympathetic thought and feeling."—*Library News-Letter*, Wilkes Barre, Pa.

"It is one more contribution to the mass of argument which seeks to persuade those thoughtful enough to read it that the kingdom of God is within us and that environment cannot shake our soul's peace if we will that it shall not. The white light of this great truth dawned upon the world nineteen centuries ago. Such books as 'The Arts of Life' are prisms; they help us to see the component parts of the steady ray."—*Brooklyn Eagle*.

BOSTON AND NEW YORK

HOUGHTON, MIFFLIN AND COMPANY

THE RIVERSIDE PRESS, CAMBRIDGE

# Strong Features

of our LIBRARY DEPARTMENT are

1. **OUR EXPERIENCE**, extending over many years and fitting us to supply ready information with regard to Authors, Publishers, Titles, Editions, and Bindings.
2. **THE STOCK** to which we have access, comprising more of the standard and worthy publications of English and American houses than can be found elsewhere in the United States.
3. **OUR SPECIALTY** of finding and importing **RARE BOOKS**—duty free—for Libraries.
4. **PROMPTNESS** in filling orders, and **Satisfactory Prices**.

Open to a library or other engagement. Address COLUMBIA UNIVERSITY LIBRARY, New York City.

**MR. THOMAS LETTS**, at present, and for the past three years at the New York Public Library (Lenox building), and for many years previously, map editor, printer and publisher, and agent for the sale of the maps of the British and European governments, is open for engagements (temporary or otherwise) to classify, take care of, and catalog maps, plans, charts and atlases, or to lecture, or instruct librarians or their assistants in the same in any way agreeable to their requirements.

# HENRY MALKAN,

## Library Department.

Having received such a hearty response to our appeals for the patronage of the Librarians, it gives us much pleasure to be able to state that the pressure of business has necessitated the enlarging of our Library Department, and the employment of several expert bookmen, in addition to our regular force. We hope we may not appear self-conscious when we say that we believe our success in this special line is well deserved; as we can candidly state that there is not another house in the business that can furnish books so cheap and so promptly. A trial order will convince anyone, no matter how skeptical, of the correctness of this statement.

*Quotations furnished promptly on any list of books.*

HENRY MALKAN,

1 WILLIAM ST. AND 67 STONE ST., N. Y. CITY.

No. 11

THE plan for printed catalog cards reaches its final culmination in the comprehensive scheme announced by the Library of Congress in its two circulars. In the hands of Mr. Putnam the plan has reached a development far beyond what was at first projected and quite beyond the possibilities of the A. L. A. Publishing Board, so that the library interest is to be doubly congratulated on the fact that the national library has at last undertaken its proper work as a national center of co-operation in this important field. Not only current copyright books, but the miscellaneous accessions to the library and special departments as they are reclassified, will be represented by cards, purchasable by all libraries at the very moderate price of two cents for the initial card and one-half cent or four-tenths of a cent for duplicates, according as they are ordered after or before printing. These prices are provisional ones, based on the authority given by the printing act to sell government publications at the cost of manufacture, plus ten per cent. The fact that this card work must be done for the library itself removes from consideration the main difficulty before the plan as considered by the Publishing Board, and gives libraries the best results at the lowest cost. There should be special appreciation of the prompt willingness on the part of the authorities of the national library to conform its practice to the requirements of libraries in general, as formulated by the American Library Association. The result is a long step forward in library development.

As newly-published books are the chief consumption of most libraries, the prices of new publications are of vital importance, and every library is interested in noting how the "net" plan of the publishers works out in practice. The publishers' proposals were made in a broad and liberal spirit at the A. L. A. conference, and while it was thought that the new plan might somewhat increase the cost of books to libraries, yet if this ad-

vance were small there might be compensating advantages. Mr. Wellman's letter, elsewhere in this issue, is one of several indications that the subject should receive the prompt attention of the Committee on Relations with the Book Trade which was provided for at Waukesha, and of which Mr. W. T. Peoples, of the New York Mercantile Library, has been wisely made chairman, as representing a large purchasing interest at the publishing center. It has been generally understood that the publishers did not expect to make the new plan a means of increasing their own returns, except so far as it might promote a wider sale of books, but were endeavoring chiefly to restore the bookstore part of the machinery of book distribution, of which the libraries form the complement. As large and regular buyers, libraries are entitled to the best terms practicable, and as the actual prices to libraries are based upon "net" publishing prices, librarians should be on the alert to see that these are really on the reduced basis.

THE death of Edward Capen on his eightieth birthday, October 20, recalls the striking progress in library development which has taken place within the span of a single life. Mr. Capen was the first librarian of the Boston Public Library, in its humble beginnings, in comparison with which the present Haverhill Library, of which he was librarian emeritus at the time of his death, would probably seem a great institution. The names of Charles C. Jewett, Justin Winsor, Mellen Chamberlin, Herbert Putnam, and now by James L. Whitney, his successors, suggest how to the original conception of the librarian's function as a keeper of books were added, as library interests developed, the qualities of scholarship, executive ability, and bibliographical skill, until the foremost libraries now require the ablest men in the community for their full development. Mr. Capen is held in affectionate remembrance by those who have memory of the earlier days of the library interests in this country.

### ANNE MANNING — A REPLY.

"CATALOGER" will find an account of Miss Manning in the introduction of the 1896 edition of the "Household of Sir Thomas More," published by Scribner's Sons. It there states that Miss Manning never married.

F. B. BIGELOW.

NEW YORK SOCIETY LIBRARY.

### INFORMATION WANTED.

THE undersigned will be grateful to any reader of the LIBRARY JOURNAL who can aid him in locating a copy of the following book: J. Carpentier, *Histoire genealogique de la très-ancienne et très-noble famille de Herlin. Leyde, 1669, folio.* W. J. JAMES.

WESLEYAN UNIVERSITY LIBRARY,  
Middletown, Ct. }

### AN INDEX TO RECITATIONS.

AFTER reading Mr. W. Dawson Johnston's instructive article on "Present bibliographical undertakings in the United States," in the September JOURNAL, one can appreciate the immense amount of good such undertakings are calculated to effect for librarians, not less than readers in general. It is to be hoped that the good work will go on, and that humbler subjects, not less important in some cases, will not be neglected. One such which is much needed in any public library is an index to recitations, or "pieces," which are always so eagerly sought after by the pupils of grammar grades. The old, defective Werner's "Directory," which, however faulty, was the only thing of the kind, and as such was useful, is now out of print and impossible to obtain, and a complete modern successor to it would be very welcome.

### TELEPHONES IN LIBRARIES.

In the *Electrical World and Engineer* of October 26 is an article "The telephone as an information bureau," which is worth noting. It describes how the Cuyahoga Telephone Company of Cleveland put into operation a public information bureau for its subscribers, with a young woman and a reference library as the basis of its work. If telephone companies in a large city can afford to do such things as a commercial venture, why could they not do quite as well to supply libraries in smaller places with a 'phone, in return for the furnishing of such information by the library to their customers? Would not a library thus be enabled to earn its telephone rental, and at the same time be justified in paying more attention to inquiries than is sometimes felt necessary; or would it not be a solution of the difficulty in cases where we refrain from putting in a telephone at all, because of the "bother" it may give owing to just such inquiries?

### PROTECTING POOLE INDEX PAGES.

I NOTE Miss L. Ambrose's letter in regard to the wearing out of the preliminary pages of Poole's "Index" (L. J., June, 1901: 316.) In the old Astor Library (before the consolidation) we hit upon the plan of having the binder cover these pages of "Abbreviations, titles and imprints" on both sides with transparent tracing linen, and we have not yet found any reason for abandoning the practice.

### LIBRARY DISCOUNTS AND NET BOOKS.

WHEN the system of net prices for books, with a discount to libraries of only ten per cent., was proposed, librarians were given to understand that the net prices would be approximately 20% less than the old list prices. Thus a book which would formerly have been listed at \$1.50 and sold to libraries for \$1 would under the new plan be listed at \$1.20 net, and would cost the libraries \$1.08. This increase of 8% in the cost, librarians were urged to submit to for the sake of the obsolescent booksellers.

It is unfortunate, then, that while making the price net, many publishers should have neglected to make the corresponding reduction. Although it is difficult, of course, to demonstrate in regard to a given publication that the net price is as high, or nearly as high, as the list price would have been under the old arrangement when 33% discount was allowed to libraries, yet in many instances the fact is plainly apparent.

This opinion is strengthened by examination of recent English books published on this side or imported. For such books the prices used frequently or generally to correspond with the foreign list price, from which a discount of 33% was usually secured by libraries. Of eight similar recent publications chosen at random, in only one instance was the net price less 10% as low as the English list price less one third. In three cases the net prices corresponded closely with the English list prices (none of which were net); while in four instances the American price less the discount was actually higher than the English list price.

Conclusive evidence may be found in many series; e.g., "The great commanders series" formerly published at \$1.50 per volume and costing libraries \$1, while the recent volumes are listed at \$1.50 net and cost libraries \$1.35 per volume.

An increase of 35% in the cost means less than three-quarters as many books. The library which formerly purchased 2000 volumes per year will be able to buy less than 1500. Is not this matter serious enough to demand immediate and vigorous protest?

## COMPILING A BIBLIOGRAPHY—I.\*

BY GEORGE WATSON COLE.

WHAT do we mean when we make use of the term bibliography? As here understood, a bibliography is a record, in technical form, of all the literature known to exist upon any specific topic or subject.

"The object of Bibliography," says a writer, well qualified to define that object, "is to bring a book or set of books, in their absence, as much as possible before the student. A perfect bibliography would not only give a full and exact description of a book viewed as just a compound of paper and ink (measurements, number of pages, etc. ; ) but would also, as I hope we are agreed, set before the student so much of the life of a book as would give him, as far as the special object of the bibliography would allow, an idea of the correspondence of the title with the contents, of the plan and arrangement, of the circumstances of production—if they are noteworthy—and, roughly, of the place of the volume in the literature of its subject. This ideal, in which the author is recognized as having claims on our attention, as well as the printer, ought never to be lost sight of, and we should, if our scheme and powers allow us, never rest content with the technical description only." (Madan's "On method in bibliography.")

The compilation of a bibliography is a subject which may be considered from two points of view; the theoretical and the practical. From either standpoint it bristles with technicalities and difficulties and it is quite unlikely that what I may have to say upon it will prove of general interest. While it is true that it appeals to but few minds, it gives me great satisfaction to know that those for whom I am writing are both by experience and training most likely to belong to that small class of which I have just spoken. Some one may ask—why are not library catalogs sufficient for all practical purposes? Why does it become necessary to compile bibliographies and in what respects are they

superior to such catalogs? In reply, it may be justly said, that, for the great mass of people the library catalog answers most inquiries, but for the scholarly student or writer who wishes to know all that can be learned upon any special subject—one, perhaps, to which he proposes to devote months or years of study, as a Bancroft, a Parkman, or a Motley, who deliberately sits down to write the history of a certain epoch or nation—it will at once be perceived that *every* source of information, no matter how trivial or insignificant, should be placed at his disposal. While the example just given may be extreme in its application, the fact remains that there is a large class of writers and readers in search of information upon all conceivable subjects, who wish to pursue the subjects of their search with great thoroughness. Few of these persons have the time or means to travel from library to library, and so familiarize themselves with the resources of the largest libraries in the country, and even if they had, few of the catalogs of these libraries are so constructed as to show all the material upon any given subject which lies hidden in the periodicals, the proceedings of learned societies, and various other compilations, which rest upon their shelves.

The ideal library catalog is that one which shows the entire literary production of every person, and of every work or contribution to every subject in that library, no matter where they may lie hidden. Such a catalog, alas! has but an imaginary existence. If this is true of our largest libraries, which from the very nature of their collections, when compared with the entire product of the world's literary activities, must be pitifully incomplete, where shall we look for anything approaching completeness of record upon any subject, except in a bibliography especially devoted to that subject?

What, therefore, libraries and governments, even, have neglected to accomplish it has fallen upon the shoulders of individuals to do. We, therefore, find many contributing their

Delivered before the Pratt Institute School of Library Training, March 15, 1901.

share toward surveying and mapping out the great field of knowledge, selecting some special portion, and giving us the benefits of their knowledge and researches in the form of bibliographies.

Every bibliographer, while making his investigations should pursue them as if at some future time he intended to write a comprehensive work upon the subject of his labors, and was simply making a preliminary survey and record of the field, with this as his main purpose constantly in view. In this spirit he will most nearly put himself in the position of those who will consult his completed work. The bibliography which fails to most fully record, annotate, and index the literature of its subject in such a manner as to be of the greatest service to the student in any of its various phases, as well as to inform him *where a copy of each individual work may be found*, falls short of the bibliographical ideal.

The saying, that the librarian should know something about everything and everything about something, has passed into a truism. The various demands made upon the librarian of the present day help wonderfully to give him or her some acquaintance with many subjects, or at least the ability to know where information upon them may be found. The very contact with the books which come into a rapidly growing library, is an education in itself, if properly improved, inasmuch as it permits one to taste from many springs of information. After all has been said and done the best fruits of the library are to be found in its catalog. Here is to be found the evidence of the librarian's ability to organize and systematize the mass of information about everything, which has been placed in his charge, and to guide others through its labyrinthian mazes. If the librarian has no clear idea what his library contains how can he expect to be a competent guide to others? The catalog represents in its highest form the something about everything which the librarian should know or his library contain if it is to successfully perform its functions.

But in order to know or learn everything about something it is necessary to follow a more methodical course. While the library catalog may be taken as a type embodying the something about everything, the everything about something is perhaps better exemplified by the bibliography.

Now a bibliography may be made upon any conceivable subject; upon any subject, in fact, upon which a man can write, whether a book, pamphlet, or occasional article. Broadly classed, most printed works are found to be written about persons, places, or things, or take various literary forms such as poetry, essays, the drama, etc. Probably there is no one subject around which literature more naturally groups itself than that of locality or place. As my experience in bibliographical work has been confined mostly to works of this description, whatever I have to say will naturally relate to this phase of the subject. It might almost, with truth, be said that everything centers about some locality.

We are all, more or less, interested in some place, usually the town in which we live. If we are connected with a library, nothing would seem more natural than that we should desire to place upon its shelves all the books and pamphlets, in short everything which can be secured which relates in any way to the city, township, county, or state in which the library is situated. These works, to be useful, must of course be cataloged. Here, then, we have a subject at our very hands, and one most naturally chosen: the formation of a special library and the beginning of a bibliography. Here, too, is an incentive to activity in making both the collection and the record as full and complete as possible. Again, we here have all the most favoring conditions for successfully carrying out such an enterprise. Many persons are already, or may easily be made, interested in the work. Still, again, no place is so likely to contain the materials we are in search of as the place concerning which this literature has been written. Should a house to house search be made, it cannot but be rewarded with many precious discoveries. And just here it may be best to call attention to what should be looked for in collecting material for a local bibliography.

1. Printed works—the contents of which relate exclusively to the locality chosen or to any part of it.
2. Printed works which contain a substantive and important reference to the locality chosen or to any part of it.
3. Biographies of the inhabitants of the locality chosen.
4. Locally printed works.

5. Works written by the inhabitants of the locality chosen.

6. Speeches or sermons on general subjects delivered within the locality chosen.

7. Prints.

8. Maps.

9. Manuscripts.

This list I have taken from F. A. Hyett's paper on "County bibliographies," which was read before the Bibliographical Society of London, March 18, 1895, and is to be found in the Proceedings of that Society, vol 3, pt. 1, p. 27-40. I would strongly advise any one who contemplates doing anything in local bibliography to read this paper before beginning his work. Another article by F. Madan, entitled "What to aim at in local bibliography," in the *Library Chronicle*, vol. 4 (1887), p. 144-148, will also be found very helpful. Returning to our list; no. 1 may be said to contain not only books about the locality, but also all such pamphlets, articles, etc., in reviews and magazines; papers in the Transactions of societies; as well as all such broadsides and leaflets as are likely to throw any light on the history, description, literature, flora, fauna, or other distinguishing characteristics of the locality chosen. Poetry and fiction, the scene of which is laid within the locality, should also be included.

No. 2 should include all the above, possibly excepting broadsides and leaflets. But it would be well to notice no references which are not of a substantive character, such as separate chapters or parts of a book under a separate heading.

To this list should be added not only local magazines and newspapers but reports of local institutions and societies. Extracts from, or portions of the laws and reports of the greater political departments of the government, as those of the county, state, or federal government, so far as they especially apply or pertain to the locality chosen, should also be included.

The choice of material to be made use of in the various classes I have named—what to include and what to exclude—is far from an easy question to determine. A general rule, however, may be laid down: the smaller the place chosen the greater should be the effort to include everything about it. The papers of Mr. Hyett and Mr. Madan, to which reference has already been made, will

assist one much in coming to a decision in each individual case. The bibliographer should never so far forget himself as to attempt to play at the same time the role of critic and recorder. Mr. Hyett has well said: "Unfortunately, the bibliographer cannot

'Look into the seeds of Time,  
And say which grain will grow and which will not.'  
And however unpalatable it may be to him, he should chronicle the existence of much trash, in order that what may ultimately prove of value may not escape notice."

Before proceeding further I cannot refrain from calling your attention to a very important suggestion made by Mr. Madan in his paper to which reference has already been made. He strongly recommends the librarian "to index, or to get indexed roughly, the best local paper." "References for recent facts are often," he truly remarks, "the very hardest to obtain, and also the most immediately useful; the civic authorities of a place would be most grateful for an index of matters of public interest kept up to date. We should aim at working backwards and forwards each week (say) the current number and at least one back one."

Having selected the place of which we propose to compile a bibliography the first query which confronts us is How shall we make a beginning? How are we to learn what has been written about it? There is perhaps no better way, to begin, than by obtaining the best or, at least, the most comprehensive work upon the subject and reading it carefully through, making notes, (as will hereafter be described,) of every citation or authority that the writer gives. No author, as a rule, attempts to write upon any topic, without first looking up, to a more or less thorough extent, what has already been written upon it. From what he finds he borrows, or adapts, and, if an honest writer, indicates the sources from which he has obtained his information. Consult, also, all the catalogs and bibliographies upon which you can lay your hands. By this means you will soon learn of the most important works which have been written concerning your subject. You may, perhaps, discover that a bibliography of the place has already been compiled and that it would be time and labor thrown away to proceed with your project. Or, again, you may discover that there exists an old bibliography, which

you can supplement and bring down to date, amplifying its scope, if need be, and really making a new work of it. For the encouragement of those desiring to take up this class' of work, it may be said that in this country but little thorough work has been accomplished in local bibliography. The field is comparatively unworked, and there still remains much work which ought to be done. For, in the words of Dr. Elliott Coues, in the preface to an excellent special bibliography which he compiled: "Bibliography is never finished and [is] always more or less defective, even on ground long gone over."

There are two methods of compiling a bibliography. The first consists in copying all the titles that can be found in the catalogs of booksellers, libraries, publishers, special bibliographies, subject or local, etc., and arranging them in an orderly manner. At best this class of work savors of Grub-street and is an achievement which the painstaking, accurate, and conscientious bibliographer justly holds in scorn. For when completed, it is but the preliminary work or rough sketch, which he should consider as his starting point. Such a work as I have sketched is more than likely to carry mortifying evidences of its origin. The "pride of accuracy" of which Henry Stevens spoke, has often been brought low even when a most carefully prepared catalog or bibliography has appeared in type. How much greater is likely to be the mortification of the compiler of such a work as we have just described, when it is borne in mind that a bibliography so constructed (though seeming to be a royal road to bibliographical success) not only perpetuates his own errors but adds to them those of the works from which the material has been appropriated.

When I began to compile a bibliography of Bermuda, I decided to include in it the title of no book or article which I had not personally examined. As the subject was one upon which but little had been written, this determination has given me an advantage, which I can recommend to any one who wishes to compile a local bibliography. It gives one an opportunity to examine for one's self everything which comes to hand for references to new and unheard of material, and to see what authorities the various writers have consulted or quoted. By this course one's horizon is constantly extending and he is meeting with references to, or quotations

from books, to which all the catalogs chance will throw in his way will never call his attention.

As I found these references to or quotations from other writers, I carefully copied them upon standard size catalog cards, including all the bibliographical information they gave. Whenever meager, this information was subsequently increased by consulting catalogs, bibliographies or other sources of information for fuller particulars to add to the card. In writing this card I took especial care to name the book or other source from which the entry was made. Experience has taught me that it is also advisable in many cases, to briefly give some idea of what information is to be found in the work cited. This is all the more important, as some time may elapse before the book itself may be placed in your hands; by which time the circumstances under which the card was written or the information which the work you have long sought for is expected to give may have passed completely from your mind. Not always having given the source of the information on the card, I have sometimes found myself puzzled, when the book at last came to be placed in my hands, to know why the card was made, and have had to visit the library a second time, if, as sometimes happened, I did not have my card index with me.

These cards, as may be seen, are to be made from all sources of information, such as catalogs, bibliographies, indexes, citations from books, and from every other conceivable place where information may be picked up, and, best of all, at the very time it strikes the attention. I presume we have all experienced the difficulty of finding some bit of information in the daily paper, which we have desired to refer to again after an interval of two or three days. Much time is wasted in such efforts which would have been saved by the prompt use of a blue pencil. As our work progresses, the spirit of the quest will grow sharper, and we will almost instinctively know where to look for pointers. We shall constantly be on the lookout for a title to add to our preliminary list. Many of these titles when run down will amount to nothing, for we shall naturally add many which arrest our attention in out of the way places in the expectation that they may possibly afford something for our final record. Having begun this preliminary card index,

The next step to be taken is to consider the order of entry and the extent of the information given in the final record.

Cataloging rules for libraries are a series of compromises. The elements of time, space, and expense are factors which, of necessity, have to be taken into account with most libraries in varying degrees, and as a result the library catalog, while serviceable in the time and place for which it is made, is far from being a model to be followed in the kind of work now under consideration. In bibliographical work it should ever be borne in mind, on the one hand, that there are certain elements about a book which are fixed and unchangeable while again there are others which are subject to variation. Among the latter may be mentioned binding and absolute size. From the bibliographer's standpoint a book, in its highest and most complete form, consists simply of the sheets of which it is composed, printed, folded, gathered, stitched, and bound in paper covers, before the binder's guillotine has cut away a particle from its edges. Hence it is that the bibliophile chooses that his books shall be bound with uncut edges, or with the top edge cut away only just enough to permit of its being gilded. When such a view is taken, it necessarily follows that it should be the aim of every bibliographer to so describe a book that it can never, by any possibility, be mistaken for any other book or for any other edition of the same book; a thing which is not so easy to do as at first sight it appears. Professor Augustus De Morgan, the celebrated philosopher and mathematician, in the Preface (p. xiii.) to his bibliography of "Arithmetical books; 1481-1800" (London, 1847), says, "Were I to begin this book again, I would in every instance make a reference to some battered letter, or defect of lineation, or something which would be pretty certain not to recur in any real imprint. Ordinary errata would not be conclusive, for these might be reprinted for want of perceiving the error." Madan's rule of giving the first word of page 11 and occasionally of 101 or 501 seems to my mind to be almost, if not quite as safe a method. (Madan, 1893, p. 96.) This, at first sight, may perhaps seem unduly painstaking, but experience has proved that such is not the case, especially with very old books.

The French have always borne the reputation of being bibliographers *par excellence*.

One reason why this may be so, is that, in France, the great mass of books are published in paper covers with uncut edges; *i.e.*, are folded in the original size of the sheets upon which the book was printed. In this country and England, on the other hand, it is customary for publishers to issue their works bound in cloth, or other material, usually, with the edges trimmed. A book, subject to constant handling and wear, as in our large circulating libraries, is in constant need of rebinding, so that its absolute size is constantly changing each time it passes under the knife of the binder.

A protest occasionally appears in our public prints against the publishing of books or magazines with uncut or untrimmed edges. No bibliophile, no true lover of books, desires them in any other form. In this shape he has the book in all its bibliographical perfection.

If, as we have seen, the size of a book is a changeable quantity, where then can we find something that we can describe which will undergo no change, whatever may have been the vicissitudes through which the book itself has passed? In reply it may be said that the type or letterpress of a book, together with its pagination and signatures and the paper upon which it is printed are its only fixed elements. Bearing this, as it seems to me, vital and at the same time elementary bibliographical point always in view, I have pursued my work as follows: In the case of a book which relates wholly to the subject I am treating, I first exhaust the information given by the title-page and in the exact order in which it is there given. There are only one or two portions of any title-page, which, in my judgment, it is safe to omit. First, the list of titles, etc. (frequently given at wearisome length), which follows an author's name. Even here caution should be taken to omit nothing which shall show that the author is, in an especial sense, an authority upon the subject of which he writes. All information of an extraneous nature had much better be omitted. Secondly, mottoes or quotations which embellish a title-page may be treated in a like manner. Sometimes their appositeness is such that they may well be retained. The lining of titles of old books should be given, say before 1850, and especially of very rare books even if of more recent date.

## "THE SCIENCE OF LIBRARY STATISTICS."

BY FREDERICK J. TEGGART, *Mechanics' Institute Library, San Francisco, Cal.*

THIS phrase is taken from an editorial in the September number of the LIBRARY JOURNAL; it is brought forward here for the reason that if by "science" is meant "knowledge duly arranged, and referred to general truths and principles on which it is founded, and from which it is derived," a science of library statistics is not only non-existent but apparently hitherto unthought of.

The editorial alluded to has done a service in once more calling attention to the need of a thorough and comprehensive investigation of the experience of American libraries as revealed in their statistics. During the last twenty-five years there have not been wanting moments when it seemed to some members of the profession that every subject in library economy had been "thrashed out," that all had been said that could be said profitably. And yet those years have been devoted mainly to the purely preliminary process of "getting started," and the literature which has appeared has consisted of suggestions and personal views rather than of contributions to a science. During these years of the "modern library movement" the library profession has been notably enthusiastic in its work and has set the attainment of practical results before the cultivation of professional knowledge; it has gone further and taught that "the great element of success" in library administration, "is the earnest moving spirit which supplies to the institution its life," an effervescent creed which is little likely to provoke the painstaking investigation necessary before a scientific basis of library management can be attained.

It is in keeping with this perfunctory attitude towards professional knowledge that the attention bestowed on library statistics has hitherto been confined to the most obvious phases of the subject. A basis for comparing different institutions was required for encyclopædias and other general sources of information and it was found in the number of volumes which a library contained. This is certainly the most apparent and convenient figure for use as an index of the comparative importance of libraries, and it

is to-day the only form of library statistics in common use.

But while the volumes-number is eminently convenient for the construction of statistical tables, for the purposes of library economy it is of minor interest inasmuch as it conveys no idea of the relative value or character of the contents of a library and leaves one hopelessly in the dark as to the extent of its service to the public. The statistical tables heretofore published have been used, one might venture to say exclusively, as library directories. The volumes-number method in short has contributed to general library information, but it has done nothing directly for the advancement of library science.

Librarians, however, have not remained satisfied with this single basis of comparison. In France and Germany for instance they prefer the manuscripts-number, while in the United States there has been since 1876 a disposition among librarians to concede priority of importance to the institution which gives out for home use the greatest number of books. This circulation-figure is the second of the two methods of library statistics which have been used up to the present.

It is evident that these methods of comparing libraries are simply enumerative and in no degree scientific, indeed so little do they represent that comprehension and understanding of facts which is the preliminary basis of a science, that an agreement as to the essential facts which should be recorded and investigated has not yet been reached. On the other hand it must not be concluded that this blind search for an adequate basis of comparison between libraries has been without its effect in library administration. The preference for the manuscripts-number in Europe has led to the concentration of the attention of librarians upon manuscripts. The preference for the circulation-figure in the United States has led to developments of far reaching importance in American library economy. It is the purpose of this paper to present a preliminary estimate of the extent and significance of these developments.

Speaking of public libraries generally, the

"home circulation" figure is certainly of greater utility as an index for comparison than the volumes-number. That its use has met with opposition both editorials and contributions in the pages of the *LIBRARY JOURNAL* will show; but that it is the most acceptable means yet available for comparing the work done in different institutions is shown by the continued importance given it in the reports of every library in the country.

Progress, being largely a matter of competition, implies the contrasting of results, it demands a basis of comparison, what might be called an index of efficiency. As between the volumes-number and the circulation-figure it is evident that the latter is somewhat more comprehensive and to that degree more desirable than the former. Criticism of the use of either of these figures for comparative purposes is based on the fact that they leave out of consideration many important factors in library work. But this criticism, which has been made repeatedly, overlooks the point that such a number is used only as an index of what a particular library is doing and not as a summation of its various activities. Between institutions of the same class such a basis of comparison is equitable, inasmuch as it cannot be assumed to benefit any one at the expense of the others. The real and great defect in the use of any single factor to represent the entire work of an institution lies in the overemphasis laid on this factor by the continued attention which it receives as constituting the basis of competition. The use of the circulation-figure during the last two decades made it inevitable that the competition between libraries should be directed to this one factor in library work. It would be superfluous to introduce proofs of the existence of this competition in circulation among American libraries; it is known to everyone, as are the conditions under which it has been conducted. In short, the desired result has been the greatest possible circulation with the lowest attainable percentage of fiction use.

The particular class of literature upon which men and women to-day are most willing to spend their leisure—prose fiction—has been a much discussed topic among librarians, and no item in library statistics has been more frequently quoted than the percentage of its use. The gist of the discussions and the attention given to its statistics

imply that there is in operation throughout the libraries of this country an active discrimination against fiction reading. There can be no doubt that librarians believe in the existence of this discrimination and in its desirability, that they believe that the use of fiction is being reduced in our public libraries, and that this belief is based upon the statistics given in library reports. It is therefore proper to ask what has been the result of the discrimination against the use of fiction, linked as it has been with the effort to increase circulation as a whole.

To be definite, the net result of the apparent discrimination against fiction in our public libraries has been a great and general increase in its use, and this increase is to be attributed to the methods of the library quite as much as to the desires of the public. The case stands thus—it is desirable to increase the circulation of a library, the most effective means to this end would be to supply unreservedly what the public wants to read and see that the public gets it, notable results may be expected if in addition to efficient service every possible hindrance is removed to the frequent exchange of books by the readers, which means the establishment of numerous points of distribution. But in the report to be made of the year's business it will be necessary, in accordance with the terms of the competition, to show a decrease in the percentage of fiction used as well as an increase in the total circulation. To place any limitation on the use of fiction would defeat the latter purpose without any certainty of effecting the former, hence the only way out of the dilemma is to apply some form of artificial stimulus to increase the non-fiction circulation.

This is just what the American librarian has found it necessary to do; of the means which he has adopted it may be well to mention the more important. A means of the utmost simplicity and one which has been very generally adopted is known as the "two-book system," by which every borrower is accorded the right to draw a second book provided it is from some non-fiction class. It is apparent that if this privilege was generally accepted the fiction circulation would fall below 50 per cent., for the previous non-fiction circulation would remain unaffected. The merit of the system is that it admits of the

greatest possible encouragement of fiction reading, thereby adding to the total circulation, and naturally it appeals to the borrower who will take something (be it cheirosophy or Christian science, menticulture or cook books) rather than neglect the opportunity.

An earlier method and one which has left its mark on library affairs in the United States, was based on the observation that the problem of decreasing the fiction percentage without limiting its use would be solved if a sufficiently large group of non-fiction using borrowers could be added to the clientele of the library. On this principle was inaugurated about 1880 the method commonly referred to as "co-operation with the schools." This co-operation simply means enlisting the services of the school teachers to promote circulation among the school children; but with all the possibilities which the very idea suggests, the result does not seem to have justified at once the hopes entertained for it, inasmuch as it became necessary to create special privileges without limit to achieve a sufficiently large use of non-fiction literature to affect the statistics.

What this "co-operation" now means in the computation of percentage is apparent when it is observed that teachers are permitted to draw at one time, in some cities forty non-fiction volumes, in others a volume for each pupil in their classes—this for school use; but in addition teachers are allowed to draw extra books for their own use, in some cases without any restriction as to number. The teachers have naturally responded to the treatment and in fact their attitude now appears to be that the library exists as a labor saving device for their benefit; "the librarian *must* know the school, its work, its needs, and what he can do to meet them. He *must* be able to supplement and broaden the work of the teacher" and so forth.

Competition has here led to interesting developments. The age limit for users of the library has been abolished—"the good work cannot begin too early," and so children's toy books now swell the (non-fiction?) circulation statistics, just as kindergarten furniture figures in the expense of administration.

The result of these improvements in library methods has been a very marked and general increase in the total circulation of our public libraries during the last ten years.

The tables in recent library reports show a marked decrease in the percentage of the class denominated "adult" or "prose" fiction; if however to this be added the "juvenile" or "children's" fiction and the fiction in languages other than English, which are classified apart, it will be found that expedients and money have not been able to reduce seriously the fiction percentage, (the average of fifteen to twenty years ago appears to have been about 75 %, the average in the libraries using the new methods is about 50 %). It is therefore abundantly apparent that under the stimulus provided by the library its patrons are reading much more fiction than before.

So far only the very simplest phases of library statistics have received attention. (Mr. Bostwick's elaboration of class circulation statistics seems to the present writer to be out of the main current of the larger question and more interesting than important.) Originating in the need of a better index of efficiency than the volumes-number supplies, the prominence given the circulation-figure has concentrated the attention of librarians upon this feature of library work, with the result that competition has developed various means for reducing the fiction percentage while increasing the total circulation. But while these innovations have decreased the fiction percentage they have increased the total use of fiction and in addition have exercised an influence on library administration which threatens to usurp the control of our libraries if not to divert them from the original purpose of their foundation. For this latter was certainly neither the supply of indefinitely large quantities of fiction nor the furnishing of free school books.

As has been pointed out above it has been usual so far in discussing libraries to compare different institutions either in regard to their size or the extent of their circulation. As has been pointed out the use of either of these methods of comparison is open to objection, and the concentration of attention upon the use of the library has led to unforeseen results of great importance in library economy. It is clear that in so far as the American librarian has aimed to increase the circulation of his library he has been notably successful, but that in so far as he has purposed to discriminate against the use of fiction he has been equally unsuccessful. To

realize fully what these efforts mean it will now be necessary to take into consideration the expense account.

In any given year a library has a certain total expenditure. Out of this expenditure must first come the expense of running the establishment—caring for its volumes already collected, light, heat, etc. There is then left a certain amount for three purposes—acquiring additions, preparing these for use, and the cost of circulation. It is evident that the first two may be treated as one item inasmuch as the cost of the second will be very nearly proportionate to that of the first, the difference representing the cost of caring for the gifts.

Now supposing that there are no volumes in the library it is manifest there would be no expenditure for circulation, and the expenditure for administration would be minimum, consequently the expenditure for accessions would be maximum. But as the number of volumes increases and circulation grows this expenditure for books will be curtailed by an amount directly proportionate to the circulation, for it seems to be the case that the expense per volume circulated is a fixed sum which does not decrease, as might be supposed, with an increase in the number of books given out. In a growing library with a fixed income the condition of its book fund is that of being diminished by an increasing administration expenditure due to increase of the establishment plus an expenditure of a fixed amount for each volume loaned. To increase the circulation of a library indefinitely therefore means an indefinite decrease in its expenditure for accessions, or of course a proportionate increase of income.

An illustration of this may be given:

	Volumes.	Circulation.	Expenditure—book exp.	Per cent. of circulation to vols. in lib.	Cost per vol. circulated.
Minneapolis.	112,000	596,000	\$43,100	5.3	7.2
Cleveland....	150,000	832,000	65,800	5.5	7.9

The statistical conditions are here almost identical; the same use is made of the volumes in the library, the expense per volume circulated is the same, but the increase of 40% in circulation is obtained at an increase of 52% in expenditure.

An illustration taken from the history of a particular library through a number of years shows a similar result:

Chicago	Cost per vol. circ.	Per ct. spent for books.
1890.....	8.	16.6
1899.....	13.2.	8.4

During this period the gross circulation increased 100% and the expenditure 206%.

The accompanying diagram gives the result obtained by taking an average of the experience of a number of libraries for the last twenty-five years:

From this it will be seen that the circulation has greatly increased especially during the last decade, as have also the gross expenditure and the number of volumes. In this diagram however the volumes line represents an accumulation, the increment for each period being added to the previous total, while the circulation and expense lines represent the actual figures for each date. To show the true relation of the book increase from date to date another diagram is necessary:

The results here show that while there has been a slight increase in the amount spent for books, the percentage of the total expenditure devoted to books shows a steady and important decline.

Of necessity there is a limit to this comparative increase and decrease, for neither can the circulation be indefinitely increased nor is it possible to carry the decrease in book expenditure to the point of elimination. There must be a point at which the readers of a certain locality can draw no larger number of books, and library experience dictates the addition of new literature if circulation is to be kept up. But before the extreme is reached there is a point beyond which an increase of circulation cannot be forced without an unduly heavy expense, and it would seem that this point has been passed in many of our libraries.

Sufficient has been said to show that the lack of a "science of library statistics" has led to an undue concentration of the attention of librarians on a single aspect of library work; that this competition in circulation has led to important and perhaps undesirable developments in library methods; that notwithstanding the improvment of new methods for increasing the circulation while decreasing the percentage of fiction use, the latter continues to increase in actual figures; that this competition in circulation has led to a large increase in the cost of library administration and at the same time to a decrease in the percentage of the expenditure devoted to the purchase of books; and that a point has been reached where the actual cost of circulation per volume is increasing.

It is therefore pertinent to ask, is the American librarian in earnest in his theoretical discrimination against the circulation of fiction? Does the theory that a fiction reader will in time be converted from the error of his ways by continuous fiction reading justify the expenditure lavished upon him? Does the theory that the conferring of special privileges upon school teachers and children will in time develop a non-fiction reading class of adults warrant these privileges and the attendant expense? Do our libraries contain all the literature of importance that any student might be expected to require?

#### CO-OPERATION AMONG LIBRARY COMMISSIONS.

OFFICERS of the library commissions of Wisconsin, Iowa and Minnesota recently held a meeting at Madison, Wis., to decide upon methods of co-operation.

The problems in the three states are similar and the commission work is carried along on much the same lines. Each commission manages travelling libraries, conducts a summer school for library training, and a clearing house. These three features will be continued separately as before. Co-operation will begin with the printed material. The Iowa commission will print a bimonthly bulletin for the three states; the Wisconsin commission will issue frequent buying lists of new books, and a new edition of the "Suggestive list of books for public libraries"; the Minnesota commission will edit a handbook of practical library work to be written by member of the three commissions. Future work is planned in connection with public documents, short subject bibliographies and printed catalog cards.

## THE DESK ASSISTANT.

THIS subject, recently discussed by the New York State Library Association, is one of the greatest importance to libraries of all kinds, for readers judge a library to a very great extent by the attention given them at the delivery desk.

At the New York meeting it was stated as a fact "that the library school graduate looks down upon the work of the desk assistant and would rather do anything else." While the large majority of library school graduates do not "look down" upon the work at the desk, it is true that they would rather do anything else. The reason for this does not lie in the training at library schools. On the contrary everything is done to encourage and interest the student in his work, which is, after all, the most important in the success of a library. The curriculum at a library school includes a study of the delivery desk and its workings as well as of reference work—a knowledge of which is essential to the usefulness of a desk assistant. In addition, practical work at the desk throughout the year is a requirement. Students often enjoy this branch of the course so much that they devote extra time to practical desk work.

The reason why library school graduates do not care to take positions at the delivery desk is that salaries are lower than those in the cataloging and reference departments. After all that may be said the salary is an important item. Not many persons engage in library work from purely philanthropic motives. That a desire to do good to one's fellowmen is characteristic of the majority of librarians goes without dispute, but every one is ambitious to earn as large a salary as possible. The library school graduate has spent one to five years in time and invested some money in getting a technical training. So long as the standard of salaries for desk work is no higher than that of a shop girl (not so large in many cases as that paid to a cook), so long will the educated, trained candidate aspire to something better, not necessarily in the quality of work but in amount of compensation—despite the efforts of library schools and others to raise the standard of applicants. Besides the salary question, there arise also the difficulties of evening work and longer hours of service which accompany the work at the delivery desk.

It is also true that a considerable amount of the work in the delivery desks of our large libraries is mechanical—a simple stamping of dates and writing of call numbers. In the open shelf library the reader gets his book and in the closed shelf library the book is sent for by pages. In both cases the assistant does not leave her post. Under such circumstances the work becomes machine-like and the assistant has no opportunity to grow. One way to make the desk assistant more competent is to do away with mechanical

systems of charging and not have the reader ask for books by call numbers. This may not be practicable in a large library, unless there are many branches, each of which then becomes a small library. The branch library with open shelves offers opportunities for personal assistance to readers which are not possible in a central library with a large circulation.

In the small library where the assistant must do everything—get the book, charge it to the reader, answer all his questions as far as possible—the work is less mechanical and far better results are obtained. A knowledge of books is acquired, interest in the people and their wants is developed and the library is made attractive and helpful.

In its details of charging books, loan desk work does not require the same amount of technical training that is essential in cataloging. It is in the technical knowledge of books, of the aids and guides, that library school training counts. The chief qualifications of a desk assistant are: *first*, the right personality (which includes courtesy, tact, memory, alertness, enthusiasm), and *second*, a knowledge of books. Such a person is not often obtainable and very rarely at the salary offered for her services. That the personality of the desk assistant counts for most in the eyes of the public is beyond question. Personal qualifications such as those mentioned cannot be taught in library schools.

A knowledge of books is almost equally important. One complaint so often made by the reading public (and of late some criticism of libraries has been made in newspapers and periodicals) is that the assistant at the desk knows so little about books. The popular books of the hour she may know but her knowledge too often goes little farther. The bookish young woman is difficult to find among candidates for library work. A young woman to make desk work successful both for herself and for the public must be so imbued with a love for reading as to be on the search for knowledge in all her spare moments. She must read a little about everything, must be ready to answer intelligently the borrowers' questions about books. To do this requires the sacrifice of considerable time, but the compensation comes in the satisfaction which knowledge and helpfulness to others always brings.

No other work in a library is so interesting and satisfactory as that of the assistant who is brought in contact with the public. If the right person is in such a position, it will be the place where she can become broad-minded, helpful, happy because of the good she can do. And when the library has the right person for this important post, it must offer sufficient inducement for her to remain there. It will find that the extra money needed to keep her is not thrown away, but on the contrary is doing much more for the library than it can in any other way.

ALICE B. KROEGER.

## PRINTED CATALOG CARDS FROM THE LIBRARY OF CONGRESS.

ON Oct. 26 the Library of Congress sent out to nearly 400 libraries in the United States and the 17 state library commissions a circular making announcement of its plans for the issue of printed catalog cards, as follows:

"The Library of Congress is now prepared to furnish a copy or copies of any of the catalog cards (a) which it is currently printing; (b) which it has heretofore printed, so far as copies of these can be supplied from stock.

"The library is currently printing cards for the following classes of accessions: (a) books currently copyrighted under the laws of the United States; (b) miscellaneous material, both current and non-current, so far as acquired by it; (c) the printed books in its present collection as these are reached in the process of reclassification.

"The cards already printed have included the following: (a) copyrighted books since July 1, 1898; (b) miscellaneous accessions since Jan. 1, 1901, and in part since Jan. 1, 1900; (c) the two groups in the existing collection already reclassified, to wit: Bibliography and Library science; American history. (The group next to be dealt with is Political and social science.)

"Samples of the printed cards are enclosed. They are author cards merely. Subject headings will, however, be suggested on cards in the following groups at least: 1. Copyrighted books; 2. Bibliography and Library science; 3. American history; and 4. Each new group as reclassified. In the Library of Congress these subject headings are prefixed, with pen or typewriter, to the author cards in order to form subject cards.

"*Subscription price.*—The charge will be based upon the cost (including handling) of the extra copies, plus 10 per cent. What this charge will be will depend upon the number of copies subscribed for, both in the aggregate and by any particular library. For a single copy of a single card it will not exceed two cents.

"*Orders.*—1. Orders will be accepted in any form which specifically identifies the book (*i.e.*, the card desired). For copyrighted books the most convenient form of order would be a checked copy of the *Weekly Bulletin of Copyright Entries*, containing the titles desired. This *Bulletin* is a publication of the Treasury Department. It is available to any subscriber at a cost of \$5 per year. Subscriptions for it should be addressed to the Treasury Department, at Washington.

"2. *The Publishers' Weekly* contains almost all the titles in the *Bulletin* that would interest the ordinary library, and many of the uncopyrighted books also. Orders may be sent in the form of a checked copy of *The Publishers' Weekly*.

"3. The Library of Congress takes proofs of all its cards upon galley strips. Copies of

these strips will be sent currently to any library ordering, or likely to order, a considerable number of these cards. This distribution will have to be limited, at the beginning at least, to not more than 25 libraries. A set of the strips will, however, be sent currently to every state library commission, with the expectation that the commission will undertake to receive requisitions for cards from the smaller libraries, will consolidate them, and will forward them as orders to the Library of Congress. The cards can then be distributed, either through the state commissions (as would be more convenient to the Library of Congress), or perhaps direct to the particular institution subscribing.

"The galley strips will, of course, contain all the titles for which cards are currently printed.

"On the proofs each title receives a consecutive printer's number. The strips themselves may be cut and the titles desired forwarded as the order, with the designation of the number of copies of each card required. But the order need consist of no more than the numbers of the titles in the printer's series, as indicated upon the slips. Any library not receiving nor having access to the strips, nor choosing to employ as a check-list the *Copyright Bulletin* or *The Publishers' Weekly*, will be at liberty to send its orders in the form of a brief memorandum on sheet or slip. The description must, however, be sufficiently precise for absolute identification, to wit: author, brief title, number of volumes, date, publisher, and place of publication—in short, the imprint. In the case of a current book the information ordinarily sent to a dealer in ordering will be sufficient.

"In fact, libraries desiring these cards, for all or most of their accessions, might do well to forward to the Library of Congress, at the time of placing the order with the dealer, a duplicate (carbon copy) of their order-sheet.

"Orders for cards on sheets must be on sheets of standard letter size; on slips, must be of the size of the 33° catalog card.

Orders should be addressed: The Librarian of Congress, Washington, D. C. (Printed Cards.)

"*Price.*—Under the existing law the Librarian of Congress will act merely as the agent for the Public Printer in receiving orders and subscriptions for the cards. The law requires payment in advance. The normal charge can be determined only after experience. In the meantime, in order to initiate the undertaking, it is necessary to fix a charge which shall serve for the present. The following rates have, for this purpose, been determined upon: (a) For one copy of any card, two cents. (b) For each additional copy, 5-10 of one cent. (c) For each additional copy of any one card *where the order is received before the title goes to print*, 4-10 of one cent per copy.

"Thus, the cost per title will be: 1. To a

library requiring one copy of a card, two cents; 2. To a library requiring two or more copies, two cents for the first copy; half cent for each additional copy where the order is received subsequent to printing; 3. To a library placing an order for two or more copies of a card, *before printing*, two cents for the first copy and 4-10 of one cent for each additional copy. Fractions of a cent in any final accounting will be reckoned as a whole.

*Payment.*—Subscribers cannot determine whether their orders will reach the library in advance of printing. They cannot, therefore, determine the precise amount to remit with their orders. They may follow one of these courses:

"1. If they remit with each order, the remittance should cover the *higher* charge (two cents for the first copy; 5-10 of one cent for each additional copy). Any balance in their favor will be duly credited.

"2. They may deposit in advance with the Librarian of Congress a lump sum. They will receive a receipt and credit for this; and any work done for them will be debited against it. This method is recommended as decidedly more simple and convenient.

*Remittances.*—Must be by cheque or money order, payable to "The Public Printer, Washington, D. C." *But they are to be enclosed to the Librarian of Congress.*

"The above arrangement is to take the place of any and all arrangements heretofore proposed for the distribution of these cards by the Publishing Board of the American Library Association, in co-operation with the Librarian of Congress.

"Various details with reference to the distribution can be settled only after information as to what and how many libraries are likely to subscribe."

It is requested that all libraries receiving the circulars respond promptly, stating (a) whether they intend to subscribe and to what probable extent; (b) if they do not intend to subscribe, what modification of the plan proposed would alter their decision. Orders for cards will be received at once.

The general scope of the Library of Congress plans in this direction are set forth in a recent press interview with Mr. Putnam, reprinted and distributed with the circulars. It is, in part, as follows:

"Practically all American libraries to-day have card catalogs. In these every book appears under its author, under the subjects of which it treats, and sometimes under its title if the title differs from the subject. On an average, a book appears in from three to five different places. Now, the cards that libraries have used were in the first instance written; then they came to be typewritten, and in recent years they have in some libraries come to be printed. Printing is possible, of course, only for the larger libraries which are handling a large number of books and making

elaborate catalogs—the New York Public Library prints, the Boston Public Library, the Harvard College Library, the John Crerar of Chicago, and even the Carnegie at Pittsburgh.

"The Library of Congress has for some time been printing. It has now within its walls a branch plant from the Government Printing Office.

"Now, the cost of getting any particular book into the card catalog is far greater than the public has any notion of. There are various elements of cost. There is the work of the cataloger, who is an expert; then there is the work of the transcriber if you multiply copies of the card by transcription or by typewriter. If you print, there is the cost of composition and presswork. The stock would cost the same whether you transcribe or print. But the two most costly factors are the work of the cataloger, the expert, and the work of the compositor or transcriber. It has been estimated that on the average the total cost of getting a single book into a library catalog is from 25 to 35 cents. Not a single volume, of course. A book may be in a hundred volumes and yet represent only one title to be handled; it may be in one volume and represent 20 subjects to be handled; but on the average the cost is from 25 to 35 cents for each book, or what the librarians refer to as a 'title.'

"Until now libraries have been in effect duplicating this entire expense—multiplying it, in fact, by each one undertaking to do the whole work individually for itself. There are thousands of books which are acquired by hundreds of libraries—exactly the same books, having the same titles, the same authors and contents, and subject to the same processes. But each library has been doing individually the whole work of cataloging the copies received, putting out the whole expense. Forty years ago Prof. Jewett, then librarian of the Smithsonian Institution, conceived the notion of a central bureau which might attend to these processes, the most expensive part of them, one for all, and make available its results to the various libraries receiving identical material; but the project never came to anything.

"There have been distributions of printed cards on a small scale, or covering special subjects. The United States Department of Agriculture distributes its card indexes to subscribers paying the cost of the extra copies provided for the purpose, and is thus making generally available in convenient form, at a nominal cost, information of great value to investigators. The American Library Association has issued cards indexing certain scientific serials, and even cards cataloging certain current books. But the association has no library nor any corps of expert catalogers. For the material to be cataloged it had to depend upon voluntary gift or loan

from the publishers. The cards issued did not cover enough titles to interest a large library; they covered too many to interest a small one. Yet a subscription had to be required for the entire series. There were never more than 100 subscribers.

"Since the Library of Congress moved into the new building expectation has turned to it. It has already the largest collection of books on the western hemisphere; it is increasing more rapidly than any other single collection. It receives without cost two copies of every book entered for copyright in the United States. It receives these on or before the date of publication, and thus in advance of any other library. It receives an enormous mass of material through exchange. And it is buying a mass of other books, current and non-current, which includes a large portion of material in current acquisition by the other libraries of the United States. It is classifying and cataloging this material on its own account. It is printing the results in the form of cards. It is reclassifying and recataloging its existing collection (excluding duplicates, over 700,000 books and pamphlets), and is printing these results also on cards. These cards are of the standard form, size, type, and method of entry. The library has been in consultation for over a year past with a committee of the American Library Association—a committee of experts—in order to arrive at standards, and we have now arrived at what might be called a standard in all these respects. The card we use is called the 'postal size,' about 3 by 5 inches. There is another size (also standard) in use in some libraries called the "index size," about 2 by 5 inches. The entry on our card is so located, however, that in almost every case the 'postal size' can be cut to the 'index size' without sacrificing any of the text essential to the catalog. What the library prints is an author card. It prints by way of memorandum on the card the subject-headings that it will use on the copies destined for subject cards. The cost to it of the first author card, including the work of the cataloger, is doubtless over 30 cents for each book. But a second copy of the card can be run off for a fraction of a cent.

"Now it is receiving this urgent appeal: To permit other libraries to order extra copies of the cards which will cover books that they are acquiring; just as they are permitted to secure extra copies of the card indexes of the Agricultural Department, or, indeed, of any government publication, paying the cost plus 10 per cent.

"Should this course be adopted, the Library of Congress would be expending no greater expert labor than before; the government would be fully reimbursed for the additional mechanical work and material; and the other libraries of this country would be saved an

enormous expense, of duplicating, indeed of multiplying many times over, the outlay on the two factors of cost which are the largest factors—the work of the cataloger and the work of the transcriber or compositor. Between 1891 and 1896 there were 7,000,000 volumes added to 4000 libraries in the United States. These may have represented 500,000 different 'books' or 'titles.' The cost to catalog these once, at 35 cents a title, would have been but \$175,000. They were cataloged many times over; how many times can only be guessed, for, of course, some books were acquired by only one library, others by hundreds of libraries. Assuming that on the average each book was cataloged only six times, the total cost to the 4000 libraries was \$1,050,000. Could they have acted as a unit, having the books cataloged and the cards printed at some central bureau and multiplying copies to supply the need of each, the total cost would certainly have been kept within \$300,000. The saving effected during this short period alone would therefore have been two-thirds of the total; on the basis assumed, over \$700,000.

"American instinct and habit revolt against multiplication of brain effort and outlay where a multiplication of results can be achieved by machine. This appears to be a case where it may. Not every result, but results so great as to effect a prodigious saving to the libraries of this country. The Library of Congress cannot ignore the opportunity and the appeal. It is, as I have said, an opportunity unique, presented to no other library, not even to any other national library. For in the United States alone are the library interests active in co-operative effort, urgent to 'standardize' forms, methods, and processes, and willing to make concessions of individual preference and convenience in order to secure results of the greatest general benefit.

"The distribution of cards for the current publications may begin at once. Very likely it will cover also the publications of the present calendar year, so that the undertaking will be coeval with the century. The cards first issued will doubtless be those for the current American copyrighted books.

"The library is now printing cards at the rate of 200 titles a day, or 60,000 a year. The copyrighted books form, of course, but a small fraction of these. Thousands of the others will be of interest to other libraries and sought by them. Those of them which represent books that they possess or are about to acquire will save them expense; those that do not will still contain for them bibliographic information of value. The Library of Congress will itself include a large percentage of the books to be found in any other particular collection in the United States. The remainder will certainly be included in the contents and accessions of a half-dozen of the

other great libraries. Co-operation may enable the titles of these to be brought into the scheme of distribution, so that finally there shall actually be a centralization of this work.

"The possible and actual use of the printed cards is not confined to the main catalogs, nor indeed to the catalogs at all. They can be used in catalogs of special subjects, in the 'shelf list' of the library, and in various different records. Indeed, over a dozen different uses have been planned out for them by librarians, or in part adopted"

The circular and statement from the Library of Congress are accompanied by the following brief notice from the A. L. A. Publishing Board: "The A. L. A. Publishing Board takes pleasure in commending to the libraries the proposition contained in the accompanying circular from the Library of Congress. That library being now prepared to issue printed cards for new books direct to libraries desiring them, this board is happily relieved of the necessity of further efforts to supply this need, and will turn its attention to other co-operative work."

#### DO READERS READ?

To a recent number of *The Critic* Arthur E. Bostwick contributes an interesting analysis of library circulation statistics, entitled "Do readers read?" He points out that librarians are constantly attempting to answer the question, "What do readers read?"; "but a question that is still more fundamental and quite as vital is: 'Do readers read at all?'"

The results of Mr. Bostwick's investigation of the question are given, in part, as follows: "This is not a paradox, but a common-sense question, as the following suggestive little incident will show. The librarian-in-charge of a crowded branch circulating library in New York City had occasion to talk, not long ago, to one of her 'star' borrowers, a youth who had taken out his two good books a week regularly for nearly a year and whom she had looked upon as a model—so much so that she had never thought it necessary to advise with him regarding his reading. In response to a question this lad made answer somewhat as follows. 'Yes, ma'am, I'm doing pretty well with my reading. I think I should get on nicely if I could only once manage to read a book through; but somehow I can't seem to do it.' This boy had actually taken to his home nearly a hundred books, returning each regularly and borrowing another, without reading to the end of a single one of them.

"That this case is not isolated and abnormal, but is typical of the way in which a large class of readers treat books, there is, as we shall see, only too much reason to believe.

"The facts are peculiarly hard to get at. At first sight there would seem to be no way to find out whether the books that our libra-

ries circulate have been read through from cover to cover, or only half through, or not at all. To be sure, each borrower might be questioned on the subject as he returned his book, but this method would be resented as inquisitorial, and after all there would be no certainty that the data so gathered were true. By counting the stamps on the library book-card or dating-slip we can tell how many times a book has been borrowed, but this gives us no information about whether it has or has not been read. Fortunately for our present purpose, however, many works are published in a series of volumes, each of which is charged separately, and an examination of the different slips will tell us whether or not the whole work has been read through by all those who borrowed it. If, for instance, in a two-volume work each volume has gone out twenty times, twenty borrowers either have read it through or have stopped somewhere in the second volume, while if the first volume is charged twenty times and the second only fourteen, it is certain that six of these who took out the first volume did not get as far as the second. In works of more than two volumes we can tell with still greater accuracy at what point the reader's interest was insufficient to carry him further.

"Such an investigation has been made of all works in more than one volume contained in seven branches of the Brooklyn Public Library, and with very few exceptions it has been found that each successive volume in a series has been read by fewer persons than the one immediately preceding. What is true of books in more than one volume is presumably also true, although perhaps in a less degree, of one-volume works, although we have no means of showing it directly. Among the readers of every book, then, there are generally some who, for one reason or other, do not read it to the end. Our question, 'Do readers read?' is thus answered in the negative for a large number of cases. For some reason or other, many persons begin to read books that fail to hold their attention. In a large number of cases this is doubtless due to a feeling that one 'ought to read' certain books and certain classes of books. A sense of duty carries the reader part way through his task, but he weakens before he has finished it.

"In the following table, the average circulation of first volumes, second volumes, etc., is given for each of seven classes of works. The falling off from volume to volume is noticeable in each class. It is most marked in science, and least so, as might be expected, in fiction. Yet it is remarkable that there should be any falling off at all in fiction. The record shows that the proportion of readers who cannot even read to the end of a novel is relatively large. These are doubtless the good people who speak of Dickens as 'solid reading' and who regard Thackeray with as remote an eye as they do Gibbon."

## State Library Associations.

### CONNECTICUT LIBRARY ASSOCIATION.

*President:* H. M. Whitney, Blackstone Library, Branford.

*Secretary:* Miss Anna Hadley, Ansonia Library.

*Treasurer:* Miss J. P. Peck, Bronson Library, Waterbury.

Tuesday morning, October 29, members of the Connecticut Library Association journeyed to the little town of Salisbury to hold the fall meeting in the Scoville Memorial Library. The morning hours were devoted to the library building, but soon after luncheon those present, together with a great many townspeople, gathered in the assembly hall where Rev. John Calvin Goddard welcomed the association in the name of the trustees of the library. The board of trustees of the Scoville Memorial Library sets apart each year one day which is called "library day," when it receives friends of the library and furnishes a literary and musical program for the entertainment of its guests. This year October 29 was named as "library day" and the members of the Connecticut Library Association became guests of honor. The musical program, conducted by Mr. Elisha Chapin and Miss Chapin proved a rare treat, while Dr. Joseph Anderson of Waterbury in his address entitled "The preservation of the beautiful in nature and life" gave his hearers many suggestive as well as beautiful and inspiring thoughts. Miss Dotha Stone Pinneo gave two of her "True stories"—"Black Philip" and "The Colorado girl"—in her usual bright and captivating manner.

Afternoon tea was served at five, after which guests retired to the homes in which they were to be entertained for the night. At eight o'clock members reassembled at the library and the regular session of the association was opened with the president, H. M. Whitney, in the chair. After routine business had been transacted, those present listened to a paper by Mrs. Agnes Hills of the Bridgeport Public Library, "The public library and the people" in which the librarian and the school teacher of the present day were roundly scored.

Mrs. Hills' paper presented many of the superficialities found in methods of "popularizing" the library and forcing the reading habit, and set forth, by implication at least, the advantages of making haste slowly in any field of work. Miss Grace Warner had prepared a paper on "Architecture and its message," which was read in her absence by Miss Alice T. Cummings, of the Hartford Public Library. Miss Warner traced through architecture the development of a period, a nation, a race.

During the session Mr. and Miss Chapin entertained the audience with most delightful musical selections.

The following morning at 9.30 the second

session was opened by Miss Helen Sperry of the Bronson Library, Waterbury, who gave a very pleasing sketch of the trip to Waukesha and return, outlining the work of the A. L. A., giving most clearly reasons for becoming members of the association and citing the advantages and influence of attending, if possible, the yearly conferences.

Mr. George Stockwell, of the Westfield (Mass.) Athenæum, followed with a paper, "The library institute," in which he told the association of the new work undertaken this year by the Western Massachusetts Library Club by which the members hope to become more intimately related with the small libraries of the western portion of their state, and by so doing to raise the general standard of those libraries. Mr. Stockwell spoke of libraries depending upon yearly appropriations of \$5 for the purchase of books, of the expense and time for attending regular library meetings—problems which confront the librarians of many such libraries, and of the club's desire of taking the meetings to the libraries, so to speak. On holding an institute in one of a group of small towns, one of the officers of the club visits the locality, and by talking with library officials, school teachers and prominent men of the town in question and its neighbors arouses a personal interest in the coming Institute. Programs are prepared which shall interest not only the librarians but the schools and the people. In one such town depending upon a five dollar yearly appropriation, the dinner served the visitors attending a recent institute netted the library some \$16 for the purchase of books. Three institutes in the spring and three in the fall are of benefit to at least 30 towns. At the close of his interesting paper, Mr. Stockwell asked for the co-operation of the Connecticut Library Association in work along the western borders of the states. A motion was immediately made and carried to that effect.

Miss Caroline M. Hewins then gave her paper, read at the A. L. A. meeting, entitled "Book reviews, book lists and articles on children's reading—are they of practical value to the children's librarian?," repeated at the request of those not fortunate enough to have heard the paper at Waukesha.

A "Clearing-house half-hour" followed, and as members had come prepared with lists of duplicates of which they would dispose for equally valuable volumes or for cash, one heard of "wants" of various libraries supplemented by lists of works for which certain libraries have no need.

The meeting was adjourned at 11.30 until the winter and annual meeting to be held in February in New Britain.

The members intending to remain in Salisbury until late afternoon trains were treated to most delightful drives about the picturesque town and its adjoining neighbors.

ANNA HADLEY, *Secretary.*

**DISTRICT OF COLUMBIA LIBRARY ASSOCIATION.**

*President:* F. A. Crandall, Office of Documents.

*Secretary:* Hugh Williams, Library of Congress.

*Treasurer:* F. E. Woodward, 11th and F streets, N. W.

The 57th regular meeting of the District of Columbia Library Association was held at the Columbian University, Wednesday evening, Oct. 9, at 8 o'clock. After the transaction of routine business, brief addresses on their bibliographical experiences during the summer months were made by Col. Weston Flint, of the Washington Public Library; Mr. Theodore L. Cole, of the Statute Law Book Company; Dr. Cyrus Adler, of the Smithsonian Institution; Mr. Edward L. Burchard, of the Coast and Geodetic Survey Library; Dr. Henry Carrington Bolton, and others.

Col. Flint and Mr. Cole spoke of their visit to the American Library Association conference at Waukesha. Col. Flint compared that meeting with those of 20 years ago. He was impressed with the vast amount of work which was now being done through committees, the prominence given to children's libraries, the social features of the meeting and the large number of women attending in proportion to the attendance of men. Mr. Cole was particularly interested in the discussion over the relation of the bookseller to the public library, and that of Mr. Iles and Prof. Ely over the evaluation of literature.

Dr. Bolton told of his experiences in the Biblioteca Nazionale di Brera of Milan, which was the only library he visited during the summer. In making his way through the library he was informed by every employe he met that the building was closed. On reaching the librarian he was served very graciously. He was the only reader in the building at the time.

Dr. Adler told of the progress made in the "International catalogue of scientific literature." The business offices for the catalog are now independent of the Royal Society. It is expected that the first volumes will appear in April. He also described the travelling library established by the institution in the National Zoological Park for the employes of the park, a box of books being sent every month. Miss Irene Gibson then explained the attempts made by various organizations to establish travelling libraries within the city.

Mr. Burchard, who had travelled extensively in Great Britain and Ireland, spoke at some length of the impressions gathered of the library systems, especially of England. He was very much pleased with the union of the public library, museum and art gallery, and advocated its adoption in this country. In London he noticed that there were travelling museums and galleries as well as libra-

ries. He also described the methods employed in caring for and preserving maps in the Hydrographic Office and Ordnance Survey, subjects in which he was especially interested. In regard to the union of the library, museum and gallery, Col. Flint and Dr. Adler held that it did not work to advantage in large cities, but was more practicable in small places.

The meeting adjourned at 9.30. There were 30 present. HUGH WILLIAMS, *Secretary*.

**INDIANA LIBRARY ASSOCIATION.**

*President:* Miss Jennie Elrod, Public Library, Columbus.

*Secretary:* Miss Anna G. Hubbard, State Library, Indianapolis.

*Treasurer:* Arthur Cunningham, State Normal School, Terre Haute.

The 10th annual meeting of the Indiana Library Association was held in the State House, Indianapolis, Oct. 29 and 30.

Miss Marilla Waite Freeman, of Michigan City, as president, made a brief opening address in which she called attention to the important results in library matters which had been obtained in the state during the past year. The library commission, both by the travelling libraries and through the efforts of Miss Hoagland, state organizer, has aroused great enthusiasm, and the new library law is promoting the formation of new libraries.

"Recent library legislation in Indiana" was discussed by Hon. E. E. Mummert, of Goshen. He pointed out a few defects in the act which aside from these is considered one of the best library laws in any state. It is believed that the generous donations which so many towns in the state have received from Mr. Carnegie are due to its wise provisions.

Miss Merica Hoagland, state organizer, read a paper upon "Relation of the public library commission to libraries of the state," in which she said as personal work was the greatest assistance therefore the organizer was the greatest help. The week's course of instruction, to follow the meeting of the association, is only open to persons actually engaged in library work and the new librarian is urged to attend a regular library school. Seventeen applied for this course and in May the commission hopes to provide a four weeks' institute, and also hopes to publish bulletins and lists of books at that time. Following the paper a question by Miss Ahern elicited the information that library trustees were admitted to the institute and that one would be in attendance. Mr. Mummert said the greatest impulse for the formation of new libraries comes from a visit by the organizer, pointing out the provisions of the law.

"Co-operation in collecting material," by W. E. Henry, state librarian, showed the clearing house scheme of the state library. He said the libraries of the state are invited to contribute magazines, books and especially any

pamphlets or other material bearing upon the history of the state, and in exchange will be sent numbers, and, in some instances, sets of magazines which they lack. No expense other than the cost of transportation one way is attached to the plan.

The evening session was held in the parlors of the Hotel English when W. A. Millis, superintendent of the Crawfordsville schools, read a very interesting paper on "The library and the school—their relationship." Following this was an informal reception, refreshments being provided by the Bowen-Merrill Co.

Miss Belle S. Hanna, of Greencastle, read a paper Wednesday morning upon "Reference work with children" in which she said that reading is for information, recreation and inspiration, and that reference work pertains to the first. As reading is only a means to an end children should be taught to read topically and to economize time by the use of indexes and other helps.

"Apportionment of time in a small library" was dealt with by Miss Nellie B. Fatout, of Elwood, in part as follows. When there is only one person in a library the work resolves itself into two classes, things requiring immediate attention and those which may be postponed. Under the first come attention to borrowers, the filing of magazines and newspapers, and answering of business correspondence. The second class includes cataloging, book lists, and lists for certain days. Again the work is subdivided under show work and substantial. The first includes picture bulletins, special days, and advertising schemes; the second, wise selection of books, cataloging and classification. The substantial should always have precedence over show work. In the discussion which followed Miss Ahern insisted that a ten hour work day was too long as there was not sufficient time left for recuperation. Mrs. Stein, of Lafayette, objected to depending upon untrained apprentices for assistance, as they were usually placed at the loan desk where the most capable service was required, rather than the least effective.

A paper upon "What critical magazines give the best aid in selecting books" was read by Miss Jennie Elrod, of Columbus. The omission of any mention of books which did not reach a certain standard was criticised as leaving the librarian no guide other than the publisher's notice. Among the magazines mentioned *The Dial*, *The Nation*, and *The New York Times Saturday Review* were most highly recommended. In discussing the paper Mr. Cunningham thought it might be well to add to those mentioned *The Athenaeum* and *Academy*. By inquiry it was found that some library boards in the state would not subscribe to or furnish any critical magazines.

As Miss E. G. Browning of Indianapolis was ill and could not be present, the "Report of the A. L. A. meeting at Waukesha" was given

by Miss M. E. Ahern. She said that the only reason Indiana did not secure this session was because the invitation from Wisconsin was received first. The meeting was the largest ever held, that is of people directly interested in library work. She called upon several persons to express their opinion as to the dominant note in the Waukesha meeting. Among the points mentioned was the hospitality of the Wisconsin people; the cordiality of the A. L. A.; children's work; and the element of self dependence. Miss Ahern closed by saying that the point of view was so enlarged by attending an A. L. A. meeting that life could never be the same afterward.

A "Library building symposium" was the feature of the afternoon session and was very gratifying both in point of interest and attendance, especially by trustees. It was opened by a paper on "Library buildings," by E. N. Lamm, an architect from Cincinnati. In his opinion the best results may be obtained from considering the common people. The location should be in the business portion of the town and if possible have a large lot with good drainage. Select the architect as you would a librarian and by all means avoid competition. One story is usually considered the best, and plan for the public to have direct access to shelves. The greatest economy of administration is obtained from one room with the desk in the center.

Mr. E. E. Mummert followed with an exhibition and description of the plans of the Goshen library building. It is to be 75 x 48 ft. and built of Bedford stone. He also related how they secured their donation from Mr. Carnegie. Mrs. Lura E. Woodworth said the women's clubs of Fort Wayne, with the endorsement of the city officials secured their gift of \$75,000. She also exhibited the plans of the building. Mrs. Sailor, of Elwood, said they secured their donation by the mere expenditure of four cents postage. T. F. Rose, of Muncie, after briefly describing their site and how it was selected introduced their architect, Mr. McHuron, of Fort Wayne, who gave a very interesting talk on library buildings in the eastern cities. He urged simplicity of design both as to architecture and as to the interior arrangements. He also exhibited plans of the Muncie and Elkhart buildings. G. W. Webster, a trustee of Marion, read an instructive paper on the work and plans at that place. They hope to make the library a center for the culture of the county and expect to go before the next legislature with a bill to permit the county to use the library. Mr. Moore, of Marion, also assisted in explaining the plans. Dr. L. O. Malsbury told what they were doing at Peru. Their building will be of Bedford stone. The enthusiasm of this session left no doubt in the minds of those present that the trustees are fully alive to their duties and responsibilities.

"Open shelves" was the subject of a paper

by Mrs. Ida Gruwell, of Marion. She said free access had increased their circulation very materially, that last year they loaned 50,000 books on 8000 volumes, and that in four years of access to shelves only eight books had been lost.

At the closing session which was held in the evening Miss Jessie Allen, of the Indianapolis Public Library, read a very interesting and instructive paper on "Library work in social settlements." She read letters from various workers in Chicago and elsewhere demonstrating what excellent results had been obtained.

The "Question-box" as conducted by Miss M. E. Ahern proved very interesting, many troublesome points in administration being solved.

Upon a motion by Mr. Henry a committee on architecture which might be consulted as to the essential things which every library building should contain was appointed by Miss Freeman as follows: W. E. Henry, chairman, Miss Merica Hoagland, Mrs. E. C. Earl, Jacob P. Dunn, and Joseph R. Voris.

A committee to consider amendments to the constitution was appointed as follows: Mrs. E. C. Earl, chairman, Arthur Cunningham, Miss Jessie Allen.

The following officers were elected for the ensuing year: President, Miss Jennie Elrod, Columbus; vice-president, E. E. Mummert, Goshen; secretary, Miss Anna G. Hubbard, State Library; treasurer, Arthur Cunningham, State Normal Library, Terre Haute.

Mrs. Colerick presented the following resolutions of thanks, which were unanimously adopted: to the Bowen-Merrill Co. for their hospitable entertainment; to the local committee, Miss Anna G. Hubbard, Miss E. G. Browning, and Miss Merica Hoagland for their courteous and thoughtful arrangements for the meeting; to the president and other officers for the successful and interesting session, and to Miss M. E. Ahern for helpful suggestions and the keen interest manifested.

JENNIE ELROD, *Secretary*.

#### IOWA STATE LIBRARY ASSOCIATION.

*President*: F. C. Dawley, Cedar Rapids.

*Secretary*: Miss Margaret Brown, Chariton.

*Treasurer*: W. H. Douglas, Grinnell.

The 12th annual meeting of the Iowa Library Association was held in Burlington, from October 9-11, and proved perhaps the most important and successful in the history of the association. The attendance was large and thoroughly representative, the program proved most interesting, and the whole atmosphere of the meeting was thoroughly stimulating and enjoyable.

Sessions were held in the auditorium of the fine Public Library building, which was in itself a center of interest to the library visitors, and the social features included a delightful reception tendered to the librarians

by Mr. and Mrs. P. M. Crapo, of the library board, an afternoon trip upon the river, and an informal evening reception, on the occasion of Mr. Putnam's address.

The first session was opened at two o'clock on the afternoon of Wednesday, Oct. 9. In the absence of the president, A. P. Fleming, Mrs. H. M. Towner, of Corning, presided, and won praise from the Burlington *Hawkeye*, as "the best chairman who has wielded the gavel in Burlington in many a long day." The address of welcome was delivered by Hon. P. M. Crapo, and the subject of "Library extension" was then considered in three aspects—in state, county, and city, by Johnson Brigham, Miss Alice M. Tyler, and J. M. Brainard, who outlined methods of popularizing library privileges and urged the broadening and deepening of library opportunities. "The child in his kingdom—the library" was the subject of an admirable paper by Miss M. E. Dousman, of the Milwaukee Public Library. Especially suggestive were her views upon the influence of the library book in the home where other books were positively unknown. She developed the fact that the child may be led up to citizenship, to the proper performance of civic duties, through the library. She showed how the fathers and mothers were educated and elevated by the little folks, who were given a broader education at the public library, and laid especial stress upon the fact that the standard of literature for children should be raised; that there should be no cast-iron rules, but that the books should be distributed judiciously by librarians, who are "in touch" with the little folks. Given these conditions, the library is the greatest educator of the time.

"Libraries and schools" were discussed by Miss Emma Fordyce, of Cedar Rapids, who spoke without notes. She said that the common people needed education and especially that best education which looks at the world's wonders through the eyes of a gifted man, and she pointed to that not very distant future when every school house will have its own library, with a gifted and experienced librarian and a collection of good books, forming an educational medium of inestimable value, not merely for scholars, but for all residents of the vicinity.

In the evening a most enjoyable reception was given by Mr. and Mrs. P. M. Crapo at their home, in honor of the Iowa Library Association and of Mr. Putnam, Librarian of Congress.

Thursday morning's session, under the chairmanship of F. C. Dawley, opened with a short business meeting, and appointment of committees. Miss Ella McLoney, of the Des Moines Public Library, read a paper on "The librarian and the public," full of practical advice and common sense. This was followed by an interesting discussion led by Royal Holbrook, of Ottumwa, who pointed out the

difference between librarians and book lovers and the necessity of having the former in the library, that being no place for the mere book lover. He said that fiction was the most dangerous element the library has to contend with and regarded the percentage of fiction issued as a deplorable fact. This is partially due to the reader never having been directed to other lines, and it should be a duty of the librarian to influence readers to other reading. This subject of fiction opened an animated discussion on the good and harm of fiction reading. The themes of much of the fiction should not be sent out by the librarian as educators. Not more than one-fifth of the books in the library should be fiction, and it should be carefully selected. In small libraries the proportion of fiction was much greater. A distinction should be made in the books meant for mature and immature minds.

Herbert Putnam, Librarian of Congress, was then introduced and reported upon the plans for furnishing printed catalog cards through the Library of Congress.

Charles Lawrence Mauran, of St. Louis, followed with an interesting and very comprehensive paper on "The housing of books," speaking from the experience of a practical architect.

The topic, "The library as an intellectual center: obligations of citizens to the library," was introduced by Mrs. H. M. Towner, and further considered by Senator G. M. Titus, of Muscatine, on "Trustees," Miss Harriett Wood, of Iowa City, on "Women's clubs," and Mrs. Hayners on "Business men."

For the afternoon an excursion on the river had been arranged, which proved most enjoyable; and in the evening a large audience greeted Mr. Putnam, who delivered a stimulating and delightful address on "The book and the people."

The session for Friday morning opened with the presentation of committee reports. A legislative committee was appointed, including F. C. Dawley, chairman; G. M. Titus, of Muscatine, and Mrs. Battis, of Marshalltown. The nominating committee reported the appointment of the following officers for the coming year: Mr. Dawley, president; P. M. Crapo, of Burlington, vice-president; Miss Margaret Brown, of Chariton, secretary; Mr. W. H. Douglas, of Grinnell, treasurer; and on the program committee, Miss Tyler, of Des Moines; Mrs. Battis, of Marshalltown, and Mrs. Towner, of Corning.

Captain Johnson read resolutions of respect regarding the late Hon. Theo. S. Parvin, which were unanimously adopted. It was decided to meet next year at Grinnell. A resolution was passed, approving the plans for a model library building in connection with the Louisiana Purchase exposition to be held at St. Louis.

A committee, including Miss Tyler, Miss Carey, of Burlington, and Miss McLoney, of

Des Moines, was appointed to revise and explain the by-laws of the association.

"College libraries," their management and problems, were discussed in a section meeting, when papers were read on "The machinery of a college library," by Miss Bertha Ridgeway, of Grinnell College Library; and "The college student in his library," by W. H. Douglas, of Grinnell College.

A "Round table of practical work" proved helpful and interesting. The subjects discussed included government documents, newspapers and reports, library hours, charging system and book selection.

A short afternoon session was held, when resolutions of thanks for the many local courtesies were adopted, a paper on "Co-operation among the college libraries of the state" was read by Miss Carpenter, and a "question box" conducted by Miss M. E. Ahern closed the proceedings.

A special meeting of trustees was held, at which was organized a Trustees' Section of the Iowa State Library Association. Mrs. Towner was appointed chairman of the meeting and permanent chairman of the section. Mrs. Van Vechten was appointed secretary of the meeting and permanent secretary of the section. The following resolutions were passed:

"That the state library commission be asked to set aside a corner of the bulletin for matters of special interest to the trustees of public libraries, to be known as the trustees' corner.

"That the state library commission be petitioned to arrange for uniform reports from all public libraries in the state."

Discussions followed on things of interest to the trustees.

#### MASSACHUSETTS LIBRARY CLUB.

*President:* Hiller C. Wellman, Public Library, Brookline.

*Secretary:* G. E. Nutting, Public Library, Fitchburg.

*Treasurer:* Miss Theodosia Macurdy, Public Library, Boston.

The fall meeting of the Massachusetts Library Club was held in Boston, Thursday, Oct. 31, in the lecture hall of the Boston Public Library. Mr. Lucius P. Lane, of the Public Library, opened the session at 10 a.m. with a brief résumé of the A. L. A. conference at Waukesha. He was followed by Mr. Otto Fleischner, of the Public Library, who spoke on "Fine arts collections—books and pictures—for small libraries." A mimeograph list of books prepared by Miss Hitchcock, of the fine arts department, was distributed. This list was made up of books which could easily be procured and were comparatively inexpensive. Mr. Fleischner commented at some length on the list, explaining why certain titles were included and others excluded. After explaining the method of cataloging and arranging pictures in the Public Library, he called attention to the method used by the Brookline Public Library as excellent for

small collections, and that of the Massachusetts Institute of Technology as best for large collections.

The women's clubs he considered as the best help a library could have in starting such collections, and he approved of the grouping pictures around a place as the Library Art Club has done, having the pictures cover the architecture, sculpture and painting. Travel clubs, too, can help the library. He called attention to the colored photographs (10 x 14 in.) sold by the Detroit Photo Co. at 20 cents, which are good enough for geographical study.

The stereoscopic pictures which are being introduced to the libraries he considered good, but the best way of keeping the pictures has not been solved. This was the subject of some desultory discussion at a later time.

The chief paper of the morning was by Mr. Leon H. Vincent, entitled "A plea for better colloquial English." By way of prefacing his remarks Mr. Vincent stated that physically Americans were the cleanest nation on the face of the earth; we wash everything that is washable and accessible; we are in advance of all other countries in public and home sanitary skill, and we take as much pains in the care of our garments as in the care of our persons; but we are wholly tolerant of all kinds of oddities and vulgarisms in the use of that noble tongue which is one of the greatest gifts of the old world to the new. The protest, therefore, which he set out to make was against the corruption of familiar and colloquial speech by people who ought to know better. Mr. Vincent said, in part: "In America we have many good talkers, but we have no widespread interest in the art of conversation. In at least one nation of Europe (France) there is a healthy condition of mind on this subject, and for 300 years the French have regarded conversation as one of the fine arts; they have reflected on the meaning of words, they have polished their sentences, they have spent time and labor in the practice of the interchange of ideas. We in America have a good deal to learn from the French, for when we can show history like French history, art like French art, or academic influence like that of the Académie Française, a government theatre like theirs, then, and then only, may we cease to criticise a nation from whom we have so much to learn. To be sure, the French know only their own tongue, but they do know how to speak it; but how many Americans know how to speak English?"

"Our indifference in this important matter may be traced to two things, first our passion for novelty, which makes us lose sight of the fine old pieces of English literature, and by not reading the older books we deprive ourselves of a standard; we don't know what is English and what is not. This passion for novelty will be the death of us, for there is nothing we Americans stand so much in fear of as the implication that we are not up to date. Tell us we are wicked, but don't tell

us we are slow. We must be up with the times, wherever the times happen to be. Unless we come in contact daily with the best English, how are we going to know what the best English is? We cannot talk in Addison's phrases, but we must know Addison in order to have a touchstone for the purity of our own phrases.

"Our greatest danger is from hideous new words, recent false coinages, which get into circulation and damage the colloquial language almost irremediably. We do not need more new words. When the chemists discover a new element there must be a verbal symbol to express it; but occasions of such importance are rare. Already the language is incomparably rich in words, yet the most dreadful terms are continually getting into circulation. Why try to invent words we do not need? We ought to avoid those words which stamp us as Americans the moment we go abroad. There are picturesque differences between the mode of speech of different nations which may be tolerated; but when a good word is distorted from its traditional sense it is our duty to protest. Many people cannot end a sentence. They talk on, phrase after phrase, codicil after codicil; nothing is complete, separate, distinct. Let us rid our speech of useless expletives, introductory words, mere stop gaps and verbal paddings. The habit of slovenly speech begets a habit of slovenly thinking; we should do what we can to stem the tidal wave of incorrect, vicious, slangy speech that threatens to engulf us. There is little hope for the English language in America unless the public conscience is aroused. The colleges have little or no apparent influence. The average college-bred man talks no better than any one else. Sometimes he is grammatically vicious and shamefully slangy, and he caps the climax by being proud of the fact. I plead with you in behalf of the traditional English; honor it, love it, protect it; such respect is one form of patriotism. Let us prove our right to the inheritance of this noble English by the use we make of it. This is the least we can do."

The new scheme of discounts as adopted by the Publishers' Association was outlined, and the following were chosen as a committee on the cost of books: Messrs. Gifford, Fleischer, Dana, Jones, Dr. Wire, and Miss Macurdy, chief of the Boston Public Library order department.

Mr. Whitney, of Boston, Mr. Lane, of Harvard, Mr. Gifford of Cambridge, Mr. Bolton, of the Athenæum, and Mr. Faxon were appointed to take charge of the arrangements for the coming of the A. L. A. next year.

The club endorsed the resolutions adopted by the New York Library Association: "The proposal of the St. Louis Public Library to secure, at the Louisiana Purchase Exposition of 1903, the erection of a model library building, and to place in it a model library, fully equipped and in actual operation, presents an

opportunity never before offered to the librarians of the country to fasten public attention on the free library and its vital relations to the national welfare."

The afternoon session was opened by Mr. C. W. Ayer, of Brockton, who read a paper on "The classification of music." He was followed by Mr. E. B. Hunt, of the Public Library, who told of the arrangement of the Allen Brown collection in the library and explained some of the special points of its dictionary catalog. Each composition is catalogued under its composer, the title and the form in general. Mr. Putnam then read a paper on "Copyright and patent-right—some variances," and ended with a brief statement of the plans of the Library of Congress for the distribution of its catalog cards.

The meeting closed with an announcement by Mr. W. H. Tillinghast that the Massachusetts State Library would soon issue to the public libraries of the state a pamphlet containing the titles of the Massachusetts public documents, 12-volume set, annual reports from the beginning and special reports and papers for 1808-1899, and that the A. L. A. Publishing Board would issue a limited number of sets of cards for the same titles at \$1.75 per set.

#### MINNESOTA LIBRARY ASSOCIATION.

*President:* Miss Alice N. Farr, Public Library, Mankato.

*Secretary:* Miss Clara Baldwin, State Library Commission, Minneapolis.

*Treasurer:* Mrs. Lilian G. Tandy, Public Library, Red Wing.

The ninth annual meeting of the Minnesota Library Association was held at Stillwater, Oct. 14 and 15. It was the most satisfactory meeting ever held by the association. The sessions were held in the high school auditorium. The first session was opened at 2 p.m. on Monday, when after a few words of greeting, Warren Upham, secretary of the State Historical Society, read a paper on "Our state publications." On behalf of the state library commission it was announced that the commission had agreed to prepare a pamphlet list of these publications. Mrs. C. M. Beals, of the St. Paul Public Library, spoke on "Reference work"; and Willet M. Hays, of the University of Minnesota, presented the subject "How the library can aid agriculture." In the discussion that followed the general opinion seemed to be that in view of the vast agricultural resources of the state effort should be made to include in the public libraries more literature dealing with agriculture. A resolution was passed, favoring the bill now pending in Congress for reduced postage rates on library books circulated in rural communities.

Other papers read were: "Beginnings of an art library," by Miss Katherine Patten; "The children's department," by Mrs. A. C. Ellison; and "Work with the children," by Miss Agnes Libby.

An evening session was held when pleasing musical selections were rendered, and Willis M. West, of the University of Minnesota, delivered a lecture on "History and literature." At the morning session of Tuesday, papers were read on "Selection and purchase of books," by Miss Jessie McMillan, and "Library architecture," by Mrs. Marie E. Brick, of the St. Cloud Public Library. There was a short business meeting, and a brisk "round table" discussion of technical questions was held. Officers were elected as follows: President, Miss Alice N. Farr; vice-president, Miss Minnie McGraw; secretary, Miss Clara Baldwin; treasurer, Mrs. Lilian G. Tandy.

#### MISSOURI LIBRARY ASSOCIATION.

*President:* Mrs. C. W. Whitney, Public Library, Kansas City.

*Secretary-Treasurer:* J. T. Gerould, University of Missouri, Columbia.

The second annual meeting of the Missouri Library Association was held in Kansas City, Mo., on the 24th and 25th of October. Invitations had been sent out to all the librarians in the states of Kansas, Nebraska, Iowa, Texas and Oklahoma, and a considerable number of delegates were present from the three first mentioned. About 50 people came from outside of the city, and a most instructive meeting was held. The keynote of the program was the small library in the small town, its organization and equipment. Special attention was given to the relation existing between the library and the school.

The first session opened on the morning of Oct. 24 by an address of welcome delivered by General Milton Moore, of Kansas City. Mr. Frederick M. Crunden, the president of the association, responded with a few words, and then called upon the Hon. J. V. C. Karnes to tell something of the history of the Kansas City Public Library. The rest of the morning was spent in the inspection of the library building and in social gatherings. The afternoon session was opened by a paper read by Miss Buchanan, librarian of the Pittsburg (Kan.) Library, on the subject "The organization of a town library." Miss Thompson, the librarian of the Public Library at Jefferson City, Mo., led the discussion, which was participated in by a large number of those present. At this point a resolution was introduced asking for the co-operation of the Federation of Women's Clubs, then in session at St. Joseph, in an effort to secure a state library commission. After the passage of this resolution the regular program was resumed by a paper on "The qualifications and duties of a librarian," by Miss Julia Walsh, librarian of the Public Library, Ottawa, Kan. Mr. James I. Wyer, of the University Library, Lincoln, Neb., opened the discussion, dealing with the question from the standpoint of a college librarian. One of the most interesting discussions of the entire meeting was one

brought out by a paper read by Miss Julia Krug, superintendent of the children's department of the St. Louis Public Library, on "The children's department to awaken public interest." She was followed by Miss Helen Read, of the children's department at the Kansas City Public Library, and by several others. The question of "The reference department as a foundation for the development of a library" was treated by Rev. Henry Hopkins, of Kansas City, and "The best form of catalog for the public library" was discussed by Miss Smith, of Sedalia, and Miss Phelps, of the University of Missouri Library.

In the evening a reception was tendered to the visiting delegates by the people of Kansas City, in the Public Library building, and the delegates had an opportunity of meeting in a very pleasant way those who are most interested in the library work of the city, and who had been instrumental in showing so many courtesies to them.

The third session, Friday morning, was perhaps the most instructive of any during the meeting. Prof. J. H. Hill, of Emporia, Kan., opened it with a paper on "The school and library." He was followed by Hon. J. V. C. Karnes and Superintendent J. M. Greenwood, of Kansas City. Mr. Edward P. Wilder, of Topeka, Kan., and Mr. Purd B. Wright, librarian of the St. Joseph Public Library, then discussed "Popularization of the library." "Branch libraries and delivery stations" were considered in a paper read by Miss Edith Tobitt, librarian of the Public Library of Omaha, Neb., and the discussion was opened by Mr. Crunden. The session was terminated by a question box, conducted by Mr. Crunden, and the business meeting of the Missouri association. The following officers were elected: President, Mrs. Carrie Westlake Whitney, librarian Public Library, Kansas City; 1st vice-president, Miss Faith E. Smith, librarian of the Public Library, Sedalia; 2d vice-president, Miss Sula Wagner, Public Library, St. Louis; secretary and treasurer, J. T. Gerould, State University Library, Columbia.

The committee appointed at the last meeting of the association to prepare and secure the passage of a bill calling for a state library commission, reported that the bill introduced at their instance had failed to pass. The committee was continued and instructed to co-operate with other committees to be appointed for this purpose by other organizations.

A resolution was passed endorsing the project to locate on the grounds of the Louisiana Purchase Exhibition a model library, complete in arrangement, equipment and books. A committee was appointed to secure the co-operation of the friends of public libraries in an effort to secure this building.

It was also resolved that the state teachers' association be asked to consider at their next meeting the subject of the relation between

the school and the library, and also that their co-operation be requested in the matter of a state library commission.

A resolution of thanks for the many courtesies extended by the people of Kansas City was also passed.

After deciding that the next meeting of the association should be held at Sedalia, the convention adjourned.

During the afternoon the visiting delegates were entertained by a very enjoyable tally-ho drive about the city.

J. T. GEROULD, *Secretary.*

#### NEW JERSEY LIBRARY ASSOCIATION.

*President:* S. G. Ayres, Drew Theological Seminary Library, Madison.

*Secretary:* Miss Bertha S. Wildman, Public Library, Madison.

*Treasurer:* Miss Sarah S. Oddie, Public Library, East Orange.

The 12th annual meeting of the New Jersey Library Association was held at the Newark Free Public Library, on Wednesday, Oct. 30, 1901. The morning session opened at 10.30, A. E. Bostwick, vice-president, in the chair. After a few words of welcome from Miss Winsor, acting-librarian of the Newark library, and response by Mr. Bostwick, the following program was presented: "The library and the child," by Miss S. Augusta Smith, Montclair, N. J.; "Books for young readers," by Everett T. Tomlinson, member of the state library commission; address on books by Rt. Rev. Mgr. G. H. Doane; and presentation and discussion of the tentative "List of books for New Jersey libraries," prepared by the state library commission, opened by Miss Wildman.

Luncheon was served in the empty art gallery on the top floor of the library, and after lunch the new building was inspected from garret to cellar.

The afternoon session was devoted to business. The following officers were elected for the coming year: President, S. G. Ayres, Drew Seminary Library, Madison, N. J.; 1st vice-president, H. C. Deats, Flemington, N. J.; 2d vice-president, Miss Elizabeth H. Wesson, Orange Public Library; secretary, Miss Bertha S. Wildman, Madison Public Library; treasurer, Miss Sarah S. Oddie, East Orange Public Library.

CLARA WHITEHILL HUNT, *Secretary.*

#### OHIO LIBRARY ASSOCIATION.

*President:* S. L. Wicoff, Sidney.

*Secretary:* E. C. Williams, Cleveland.

*Treasurer:* Miss Grace Prince, Springfield.

The seventh annual meeting of the Ohio Library Association was held in Sandusky, Oct. 1-4. It is now almost settled as a definite policy of the association that its meetings will be held the first week in October. This is in accordance with a plan talked over

informally at Waukesha, to have state meetings follow each other in regular order, so that any one finding himself able to attend several of these meetings would not be confronted with a conflict of dates. Owing to an arrangement made at that time the New York state meeting at Lake Placid was put a week earlier than at first intended, and by this arrangement both New York and Ohio were able to have the pleasure of Mr. Putnam's presence. From Ohio Mr. Putnam went on to the Iowa meeting, which came the next week.

The first week in October in Ohio generally gives very pleasant weather, and this year was no exception. The weather was delightful, and the pretty city of Sandusky was seen to good advantage. Lake Erie, too, was at its best, and the afternoon spent in a trip to Catawba Island was all that could be desired.

The reason for going to Sandusky this year was because of the completion of the new library building given by Andrew Carnegie. The building is a combination of music hall and library, and is well planned and well adapted to the needs of the city. The evening sessions of the meetings of the association were held in the music hall, while the day sessions were held in the art room connected with the library, the College Section being provided for in the reference room.

On the evening of Oct. 1 the first session was held, at which time the association was welcomed to Sandusky by Rev. Winfield S. Baer. Professor A. S. Root, president of the association, made the annual address, and Rev. Charles Martin gave an account of the evolution of the library in Sandusky. After this there was some time spent by the members of the association in inspecting the library and in greeting old friends. Wednesday morning was given up almost entirely to the reports of committees, there being but one paper, that of Miss E. L. Abbott on "Bibliography in the small library." The report of the library training committee was considered so important that its consideration was made a special order for Thursday morning. Wednesday afternoon was given to a trip on the lake, and Wednesday evening to the pleasure of listening to a lecture by Professor R. G. Moulton, and to enjoying a reception tendered by the people of Sandusky.

On Thursday morning the association had a general business session, listening to reports of committees and discussing the report of the committee on library training. The result of the discussion was that it was decided by the association that a committee should be appointed to have charge of the general subject of library training in the state. This committee is to appoint members of the association, subject to the approval of the executive board, to act as consultants during the year in different subjects pertaining to library economy. The committee is also to

provide library institutes whenever a sufficient demand comes for them. These institutes are to be in charge of paid instructors, who will give not less than two lectures a day during one week. It was also recommended that the state library keep a collection of all matter pertaining to library training, which collection can be sent to different parts of the state on demand. The association then divided into two sections, the Small Library Section and the College Section. The subject for Thursday afternoon was library legislation. The program was divided into three parts, the first part being an exposition of the library laws now in the statute books of Ohio, the second being experiences from a number of places as to what had been accomplished under these laws, and the third the report of the legislative committee. The committee's report was adopted almost exactly as read, and the association instructed the legislative committee of the next year to endeavor to secure the passing of a bill providing for the establishment of county libraries and for the appointment of a library organizer.

In the evening came the main public session of the meeting. At this time it had been the hope of the association to listen to Mr. R. R. Bowker, of the LIBRARY JOURNAL, he having expected to speak to the association on the subject of "The library and self-help." Owing to sudden illness he was not able to be present, and his place was taken by Mr. Herbert Putnam, who while at Lake Placid, hearing of Mr. Bowker's illness, with great kindness offered to substitute for him. His address on books, the material with which libraries have to deal, was a great inspiration. Preceding Mr. Putnam's address Mr. W. H. Brett, of Cleveland, gave a brief resumé of library progress during the last few years. Many Sandusky people were present at this meeting, and the association was favored with two songs by Mrs. Charles Greafe.

On Friday morning came the closing session of the association, at which time officers were elected for the ensuing year and the place of meeting was considered. The officers for the ensuing year are as follows: President, Mr. S. L. Wicoff, of Sidney; 1st vice-president, Mr. N. D. C. Hodges, of Cincinnati; 2d vice-president, not filled; 3d vice-president, Mrs. I. F. Mack, of Sandusky; secretary, Mr. E. C. Williams, of Cleveland; treasurer, Miss Grace Prince, of Springfield.

The committee on the place of meeting reported that in the opinion of the committee it would be desirable to meet in Columbus, but it recommended leaving the question to the executive committee to decide. This the association agreed to do. The meeting adjourned about 11 o'clock, after having expressed hearty resolutions of thanks to the people of Sandusky for their gracious hospitality. OLIVE JONES, Secretary.

## Library Clubs.

### BAY PATH LIBRARY CLUB.

*President:* Miss M. Anna Tarbell, Brimfield, Mass.

*Secretary:* Miss Mary D. Thurston, Public Library, Leicester, Mass.

*Treasurer:* Miss Eliza Hobbs, Brookfield, Mass.

The Bay Path Library Club held its fall meeting in library hall, Barre, Mass., Oct. 8, with an attendance of about 80. The morning session opened at 11 o'clock with an address of welcome by Hon. T. P. Root, chairman of the board of trustees of the Barre Library. Miss M. Anna Tarbell, president of the club, responded in a few well chosen words, and a brief business session closed the exercises of the morning.

At 1.15 p.m. the afternoon meeting was called to order by the president, who introduced Principal O. Harlow Russell of the Worcester Normal School as the first speaker. His subject—"Books of value to teachers"—was treated in a practical and yet entertaining manner, and held the undivided attention of his audience.

He spoke of the manifold relations existing between the public library and the school, and said that while teachers should direct the reading of their pupils to a certain extent, much should be left to the child's instinct. Librarians are much better fitted to have this oversight than teachers, in that they are more catholic and liberal, less prescriptive and proscriptive. Teachers should be great readers but they are not. They think that they have no time, whereas they, rather than the rich, might be termed "the leisure class." They feel that what reading they do should be in the line of their work, but such reading is dull beyond belief and should be taken only in small doses, like medicine. Four half-hours a week is enough to devote to pedagogical works. Teaching is both theoretical and practical. Among the books on the philosophy or theory of teaching, Mr. Russell places first Plato among the ancients and Rousseau among the moderns. But one must be possessed of ample imagination and be able to appreciate the ideal in order to fully grasp the meaning of Plato's "Republic" or Rousseau's "Emile." These two with John Locke ("Thoughts concerning education"), Montaigne and Richter constitute the choicest reading, while among the minor lights he places Pestalozzi, Froebel, Herbert Spencer and Edward Thring.

Mr. Russell also thought that teachers needed to strive more for imaginative sympathy for children than for so-called knowledge of them.

Following this address, Dr. G. E. Wire, of the Worcester County Law Library, gave a helpful and interesting talk on the "Selection of books for small libraries."

In the discussion following this address,

the general opinion was expressed that the librarian should have a voice in the selection of books.

MARY D. THURSTON, *Secretary.*

### LIBRARY CLUB OF BUFFALO.

*President:* H. L. Elmendorf, Public Library.

*Secretary-Treasurer:* R. F. Morgan, Grosvenor Public Library.

The Library Club of Buffalo began its work for the coming season Oct. 24, 1901. The meeting was very enthusiastic and largely attended. Papers and reports were read on the Lake Placid conference of the New York State Library Association. The president, Mr. Elmendorf, addressed the club on the subject of "Library institutes." A committee was appointed by the club to look into the matter of library institutes and report at the next meeting on the advantages of making institute work the aim of the club for this winter.

R. F. MORGAN, *Secretary.*

### CHICAGO LIBRARY CLUB.

*President:* A. G. S. Josephson, John Crerar Library.

*Secretary:* Chesley R. Perry, Public Library.

*Treasurer:* C. A. Torrey, University of Chicago.

The Chicago Library Club enjoyed a trolley ride to Evanston and back on September 27. Refreshments were served at the Evanston Boat Club House, and there was some dancing by the younger members of the club. A number of the party dined together down town and talked over the plans of the club for the coming season. This social meeting was in charge of a special committee, comprising Misses Foye, Stern, and Hill, and Messrs. Merrill and Perry.

The club held its first regular meeting of the season 1901-02 at the Public Library on Friday evening, Oct. 11. One hundred persons braved a rainstorm to greet Mr. Herbert Putnam. The report of the executive committee showed that the club is planning for a season of vigorous work. The constitution is being revised, and a club manual is in preparation. The union list of periodicals in the public libraries of Chicago and Evanston has been printed and is ready for distribution. The plans of the school extension committee to secure for the public a freer use of the school buildings of Chicago were endorsed, and the announcement was made that the executive committee had named the secretary as a representative to serve on that committee. Twelve new members were elected.

President Josephson presented as the topic for the evening "Problems in library co-operation." He said, in part:

"These problems can be divided in three groups: Problems of selection and purchase; of cataloging and announcement of accessions; of use.

"The problems of cataloging and announce-

ment are already solved, or on the way to be solved. Witness the plans for cataloging in one place, the Library of Congress, all the new accessions to American libraries, the joint monthly list of accessions to the libraries of Providence, R. I., and the "Union lists" of serials taken by the libraries of a certain city or vicinity, such as the one just completed for Chicago and Evanston. The ideal towards which we will have to work is a scheme whereby each city will have at one place a catalog of all the books in all the libraries in the city, each state a similar catalog of the state, and one library, the national library, a catalog of all the books in all the libraries of the country, these catalogs to be kept constantly up to date and each entry marked with the check marks of all the libraries possessing the book.

"The problems of selection and purchase are seemingly easy enough, but really of a larger bearing and requiring no less consideration than those concerning cataloging. The object of co-operation in selection is to prevent needless duplication, and it is not always easy to determine when duplication ceases to be wasteful and becomes helpful.

"In turning to the problems of co-operation in use we come to the really crucial issue. Here it is not merely a question of what the readers demand, nor what the librarians or even the trustees wish to do, but of what can be done under the laws governing state and municipal libraries, and under the wills creating endowed libraries. And when these difficulties have been cleared away as far as possible, there still remains the question in how far a library can lend books to other libraries in the same city or perhaps a thousand miles away without injuring the interests of those who come to the library, expecting to find its books on the shelves. This is distinctly a kind of co-operation where not all libraries can take part, but in which all that can should take part if they are to fulfil all their obligations. The small popular library, designed to be an adjunct to the homes, cannot be expected to do much, if anything, in this connection. Its duty is to its nearest constituency. Not so the scholarly library, the library devoted to special fields of literature. Such an institution is established to encourage research and scholarship, and its constituency is the republic of learning at large, scattered all over the country. The ideal here will not be attained until any student, no matter where he lives, can receive through the medium of his local library any book needed in his studies, no matter where it may be found.

"If the plans of the executive committee can be carried out, this meeting will be the first of a series covering the relations of public libraries, municipal or endowed, to other agencies for higher education, universities and professional schools, and also to students unaffiliated with any institution of learning, to business and professional men seeking in

books information that will guide them in their work.

"The problems of how the libraries are to meet the requirements of these various classes of readers are peculiarly difficult in a city like Chicago, with its long distances and its numerous institutions and libraries, scattered as they are. Sooner or later we must come to an effective system of co-operation between the libraries and learned institutions in this city. A beginning was made when the boards of the three large libraries divided the field of literature so as to prevent duplication in purchase. But it must be recognized, as I dare say it is recognized by those in authority, that this is only a beginning. Is it too much to hope that the discussions at the meetings of this club during the coming winter may be the means of perfecting such a system of co-operation?"

Dr. H. P. Judson, of the University of Chicago, opened the discussion with a few remarks upon the needs of university men. "The needs of the scholar and investigator are very simple. All he wants is this: Everything that has been produced on a subject; and he wants it all immediately." The difficulties confronting the investigator were thought to be the lack of definite knowledge as to where he can find his material and the fact that he can get it only by a considerable expenditure of time and effort. "If the scholar can minimize the time he must spend in getting mere material for his work he can then have more time to spend on the work." The speaker heartily approved of the co-operation suggested by Mr. Josephson, though he felt that the University of Chicago was as yet hardly in a position to share fully in such co-operation. With the development of the collection in the more adequate building already planned, the library could be strengthened along special lines, differentiating from the other Chicago collections. Dr. Judson touched upon the difficulty of obtaining material desired in research work. "Scholars in our great West are working with knowledge and honesty and ability. They are producing some results of value, but they are hampered very greatly indeed by this failure to get material they need. The difficulty is tremendous, right here in Chicago, and the result is, so far as we are concerned, that some of our investigators are compelled to drop work in Chicago and go elsewhere. Yet I am sufficiently optimistic to look forward to the time when the great mass of this material will be here in Chicago, and by the aid of our libraries will be accessible to us all."

Mr. Putnam followed with a clear and detailed statement of the co-operative plans outlined and hoped for by the Library of Congress. He briefly noted the extent and main divisions of its collection, and described the system of issue of the printed catalog cards, now arranged for. He also touched upon the possibilities of securing from large and spe-

cialized libraries order-lists of important books, to serve as purchase suggestions for the national library; upon the desirability of keeping the Library of Congress closely in touch with the contents and work of the other libraries of the country; and upon the propriety of establishing a wide and generous system of inter-library loans under the auspices of the national library.

CHESLEY R. PERRY, *Secretary*.

*LONG ISLAND LIBRARY CLUB.*

*President:* Miss M. W. Plummer, Pratt Institute Free Library, Brooklyn.

*Secretary:* Miss Miriam S. Draper, Children's Museum, Brooklyn Institute.

*Treasurer:* Miss Mabel Farr, Adelphi College Library, Brooklyn.

By an error in the October issue of *L. J.* the name of Mr. C. A. Green was given as president of the Long Island Club. Mr. Green is vice-president.

The next meeting of the club will be held on the first Thursday in December.

*WESTERN MASSACHUSETTS LIBRARY CLUB.*

*President:* George Stockwell, Westfield Athenæum, Westfield.

*Secretary:* Ida F. Farrar, City Library, Springfield.

*Treasurer:* Mrs. A. J. Hawks, Meekins Library, Williamsburg.

The regular fall meeting of the Western Massachusetts Library Club was held Oct. 18, at Huntington, in the audience-room of the Baptist Church. Representatives of libraries in the following towns were present: Holyoke, Sunderland, Pittsfield, Blandford, Russell, Middlefield, Conway, Adams, Northampton, Florence, East Longmeadow, Ludlow, Brimfield, Westfield, Dalton, South Hadley and Springfield. The principal topic for the morning discussion was, "How to increase the usefulness of the reading-room," opened by Miss F. Mabel Winchell, of the Forbes Library, Northampton. Her points were very practical, such as to make the room inviting with books, pictures and plants. Advertise the room; if hampered by lack of funds, interest some of the townspeople to give their cast-off periodicals, or, better still, to subscribe for some for the library. Get the young people to come in to see the picture bulletins or exhibits—in that way they form the habit of coming, and once having formed the habit it becomes second nature.

The next paper on the subject, by Miss Anna B. Jackson, of North Adams, was read (in the absence of Miss Jackson) by Miss Ida Taylor, of the Springfield City Library. She approved fully of the theory that the best way to help a person is to help him to help himself, not to find exactly the information the reader wants and place it before him, leaving him no better able to help himself next time, but show him how to find it. The

usefulness of the reading-room is also increased by attending to the comfort of those who visit it, and even the care exercised in such prosaic matters as the purchase of tables and chairs is well repaid. This paper was followed by a discussion of the subject, in which Mr. Ballard, of Pittsfield, suggested the need of good light, and spoke of the use of glass ridged in prisms. In carrying out the exhibition idea he would adopt the Japanese plan of having only one fine picture or one bit of choice bric-a-brac shown at a time.

Echoes of other club meetings were given by J. C. Dana, of the Springfield Library, and Miss M. A. Tarbell, of Brimfield. Mr. Dana had attended the American Library Association meeting at Waukesha, and had brought away a very pleasant recollection of a good time in company with delightful people. Miss Tarbell "echoed" delightfully the recent meeting of the Cape Cod and the Bay Path Clubs, giving a résumé of Mr. Wheeler's talk on "Reading for teachers," reported in the account of the Bay Path meeting. The secretary also outlined the recent institute held at Greenwich Village. The club then adjourned to the vestry, where luncheon was served by the women of the church, after which a walk was taken to the top of Laurel Hill, where a wonderful panorama of hills is unfolded, with the Westfield river winding between. On the way back the company visited the town library, which rejoices in a larger appropriation this year than ever before.

The afternoon session opened with business, when H. H. Ballard, of Pittsfield; Miss Dorcas Tracy, of Northampton, and Miss Ida F. Farrar, of Springfield, were chosen delegates to represent the club at the meeting of the Massachusetts Club in Boston, Oct. 31. The first topic of the afternoon session was, "The 100 best books of the year for a small library to buy," a printed list of which, carefully annotated, was placed in the hands of each person present. After a brief summary of each book by the secretary, there was a lively discussion as to the kind of books a library should buy. Should it always purchase those of a high class and seek to raise the people to its standard, or should it come down to the plane of the people with trashy literature, and seek to raise its standard by degrees? Should the library use the method of the saloon or of the club? Books may be standard in two senses: standard because they are good, and standard because they "stand" on the shelves. Get the books the people will read. The list of books was pronounced one likely to be of much assistance to the small libraries.

The subject of "Library helps" was treated by Miss Grace Ashley, of Springfield; Miss Blakeley, of Mount Holyoke College, and Miss Dema Gaylord, of Forbes Library, Northampton. Miss Ashley's paper showed

how printer's ink can be made use of through the newspaper, by advertising new books or pictures and by clippings, telling of local history and of history not local, through the monthly bulletin, special bulletins, bulletins of other libraries, publishers' lists, always taking care to have paper as good as the library can afford and the printing artistic. Miss Blakeley's remarks on indexes were suggestive and practical. Miss Gaylord showed how simple things, those near at hand, can be utilized by the librarians, through book covers posted with numbers attached, newspaper clippings fastened on bulletin boards, collections of books by and about an author whose anniversary is celebrated, on "birthday" tables, with pictures of himself and his home hung above, a nature study table in the spring, a table of the different countries of especial interest at the time, etc.

After a vote of thanks passed to the directors and librarian of the Huntington Library, the meeting adjourned, giving time for the visitors to examine the books which had been brought as representative of the list discussed in the afternoon. IDA F. FARRAR, *Secretary*.

## Library Schools and Training Classes.

### DREXEL INSTITUTE LIBRARY SCHOOL.

#### NEWS AND NOTES.

On October 30, the Drexel Institute Library School Association held its annual meeting at the Institute. After the business session, a reception to the new class was held.

Miss Anna B. Day, class of '01, will organize the Carnegie Library at Grove City, Pa.

Miss Gertrude P. Humphrey, class of '01, has been engaged as organizer of the Public Library, Lansing, Michigan.

Miss Harriet A. Mumford, class of '97, has been appointed librarian of Hill School, Pottstown, Pa.

Miss Emily J. Kuhn, class of '00, has been appointed librarian of the McKeesport Public Library.

Miss Mary H. Upton, class of '97, who has been studying book binding at the Dove bindery under Cobden-Sanderson, returned in September and has opened a bindery in Philadelphia.

Miss Caroline B. Perkins, class of '01, has accepted a position in the West Philadelphia Branch of the Free Library of Philadelphia.

Miss Edith F. Pancoast, class of '01, is cataloging a private library in Portland, Maine.

Miss Bessie H. Jennings, class of '00, has been engaged as an assistant in the Bryn Mawr College Library.

Miss S. Alberta Rice, class of '01, is assisting in the cataloging of the Public Library, Hackensack, N. J.

### NEW YORK STATE LIBRARY SCHOOL.

#### NOTES AND NEWS.

Mr. Jacob A. Riis who addressed the school and staff informally Oct. 11, succeeded in communicating to the audience the contagion of his buoyant spirits and his optimistic attitude towards life. He believes that the people of the slums will read books that are pure and high in their ideals, but confesses that it is very hard to wean them from the "yellow" journals. When asked whether the public library should supply a demand for anarchistic literature he replied—"Keep it out as you would dynamite. It is dynamite."

Miss Katharine L. Sharp (N. Y., 1892), director of the University of Illinois State Library School, gave a paper at the annual meeting of the National Association of Collegiate Alumnae at Buffalo, October 26, on "Library schools and the librarian's opportunities." She was easily persuaded to cross the state to visit this school, where she gave a thoughtful and interesting address. Both in Buffalo and in Albany she took the ground that library schools granting degrees should require a college degree for admission. An informal reception was given to Miss Sharp immediately after her lecture.

Two changes in the curriculum were made in October. The courses in elementary classification and elementary bibliography are given to the junior class at the beginning of the school year, followed November 18 by the course in elementary cataloging. The reference course is transferred from the senior to the junior year, and the work on current topics from the reading seminar to the reference class. A course in advanced reference work will be added.

What is the best way for a public library to make its work known through the local newspaper? The senior class are trying to answer this interesting, practical question by writing in turn a library letter for the Albany *Argus*, covering both the local and general library news of the week. The letter is prepared in connection with the library news report given in the senior seminar. A similar letter is furnished by W. H. Brett for the Cleveland *Plain Dealer*, and by Miss Hazeltine for the Jamestown *Evening Journal*. The following item is quoted from the *Argus* of November 4:

"The senior class of the New York State Library School gave a Hallowe'en party to the junior class, the faculty and a few other guests at the home of Mr. and Mrs. Dewey, 315 Madison avenue. Many of the customary features in the way of games, decorations and edibles were observed, but other novel games were added, and the weirdness of the whole was heightened by sheet and pillow-case disguises."

The class of 1903 has organized with Mr. Malcolm G. Wyer as president, and Miss Ella R. Seligsberg as secretary and treasurer. Mr. Wyer is a brother of Mr. J. I. Wyer, Jr.,

class of 1898, librarian of the University of Nebraska.  
SALOME CUTLER FAIRCHILD.

*HANDBOOK, 1901.*

The University of the State of New York issues State Library bulletin 66, for September, 1901 (Library School 9), being a "Handbook of New York State Library School, including summer course and library handwriting." It gives full details regarding scope, requirements and features of the school course, and includes several views of the study rooms. An appendix is devoted to the article upon library handwriting, originally printed in *Library Notes* in 1887 and later revised.

*PRATT INSTITUTE LIBRARY SCHOOL.*

PERSONAL NOTES.

Miss Sarah C. Nelson, '92, has been engaged to catalog the Public Library of Akron, O.

Miss Henrietta C. Bartlett, 1901, has been engaged in cataloging the library of the Lawrence High School, at Lawrence, N. Y.

Miss Susan Clendenin, 1901, has been appointed assistant in the Y. W. C. A. Library of New York City.

Mrs. Metta R. Ludey, 1901, has been engaged for the staff of Pratt Institute Free Library.

*UNIVERSITY OF ILLINOIS STATE LIBRARY SCHOOL.*

NOTES AND NEWS.

Mr. Herbert Putnam, Librarian of Congress, visited the school October 6-8. On the evening of October 7 he gave a general address on "The public library movement and the relation of the scholar to it." On Tuesday morning he spoke to the library school on the Library of Congress, and on Tuesday afternoon to the College of Law and the library school on the law of copyright. The visit was an occasion of great satisfaction to the library school and to the university at large.

The director of the library school spoke at Buffalo, Oct. 26, at the annual meeting of the Association of Collegiate Alumnae, on the subject, "Library schools on a graduate basis"; urging a baccalaureate degree for entrance to the schools connected with universities.

The students are now enjoying a loan exhibit of picture bulletins made by the New York State Library School last year.

Mrs. Martha B. Clark is organizing the library of the Steel Works Club at Joliet, Ill.

Miss Caroline Wandell has been appointed cataloger at the University of Texas.

The director had a delightful visit at the New York State Library School, Oct. 28, and the Illinois students appreciated the sympathetic and cordial relation between the schools.

*WISCONSIN SUMMER SCHOOL.*

The seventh annual session of the Wisconsin Summer School for Library Training, un-

der the direction of the Wisconsin Free Library Commission, was held in Madison at the State Historical Library, July 8-Aug. 31. There were 37 students present, 23 from Wisconsin, and others from Illinois, Iowa, Michigan, Kansas, Missouri, Nevada, Oregon and Ohio.

The model library collected for the school was used for the first time, and added greatly to the value of the work. The reference work was done in the fine reading room of the State Historical and University libraries. The students enjoyed the privilege of a tour of the building in company with Mr. Thwaites, prefaced by a talk on library fittings and supplies. Special lectures were given by Mr. Thwaites, Miss Stearns and Miss Bertha M. Brown. For the final examination the class made a complete dictionary catalog of the library, each student cataloging 20 books.

Next year a supplementary four weeks' course will probably be added to the regular course of eight weeks. The plan is to offer some additional work each year, so that summer school students may look forward to more training, and, in the course of a few years, complete the work usually given during the first year in library schools. Only librarians of experience actually employed, or to be employed, will be accepted as students.

It is hoped that at least one person from every library in the state will attend the summer school in 1902. The beginners are expected to take the regular course, those who have already attended may come for the supplementary course, or for the special course in documents.

*A Course in Public Documents.*

The Wisconsin Free Library Commission has engaged Miss Adelaide R. Hasse, chief of document department of the New York Library, to give a course of instruction in public documents at Madison, Wis., during the three weeks from Aug. 6-27, 1902. Miss Hasse's work as assistant librarian in the Los Angeles Public Library, as librarian of the Office of Superintendent of Documents in Washington, and in her present position, has made her an authority on the subject of documents. She will put into this course the best results of her ten years' experience.

The work is planned to cover the study of U. S. federal, state and municipal documents, and to occupy the time of the student from 9 to 5 o'clock daily. Only those who have had library school training or equivalent experience in practical library work will be admitted. The tuition is \$10.

The care of documents is a very important part of library work, and one for which the majority of librarians are totally unfitted. It is hoped that many will avail themselves of this opportunity to work under Miss Hasse's direction.

For further information address Wisconsin Free Library Commission, Madison, Wis.

## Reviews.

A. L. A. INDEX: an index to general literature, biographical, historical and literary essays and sketches, reports and publications of boards and societies dealing with education, health, labor, charities and corrections; by William I. Fletcher; with the cooperation of many librarians. 2d ed., enl. and brought to Jan. 1, 1901. Issued by the Publishing Board of the American Library Association. Boston, Houghton, Mifflin & Co., 1901. 4+679 p. l. O. \$10, net.

The new edition of wider scope than the old, which has been promised us by Mr. Fletcher, has become an accomplished fact, and is greeted with pleasure by all libraries, large and small, doing reference work. It serves as an analytical subject-index for many most important books of essays, authors' collected works, reports and proceedings of societies. The new edition is fully twice the size of the original one. Not only has the "General literature index" from 1893-99, which appeared in the "Annual literary index," been incorporated, but many books, conspicuous by their absence in the 1893 edition, but of the same general character, have been included, thus remedying the most marked defect of that edition. The abbreviations employed throughout the index are merely contractions of the full titles which one could hardly fail to identify, even without reference to the "List of books indexed" which appears at the end of the volume. Especial care has been taken to make self-explanatory the abbreviations of certain titles, references to which appear in the index, but which are purposely omitted from the "List of books," because no systematic analysis of them has been attempted. Forms of entry in the "List of books indexed" have been revised, *i.e.*, University of State of New York now appears under New York State University. Space has been left between the entries here that call-numbers may be supplied by the library if thought desirable. It is with pleasure we note the addition of several national and state publications. Most notable among them will be found the reports of the U. S. Bureau of Education, labor bulletins and reports of the National Museum. One valuable new feature is the inclusion of the index to bibliographies and reading-lists which has appeared in the "Annual literary index." The principle of indexing only such books as are common in most libraries has been generally but not invariably observed, the rare exceptions being in favor of works of unusual value and interest, readily accessible in the large libraries, although probably not to be found in the smaller collections. No books in foreign language are included. History and travel, representing so exhaustive a field,

may seem to have been a little slighted, but reference to a few of the best books in these classes are found under the names of the important places or events concerned. F. R.

COLUMBIA UNIVERSITY. Library bulletins, no. 2: Books on education in the libraries of Columbia University. New York, Columbia University, 1901. 6+435 p. l. 8°.

This large and handsomely printed finding-list is prefaced by a note written by Prof. Nicholas Murray Butler, acting-president of the university, in which the list is characterized as to a certain degree tentative in "that it will show what the Columbia University libraries possess on education and wherein the collection needs additions in order to be as complete as possible." This statement is an admirable defence of the publication of the list and at the same time indicates a most wholesome spirit of progress on the part of the department of pedagogy of the university and of the university library. It must have taken no small amount of moral courage to expose so unmercifully as this list does the gaps in the collections, particularly in the line of official documents, and also to incur the expense of publishing with minute bibliographical details titles of so many thousand pamphlets. At the same time it must be an occasion for no little pride that the university is able to set forth nearly 14,000 titles in a list of this sort, omitting, however, its entire collection of *Columbiana* and the large collection in the Bryson Library illustrative of the history of text-books.

How extremely difficult it is to secure complete files of the publications of colleges and universities, and how great is the need for careful study of this problem will be evident from a glance at several sections of this list. So few institutions have absolutely complete sets of their own publications, catalogs, and announcements; so great is the difficulty of securing back numbers; and so, apparently, unprofitable is the preservation of this class of printed matter, that too many of our libraries offer the student of educational problems either no material at all, or sets with gaps at exactly the vital spots. The publication of this list and its wide dissemination should lead to numerous gifts to Columbia to fill vacant spaces, and should cause many another institution to overhaul its files to see in what condition they are.

To criticise in detail a list covering 403 pages of two columns each is impossible in the space allotted. Certain remarks may, however, be made without attempting to do full justice to the subject. The first is that the list is not a true finding-list inasmuch as call numbers are entirely omitted. The student must still consult the card catalog to secure his books, although he is aided to the extent of notifying him in which of the two libraries the work is housed. Considerations of expense may well have prompted the omission

of the call numbers, and other possible reasons will at once suggest themselves.

Another observation is that there are decided vagaries of classification in the list, despite the excellence of the general scheme. Exception will probably be taken by most students to the separation of the state universities from other institutions for higher education. This is done on the ground that these universities represent "the highest grade of public instruction" in those states supporting them. This is undoubtedly true, but the convenience of readers would be served by grouping all universities of the country together. It is somewhat strange also to find the University of Cincinnati and the New York University placed under the caption "Cities and towns" instead of that of higher education in the United States, although some justification for this may be found in the fact that the University of Cincinnati receives some income from the city. These and other occasional peculiarities of classification cease to be regarded as difficulties in the use of the list when one consults the author index prepared by Miss Baldwin of the Bryson Library.

It is encouraging and refreshing to find so large a proportion of the books grouped under "Present systems" in the department of History of education, and to observe that the "Study of the classics" has been made a sub-heading under Secondary education, where, of course, it really belongs. It is also a pleasure to note the extent to which analytical work has been done with all collections and composite books. More extensive still is the cataloging of pamphlets. The catalog is very largely the personal work and has been carried through under the direction of Mr. C. Alex. Nelson, reference librarian, to whose careful and painstaking labor it bears notable witness. In the sections devoted to the official and historical side of education over a third of the titles are those of works of less than 50 pages. For example, the total number of works on education in Germany is 248, of which 100 have less than 75, and 84 less than 50 pages. Two singular omissions have been noted. In the section devoted to summer schools there are no titles bearing on the Chautauqua system. Apparently, also, there are no works, catalogs, or circulars in the libraries of Columbia University relating to library schools or to professional training for librarians.

WM. WARNER BISHOP.

PARKER, H. W. New system of classification and numbering in use in the Mechanics' Institute Free Library. New York City, 1901. 95 p. O.

This scheme, prepared by the librarian of the New York Mechanics' Institute Free Library (formerly the Apprentices'), is much on the lines of the Schwartz classification, 18 letters of the alphabet being used to designate the classes, instead of 21, as in Mr. Schwartz's

system. Under these main divisions lower case letters are used instead of numerals, giving as the scheme stands, 140 subdivisions.

The author states, in his introduction, that the "system is as nearly mnemonic as possible, intending to aid both the public and library employees."

All logic of arrangement is sacrificed to the intended mnemonic features of the system: thus A is agriculture; B biography, etc. Why not A Arts, fine and useful; or E Europe, as in the Schwartz system, as well as the curious *olla podrida* "Class E, Education, business, language and philosophy?"

All reports and public documents, regardless of subject, are found (or lost?) under R Pamphlets are classed under General works, pamphlets (Gp). Considering the disregard of logic in the scheme, it is not strange that the subdivision here does not parallel the main classification, but pursues a wholly independent course.

Following the classification is the "Numbering system," whereby numerals assigned to certain groups of letters and used for book numbers give an alphabetical arrangement by author.

By Mr. Parker's system the call number of Lossing's "Our country," Hu 359580, is of the same length as by either the Decimal or Expansive classification, followed by the Cutter author number and initial letter of the title.

In putting this system of classification into use, the lack of a subject index would be felt at once.

M. L. D.

## Library Economy and History.

### GENERAL.

FOOTE, Elizabeth L. Making the Sunday-school library a success. (*In The Sunday-school Times*, Oct. 19, 1901. 43:679-680.)

This is the first of a series of articles by Miss Foote on the Sunday-school library. In this one is discussed the first steps of reform, the librarian, and how books should be chosen.

*The Library World*, for October, is mainly devoted to the recent annual meeting, at Plymouth, of the Library Association of the United Kingdom. Editorially it considers the Plymouth meeting "on the whole to have been the most practical and valuable held for a long time. We particularly commend the devotion of a session to a single topic, instead of cramming into one morning papers and discussions on many subjects."

THE REPORT OF THE U. S. COMMISSIONER OF EDUCATION for 1899-1900, recently issued, contains (v. I, ch. 13) the interesting "Report of Committee of the National Educational Association on the relations of public libraries to public schools." The report in-

cludes a full review of the literary work done, conjointly with public libraries, by public schools, by Sherman Williams; suggestions on supplementary reading, by Robert C. Metcalf; a report of the subcommittee on relation of libraries to normal schools, by M. Louise Jones; papers on "establishing libraries in villages" and "securing libraries for rural schools," by F. A. Hutchins; and other articles in the same field.

#### LOCAL.

*American Congregational Ass'n L., Boston.* The additions for the year 1900-'01 were by a typographic error given as 2187 in L. J. for October (p. 763). They amounted in fact to 3187, of which 1850 were unbound pamphlets.

*Billings, Mont. Parmly Billings Memorial L.* The formal dedication and opening of the new Parmly Billings Memorial Library, the gift of Frederick Billings, Jr., of New York, was held on the evening of Tuesday, Oct. 1, in the opera house, followed by a public reception in the library. Miss Mabel Collins is the librarian.

*Boston. General Theological L.* (39th rpt., year ending May 20, 1901.) A short historical sketch traces the development of the library from its organization on April 20, 1860, to its present condition, with a collection of some 20,000 v., in a building of its own. "The last and perhaps most important step in the development of the institution, and one towards which its friends had long been looking, was taken in the year 1900. By vote of the directors, January 15, ratified by the corporation at the annual meeting in April, the library was made free to all New England clergymen. Ministers of Greater Boston may obtain books in person. Others may draw them through their local libraries, which are made distributing branches. Those living beyond the reach of libraries may on application obtain personal cards and have books sent to them."

The secretary and librarian, Mr. G. A. Jackson, touches upon this extension of the library's privileges, and adds, "After an adequate income, the only other requirement to make the library more and more useful is lower postage rates on books. We have been prominent in the national movement to secure from Congress such lower rates." Accessions for the year numbered 256. The circulation was 5110, or "234 per cent. of the last preceding year." It is stated that "already 202 clergymen of Greater Boston have taken out free cards and are using our books. Of the public libraries throughout New England, 94, representing 1065 clergymen, have been made our distributing branches. Above one-fourth of the ministers of New England are thus in one year's time in a position to use our books without cost save for carriage."

*Brooklyn (N. Y.) P. L.* At the October meeting of the board the matter of selecting sites for the Carnegie branch libraries was briefly discussed. The sites committee was directed to look over the field, decide upon sections of the borough in which it would seem desirable to locate branches, and report its findings at a later meeting.

The contract between Mr. Carnegie and Messrs. Boody, Appleton, Devoy and McWilliams, as a committee representing the library board, was formally signed by the latter on Oct. 7.

The sinking fund commissioners on Oct. 30 refused to authorize the removal of the Bedford branch of the library from its present quarters, 26 Brevoort Place, to Avon Hall, on Bedford avenue, on the ground that the premises selected were undesirable for library purposes.

*Brooklyn, N. Y. Pratt Institute F. L.* Another step in practical bibliography has been taken by the library, in the shape of a course in works of reference, for high school teachers. The class has begun with 13 enthusiastic members, meeting one hour a week for 10 weeks. Only those books are characterized and discussed which are especially valuable to teachers and their classes; there are no tests or examinations, no recitations, and only as many problems given as can be dealt with in the hour.

The Astral Branch of the Pratt Institute Free Library was transferred Sept. 15 to the Brooklyn Public Library. It will be continued as a branch of that library.

It has been decided that the annual report of the library will hereafter appear as the *Library number of the Pratt Institute Monthly*, in December. Its issue in the small pamphlet form, previously adopted, is thus discontinued.

*Chattanooga (Tenn.) L. A.* The library will be removed Dec. 1 from its present quarters to rooms in the Masonic Temple building, on Cherry street.

*Chicago (Ill.) P. L.* An abstract of the report of the librarian for the year ending May 31, 1901, gives the following facts: Added, 21,854, of which 18,910 were purchased; total 272,276. Issued, home use 1,772,741 (fict. 45.20%; juv. fict. 28.64%); total circulation (ref. dept., bound newspapers, branch reading rooms, etc.), 2,318,579. The number of delivery stations was increased from 60 to 65; the home circulation through these stations amounted to 1,164,320, "comprising nearly 66 per cent. of the entire home circulation." The average cost for each book circulated through the stations was 1.65 cents.

In the reference room 121,709 visitors were recorded, to whom 336,103 v. were issued from the stacks; no record is kept of open shelf use. Of books for the blind, 858 were circulated for home use and 122 were used in

the library. The total cards issued during the two years ending May 31 was 80,616, of which 41,967 were issued to males and 38,649 to females; the number of "live" cards is given as 75,109. There are now employed in all departments of the library's service 208 persons, with an expenditure for salaries of \$135,678.76.

*Cleveland (O.) P. L.* The library was formally opened to the public in its new temporary building on Wood street, on the evening of Oct. 29. The library had been performing routine work in its new home for some time, but no formal exercises had been held. A general reception was arranged as a "house-warming," and addresses were delivered by Judge J. C. Hutchins, President C. F. Thwing, of Western Reserve University, and others. The rooms were attractively decorated, there was a good musical program, and a large gathering of interested visitors made a thorough inspection of the new building.

*Dallas (Tex.) P. L.* The handsome Carnegie building of the Dallas Public Library was formally turned over to the city on Oct. 29. The exercises, held in Carnegie hall of the new building, were largely attended, and a general reception and inspection of the building followed. Mr. Carnegie's gift for the building was \$50,000. The site cost \$9525, largely raised by public contributions; and the library has an annual income of about \$5000, of which \$4000 is city appropriation. About \$8000 have been spent on books, furniture and equipment.

The building is of the classic type, of Roman pressed brick and gray Bedford stone. Entrance is made by broad steps and a marble portico to a handsome rotunda, at the end of which, in the center of the building facing the main entrance, is the delivery counter of marble and oak, from which the attendant may see and control the entire interior. Provision is made for a children's room, art room, reading room, assembly room, and other departments. The stack room has an ultimate capacity of 100,000 v. The shelves, now in position will hold about 21,000 v., and 9852 v. are already installed. The librarian is Miss Rosa Leeper, formerly on the St. Louis Public Library staff.

*Durham (Ct.) P. L.* The cornerstone of the new library building was laid on the afternoon of Nov. 2.

*East Orange (N. J.) F. P. L.* The cornerstone of the \$50,000 library building given to East Orange by Andrew Carnegie was laid with simple exercises on the afternoon of Oct. 29.

*Fort Worth, Tex. Carnegie P. L.* The library was formally opened to the public on the morning of Oct. 17, when about 250 card-holders were registered. The equipment is not

yet complete, but about 8000 v. are available for use.

*Fresno, Cal. Carnegie L.* The conditions of competition for the \$30,000 library building given to Fresno by Andrew Carnegie were made public on Oct. 8. All drawings must be submitted by Dec. 1. The new building must provide for at least 10,000 v., with an ultimate capacity of 25,000.

*Galveston, Tex. Rosenberg L. A.* The directors of the library association have accepted the building plans submitted by Eames & Young, of St. Louis. It is hoped to begin active building operations by the first of the year. The site chosen is the northwest corner of Tremont street and Sealy avenue. The building will cost approximately \$160,000.

*Greenville, O.* The cornerstone of the new Carnegie Library building was laid on Oct. 30.

*Illinois State Historical L., Springfield.* (6th biennial rpt.—period ending Dec. 24, 1900.) Added 1940, "of which 796 are U. S. government publications, the remaining 1144 books and pamphlets of a general nature"; total 12,031.

This interesting report is a comprehensive sketch of the history of the library, of the difficulties encountered, largely due to crowded accommodations, of the impetus given by the recent state appropriation of \$600 a year for the "publication of original matter relating to Illinois history," and of the hopes and plans of the librarian, Mrs. Weber, for collecting and arranging state and county histories, maps, newspapers, portraits, etc. By far the most important of the five publications so far issued by the society is the catalog of the library. "The subject 'Illinois' as the fundamental subject and object of the library has been cataloged in chronological order. Matter relating to Illinois begins with the early French explorers, through French and English ownership of the Mississippi Valley, through Illinois as a county of Virginia, as a part of the Northwest Territory, of Indiana Territory, of Illinois Territory and the State of Illinois. The material has also been classified under many sub-divisions, and may be said to, in a way, itself portray the growth of the state." There is also a card catalog which supplements this printed record.

The library is now endeavoring to increase its collection of Lincolniana, hoping to make it the best in the country. For the old and frail original Lincoln papers a specially designed case has recently been purchased.

The librarian urges not only increased accommodations, but also additional assistance to carry on the growing reference work.

*Louisville, Ky. Polytechnic Soc. L.* Contracts have been signed for the erection of a new six-story building for the Polytechnic Society. The library will occupy three floors,

and there will be a lecture hall seating 500 persons. According to the contract, the building is to be ready for occupancy not later than Sept. 1, 1902.

*Ludlow, Vt. Fletcher Memorial L.* The handsome memorial library building, given to Ludlow by Hon. Allen M. Fletcher, of Indianapolis, was dedicated on the afternoon of Nov. 1. The exercises were largely attended, the afternoon being practically observed as a holiday. The shops were closed, and time for attendance was granted to all the workers in the mills. The presentation address was made by Mr. Fletcher, and the response on the part of the library trustees was made by Governor Stickney. The chief speaker of the day was Rev. M. H. Buckham, president of the University of Vermont.

The library building stands on a beautiful site, at the head of the park on Main street. In plan it is in the form of a Latin cross, at the head of which is the vestibule opening into the delivery room, which is at the crossing, with a reading room on either side, forming the arms, while directly in front or in the foot of the cross is the stack room. The librarian's room is in the angle formed by the stack room and the right hand reading room. The interior plan of the vestibule is a square, elongated by semi-circular ends, in one of which is the staircase leading to the basement. The walls are of white marble with Ionic pilasters. The floor is of marble mosaic decoration worked out in green, white and red marbles. The ceiling is also of mosaic in similar colors, the portions over the semicircular ends being flat while that over the central portion is a barrel vault.

The delivery room is square in plan with a vaulted stucco ceiling. The walls are of white marble with Doric pilasters supporting the arched openings to stack and reading rooms and vestibule. The floor is of colored marble mosaic of an elaborate design. The reading rooms have vaulted stucco ceilings broken by beams and panels. The walls have a wainscot of dark oak, pilastered and panelled, running up a distance of ten feet to the spring of the arch of the round headed windows. In either reading room is a massive mantel of Caen stone, with a richly carved coat of arms—one of the Fletcher family and one of the state of Vermont. The rooms are furnished in dark oak. The stack room is simply treated, and is fitted up with light oak bookcases.

The building is in the style of the later English Renaissance. The exterior walls are of red brick and buff Bedford limestone, with a Milford granite base. The roof is of green slate with copper ridges. The front of the library is a free adaptation of the Winchester School, at Winchester, England, and consists of a central pavilion crowned with a pediment, on either side of which are wings containing the reading rooms, each with three

round-headed windows enclosed in a frame with brackets and cornices.

The entrance is in the central pavilion and has rusticated Doric pilasters supporting a broken pediment containing the Fletcher coat of arms, and above this and corresponding to the carved panel over the windows is a panel flanked by festoons with the name and date of erection. Fehmer & Page, of Boston, were the architects.

There are about 8000 volumes in the stack room, and free access to the shelves is permitted. Miss Martin is the librarian.

*Manitowoc (Wis.) P. L.* (Rpt. — year ending Sept. 30, 1901.) Added by purchase 700; by gift 648; total 5133. Circulation 40,526 (fict. 75%). New registration 976; total 3000.

It is interesting to note the provision for readers of various nationalities and the corresponding circulation, as follows: German books 271, with a circulation of 3452; Polish 134, circulation 681; Bohemian 63, circulation 516; Norwegian 440, circulation 284; French 4, circulation 5; total for foreign books 912, with a circulation of 4938. Some of the wealthier citizens have started a fund for the erection of a library building which it is hoped may be obtained through local enthusiasm and support rather than through outside benefaction.

*Memphis, Tenn. Cossitt L.* The work of reorganizing the library, undertaken when the present librarian, Charles D. Johnston, assumed charge three years ago, is now fairly completed. When Mr. Johnston was appointed librarian the books were not classified, and there was no catalog except the accessions book and a partial author catalog, typewritten on sheets. The circulation was less than 25,000 a year. Since then steady progress has been made, and the circulation this year will be about 65,000 v. An author, classified, and separate fiction and juvenile card catalogs, are complete. The library, indeed, has reached the stage where it can plan for "missionary work," and it is hoped within the next year to establish a branch for negroes, several delivery stations, and to get into closer contact with the schools. As a means of bringing its resources clearly to public notice the library prints from time to time lists of accessions in the local *Scimitar*. These are printed without charge by the paper, which also permits the use of the linotype slugs by the library for striking off extra copies of the lists.

*Missouri, Libraries in.* The "circular of information" issued by the University of Missouri committee on approved schools contains a synopsis of the state law affecting libraries and suggestions for the purchase of books. The law of March 19, 1901, makes it mandatory upon district boards of directors to set aside not less than five nor more than 20

cents per pupil enumerated in the district each year, to be devoted to purchase of books, the first hundred volumes to be from a list selected by the state library board. The suggestions in the circular are made in view of this provision of the law, and "with the hope of stimulating the growth of the high school libraries throughout the state and directing that growth in the right direction." A selected classed list is given, including textbooks and general works in the main subjects of school instruction, and this is followed by a reprint of the short reference list on Bible study, prepared by Dr. Lyman Abbott.

*New York Historical Soc.* At a meeting of the society held on Oct. 1, plans were adopted for a new building to cost \$1,000,000. The architects selected are York & Sawyer, of New York.

The building will be erected on land which the society has owned for several years, on Central Park west, including the entire block between 76th and 77th streets. The building space is 204 feet long and 125 feet deep. The new structure will be three stories in height, but from the exterior will appear as only two stories, the upper story consisting of arched windows, divided by marble Ionic pillars. The building will be erected by wings, and the central portion will be the first begun. It will be the largest of the three sections, and will contain the principal rooms for lectures, the library, the portrait and art galleries, and the museum halls. Beginning on the ground floor, reception rooms and committee rooms will be on either side and in the rear, beyond a broad hall, will be the lecture hall, capable of seating 530 persons.

On the second floor a circular reading room, modelled upon that of the British Museum, will be found directly over the lecture hall. Book alcoves will be ranged on the outer edges of the circle. About 200 persons can use the room comfortably, and for students on special research there will be two or three smaller rooms. The stack rooms in the central section will furnish shelving for 134,000 volumes. When the two side wings are finished, in addition to the stack room in the basement, there will be shelf room for fully 250,000 books.

President Hoffman, of the society, in reviewing the plans, said: "It is estimated that the portion first to be erected will cost about \$400,000, and we have about \$100,000 in cash subscribed. With the value of the present site, owned outright by the society, we can safely say that about half the amount needed to begin work is in hand."

*New York P. L.—Astor, Lenox, and Tilden Foundations.* (Rpt.—year ending June 30, '01; in *Bulletin*, October, p. 395-425.) The notable events of the year reviewed were, of course, the completion of the Carnegie contract for branch buildings, and the consolidation with the New York Free Circulating Li-

brary, "thus ensuring a broad and comprehensive library system for the city." The details of both these events have been already fully recorded in these columns. Another important undertaking was the establishment in June of general reading rooms in four public-school buildings, under authorization and with the aid of the board of education. This system of school branches forms a part of the circulation department, and will be extended to additional selected schools as soon as practicable.

Statistics of accession and cataloging work are given for the central reference library as follows: received 32,971, of which 17,404 were gifts; pamphlets 44,669, of which 31,112 were gifts. "The total number of volumes on the shelves and available for use at the end of June, 1901, was 538,957, and of pamphlets about 182,370."

"Reclassification in the reference department has been continued during the year;" 36,155 v. and 5033 pamphlets were reclassified, the main work being done in the sections of theology and church history, philosophy, mathematics, astronomy, physics, chemistry, German history, and classical and English literature. In the catalog department 60,308 v. and 39,045 pm. were cataloged. The index catalog, at the close of the year covered, contained about 850,500 cards. "The 'small card' catalog at the Astor building, which contained the author and subject record of books received by the Astor Library between 1880 and 1896, has now been abolished, all the entries in it having been transferred to the official author catalog and to the public index catalog, either on written or printed cards." The author catalog of books added to the Astor prior to 1880 contained in the eight printed volumes of the Cogswell and Nelson catalogs, will ultimately be transferred to cards and embodied in the general index catalog. Dr. Billings states that "owing to want of funds it has been found necessary to discharge the greater part of the extra force which has been employed for the last three years in bringing up arrears of work in cataloging and classification, and this work must now go on more slowly. Of recent accessions there still remain a few thousand books and pamphlets to be cataloged; but unless some large and unforeseen addition by gift should come in, I hope to have all of these disposed of by the end of the next fiscal year. There are still about 100,000 books and pamphlets cataloged by author titles only."

Visitors to the Astor and Lenox buildings during the year numbered 143,972, of whom 101,689 visited the former. There were 605,487 volumes and periodicals issued to readers in both buildings. At the Astor the largest percentage of use (19%) was of books in applied science; at the Lenox genealogy was the subject most in demand. Summaries of chief accessions and general work in special departments are given. The Slavonic depart-

ment now contains 3161 v. In the print department 8763 prints were accessioned, and important gifts included over 400 prints from S. P. Avery, 990 prints from Charles B. Curtis, 628 prints from James D. Smillie, 909 prints from R. H. Storer, and 1763 prints from Japanese artists, by Charles Stewart Smith. Several notable public exhibitions were held.

In making purchases of books for the reference library, in view of the lack of sufficient funds to keep all departments up to date, the following aims have been formulated and followed:

"To maintain and increase that department of the library which is the strongest, which gives it a distinctive character, and in which the scholars and writers of this country take the greatest interest, namely, American history.

"To supply a large group of current periodical literature covering all the subjects in history, literature, art, science, and technology, for the latest information with regard to which there is the greatest demand on the part of readers.

"To add important works of reference in departments of growing interest and importance, but in which the library was relatively weak.

"To buy comparatively little in departments which are well covered by other professional or technical libraries in the city.

"Not to buy high-priced books whose value consists mainly in their rarity."

Statistics for the circulating department (formerly the New York Free Circulating Library) are given only in tabulated appendices. They cover four months only, and show additions of 6789; total 176,199; home use, 584,200.

On Oct. 16 G. L. Rives, secretary of the library board, issued a statement outlining the general policy that is to be pursued regarding the selection of sites and plans for the Carnegie branch libraries. It was announced that one site, at East 79th street and Second ave., had already been selected. "Application will shortly be made to the city for the purchase of other sites. With regard to the planning of buildings, it has seemed best to the trustees that the libraries should be not only built of a distinctive type, but that there should be as much uniformity in the design, use of materials, general character and scale of the different buildings as is consistent with the numerous variations bound to exist in the practical requirements at different places and the dimensions and diversity of sites and their surroundings.

"How to secure the sort of uniformity of type that is desired has been a matter of serious consideration with the trustees. The problem is not unlike that which has had to be dealt with at the great exposition of Chicago and Buffalo, where it has been desired to put up adjacent buildings exhibiting a uni-

formity of type but some individual diversity. It has seemed to the trustees that the best solution of the difficulty would be found, not in competition, but in collaboration. The trustees would not have been satisfied to entrust the entire work of erecting the 42 branches which they are to construct to a single architect. On the other hand, it was plain, that too large a number of architects would not be able to work together in as efficient a manner as a comparatively small number.

"Acting on these general principles, the trustees at their last meeting resolved to invite three firms of architects, viz., McKim, Mead & White, Carrere & Hastings, and Babb, Cook & Willard, to serve the library in designing and supervising the construction of the branches in question, with the single exception of the 79th street branch, which, it is expected, will be constructed from designs furnished by James Brown Lord. The three firms above named are to act in collaboration and decide jointly all matters of common import regarding the designs and construction and other details relating to the various buildings. The designing of each separate building, however, and the supervision of its construction are to be entrusted by allotment to several firms.

"It is the expectation of the trustees that the advisory board will at once take up the problem of designing these libraries and determine upon what may be called a general type of building, and that as fast as the city acquires sites for branch libraries these designs for the buildings will be ready, and the work of construction rushed as fast as possible."

*Newport, R. I. Redwood L. and Athenaeum.* (171st rpt.—year ending Aug. 14, 1901.) Added 440 by purchase, 625 by gift; total 48,696. Issued, home use 17,886 (fict. 68%).

The total no. of v. in the library, as given, includes a considerable number of volumes, chiefly fiction, which have been worn out and permanently removed from the shelves. Besides this, the library has been suffering from theft to a remarkable degree. Most of the losses occur from the stack room, which is open in summer to tourists and visitors as well as to subscribers. Librarian Bliss recommends the complete exclusion of strangers from the stack room except when accompanied by a "proprietor," or subscriber. The extent of losses cannot be determined, owing to incompleteness of shelf list, work on which has been discontinued because of lack of funds.

More stack room is urgently needed, the rapid accumulation of books having forced an overflow of fiction into the reading and delivery rooms, and left no space for new government publications, except on the floor.

*Oakland, Cal. Carnegie P. L.* As a continuation of their former work in the library cause—in providing a site for the new Car-

negie building—the members of the Ebell Society have assumed the obligation of equipping the children's room in the library building. The society is one of the leading women's clubs of Oakland.

*Ohio State L., Columbus.* (55th rpt.—year ending Nov. 15, 1900.) Added 6809, of which 4642 were additions to the travelling library department; total 68,750. During the year 711 travelling libraries were sent out, of which 252 went to schools, 179 to study clubs, and 125 to women's clubs. "The interest manifested in library extension throughout the state indicates accelerated growth and rapidly increasing demand for the help that, under the existing law, the state stands pledged to give." More room for the state library and for commission work is urgently needed. The list of accessions for the year is appended.

An important and permanently valuable feature of the report is the appendix, devoted to "list of newspapers and periodicals in Ohio State Library, other libraries of the state, and list of Ohio newspapers in the Library of Congress." This is practically co-operative work, the list for each library being given separately and compiled by the librarian of the special collection. The immediate criticism that suggests itself is the greater advantage of a single list, giving indication of the various libraries in which the material recorded may be found; but its preparation would, of course, have entailed much more expenditure of time and labor in compilation.

*Pittsburgh, Pa. Carnegie L.* The library *Bulletin* for October contains an interesting report by Meredyth Woodward on the work done in supplying books to children at the summer playgrounds. This was begun as an experiment three years ago, and was continued this summer as a part of the work done by the children's department of the library. "During the initial summer five playgrounds were supplied, the total circulation being about 1600. Last year the needs of seven playgrounds were met, with a result of 1833 in circulation, while the present year nine playgrounds have given a circulation of 3637 volumes, and this during one day in each of six weeks." This day was set apart as "library day," and as many as 117 volumes have been issued in a single playground on that day.

"In these miniature libraries not only do the children become familiar with library regulations, but more judicious and intelligent in the selection of books. At first they choose a book because it has an attractive cover, large print, 'lots of talk' (conversation), or because it is small and soon read. Later they select a book because the title tells of interesting subject-matter, or because a playmate has recommended it as 'grand,' a 'dandy,' or 'a peach.' A popular book often has as high as 10 or 15 reserves on it. Nor are these ab-

sorbing books always fiction. The statistics show that stories of travel, lives of great men, and books on natural history were fully as popular as the fiction. The fiction per cent. of last year was reduced from 60 per cent. to 52 per cent. this year.

"On the whole we feel well pleased with the season's work, although, as is natural, the work done by the two new branches was not so successful as that elsewhere, owing to the fact that the work was new to the district." As a result of previous work in another district 52 children from one playground are recorded as having taken out library cards. "The children are better trained in library usages, and more intelligent as to what they want, often counting from one year to the next upon getting a certain book. Out of this enthusiasm there naturally result the home library groups and clubs which furnish books during the winter."

*Saco, Me.* On Oct. 23 the trustees of Thornton Academy accepted the plans for a library building, to be erected as a memorial to the late Col. C. C. G. Thornton. The new structure will be erected on the academy campus near the main building, and will cost from \$20,000 to \$25,000.

This new building will be a gift from Mrs. Annie C. Thornton, of Magnolia, Mass., widow of the late Col. Thornton, and her daughter, Miss Mary C. Thornton. The work of construction will be commenced early in the spring, and it is hoped it will be ready for occupancy by next September.

*St. Joseph (Mo.) F. P. L.* (11th rpt.—year ending April 30, 1901.) Added 2146; total 20,088. Issued, home use, 103,274 (fict. 79.61 %). Cards in use 4665, of which 43 are teachers' cards.

The record of a busy year shows increased activity in all departments and a steady preparation for removal to the new building, to be finished, it is hoped, this fall. Work with the schools has included reading lists prepared for class-rooms and greater latitude given in the number of books issued to teachers for school use. In several instances selected libraries of from 60 to 100 volumes have been placed in city and suburban schools.

The "duplicate collection" of popular novels, numbering 78 books and costing \$77.90, has earned \$92.55; but the reduction of charge from 10 cents to 5 cents, recently adopted, will in future undoubtedly eat up the profits.

In the cataloging department the revision of the card catalog has been about completed as well as a new shelf-list made for the reference room. Two additional delivery stations have been established, at one of which, the Wesley M. E. Church reading-room, a collection of 100 books has also been placed. In the line of library publications, the second biennial supplement to the finding list has been compiled from the quarterly bulletins of two

years, and four bulletins of additions have appeared as well as a second edition to the first supplement of the finding list, and selected lists of popular fiction.

Probably the most important event of the year has been Mr. Carnegie's donation of \$25,000 for a branch library in South St. Joseph, followed by a gift of land from South St. Joseph Town Co. and the guarantee of support from the city tax list.

*San Jose (Cal.) Carnegie L.* Plans for the \$50,000 Carnegie library building were adopted on Nov. 4.

*Sedalia (Mo.) P. L.* (6th rpt. — year ending April 30, 1901.) Added 178; total 4027. Issued 37,092 (fict. .761%; juv. .149%). New cards issued 1867. Receipts \$4602.94; expenses \$4368.47.

This is a readable and interesting report, giving details of a reorganization so complete as to seem like the organization of a new library. When the librarian, Miss Faith E. Smith, assumed her new duties last November she found everything in dire confusion, and the necessity staring her in the face of getting the library into working order before its removal into the Carnegie building. One by one the books were stamped, prepared for the shelves, and mended, if necessary, then accessioned, and, lastly, classified according to the Dewey system, numbered, shelf-listed, and cataloged, cards being written on the Hammond typewriter. The cards were then arranged in three files, under author, subject and title. During the six months preceding the report 2035 books were thus treated, and it is expected that the whole library will be cataloged within the year. Aside from this work, a loan system has been adopted; periodicals have been put into usable condition, and plans prepared for work with the schools as soon as the facilities of the new building make it possible. It is also under consideration to adopt the two-book system, hoping thereby to increase the circulation. It is perhaps only just to explain that the large expenses preparatory to moving into the Carnegie building have much curtailed the purchase of new books, which in turn has decreased the circulation.

The report of the president of the board tells of the preliminary arrangements for the \$50,000 building offered by Mr. Carnegie; of the architects chosen and of their plans; and of the progress of the work. Accompanying the report is a neat little book bound in stiff blue card board, which contains "The by-laws and rules of the Sedalia Public Library; together with the ordinances of the city and statutes relating to public libraries."

*South Norwalk (Ct.) P. L.* The town of Norwalk celebrated its 250th anniversary in September, and the Public Library had an exhibition of Norwalk literature, some of which

was old and rare; and a collection of photographs and prints of Norwalk scenes was hung in the reading-room. It was the first attempt at making a Norwalk bibliography.

On Oct. 15 Miss Jennette Mathewson presented 100 new juvenile books to the library in memory of her little brother, Edwin H. Mathewson, Jr. A neat book-plate in each volume states the source of the gift.

*Springfield (Mass.) City L. Assoc.* (40th rpt. — year ending May 7, '01.) Added 6071; total 121,162. Circulation 213,553 (adult and juv. fict. 61.8%); of these 32,884 v. were issued through schools and branches. It is not stated whether the total circulation figures include books drawn for library use as well as home use, and no specific statistics of reference use are given. "The use per capita of books from the library was 3.3, a ratio not equalled it would seem by any city in the country of the same or greater population, save Somerville, Mass., and Los Angeles, Cal. Nearly one person in every three in the city is a library cardholder."

A new registration of borrowers was begun in July, 1897. "Of 18,000 cardholders nearly 6000 are children. Of all books lent, those for children constitute about one-third. The total number of books for young people now in the library is 7270, or six per cent. of the whole collection." Books have been sent during the year to 21 school buildings, to engine houses, street railway employes' stations, Sunday-schools, and similar places. In the selection of fiction reliance is placed, as in the previous year, upon the verdict of volunteer readers, and offers of assistance in this direction, for fiction or other books, are welcome. In adult fiction there were purchased 1010 volumes, including the works of 49 new writers and 144 different new titles.

The "home delivery" system, begun in April is described. The plan has met with general approval, and "all indications point to its success and continuance, though possibly at a slightly increased charge. One of the very encouraging features of the plan is found in the fact that of the 160 who asked for this home delivery, 80 had never before made use of the library and about 25 had not used their cards for many months and in some cases years." Work with the children receives special attention, and the plans for encouraging "vacation reading," and reference use of books are noted. The need of more space in the children's department is urgently felt.

An important feature of the library's collections is the D. A. Wells Economic Library, for which the D. A. Wells bequest of \$90,000 makes provision. This brings an income of about \$3000 a year, half of which must be expended for "books or other publications on economics, fiscal or social science subjects" for the Wells collection. A brief historical sketch of the library is included, and the

report touches upon other phases of library activity. It deserves to be read in full.

*Syracuse (N. Y.) University.* The college year opened on Sept. 15 with 10 seniors and 14 juniors regularly registered in the course of library economy, conducted by Mrs. H. O. Sibley. This course has existed since 1892, when the librarian, Dr. H. O. Sibley, was appointed instructor in library economy. In June, 1901, he was made professor of library economy. From 1892 to 1896 special instruction was given to some students pursuing other courses in the university. In September, 1896, the first student entered regularly for a two years' library course.

*University of Montana, Missouri.* J. F. Davies, who was engaged by the university authorities as expert librarian, to catalog and classify the collection, has submitted an interesting report of his ten months work. This included shelving, classifying, accessioning, cataloging, indexing, shelf listing, etc. In all about 4000 v. were classified and cataloged, of which some 3200 had been already accessioned. The Dewey system was followed, with a few modifications, and much analytical work was done for important sets and extended works. In connection with this work of reorganization, Mr. Davies conducted a class in library economy and bibliography during the second semester. "Thirteen students, 12 being regular college students and one a special, began this course and nine completed it in a satisfactory manner. The course continued for four months and consisted regularly of one recitation, one lecture and five hours of laboratory work each week. The text-books used were Cutter's rules and the Abridged decimal classification. The cards written by the class in their laboratory work were retained for use in the card catalog. The main purpose of this course was to enable the members of the class to learn the use of libraries and to become acquainted with the principles that underlie the selection of books in connection with their studies and their future needs rather than to fit them for actual library work, though this latter purpose was incidentally observed."

*Vineland (N. J.) P. L.* The newly organized public library was opened Oct. 1 in its rooms in the city hall. The library was established mainly through the work of the local women's club, and its nucleus was the collection of the Vineland Library Association, which was transferred to city control. About 3000 v. are on the shelves.

*Virginia State L., Richmond.* A plan is now under consideration by the state educational committee to bring the state library under the control of the board of education; to utilize the accumulated \$12,000 that stands to-day to the credit of the library, and to divorce the office of librarian and other librarians' positions from politics.

*Watertown (Mass.) F. P. L.* (33d rpt.) Added 857; total 26,409. Issued, home use, 36,430 (fict. and juv. 24,453); lib. use 4656. New cards 434; total cards in use 8548.

This has been a fortunate year in the library annals, including the installation of new stacks that will more than double its book capacity; the completion of the Hunnewell reading-room, and arrangements made for the children's room. All this has involved much arduous work on the part of the staff, including a reclassification of the whole library, on which a good beginning has been made. New finding lists of biography, history, geography and travel are now ready for printing. It is also noted that the printed catalog cards to be issued by the Library of Congress will render welcome assistance in the cataloging department, allowing the staff to "give more personal attention and assistance to . . . readers." There is a gratifying increase in the number of cards issued, partly due, no doubt, to the removal of age limit for children. Home use of books has also increased, with a decrease in reference use, accounted for, however, by the confusion in the building incident upon the many alterations. The Art Club exhibits have been fewer in number simply because of the lack of space to show pictures.

Appended to the report is the "19th supplement to the catalog of 1881," containing most of the additions of the last year.

*Watertown (N. Y.) P. L.* Plans for the Flower Memorial Library building were accepted in August, the successful designs being those of Lansing, Orchard & Joralemon, of Watertown.

*Westfield (Mass.) Athenaeum L.* The library opened a training class on Nov. 1. Preliminary examinations were held to test the fitness of applicants, and the entrance requirements include an agreement to give an average of 36 hours a week to the library service for three months. This probationary service is to be followed by six months' apprentice service, averaging 42 hours a week, making the full course one of nine months from the date of entering. A probationer will devote six hours a week out of the 36, and an apprentice will devote 12 hours a week out of the 42 to private study of library economy, history, literature or language, under the direction of the library. There will be daily class meetings, at which subjects relating to library economy will be discussed.

*Wilmington (Del.) Institute F. L.* The news of the extensive mutilation of books in the library has already been noted in these columns. John H. Rollo, who is accused of the crime, has been captured in Reading, Pa., and brought to Wilmington. His counsel waived examination, but in default of \$1000 bail he was committed to New Castle county

jail awaiting the November term of court. A rough estimate of the cost to replace the books stolen and mutilated is placed at least \$2500. Mr. Bowerman, the librarian, is said to be in possession of complete and convincing evidence of the guilt of Rollo. There seems no doubt of his conviction and punishment on the double charge of larceny and the mutilation of library property.

#### FOREIGN.

*Bibliothèque Nationale, Paris.* According to the *Athenaeum* the Bibliothèque Nationale has decided to keep only about 2000 of the 30,000 pamphlets, etc., on the French Revolution which the trustees of the British Museum handed over to it some time ago. Those which have not been retained were duplicates, and have been placed in the keeping of the Bibliothèque Historique de la Ville de Paris at the Musée Carnavalet, of which M. Gérard is the librarian. This residue fills 30 large cases, and before this sudden influx of 28,000 items can be conveniently stored away a special money grant will have to be made.

*Leeds (Eng.) P. F. Ls.* (31st rpt.—year ending March 25, 1901.) During the year, 12,675 volumes worn out, obsolete or otherwise useless, were removed, so that even with additions and replacements the total number of volumes in the libraries is only 200,244, as against 203,481 last year. This total is distributed as follows: Reference library 63,042 (incr. 3036 over last year); central library 42,460 (decr. 7217); branch libraries 94,742 (incr. 942). There were 126,159 v. consulted in the reference library; 360,365 issued from the central library and 450,327 issued from branch libraries; the total use in all departments being 936,851 as against 844,172 of the previous year. The number of card-holders has increased to 28,147.

The reference library is being reclassified according to the Dewey system and a catalog is under way. Five branch library buildings were planned for or in process of erection and two day branch libraries opened, making the complete library organization at the time of this report as follows: Central library (reference dept., lending dept., and newsroom); seven day branch libraries, 15 evening branch libraries and 23 juvenile branch libraries.

*Sydney, N. S. W. P. L. of New South Wales.* (30th rpt.—1900.) Added 6009; total 149,840. Issued, home use 106,039 (fict. 42.3); attendance in ref. dept. 185,059, an increase of 1299 over that of previous year. Total borrowers 8311, a decrease since last year, largely accounted for, however, by the outbreak of bubonic plague in the city, when one of the officers of the lending library was attacked.

The record of the year seems chiefly notable in what has been accomplished in the cataloging department. Aside from current work.

a subject index has been completed for the 80,000 books received in the reference library during the years 1869-1895, which, added to the current supplement, 1896-1900, gives a complete subject index of the reference department. It is earnestly urged that funds for printing this index be now provided. Various supplementary catalogs of the lending branch for the years 1886-1898 have been combined and a subject index to the 16,000 volumes of this branch also compiled, the government printing office having undertaken the printing of the volume. The recent installation of the Chivers' Indicator is also noted and the consequent necessary renumbering of the whole collection in the lending library. Outside energy of the year is shown in the further extension of the travelling library scheme and "there is abundant evidence that this branch of the trustees' work is highly appreciated by country students, and is productive of good educational results." Great stress is laid upon the necessity for increased appropriations as well as for enlarged quarters in order to adequately meet the demands of the public. A course of lectures on "Hamlet," given in the library in connection with the university extension movement, proved one of the pleasantest events of the year.

---

#### Gifts and Bequests.

---

*Bolton, Mass.* On Nov. 5 it was announced in town meeting that a gift of \$10,000 for a public library building had been made to the town by Ann Eliza Whitney, of Lancaster, formerly of Bolton, in the name of her deceased sister, Emma Whitney. The offer has been accepted. The conditions are that the town furnish a central site and put in the foundation of the building; that a memorial tablet be placed in the building; and that the town pay Miss Whitney the interest of \$3000 so long as she lives.

*Chicago P. L.* Mrs. T. B. Blackstone has offered to the Chicago Public Library board to erect and equip a \$100,000 library building for the Chicago suburb, Hyde Park. Mrs. Blackstone is the widow of the late T. B. Blackstone, founder of the Blackstone Memorial Library of Branford, Ct. The library is to be known as the T. B. Blackstone Memorial Branch Library.

*Horse Cave, Ky.* On Nov. 5 a library of 500 selected volumes was presented to Horse Cave School, the gift of Miss Helen Gould.

*Middleboro, Mass.* By the will of the late Thomas S. Peirce, of Middleboro, the sum of \$50,000 is left to that town for the erection of a public library building, and an additional \$50,000 is bequeathed for books and equipment.

*Randolph (Vt.) P. L.* Col. R. J. Kimball, of Randolph, has offered to give \$10,000 for a new library building, provided the town will furnish a site without drawing upon the present library fund. There is a fund of about \$4000, the bequest of Mrs. S. J. Crocker, also available for library purposes.

*University of Toronto L., Toronto.* The library has received a gift of \$10,000 from Mr. and Mrs. Goldwin Smith. No conditions are attached to the gift.

*Westerly, R. I.* By the will of the late Mrs. Harriet Wilcox, of Brooklyn, who died on Aug. 21, the sum of \$150,000 is left in trust to the Westerly (R. I.) Memorial and Library Association, the income to be used in maintaining the building, library, and adjoining park.

*Whitewater, Wis.* By the will of the late Miss Flavia White, of St. Paul, the city of Whitewater receives \$17,000 for a public library building.

#### *Carnegie library gifts.*

The following recent gifts for library buildings have been made by Andrew Carnegie:

*Austin, Minn.* Oct. 17. \$12,000. Accepted Nov. 4.

*Canandaigua, N. Y.* Nov. 4. \$10,000.

*Carrollton, Ill.* Oct. 18. \$10,000.

*Charleston, Ill.* Oct. 30. \$18,000; yearly guarantee of \$1900 required. Accepted.

*Charlotte, N. C.* Oct. 13. \$5000 additional, making total gift of \$25,000.

*Dundee, Scotl.* Oct. 21. £37,000 for branch libraries.

*Elwood, Ind.* Oct. 18. \$25,000.

*Glasgow, Scotl.* Kinning Park. Oct. 29. £5000.

*Green Bay, Wis.* Oct. 14. \$5000 additional, making a total gift of \$25,000.

*Guthrie, O. T.* \$20,000. Accepted by city council.

*Hawarden, Ia.* Oct. 21. \$5000; the \$400 yearly guarantee required had been previously secured through tax levy, by popular vote.

*Islip, N. Y.* Oct. 23. \$10,000.

*Los Gatos, Cal.* Oct. 20. \$10,000.

*Nashville, Tenn.* Oct. 18. \$100,000.

*Neenah, Wis.* Oct. 17. \$10,000.

The sum of \$21,980 has been raised by public subscription to add to Mr. Carnegie's gift, as a public library fund.

*Paducah, Ky.* Oct. 28. \$35,000.

The city council has agreed to furnish the \$3500 yearly appropriation required.

*Revere, Mass.* Oct. 18. \$20,000.

*San Juan, Porto Rico.* Oct. 24. \$100,000. City appropriation of \$6000 annually required, "supplemented by action on the part of the insular legislature, bringing the total up to \$8000 or \$9000."

*Waterford, Irel.* Oct. 7. £5000.

## Librarians.

BACON, Charles A., librarian of Beloit College, died at his home in Beloit, Wis., on Nov. 6. Mr. Bacon was a native of Vermont, and was widely known for his astronomical researches.

BEARDSLEY, Ira L., librarian of the Cleveland (O.) Public Library from 1875 to 1884, died at St. Augustine, Fla., on Nov. 2, aged 82 years. During recent years Mr. Beardsley had been connected with the Standard Oil Company.

BRONSON, James M., for nearly 40 years librarian of the Leominster (Mass.) Public Library, has resigned that office.

BURNET, Henry Duncan, of the New York State Library School, 1898-99, has been appointed head cataloger in the University of Missouri Library.

CAPEN, Edward, librarian emeritus of the Haverhill (Mass.) Public Library, and the first librarian of the Boston Public Library, died suddenly at his home in Haverhill on his 80th birthday, Oct. 20. Mr. Capen had spent the day before at the library, engaged in his usual duties, and his death came as an unexpected shock to his friends and associates; it was due to heart failure. Edward Capen was born in Dorchester, Oct. 20, 1821, the third son of Rev. Lemuel and Mary (Hunting) Capen. His ancestry reaches back in Dorchester to 1630. In his early youth his family removed to South Boston, where he was graduated from the Boston Latin School, with the Franklin medal, in 1838. He entered Harvard, graduating in the class of 1842, and then attended Cambridge Divinity School, class of 1845. He served for one year as minister of the Unitarian Society, at Westford, Mass., but after that his work in the ministry met with little success, owing to his sympathy with the views of Theodore Parker, at that time looked upon askance in the ministry of his denomination. In October, 1847, he secured a position with Dr. John Collins Warren as private secretary, and in 1849 his name was registered as a student at Harvard Medical School. He attended the lectures of Dr. Oliver Wendell Holmes in anatomy and Prof. John W. Webster in chemistry. In 1850 he accompanied Dr. Warren, who was then president of the American Medical Association, to attend its annual meeting at Cincinnati, and in 1851, the year of the first great exposition, he went to London and Paris with him. In January, 1852, he secured the position of secretary of the school committee of Boston. The public library was then open in its quarters on Mason street, and Mr. Capen was appointed librarian on May 12, 1852. Under the direction of the trustees he prepared its first catalog and its first six reports to the Boston city council. The building on Bovlston street was soon after commenced, under the direction

of a commission of which Robert C. Winthrop was chairman and Mr. Capen secretary. This building was dedicated in 1853 and the library removed to it. Charles C. Jewett was made superintendent, but for 22 years Mr. Capen continued to hold the office of librarian, and gave himself with earnestness and devotion to the service of the library. In November, 1874, he was elected librarian of the Haverhill Public Library, a post which he held until his retirement as librarian emeritus in October, 1899, when he was succeeded by John Grant Moulton, of Brockton. Mr. Capen was a life member of the American Library Association. He is survived by a wife and one daughter.

CASAMAJOR, Miss Mary, of the New York State Library School, 1899-1900, has been engaged to catalog and organize the Asbury Park (N. J.) Public Library.

GREEN, Miss Lillian P., of the New York State Library School, 1900-1901, has been appointed assistant in the Leland Stanford Jr. University Library.

RANCK-BLACKBURN. Mr. Samuel Haverstick Ranck, assistant librarian of the Enoch Pratt Free Library of Baltimore, was married on Oct. 15 to Miss Judith Anne Blackburn, of Baltimore.

RODGERS, Miss Jane, of the New York State Library School, 1900-1901, has been appointed librarian of the Washburn College Library, Topeka, Kansas.

SHARP, Miss Katharine Lucinda, B.L.S., New York State Library School, class of '92, has been appointed vice-president of the National Association of Collegiate Alumnae.

THOMSON, Miss Frances Danner, Pratt Institute Free Library, class of 1900, has resigned her position in the library of the Y. W. C. A., New York, to accept the librarianship of the Mount Vernon (N. Y.) Public Library.

TRUBE, Miss Bertha O., Pratt Institute Library School, classes 1900 and '01, has been appointed acting librarian of the Woman's Institute, Yonkers, N. Y.

WELBORN, Judge Carlton J., has been appointed state librarian of Georgia, succeeding James E. Brown, whose term of office expired Oct. 31. Judge Welborn served a term as state librarian over 40 years ago.

WINDEYER, Miss Margaret, graduate of the New York Library School, class of 1899, has been appointed library assistant in the Public Library of New South Wales, Sydney, Australia. Miss Windeyer and two other women, just added to the staff, are the first women ever employed in an Australian library.

## Cataloging and Classification.

AMERICAN SOCIETY OF CIVIL ENGINEERS. Catalogue of the library, June, 1900; prepared by the secretary under the direction of the Library Committee. New York, [1901.] 704 p. 8°.

This catalog, compiled by Charles Warren Hunt, will be interesting and useful to all who have to deal with the literature of engineering and its allied sciences. It represents the classified index of the comprehensive card catalog (author, subject, and classified index) for the collection of the American Society of Civil Engineers, begun in April, 1898, and completed in June, 1900. The classification is devised to cover the various branches of engineering science, and includes 24 main divisions, with letter notation. Entries are fully given with place, date, number of volumes, size, etc. An alphabetical subject index, appended, aids consultation of the catalog.

The BOSTON P. L. *Bulletin* for October contains an author list of fiction in the Italian language contained in the library. There are over 350 author entries. In the November issue is a title list of the Italian fiction, and a list of translations from the Italian in English, French and German, including also one title in Serbo-Croatian.

DETROIT (*Mich.*) P. L. Netherlands: books and articles in the Detroit Public Library (periodical references not included), 1901. 29 p. nar. O.

A classed list, printed on heavy manila paper.

The FITCHBURG (*Mass.*) P. L. *Bulletin* for November contains a good short reference list on Shakespeare, covering general works, seven of the plays, and the poems, songs and sonnets.

HACKENSACK (*N. J.*) JOHNSON P. L. Finding list. 1901. 51 p. Q.

The first finding list of this new library is well printed and convenient in form, entry being made under author only, and books arranged in classes according to the D. C., preceded by fiction list and followed by juvenile books. The character of the books included seems essentially up to date, though older standard authors are also represented.

ILLINOIS STATE HISTORICAL L., *Springfield*. Alphabetic catalog of books, manuscripts, maps, pictures and curios: authors, titles and subjects, 1900; comp. under direction of the board of trustees of the library, by the librarian, Mrs. Jessie Palmer Weber. Springfield, 1900. 363 p. O.

A dictionary catalog, two columns to the

page, with full entries, giving place of publication, date and size. Technically the work might have been improved in details of punctuation, typography, etc., and it shows some crudities in arrangement. Title entries are often superfluous, as in Brooks' "Life and death of Abraham Lincoln," "Life and times of David Zeisberger," by De Schweinitz, and other books which appear with full title entry under "Life" as well as under author and subject. There is, however, much interesting and useful material in the catalog—notably the record of Illinois publications and of the library's valuable collection of *Lincolnia*.

The KANSAS CITY (*Mo.*) P. L. *Quarterly* for October is mainly devoted to the scientific books and periodicals contained in the library. A list of the former covers 35 pages, in double column, and is arranged in one alphabet, by authors and inverted title or subject word.

LIBRARY OF CONGRESS, *Division of Maps and Charts*. A list of works relating to cartography; by P. Lee Phillips, F.R.G.S., chief of Division of Maps and Charts. (Reprinted from A list of maps of America, in the Library of Congress.) Washington: Gov. Print. Office, 1901. 90 p. 1. 8°.

About 1000 titles, alphabetically arranged.

MASSACHUSETTS STATE L., *Boston*. Catalogue of the laws of foreign countries; prep. by Ellen M. Sawyer, principal assistant. Boston, Wright & Potter Printing Co., State Printers, 1901. 75 p. interleaved, O.

Following a short general division of Codes and collections, the laws recorded are arranged alphabetically by names of countries. A thorough and careful catalog, well printed, and interleaved with writing paper for notes.

PHILADELPHIA F. L. *Bulletin*, no. 3: indexes to the first lines and to the subjects of the poems of Robert Herrick; prep. under the direction of John Thomson. August, 1901. 98 p. Q.

A careful and handsomely printed piece of work. The index to first lines covers 36 pages; that to subjects 44 pages in double columns; and an excellent glossary fills eight double-column pages. The references are made throughout to the two-volume edition of Herrick, published by Little, Brown & Co., in their set of "British poets," to which the index will prove a most valuable supplement. Much of the original work upon it was done by Richard E. Wilson, and Mr. John Ashhurst has given careful revision and prepared the glossary.

The SALEM (*Mass.*) P. L. *Bulletin* for October contains five reading lists, dealing with Theodore Roosevelt, Sir Walter Besant, Daniel Webster, Trusts, and Edinburgh.

#### FULL NAMES.

The following are supplied by Catalogue Division, Library of Congress.

- Arnold, Joseph Alfred (Arnold's guide for business corporations in the state of New York . . .);  
 Barry, James Patrick (Fidistoria);  
 Beeson, Harvey Childs (Beeson's marine directory . . .);  
 Brown, Levant Frederick (Prince Harold);  
 Goodspeed, Frank Lincoln (Palestine: a fifth gospel);  
 Graham, Sarah Melissa Cary Downing, [Mrs. John Ellsworth Graham, *pseud.*] (The Toltec savior . . .);  
 Harris, Joanis Orlando (Colonel Johnson of Johnson's Corners);  
 Holmes, Ellis Proctor (Oakly, the son of his dad . . .);  
 Maire, Frederick (The modern wood finisher . . .);  
 Miller, George Washington (Field book of practical mineralogy);  
 Minor, Raleigh Colston (Conflict of laws; or, private international law);  
 Morton, Henrietta Josephine (Neal) ["Mrs. J. H. Morton"] (Filled hands . . .);  
 Norcross, Frank Wayland (A history of the New York swamp);  
 Oughton, Charles Martin (Crazes, credulities and Christian science);  
 Page, Lorena Maybelle (Legendary lore of Mackinac . . .);  
 Peters, Fredus Nelson (Modern chemistry);  
 Politzer, Anthony Philip (The rabbi of Litzka and the possibilities of Christian science in the twentieth century . . .);  
 Pratt, William Albert (The gold fields of Cape Nome . . .);  
 Prescott, Albert Benjamin, and Johnson, Otis Coe (Qualitative chemical analysis . . .);  
 Putnam, Homer Manley, and Smith, Bertram Garner (1000 questions in review);  
 Rhines, Fayette Wendel (Rhines' progression system for playing the races successfully);  
 Rich, Alonzo Berry (Our new neighbor, the mosquito . . .);  
 Ripley, Nelson Benedict (Cordelia, and other poems);  
 Rye, Amy Louisa, ["Mrs. Francis Rye"] (The beloved Son);  
 Sabin, Oliver Corwin (Christology, science of health and happiness . . .);  
 Sachse, Helena Viola ["Mrs. Samuel Schmucker Sadtler"] (How to cook for the sick and convalescent);  
 Simkins, Joshua Dean (Early history of Auglaize county);  
 Smith, Ella Gertrude (A manual of the treatment of disease by electricity and vital magnetism);  
 Smith, Samuel Harper (Circumvented; or, success despite opposition . . .);  
 Speer, Robert Elliott (Presbyterian foreign missions . . .);  
 Stebbins, John Wesley (The half-century history of Rebekah odd fellowship of the I. O. O. F. . . .);

Stein, John Frederick (German exercises);  
 Stephens, Dan Vorhees (Silas Cobb; a story of supervision);  
 Stevens, Edward Oliver (The Peguan hymnal);  
 Stine, Wilbur Morris (Photometrical measurements);  
 Stone, George Hapgood (The glacial gravels of Maine and their associated deposits);  
 Symonds, Henry Clay (Abstract of the elements of English grammar arranged in tabular form);  
 True, Alfred Charles, and Clark, Vinton Albert (The agricultural experiment stations in the United States);  
 Van Bergen, Robert (A boy of old Japan);  
 Vane, Isabella Cornelia de (Doctor Carrington . . .);  
 Walker, Clarence Eugene (Speed and legibility: practical hints to students and writers of Pitmanic phonography);  
 Walsh, George Ethelbert (The mysterious burglar);  
 Walton, Joseph Solomon (Conrad Weiser and the Indian policy of colonial Pennsylvania);  
 Williams, William George (Baptism);  
 Willson, Robert Wheeler (Laboratory astronomy);  
 Wilson, William Frank (Wilson's complete digest of Oklahoma . . .);  
 Winslow, Isaac Oscar (The natural arithmetic);  
 Woodbridge, Samuel Isett, *tr.* (China's only hope, by Chang Chih-Tung);  
 Wright, Carroll Davidson, and Hunt, William Chamberlin (The history and growth of the United States census).

### Bibliography.

**BAGPIPE.** Manson, W. L. The Highland bagpipe: its history, literature, and music; with some account of the traditions, superstitions and anecdotes relating to the instrument and its tunes. Paisley, Gardner, 1901. Includes a bibliography of bagpipe music; reviewed in *Athenaeum*, Sept. 28.

**DIBDIN,** Charles. Dibdin, E. Rimbault. A bibliographical account of the works of Charles Dibdin. (*In Notes and Queries*, Sept. 7; Oct. 5, 9th series, 8:191-193, 279-281.)

**DIONYSIUS of Halicarnassus.** The three literary letters: the Greek text edited with English translation, notes, etc., by W. Rhys Roberts. Cambridge, University Press, 1901. 13+232 p. 8°.  
 Contains a 12-page annotated bibliography of the scripta rhetorica.

**DRUMMOND,** Henry. Lennox, Cuthbert. The practical life work of Henry Drummond; with an introd. by Hamilton W. Mabie.

New York, James Pott & Co., 1901. 22+244 p. 12°, net, \$1.  
 Contains 9 pages of classified and annotated notes for a bibliography.

**EDUCATION.** Wyer, J. I. Recent educational bibliography. (*In The School Review*, Oct., 1901, 9:534-542.)

A classified and annotated account. 22 titles of educational bibliography are described.

**ENGLAND.** Cheyney, Edward P. An introduction to the industrial and social history of England. New York, Macmillan Co., 1901. 10+317 p. 12°, net, \$1.40.

Each chapter is followed by a brief annotated bibliography.

**ENTOMOLOGY.** Howard, Leland O. The insect book: a popular account of the bees, wasps, ants, grasshoppers, flies and other North American insects, exclusive of the butterflies, moths and beetles, with full life histories, tables and bibliographies. New York: Doubleday, Page & Co., 1901. 27+429 p. 4°, net, \$3.

The classified and annotated bibliographies include nearly 500 titles.

**GENEALOGY.** Phillimore, W. P. W. Pedigree work: a handbook for the genealogist; with a new date book, 1066 to 1900. London, Phillimore & Co., 1900. 73 p. 8°.

A very useful little guide book telling how to go about getting up a pedigree, with an account of where to look for certain data. Although designed especially for readers in England it is of use in every public library.

**HANDEL,** George Frederick. Williams, C. F. A. A. Handel. (The master musicians.) London, J. M. Dent & Co., 1901. 11+268 p. 12°.

Contains a 6-page bibliography.

**MISSIONS.** Barnes, Lemuel Call. Two thousand years of missions before Carey: based upon and embodying many of the earliest extant accounts. Chicago: Christian Culture Press, 1901. 17+504 p. 12°, net, \$1.50.

Contains a valuable selected bibliography of 31 pages, annotated and classified.

**NEW YORK CITY.** Ulmann, Albert. A landmark history of New York, also the origin of street names and a bibliography. New York, D. Appleton & Co., 1901. 8+285 p. 12°, \$1.50.

The annotated bibliography (13 pages) is arranged under the following headings: His-

ories, Descriptive and reminiscent works, Biographies, Fiction.

**POOR (The).** Mackay, Thomas. Public relief of the poor. London, John Murray, 1901. 7+214 p. 12°.

The English poor laws; contains a four-page selected bibliography.

**POULTRY.** Watson, George C. Farm poultry: a popular sketch of domestic fowls for the farmer and amateur. (The rural science series.) New York, The Macmillan Co., 1901. 10+341 p. 16°, net, \$1.25.

Contains a 3-page list of important poultry publications—books, pamphlets, and bulletins.

**ROME, Ancient.** Greenidge, A. H. J. Roman public life. (Handbooks of archæology and antiquities.) New York, The Macmillan Co., 1901. 20+483 p. 12°, net, \$2.50.

Contains a useful classified bibliography of six pages.

**SAINTS.** Simpson, W. J. Sparrow. The minor festivals of the Anglican calendar. London, Rivington, 1901. 8+470 p. 12°.

Contains a five-page bibliography of the saints commemorated in the English calendar.

**SUNDAY SCHOOLS.** Brown, Mariana C. Sunday-school movements in America. New York, Fleming H. Revell Co., 1901. 269 p. 12°, \$1.25.

Pages 246-257 contain a bibliography of "such books and papers as contribute historical material." The method and arrangement are most unsatisfactory, and it is surprising to learn that the "study of this subject, which is here presented, was offered in partial fulfillment of the requirements for the degree of Doctor of Philosophy in the Faculty of Philosophy at Columbia University." For example the *Sunday School Times* is entered under that name with a reference to a single article on May 30, 1896, followed by "and other articles," without any reference.

**WESTMINSTER CONFESSION.** Warfield, Benjamin B. The printing of the Westminster confession. I: In Britain. (*In Presbyterian and Reformed Review*, Oct., 1901. 12:606-659.)

The brief history of the printing of the Westminster confession of faith (8 pages) is followed by notes toward a bibliography of the confession: 1, British editions. There are 137 editions noted. The annotations are scholarly and extensive. The author ventures to hope that this list includes about half of the whole number of British editions. Sev-

eral editions printed in Australia and New Zealand are included.

**WHO'S WHO IN AMERICA:** a biographical dictionary of notable living men and women of the United States. 1901-1902; edited by John W. Leonard. Chicago: A. N. Marquis & Co., [1901.] 16+1304 p. 12°, \$2.75.

This volume is much fuller in bibliographical items than the edition which was published in 1899. By a very simple scheme the publisher of many books is indicated after the title in the sketch of the author.

#### INDEXES.

**HILL, Edwin A.** On a system of indexing chemical literature, adopted by the classification division of the U. S. Patent Office. (*To be continued.*) (*In Chemical News*, Oct. 25, 1901, 84:203-205.)

This article is from the *Journal* of the American Chemical Society and is most interesting. The index is made on the L. B. standard card no. 33 and the cards are arranged alphabetically, cards reading C, taking precedence of C<sub>2</sub>, C<sub>2</sub> of C<sub>3</sub>, etc. The system of the arrangement of the formulæ is governed by the following general principles:

1st. The number of C atoms in carbon compounds.

2d. The number of H atoms in carbon compounds.

3d. The alphabetical arrangements of the symbols of the remaining elements (including H in other than carbon compounds).

The following is Mr. Hill's general rule for indexing:

"Reject the water of crystallization, and rewrite the empirical formula in the alphabetical order of the chemical symbols, except that in carbon compounds write C first and H second; follow this rewritten formula with the constitutional formula, when given, adding the water of crystallization, if any, but arrange the titles alphabetically by the rewritten formula."

**VIAL, R. C.** Indexing railway maps and drawings. (*In Engineering News*, Sept. 5, 1901. 46:147-150.)

Describes the system used in the drafting room of the Chicago and Western Indiana R. R. The following are the heads described: Decimal outline, card index, method of indorsing and filing drawings, and indexing of survey notes. The method of filing is of particular interest to those who have maps under their care. A system of pasteboard tubes is used for large drawings which must be rolled. These are filed in cases with their ends projecting. They can thus be kept free from dust even in an office which is over the train shed of a terminal station.

# THE AMERICAN NEWS COMPANY,

## BOOK DEPARTMENT.

HAVING successfully conducted an extensive Library Department for the past several years, handling with complete satisfaction the entire library business of some of the largest libraries of the country, we call to your attention the elaborate facilities at our disposal ; not only as to the prompt and complete despatch of all such business, but the great saving to the library in the matter of receiving exceptional discount. A request for estimate on any miscellaneous list of publications will receive the same painstaking care and minute attention that an order involving thousands of dollars would receive. Books published abroad are secured within a very short time after order is placed—our own branch houses in London, Paris, Berlin, as well as two Canadian houses, enable us to accomplish this.

We solicit correspondence, and extend a most cordial invitation to all interested in the Free Public, School, Circulating, or Private Libraries to visit our mammoth establishment, where the thousand upon thousands of miscellaneous volumes are at your full access.

Yours very respectfully,

THE AMERICAN NEWS COMPANY,

39-41 CHAMBERS STREET, NEW YORK.

BENJAMIN FRANKLIN STEVENS.

HENRY JOHN BROWN.

**B. F. STEVENS & BROWN,**

American Library and Literary Agents,  
4 TRAFALGAR SQUARE, CHARING CROSS, LONDON.

**THIS** Agency was established in 1864 for supplying American Public Libraries, Institutions, and Book Collectors, with English and Continental Books, Manuscripts, Drawings, Philosophical Apparatus, etc., at the lowest London prices.

Special attention is paid to the selection and purchase of rare old books and manuscripts. Auction sales are carefully watched and good knowledge kept of the stocks of the old Booksellers of Europe.

Lists of *Desiderata* have the best attention and Librarians are respectfully requested to test the value of the Agency by sending trial orders on by submitting lists for Estimates for goods to be delivered, either free in London or New York, as desired.

Auction Catalogues when printed in advance and Catalogues issued by Publishers and Second-hand Booksellers are mailed to Customers when desired.

Large shipments are sent by cheapest and quickest route, or as ordered. Small shipments are made weekly through our New York Agency, at a minimum of expense and trouble to purchasers, or single books are sent by mail on receipt of order.

Special attention is given to Bindings in all styles.

Periodicals are supplied either direct by mail from London or by mail from New York Agency at lowest rates for prompt and efficient service. Send for Lists.

Payments may be made either direct to London or in U. S. Currency through our New York Agency.

*Just Ready. 100 Copies Printed for Subscribers Only.*

**B. F. STEVENS'S**

**Facsimile of the Unpublished British Headquarters Coloured  
Manuscript Map of New York and Environs  
(1782)**

Reproduced from the Original Drawing in the War Office, London.

24 sheets. Scale,  $6\frac{1}{2}$  inches to a mile. 10 feet by 4 feet. . . . .

The successive British Commanders-in-Chief in America, Generals Sir William Howe, Sir Henry Clinton, and Sir Guy Carleton, during their respective occupations of New York and Environs in the Revolution, caused this manuscript plan from time to time to be kept up.

The plan extends from below Guanias Bay to the Heights of Spikendevil, a distance of about eighteen or nineteen miles. It shows the Fortifications, Defences, Topography, Streets, Roads, etc., of the whole of the Island of New York with the Harbor, Islands, Water Ways, and River Frontages on the Hudson and East Rivers, the Military Works on Long Island including Brooklyn, the Works in Paulus Hook and parts of the Jersey Shore. It has a copious Table of References to various works (British and American), some of them with notes as to the time of their construction or destruction.

The Original Drawing, ten feet by four feet, is on a scale of about six and a half inches to a mile. It is hand-somely reproduced for subscribers only, in careful facsimile on 24 sheets which can be joined up and mounted like the original as a Wall Map or mounted on linen if desired. It will be issued either mounted on linen to fold in book form with leather (slip) case, 13 x 10 inches, or the 24 sheets (22 x 15 inches each), will be supplied in a portfolio.

No more than 100 copies have been printed and the engravings were erased as each sheet was printed off.

A few extra copies of sheet 8 have been printed so that it can be sent as a specimen on application from intending subscribers.

**Prices to Subscribers**

Mounted on linen to fold in book form with leather (slip) case. . . **\$30 net.**

Unmounted, on 24 sheets in portfolio. . . . . **\$25 net.**

The above prices include delivery to any Public Library or Institute in the United States or Canada, but private subscribers must also pay the duty.

AND

BOOKBINDER { Duro-Flexile,  
Vellucent,  
Reliure de Luxe.

"Buy Your Popular Books and Your Costly Books  
in Duro-Flexile Binding."

I OBTAIN books from the publishers in sheets and bind them "ONCE FOR ALL." This binding lasts longer than the leaves of the book, and the leaves of the book are preserved and their life immeasurably lengthened by this binding. Librarians cannot persuade publishers to print special editions for them, but I supply books specially bound for them.

If the paper is bad I sew and forward the book so that the leaves are subject to no strain and are indeed strengthened in the folds. If the paper is very stout I sew the book and forward it in a special manner adapted to the thickness of the paper, in other words I adapt Duro-Flexile binding to both good and bad paper with the results that the utmost service and the longest possible life are obtained for both.

No binding in the world is adapted to the varied qualities of the paper as is Duro-Flexile.

The service obtained from a book of bad paper when supplied bound in this way will surprise you.

A papier maché box and a steel safe are not hinged in the same way. Thin tough paper and thick spongy paper also require very different treatment, and with Duro-Flexile they get it.

**TIGHT BACKS** are used for books of a thickness and quality of paper best suited for such treatment.

**LOOSE BACKS** are given where such are better suited.

My bookbinding is in short adapted in its every detail, both of material and method, to the requirements of a Public Library Book.

500 Public Librarians in all parts of the English speaking world buy these books.

## POPULAR BOOKS AND COSTLY BOOKS

bought of me, bound from the quires, give 50% more service.

# THE LIBRARY JOURNAL

VOL. 26.

DECEMBER, 1901.

No. 12

THE Library of Congress, housed in the most magnificent library building which the world can show, has become in the natural process of evolution distinctively the national library, and may become — though it cannot expect to match the historic treasures of the British Museum or the Bibliothèque Nationale — one of the most representative libraries, and in its administration the most effective library, in the world. The advent of a trained librarian of the highest executive ability and wide professional experience, thanks to President McKinley's wise selection, has now made possible the early fulfilment of such plans as must necessarily be worked out to make the national library what it should be, and can be. Mr. Putnam has had little time to show results, yet in the short space of two years he has accomplished remarkable things, and he has now to ask Congress to continue and increase the pecuniary support so cheerfully given to the library since it has been housed in the building for which Congress made such generous provision. The Librarian of Congress, at the Waukesha conference of the American Library Association, outlined the plans which he has in view to fulfil the national functions of the library as a center of library progress and development, whose influence and help might be felt by every library in the country; and we have taken opportunity to ask from leading and representative librarians a brief statement of their views as to the proper functions of the national library, how far these are being fulfilled, and how they should be worked out in the future — which we present in the symposium printed in this issue.

THESE articles disclose cordial unanimity of appreciation and endorsement of what Mr. Putnam has already done, and like agreement on the large lines of progress ahead. Naturally, a first thought is that the other govern-

ment libraries in Washington should be in such co-ordination with — which is not absorption by — the national library, as to develop to best purposes the resources of all; and this would also suggest the development of relations with the Washington Memorial Institution or the great Carnegie institution for higher education and research, of which there have been rumors. Next come the relations with the state libraries and the great libraries at centers of population, where there should be full information as to the resources of the Library of Congress, by help of its printed catalogs and cards; it is perhaps doubtful whether suggestions that a third copyright copy should be asked for state libraries comes into the scheme. The printed catalog cards are already making the national library a help to libraries large and small throughout the country, and the bibliographical contributions on topics uppermost in the nation will extend this kind of usefulness. It is further proposed that the national library should become a loaning library to the nation in general; that is, that books which cannot be had locally should be lent to students elsewhere through the guarantee of other libraries. The national library in turn should, by a comprehensive card catalog and by collecting catalogs of all libraries, be able to point any inquirer to the place where books not in its collection may be found. It is impossible to summarize briefly all the possibilities before the national library, and we commend to careful attention the views of the representative librarians who have contributed to this symposium.

IN the past few years, since the considerable advance in the methods of printing and distributing government documents was made possible by the passage of what is known as the printing act, several amendatory bills have been drafted; but all of them have failed of passage and most of them of consideration,

because of the pressure upon Congress of matters of vital national importance. In the present session, which is a long session, it ought to be possible to procure legislation on this subject as well as on other details of administration recently neglected. It is gratifying that most of the amendatory bills have been rather closely in line with the suggestions of the American Library Association, and that there has been every willingness on the part of legislators to consider the views and interests of libraries in the proposed changes. The real difficulty is that this is not an insistent subject, but the very great benefits that would result to libraries and to the library-using public from the greater usefulness of government publications should give it a claim to legislative attention, if sufficiently emphasized.

### Communications.

#### FIRST USE OF CATALOG CARDS.

WHEN were cards first used in libraries for cataloging books? It would be well to have this point settled while those who can answer it are alive.

MERCANTILE LIBRARY, }  
Philadelphia.

JOHN EDMANDS.

#### ANNE MANNING — FURTHER INFORMATION.

F. B. BIGELOW and "Cataloger" will by reference to Rathbone, Hannah Mary, in the "Dictionary of national biography," (edited by Sidney Lee,) find that Anne Manning, author of "Maiden and married life of Mary Powell," and Mrs. Rathbone, author of "Lady Willoughby's diary," are one and the same person. It is therein stated that Hannah Mary, daughter of Joseph Reynolds, married her cousin Richard Rathbone; that "in 1844 she published anonymously the 'Diary of Lady Willoughby,' to which she issued a sequel in 1847. In 1850 she published 'Anne Manning's life of Mary Powell,' which manifestly owed its origin to the success of the earlier work."

C. DALMAS.

JOSEPHINE WIDENER BRANCH }  
FREE LIBRARY OF PHILADELPHIA. }

#### SLAVIC transliteration.

SOME further remarks on the report of the A. L. A. committee on transliteration of Slavic languages in the LIBRARY JOURNAL of September, 1900, and the criticism of it in that of May, 1901, may not be out of place.

It is absolutely impossible to devise a system of transliteration of Russian which will assign

a constant equivalent to each letter and at the same time give an English reader some notion of the correct pronunciation. A representation of Russian pronunciation in English letters is at best unsatisfactory. In such a case the only correct procedure is that of the committee, to adopt a consistent system and let the pronunciation shift for itself.

The committee preserves consistency and follows Russian precedent in not distinguishing *e* from *ě*. *Orel* is a perfectly proper transliteration of the name of the Russian town, and of the Russian word for eagle. To be sure, it gives us no idea of the pronunciation, but in that respect it is hardly worse than "Orjol, orjol." *Aryoll* or *Aryawl* would, I suppose, be the best equivalent of the sound in English, but either of these is grotesque and itself far from an exact phonetic reproduction.

The committee seems to me mistaken in its treatment of *ѣ* and *е*. *ѣ* in Russian ordinarily agrees in sound with *e*, but in Bulgarian is often distinguished from it. I suggest the use of *ě* in Bohemian. This letter corresponds to *ѣ*, and it is the transliteration for *ѣ* ordinarily used in scientific works, such as Brugmann's "Grundriss." There is a loss of consistency, and no appreciable gain, in using *ie* for either *e* or *ě*.

The reason for adopting *ia*, *iu* as transliterations for *я*, *ю* is not apparent. I should much prefer *ya*, *yu*. *Yuriŭ* and *Yakov* as transliterations of Russian Christian names please me more than *Iuriŭ* and *Iakov*; in the former the correct pronunciation of the first syllable in each word is at once clear to an unlearned reader, in the latter it is not. *Ryazan* seems better than *Riazan*, as it is less likely to suggest a pronunciation in three syllables. It may be noted that these transliterations, *ya*, *yu* for *я*, *ю* are used in Mrs. Garnett's translation of *Turgenev*.

The criticisms of J. S. S. on *tch* and *shch* as transliterations of *ч* and *щ* seem to me well founded. *Tch* at the beginning of a word certainly conveys no idea to the ordinary mind. The preference of *tch* to *ch* and *shch* to *sch* is apparently a mistaken following of a transliteration proper to French, not English.

The committee is certainly right in transliterating *v* by *y*. The letter occurs only in Greek words, where it corresponds to the Greek epsilon and is thus properly rendered in English by *y*. These words are so few in number that the question is of no practical importance.

With the changes that I have indicated, and with the use of *zh* for *ж*, *kh* for *х*, *ts* for *ц*, *sh* for *ш*, and *'* for *ь*, the report of the committee has been adopted for use in the University of California Library.

GEORGE R. NOYES.

UNIVERSITY OF CALIFORNIA, }  
Berkeley, Cal. }

## THE NATIONAL LIBRARY: ITS WORK AND FUNCTIONS.

Perhaps the most characteristic educational movement of the past 50 years is that which has created the modern public library and developed it into broad and active service. There are now over 5000 public libraries in the United States, the product of this period. In addition to accumulating material, they are also striving by organization, by improvement in method, and by co-operation, to give greater efficiency to the material they hold, to make it more widely useful, and by avoidance of unnecessary duplication in process to reduce the cost of its administration.

In these efforts they naturally look for assistance to the federal library, which, though still the Library of Congress, and so entitled, is the one National Library of the United States. Already the largest single collection of books on the Western Hemisphere, and certain to increase more rapidly than any other through purchase, exchange, and the operation of the copyright law, this library has a unique opportunity to render to the libraries of this country—to American scholarship—service of the highest importance. It is housed in a building which is the largest and most magnificent yet erected for library uses. Resources are now being provided which will develop the collection properly, equip it with the apparatus and service necessary to its effective use, render its bibliographic work widely available, and enable it to become, not merely a center of research, but the chief factor in great co-operative efforts for the diffusion of knowledge and the advancement of learning.

Theodore Roosevelt. (*The President's Message*, Dec. 3, 1901.)

If there is any way in which our National Library may "reach out" from Washington it should reach out. Its first duty is, no doubt, as a legislative library, to Congress. Its next is as a federal library to aid the executive and judicial departments of the government and the scientific undertakings under government auspices. Its next is to that general research which may be carried on at Washington by resident and visiting students and scholars. . . . But this should not be the limit. There should be possible also a service to the country at large: a service to be extended through the libraries which are the local centers of research involving the use of books.

Herbert Putnam, Librarian of Congress. (*Address at Waukesha*, July, 1901; for full text see *A. L. A. Proceedings*, or *Library Journal*, August, 1901, p. 9-15.)

THE idea of making the Library of Congress really national in character, helpful to the other libraries of the United States and to students throughout the country—as outlined by Mr. Putnam at the Waukesha conference of the American Library Association—has appealed to me most strongly. If the Library of Congress could lend to other libraries for short periods books which are used only by an occasional student, the unnecessary duplication of little-used books in these libraries could be avoided, and large sums released for more active educational work. The plan, recently put into operation by the Library of Congress, of furnishing to other libraries printed catalog cards at cost is a practical solution of the problem of co-operative cataloging which has been occupying the minds of librarians for years. Furthermore, the Library of Congress is rapidly attaining such a position as will enable it to carry on bibliographical enterprises of great value to other libraries, and therefore to the country at large, which those libraries can do neither so well nor so cheaply.

In fact, it seems to me that Mr. Putnam is

in a fair way to make the Library of Congress a general bureau which will be of great value to the libraries of the whole country and a powerful influence in our national education. Certainly his efforts should be cordially seconded by librarians everywhere.

EDWIN H. ANDERSON,

*Librarian Carnegie Library of Pittsburgh.*

I WOULD submit two suggestions bearing upon this theme:

First, that Congress make haste to remove the present confusion in the public mind as to the scope of our great national library by altering the name to make it fit the fact. With the name changed from "Library of Congress" to "National Library," the public would better comprehend the necessity of the large appropriations which must henceforth be made if the just expectations of Librarian Putnam and the librarians of the country are to be realized. The name proposed fits not alone the fact, but also the dignity of the service for which it stands. A National Library, in fact as in name, would be none the less, but rather more, the Library of Congress.

Again, once assured that we have a National Library in fact and in name, with a librarian at its head who firmly grasps the national idea, the reading and thinking and inquiring public will naturally turn to it when focal library resources fail, and these should not be disappointed. To this end my suggestion would be that the relations of all present depositories of government documents be made more intimate, enabling state librarians and others now receiving government publications to draw on the National Library for temporary loans of books, pamphlets, etc., which may from time to time be needed locally, but cannot be locally supplied, the national librarian to exercise his judgment in every case as to making or withholding the loan requested. I would urge also that the privilege of borrowing books from the National Library be extended to all public libraries in the states and territories, the local librarians being empowered to sub-loan the books to individuals and organizations.

JOHNSON BRIGHAM,  
*State Librarian of Iowa.*

THE paper read by Mr. Putnam at Waukesha was an added evidence that he is the right man in the right place. It showed that he has the broadest vision of the field that the National Library of the United States should cover, the highest ideas of the functions it should fill as the library of the nation. What the institution has already done for the libraries of the country in supplying them with catalog cards at nominal prices is an indication of what can be done if the librarian is supplied with funds sufficient for carrying out his plans.

The clearing house for miscellaneous books, the inter-library loans, which will enable scholars and investigators in all parts of the country to profit by the bibliographical treasures in the National Library without journeying to Washington, must commend themselves to librarians and to students on mere mention.

Just as obvious are the benefits to be derived from the execution of another of Mr. Putnam's plans relating to the exchange of cards between the National Library and the principal libraries of the country. With the adoption of this suggestion, any one who fails to find in the nearest large library the book

he wants can learn at once whether it can be obtained in Washington; and any one remote from all large libraries can ascertain by writing to Washington the nearest library that would supply the sources of information desired. Could there be any greater aid to the scholar and investigator, or the occasional searcher, than this, especially if accompanied by the privilege of borrowing the volume through the nearest library?

It is heartily to be hoped that Congress will furnish Mr. Putnam with means entirely adequate to the accomplishment of his plans for extending the influence and broadening the scope of the National Library. Nothing will contribute more to the facility and economy of scholarship and research.

FREDERICK M. CRUNDEN,  
*Librarian St. Louis Public Library.*

THE most hopeful center in the library world to-day is our National Library. We ought persistently to use this name till it displaces the "Library of Congress," which misrepresents its true functions. All recognize that public libraries are growing by leaps and bounds, but few realize that the demands on them are similarly growing. The public now asks of the library, as its right, service which a few years ago would have been thought a Utopian dream. Growth in number and functions of libraries is something like that in uses of electricity. 130 new library laws on American statute books last year and 400 gifts from private sources, aggregating \$16,000,000, are significant confirmations of the prediction that our time will be known to the future as the age of libraries and the age of electricity. There is nothing like it in human history. But the cost of meeting the new demands staggers even the most sanguine. The economic side requires our closest study. Not one library in a hundred has adequate income for the work it ought to do. More money will be given each year both from public and private funds, but it will always lag far behind the needs, so that we must increase our efficiency by finding ways to make each dollar do more. The book differs from most of man's products, because each copy of an edition is an exact duplicate of every other copy, and, therefore, much library work can be done better and more cheaply at a central point. The great work of the National Li-

brary is therefore to focalize all this work in which quality can be improved or cost materially reduced by distributing results from a common center.

Comparatively few Americans can visit the National Library in person, but by telephone, telegraph, post and express, and with the coming cheap book post, its facilities can reach every corner of the nation. Librarians and scholars should turn as naturally to the National Library for help out of difficulties as farmers and students of rural problems turn to the Agricultural Department, or owners and lovers of forests to the Forestry Division. Most of this national work can be done best and most cheaply through print. Not only should we have the catalog cards now at last so happily started on a sound basis, but the National Library should also issue, as fast as practicable, a series of bibliographies and reading lists covering all subjects of immediate interest, available to every person interested, and revised with each reprinting.

Facilities for printing and for sending through the mails post free are great elements in this work. I favor a small nominal charge for all this printed matter, not so much for income as to protect against abuse and criticism. But the essential thing is availability; whether free or at the price of a few cents is a minor question.

While these lists and bibliographies could be prepared by specialists all over the country, the system will naturally lead to the appointment of such specialists on the staff, thus making our National Library the great "faculty library" of the world. Every important topic will in time be in charge of its own librarian, who will be a recognized authority on the books of that subject, and whose expert services will be available to teachers, authors and students of the topic throughout the country. Here, again, to protect against abuse and criticism a small fee should be charged for direct services to individuals by this great staff. No one will begrudge a small payment if he may freely ask help from the best man in the country, surrounded by the greatest collection of books and the most complete bibliographies, catalogs and indexes.

There are a score of things to be done for libraries from this now recognized national center of library activity. I mention here

only co-operative cataloging, printed cards and bibliographies, reading lists, indexes and other publications needed by the National Library, but which should also be made available to every other library and student in the country at trifling cost. The most widely and practically useful work that can be now undertaken is the preparation and publication of reliable, compact notes appended to book titles, to give to readers expert opinion as to the scope, character and value of the work. This is pre-eminently work for the library faculty of book experts.

Every student of these problems recognizes that the greatest gain will come from thus utilizing the labors of the most competent experts, as may be done at the trifling cost of printing and distribution, instead of wasting vast sums of money urgently needed for other pressing work in doing again what has been already much better done at the center. I have said for 25 years that the epoch-making event in librarianship would be the assumption of its proper functions by the National Library. I sincerely believe that with Mr. Putnam's appointment the new era has begun, and that every year we shall lean more and more on the National Library.

MELVIL DEWEY,  
*State Librarian of New York.*

THE proper functions of a national library have been clearly and ably stated by the Librarian of Congress, both in his report to Congress and in public print. First, its primary duty to Congress; second, to the executive and scientific bureaus in Washington; and third, to scholarship at large. It may accumulate material which will draw scholars to Washington if adequate facilities be provided for its use; it may issue publications which will render its bibliographic work of general service; it may constitute itself a bureau of information, ready to respond by post to inquiries involving questions bibliographic as to what material exists upon a given subject, and where this material may be found; it may reach out through other libraries in the United States, through universities and through other institutions which constitute local centers of research.

These functions, personal observation and application for assistance, enable me to say, have been bravely assumed by the present ad-

ministration of the library to the extent of its limited resources. The vast amount of work necessary to make available the material already in the library has been intelligently and resolutely begun, giving promise that the only requisite for its successful accomplishment is ample funds to carry out the plans on the lines started.

In addition the system of co-operative cataloging which has been started should result in a net annual saving to the libraries of the country estimated at a quarter of a million dollars in money alone, not to speak of the benefit of the spreading of knowledge by proper indexing of all collections of books. As a further suggestion in this direction, it is possible that the library may, in time and with adequate support, add a department which would issue with the catalog cards a statement of the scope of each book listed, with an authoritative and impartial evaluation.

H. L. ELMENDORF,

*Superintendent Buffalo Public Library.*

THE "National Library" of the United States may be said to consist of the associated libraries of the government departments and offices in Washington, the Library of Congress being the "central library" and the others "branches." To carry out the idea of a national library, there should be the completest possible co-ordination and co-operation between these branches, of which leading features are the avoidance of unnecessary duplication and the making at the central library of a complete catalog of the whole. It might be said that all the branches should be brought under one administration; this is perhaps doubtful, but it does seem essential that there should be lodged in some board of control sufficient authority over the entire system to insure at least harmonious development and action. That all these collections of books, maps, manuscripts, etc., should be equally accessible to the public cannot be expected, but it may be asked that no undue restrictions shall hamper their fullest usefulness to the cause of learning, especially to the public service in all its branches.

Others who contribute to this "symposium" will probably mention most of the special things that the Library of Congress might be expected to do in the fulfilment of its function as the national library. Let it be my contribution thus to suggest that the first steps

to be taken have to do with organizing the various governmental libraries, numerous as they are, and many of them already of noteworthy importance in their specialties, into the one "Library of the United States"; not necessarily one in location, nor one in administration, but working as one for the public weal.

W. I. FLETCHER,

*Librarian Amherst College.*

NEVER before, probably, since the establishment of our national government have public libraries occupied a position of so much prominence in the annual message to Congress of the President of the United States as in that of the present year. This is but one indication of the marked progress towards the unifying of the library resources of the country, which has marked the administration of Mr. Putnam as Librarian of Congress.

Mr. Putnam's success in this and other directions is apparently due very largely to the fact that he embodies several inestimable qualities which are not always found in one person. These are distinguished scholarship, exceptional executive ability in organizing and developing his own institution, and unerring tact in his relations to the outside agencies which so largely control its welfare. The recent announcements by Mr. Putnam, extending the use of the card catalog entries of the Library of Congress to libraries throughout the country, supply the successful solution of a problem which has been long and anxiously debated by the American Library Association.

WILLIAM E. FOSTER,

*Librarian Providence (R. I.) Public Library.*

It has long been a problem how to save the cost of duplication of cataloging and indexes in a large number of libraries by having the cards of the catalogs and indexes made at one center for all the libraries. The matter was considered of prime importance by the librarians who joined in the Conference of Librarians which was held in Philadelphia in 1876, at which the American Library Association was formed.

Now the librarian of the Congressional Library comes forward with a plan for furnishing at a low price to such libraries as will adopt it cards for current additions of books. After studying the plan the officers of a large number of libraries have made up their minds that it will work well, and are ready to join in making it effective.

Of course there will be many libraries which will, at first certainly, find difficulties in the way of joining in the experiment. But as time goes on and the plan is improved in details it is not unlikely that a constantly increasing number of institutions will see their way clear to join in the new movement. It is by co-operation in sympathetic trials of experiments that many of the great improvements in the libraries of the United States have been brought about.

It seems to be a legitimate work for the Congressional Library to help along the work of cheapening the cost of catalogs. The work which that library is undertaking is for the benefit of libraries all over the country. The Congressional Library is the natural center for work of this kind to radiate from. At a comparatively small expense (a large portion of which is borne by the librarians themselves) the different members of Congress will save a good deal of money for the libraries in their respective districts. Well devised experiments like the one under consideration should be heartily encouraged. They often lead to great good.

In the first number of the LIBRARY JOURNAL I advocated inter-library loans. The library with which I am connected was then and has been ever since borrowing and lending books. This kind of work was afterwards systematized by Dr. Billings, when he got together in Washington the best medical library in the world, and it has since been easy for physicians in any part of the country to borrow books from the library of the Surgeon-General's office through local libraries. College and public libraries in cities continually lend to one another and to smaller libraries books needed in study.

It has been thought by some persons, and especially by an expert whose opinion I prize highly, that a great central library, established, perhaps, in New York, by some philanthropist like Carnegie, would serve best as means for making a large collection of books to be lent to other libraries in parts of the country where students are found, but where too great slenderness of fortunes exists to make it possible for the libraries near them to buy books needed by them in making investigations.

But why should not the Congressional Library do this kind of work, whether such a library as I have spoken of should be estab-

lished or not? Other libraries are doing it. One of the libraries of the United States Government is doing it. It would be a graceful thing for the Congressional Library also to engage in it. The librarian would be glad to aid in sending books asked for to all parts of the country when needed by students. This kind of work is legitimate work, it seems to me, for a national library such as the Library of Congress is developing into.

SAMUEL SWETT GREEN,  
*Librarian Worcester (Mass.) Public Library.*

It is difficult if not quite impossible for one outside of an institution to make any declaration of value as to the mission of that institution. Lack of familiarity with its legal as well as its financial limitations affords great opportunity for absurd blunders. And since Mr. Putnam has already projected greater work for the Library of Congress than most of us had even faintly imagined, it seems doubly presumptuous for any of us to attempt to so much as even suggest to him.

I can, however, suggest one plan that the progressive state librarians would like carried out, and one in which the Librarian of Congress can give us almost absolute aid and such as can come from no other source. In this I refer to beginning in a very comprehensive manner the building up of state bibliographies for the future, the past being largely beyond our reach.

Every progressive state library desires to collect every publication published by an author in the state to which the library belongs. Since the copyright record is the nearest a complete record of the published works to be found anywhere, why could not the law governing the deposit of copies be so amended that three copies instead of two be demanded from the author, and one of these copies be sent to the state library of the state in which the author resides? Such a plan would add immensely to the interest of the state library collection and would be of little cost or inconvenience to any one.

W. E. HENRY,  
*State Librarian of Indiana.*

THE importance of Mr. Putnam's address at the annual meeting of the American Library Association last July can hardly be overestimated. He outlines a program for the Congressional Library magnificent in its

scope and yet thoroughly practical. While his proposition represents an innovation from one point of view, from another and more important viewpoint Mr. Putnam is simply endeavoring to carry out the obligation that the Library of Congress took upon itself when it agreed to become the depository for a copy of every book published under the copyright law of the United States. At that moment the Library of Congress ceased to be merely a library for Congress, while retaining of course the important function of supplying the members of the national legislature with the material necessary for their work.

It is one thing to have a large collection of books and another to make the best possible use of that collection. The innovations proposed by Mr. Putnam may all be grouped under this one head — the desire to make the best possible use of the collections and of the opportunities afforded to the Congressional Library. Of the three directions in which Mr. Putnam proposes to extend the usefulness of this library, (1) the distribution of printed catalog cards to other libraries, (2) preparation of bibliographical material, and (3) making the material of the library more accessible by sending it, under certain conditions, to scholars and students, the first is at present of the most direct interest. Its importance will become clear as the work of printing the cards for the books in the Congressional Library advances; and, while it may be true that the example of the British Museum cannot be imitated in every particular, it is certainly of fundamental importance that the Congressional Library should supplement the copyright books by extensive purchases of foreign works, without which scientific research in any field is impossible. Speaking for university libraries, which are the natural centers for research in this country, the assistance that will be rendered them when the Congressional Library will be able to supply them with the printed cards for the kind of books that are at present in university libraries and that are likely to be ordered for them, will enable these institutions to utilize their library force for purposes which only the privileged few can at present carry out, and even these few only to a limited degree.

MORRIS JASTROW, JR.,  
*Librarian University of Pennsylvania.*

THE wisdom of President McKinley's selection of Mr. Putnam as Librarian of Congress has long since been fully demonstrated. We are accustomed to measure a man by the results he accomplishes considered in connection with his difficulties and facilities. It would be hard for one, who is acquainted with the condition of the national collection before Mr. Putnam took charge, with the many varied and important changes he has inaugurated, and with the number of bibliographical publications issued, to specify any additional labor that he could have undertaken in so limited a period, even with so loyal, able and enthusiastic a corps of assistants.

The first and chief requisite in a national library is an attitude of sympathy, cordiality and helpfulness. And that such is the relation it will maintain, no librarian who heard, or who has read, Mr. Putnam's remarks at the last conference, can have a doubt. Indeed, his own clear and comprehensive statement, and tacit acknowledgment, of the duties practicable or possible of the National Library, must have aroused feelings of liveliest satisfaction and gratitude in the hearts of the older librarians, who remember the former helpless, and perforce unhelping, Washington collection of books.

We are on the eve of the golden age of American librarianship. Let the dawn of this new age be signalled by a new name, adequately expressive of enlarged functions — the "National Library." J. C. ROWELL,

*Librarian University of California.*

MR. PUTNAM, in his inspiring address at Waukesha, so luminously and convincingly outlined "what may be done by the Library of Congress as the national library" that it would seem an impertinence to attempt to supplement that statement. Yet, perhaps, it may strengthen his hands were it appreciated by the members of Congress that the librarians of the country most heartily endorse the attitude of the Librarian of Congress, and, in the cause of scholarship, wish him full measure of success in his efforts to make of the Library of Congress a national library indeed.

The recent happy consummation of the much-discussed project of co-operation in the

preparation and printing of catalog cards is a long step forward in showing what a national library may do for the other libraries of the country—each of the latter representing a wide and important constituency of scholars, in and for whose interests Congress may fittingly legislate. But it is only a harbinger of other things to come. There is no reason why all of Mr. Putnam's dreams—and they are the dreams of American librarians everywhere—may not in time come true. No reason why the staff of the great library in Washington, of which we are all so justly proud, may not be made a staff of specialists, highly trained and properly compensated, to give advice and execute bibliographical work in each and every important field of research; no reason why the Library of Congress may not become the center and inspiration of practically all bibliographical enterprises undertaken for the public or collegiate libraries of the country; no reason why it may not be the mainspring in nearly every branch of library co-operation, mechanical or intellectual. It should, I think, lend freely to scholars, through the agency of state, municipal and collegiate libraries, such books as cannot well be supplied by the smaller institutions. Our country is so vast in extent that the great collection at Washington is practically sealed to the majority of American investigators; if the Library of Congress is to be a truly national library, it must surely lend its treasures to applicants in the most distant states. The Library of Congress should be possessed of an abundant purchasing fund; it should in every department look to the time when its collection shall be unequalled—particularly so, and that as speedily as possible, in the department of Americana, if for no other reason than that it is the national library. If, as Mr. Putnam properly suggests, a full set of its own printed catalog cards is to be furnished to each prominent library of research throughout the country, then it may well ask in return a copy of the catalog of such favored library, to the end that the individual searcher at Washington may know where material can be obtained, or the bibliographical expert in the Library of Congress may give definite information to correspondents. And having located the needed book, co-operation need not be one-sided; the library in San Antonio—

to use Mr. Putnam's example—might properly be asked to loan its rarity to the reader in the Library of Congress.

In such ways as this may the Library of Congress be made the National Library in truth.

REUBEN G. THWAITES,  
*Secretary and Superintendent State Historical Society of Wisconsin.*

THE outline which Mr. Putnam has given of the possible service the Library of Congress may render to the American people is one which should command the attention and the approval of both houses of Congress. It is a far-sighted and practical plan, some of the details of which, it is true, must be tested by experiment; but as a whole, it is safe, wise, and eminently progressive. While its full fruition will require generous appropriations, the result will command the admiration of the future. The one vital point is to make the large number of books owned by the nation most easily and effectively useful to all the people of the nation. All details should tend to this end. It involves, besides the expense, the broadest, most economic and prompt methods of administration. Fortunately Mr. Putnam has admirable administrative gifts and a thorough appreciation of the practical necessities. He should receive the approval and support of all who are interested in library administration, and be trusted by Congress with the power and the means to evolve and carry out the plan he has so wisely indicated to make the Library of Congress useful to every American citizen.

C. B. TILLINGHAST,  
*State Librarian of Massachusetts.*

To the Library of Congress, with its greatly increased facilities, have come new opportunities and responsibilities. As the library of the nation, it will obtain every publication issued in this country, as well as the best books of other nations. Other libraries may confine their collections to their own sections of the country or to special subjects; the Library of Congress must be universal in scope. As far as it can be done, under proper safeguards, its books ought to be placed within the reach of scholars everywhere—that is, its scholarly books, those which are outside the range of ordinary public libraries. Such a distribution might take place through local

libraries, as books are now distributed in certain localities, through the system of inter-library loans.

The plans of the librarian are even more far-reaching than this. He would help other libraries, where they are generally weakest—that is, in their catalogs, furnishing them, in place of their own titles of books, cataloged under many disadvantages and copied with a pen, more compact, legible and accurate titles in print.

This generous offer of the nation will be accepted by libraries with gratitude, and made use of to the fullest extent possible. Whatever it may prove to be from an economical point of view, this undertaking must be regarded as an educational movement of great importance.

JAMES L. WHITNEY,  
*Librarian Public Library of Boston.*

TO-DAY in the United States we are indebted for bibliographical work chiefly to three great institutions, which happen to represent three independent classes of library—the Library of Congress, the New York State Library, and the Public Library of New York City, supported respectively by the nation, the state and the city, and having at their heads men fitted for their high office by experience and learning, Mr. Putnam, Mr. Dewey and Dr. Billings.

Let us consider what bibliographical work can best be done by the Library of Congress in its different departments. It seems to me that the most important is to secure exact verbal copies, and, if possible, photographic facsimiles of every document relating to the discovery, description and history of the continent of North America and especially of the United States in all foreign government archives. Of these the number of copies printed should be large enough to admit of distribution to the great libraries of the world, and especially to libraries in this country. In the copyright department the older copyright registers should be reconstructed by collecting copies of the early copyright books, and gradually carried back till they cover the early history of printing in the United States. Lists of special collections in the Congressional Library might be made useful bibliographies by including in them titles of books or items known to exist in other public libraries in the country. In the bibliographical department the work of Sabin might be taken up and carried to completion, commencing at the letter where this great work has been

stopped and afterwards printing the earlier volumes. The Library of Congress should also publish an annual brief and practical bibliography of bibliographies, showing under 50 headings the principal sources of information on the books of the world under countries and subjects. Thorough subject cataloging of all the publications of the government is urgently required, and an annual bibliographical summary of the work of every department of the government would seem to be properly within the duties of the Congressional Library.

WILLIAM BEER,\*  
*Librarian Fisk Free and Public Library and Howard Library, New Orleans, La.*

THERE are three ways in which the Library of Congress can be of great service at a comparatively insignificant cost to reference libraries. One of these, the distribution of its printed cards, has already been entered upon.

The second way is by making the contents of the library generally available. Here also a good beginning has been made by the publication of special bibliographies. For students of subjects thus treated, on which usually the library is strong, these are invaluable. The deposit of a copy of each title at the great centers of population would be a useful step further in the same direction, but it might not be too much to ask that the Library of Congress should eventually print a complete catalog of its American works, and thus do for our national literature what the British Museum and the Bibliothèque Nationale are doing for theirs.

The third of the ways of helpfulness which especially interest reference libraries is the loaning of books. It seems to me that the Library of Congress would be justified in procuring a second copy of rare and costly works for this purpose alone. The service, even if carried to the widest extent possible, would not interfere with the functions and development of the other libraries of the land, while it would be of the greatest usefulness to the smaller colleges and institutions of learning.

It is a great pleasure to feel that the committee of Congress in charge of the library have recognized some of these possibilities, and that under Mr. Putnam's able management we may hope to have them realized.

CLEMENT W. ANDREWS,\*  
*Librarian John Crerar Library, Chicago.*

\* The contributions of Mr. Beer and Mr. Andrews were received too late to be given in alphabetical order.

## COMPILING A BIBLIOGRAPHY—II.\*

BY GEORGE WATSON COLE.

HAVING secured all the information the title-page can give, we next look for extraneous information. The number of volumes, if more than one, and size naturally follow the information given by the title-page. I have said that size is an uncertain quantity. To render this information as definite as possible, I give first the apparent size as determined from the fold or signatures. If these are found to be irregular this fact is noted; as "in sixes," "in eights," etc. To place the record beyond any possible doubt the actual measurement of the leaf is also given in centimeters.

Next comes information of an unvarying nature; the size and description of a representative page of the letterpress or text. The measurement of the type should include the tops of the ascenders and capital letters of the upper line as well as the descenders of the lower line. Captions or running titles, catchwords and signatures, as well as marginal or side-notes, unless in cut, I exclude from this measurement. The size of the type may easily be ascertained. My method has been to procure a copy of an old Whitaker's Almanac and detach from it the page containing samples of the various sizes of type. This mounted on a piece of bookbinder's tar board and cut quite close to the capital letters which begin the lines makes a very convenient size rule. By sliding it upward or downward near a capital letter in a page of print one is quickly enabled to find its exact size. In foreign languages this information is, of course, only approximate, the size of the English type being selected which corresponds most nearly to that of the foreign type under consideration. Should any one, however, desire to be still more exact, information regarding the names and sizes of the several foreign types and their English equivalents, the point system now in general use in this country, with other interesting information, may be found in Mr. De Vinne's recent book on "The practice of typography" (N. Y., 1900, chap. 2, pp. 52-122.)

The next information to follow is the num-

ber of pages and signatures. Care should be taken that no inserted leaves or starred pages are overlooked and any irregularity in the number of leaves to signatures should be carefully noted.

Then follows the record of illustrative matter. First in order should come plates, maps, tables, diagrams, etc., or matter which has been printed independently of the regular signatures and afterwards inserted and bound up with the work. Following these may be added the number of text illustrations in the following order, woodcuts, etc., facsimiles, and head and tail pieces, if other than conventional.

This in general closes the bibliographical record of the book from a material point of view.

Following this may come as notes, 1st, a list of the contents or a synopsis of the matter contained in the text. 2d, a list of the illustrations in the order above named with titles or description of each, especially if no such list appears in the book itself. And 3d a list of the maps, charts, diagrams, etc. The title, size, and scale of each map should here be given.

So much for a book which treats entirely of the subject. In analyticals the author's name is given, when it can be ascertained, followed by the title of the chapter, part, or article, including the author's name. If it appears at the end of the article, as frequently occurs in periodicals, it should be entered after the word [signed], in brackets. Dropping down a line in parentheses, after the word *In* follows the entire title-page of the volume analyzed. If the title is a long one it is well to repeat at its end the volume number, and in the case of periodicals, I give, in parentheses, the serial number and date of the special number in which the article appears. In most magazines this is ascertained without difficulty. If not given at the top of the first page of each separate number it may sometimes be found at its bottom as a part of the signature, sometimes in the table of contents, and, in one or two cases of the publications of learned societies, which I have in mind, this information is to be found on the *verso* of the title-page. In some cases, though rare-

\* Delivered before the Pratt Institute School of Library Training, March 15, 1901.

ly, this information is utterly unobtainable from the ordinary bound copies, in which the original covers have been discarded; an argument for the retention of such paper covers or wrappers in all cases. Following the number and date, in parentheses should be given the page from first to last inclusive.

The paging of analyticals should always contain the first and the last, as it gives the searcher some idea as to the extent, if not thoroughness, with which the writer has studied his subject. Then follow size, letterpress, type, pages of article and signatures, illustrations, etc., synopsis of contents or notes, etc., as in the case of a book, as already described. By giving the signatures, as well as the pages of analytical matter, the identification of such portions of books or periodicals as have been extracted and bound up separately is much simplified.

The subject I have chosen (Bermuda) is one which is of much interest on account of its maps and charts. Little has been done in forming bibliographies of maps. In this country, Messrs. P. Lee Phillips, of the Library of Congress, Marcus Baker, and Edward B. Matthews have examined and recorded the maps of Maryland, Virginia, the District of Columbia, Cuba, etc. There are, therefore, few precedents to follow in such work.

My first experience threw me in contact with a number of early seventeenth century maps which had been extracted from the atlases in which they originally appeared and which bore no marks by which their source could be definitely ascertained. At this period Holland, and particularly Amsterdam was the seat of great activity in the production of beautifully engraved maps and atlases. Rival houses vied with each other, in the amount and beauty of their products. Editions succeeded each other at frequent intervals. The maps in these atlases were usually accompanied with descriptive text, printed upon their backs, in every cultivated European language; special editions being prepared for sale in various continental countries. The culminating point was reached in the magnificent Atlas Major of Johan Blaeu, in 12 volumes published in 1663. It contained 586 maps and stands to-day without a rival in the sumptuous manner in which it has been engraved and printed.

Booksellers have fallen into the way of breaking up odd volumes of these old at-

lases and selling the separate sheets, this having, I suppose, been found more profitable than to sell the volumes entire or to attempt to complete the sets to which they belong. At any rate, such is the case and the markets are flooded with maps of this description which it is almost impossible to identify. Before being collected into volumes many of these maps were presumably issued for sale in sheet form, and it is safe to assume that if a map is unaccompanied by text upon its back and devoid of other evidences of having been bound into an atlas of maps, it was originally so issued. Many of the early maps now found bound up in volumes of miscellaneous maps were doubtless so issued. Others, with text, bound up in miscellaneous volumes, were without much doubt originally prepared for, if not published in atlases, subsequently broken up, and again rebound in miscellaneous collections.

The whole question of maps, either in separate form or bound, as we have seen, is in consequence, full of perplexities and uncertainty.

Maps, of all products of the press, are the most perishable. Their form is against them; if large they are folded, and much use with the creases soon wears them away. They are also the most abused and uncared for of all printed matter, especially as soon as they are superseded by those of a more recent date. But the value of early American maps as historic material is coming to be appreciated more and more and better care taken of the remnants which have been spared to us. Their study by historians is now considered indispensable to a thorough understanding of the advancement of discovery and the early progress in the settlement in this country. Here we probably find a more truthful record, and one in which there is less temptation for the traveller to prey upon the credulity of his fellow-countrymen, than in the marvellous tales he unfolds of his adventures in the printed page. They are besides more graphic, a few lines of the burin being much easier to understand than many pages of printed description.

From what has already been said, it is evident that maps, from a bibliographical standpoint, call for distinct treatment and a more exact description, if that be possible, than we are accustomed to give to books. At the outset some interesting questions present them-

selves. Who is responsible for the production of a map? Its publishers, its printer, its engraver, the traveller or navigator from whose sketches it has been produced, the compiler or draughtsman who puts these sketches into proper form, or the man who bears the expense of the undertaking, be it of the voyage, engraving, printing, or publication? Who indeed? And as maps sometimes bear the name of one, sometimes the name of another, and sometimes of more than one of these, it may readily be seen that numerous difficulties lie in the pathway of anyone who undertakes to make an exact catalog of maps. Two ends should ever be kept in view in describing a map and especially a loose map. First a thorough and accurate description should be given of the map itself and, again, a record should be made of every particle of information which will aid one to identify it and eventually complete the record of its source. For this purpose I have made use of nine headings for the map itself (A) and an equal number for its subsequent identification (B). They are as follows:

- A. 1. Printer, publisher, engraver, or other personal information given on face of map.
2. Title.
3. Place, publisher, and date.
4. Size by metric system. Measurement to be made within the neat line. Much confusion may arise from including the border of the map in its measurement to say nothing of giving that of the entire sheet.
5. Scale, also in the metric system.
6. Print or colors, whether colored by hand or printed in colors, style of engraving, etc.
7. Location on map of following features: title, scale, compass, latitude and longitude if indicated and how, and engraver's name.
8. Border: its style and description.
9. Remarks: extent of territory covered, etc., etc.; in very old maps insertion of sea monsters, vessels, form in which water is represented, method of projection, etc., etc., should be indicated

For the eventual identification of maps, a description of the text upon its back should include:

- B. 1. Title — language.
2. Pagination, if given.
3. Size of leaf.
4. Size of type and letterpress.
5. Number of columns, if more than one, and number lines of type.
6. Signatures.
7. Catchwords, of every page.
8. First and last lines.
9. Remarks — marginal notes, etc., etc.

Spaces should be left on sheet for future insertion of new information when found, thus saving rewriting.

Returning now to the consideration of the general subject: it will inevitably follow that some of the references which have been made in the preliminary card list cannot be verified with the book in hand. When at last it is decided to cease research and to publish what has been collected, this material may be utilized by inserting it in the form of notes or as quotations, appended to the entries of the works, from which the references were taken. This will show that the work referred to was not unknown to the compiler or overlooked by him.

As the sheets which are written from the books themselves accumulate, it becomes an important matter to decide how they may best be arranged or filed for easy reference. It by no means follows that such an arrangement as is most serviceable while the work is progressing is the best for its publication. As the work goes on, occasion will frequently arise to consult the material on hand to see if such or such a work has not already been seen and recorded. There are several methods of arrangement which may be employed. The alphabetical by authors and titles, is probably the best for ready reference. Another is by titles of works analyzed. This I have found convenient, and from the need of such an index to supplement the author and title arrangement, arose the list which was published in the *Bulletin of Bibliography* in 1898, a second series, of which is now being published in the same periodical. Another arrangement is by subjects. This has its good points. It keeps together all the works, for example, on the flora, fauna, geology, and other subdivisions of the subject to be worked up, and indicates its greater or less completeness, and thus helps towards completing the same. Another arrangement, which has much

to be said in its favor, when it comes to printing, and a final form must be chosen, is the chronological. This, however, has little value for ready reference unless accompanied by several exhaustive indexes. It is probably the best arrangement for print provided it is thoroughly indexed. If indexes cannot be given, I think the subject form would probably be the most useful. The same difficulty will be found here as in the classification of books, subjects often overlap or authors treat of more than one; objections which disappear in an author or chronological arrangement.

In my own practice, as material has accumulated, I have, from time to time, thrown it into several arrangements, but in whatever form it has happened to be at any given time, I have often had occasion to wish it were arranged in some one of the others. To obviate this difficulty, I have made several brief indexes which are designed to answer almost any question, no matter from what standpoint it may arise. These indexes are as follows:

1. An author and title index, in one alphabet.
2. Chronological index.
3. Subject index.
4. Analytical index, by title of periodical, compilation, etc.
5. Maps of Bermuda only; 1622—date.
6. General maps depicting Bermuda; 1511-1630. This latter is arranged chronologically with a separate alphabetical name and title index.

If indexes are thought undesirable and too large a mass of material has not been accumulated, I have found the following method of filing my sheets to work very well, as it allows one to easily throw the matter into any arrangement desired. With the book in hand, and before beginning to make my record I write in the extreme upper right-hand corner of the sheet the name of the library in which I am examining the book. Beneath this—of late—I have given the date. It at least shows that on such a date the book was seen and belonged there. When the book has a shelf mark or call number I also record this. The value of this record of the name of the library and shelf number are obvious, should you desire to re-examine the work, and in case of rarity it locates a copy to which inquirers can be referred.

The record is then made as already fully described upon sheets of paper 25 centimeters

in height by 20 centimeters in width. In the upper extreme left-hand corner the date of the publication is given. A word about this date may not be out of place. In periodicals and the publications of learned societies, issued in parts, the date of the part, when it can be ascertained, is given rather than that of the title-page, which often bears a much later date. The former is the true date of publication, so far as that particular part of the work is concerned, and priority of publication, especially in matters of scientific record is often of essential importance. It is needless to say that this date should also appear in the final entry. The date of the reading of scientific papers, which often takes place at greater or less intervals of time before they appear in print, should also be recorded. In arranging by dates, which are inclusive, as 1816-72, arrange under the earlier. To one studying the matter historically or chronologically, the reason for this arrangement is obvious.

I have made use of the Cutter author number as an assistance in alphabetizing my sheets. In case of analyticals I have used this twice; the first, for the main or author heading, I place at the right of the date and on the same line; the second, for the title or name of the work analyzed, is placed below the date on the left-hand end of the first line.

Each sheet also bears, in red ink, I hardly know why in red, the class number of the subject matter of the sheet, in the Decimal Classification.

I formerly indicated at the top of the sheet whether the work recorded contained illustrations or maps. This practice I have not kept up. It may be easily added at any time if desired.

There are a few details, which from experience, I have found convenient to employ. The judicious use of underscoring in red ink is very helpful. In cases where there are many lines of writing, it causes the important words to spring to the eye from the mass of those of less importance. For example, I use it mainly in cases of analytical matter, where the main heading is the author or, if anonymous, the title. The title of the work from which this is taken together with the volume and pages being underscored in red ink help very much in handling the sheets for rearrangement which at times is found to be desirable.

Another wrinkle which I have found to work well is the underscoring of unusual quoted matter, such as misspelled words, square brackets or parentheses, etc., with a dotted line. It reassures one when looking over his manuscript at a later date that the form used was intentional and did not arise from any mistake or negligence. When work so underscored comes into the printer's hands, he, too, will understand it perfectly and for a very simple reason. One of the rules of proof-reading requires that when any correction has been made in the proof and upon maturer consideration it is decided that the type ought to remain as it stands, the word "stet" is written in the margin and the words which it is desired to retain unchanged in the proof are underscored with a dotted line. If the copy goes to the printer underscored in this manner, he at once recognizes that it appears as written with the full knowledge and intention of the author and will not, as many printers assume to do, correct it to suit generally accepted standards. Other check marks and arbitrary signs I need not give, as each person will devise and make use of them as occasions arise for their use.

If what I have said shall cause anyone to become interested in local bibliography and to realize its value as a means of imparting important information to searchers after special information, I shall be glad. If it shall be the means of inspiring any to build up special collections of books and to engage in the compilation of a bibliography of the subject of which such a collection treats, my paper will have fully answered its purpose. No one is more conscious than myself of the difficulty of attempting to describe technical matters in a luminous, and at the same time popular way, especially in the course of a single paper. If I have succeeded in making my meaning intelligible in all cases, I shall be more than surprised. Below I have given a list of articles which it will be well for anyone, who seriously contemplates compiling a bibliography, to read before taking up his work.

A FEW ARTICLES ON BIBLIOGRAPHY TO BE READ.

## A NORWEGIAN BRANCH LIBRARY.

THIS is the day of the branch library. Main libraries are organized, and we know almost all about them. Branch libraries are to be organized in America—and in Norway. Small branch libraries in outskirts of large cities, very often in the quarters of the poor, how to build them, and how to conduct them, are the library puzzles of to-day. In the United States, where wealthy citizens compete to show their willingness to serve their fellow citizens, the question is somewhat different from the same question in Norway. We have no Carnegie to pay for our branch libraries, nor other rich men as are to be found in most American cities. My great ambition has been to study the branch library question, to get nearer to the solution of the ideal: the best books to the most people at the least cost.

In the beginning I designed my model branch library and had to give it up, because I had not studied even the rudiments of architecture. The architect of the public schools of Kristiania, Mr. Henning Klouman, became interested in the work, studied the question theoretically at home and practically in England. To my mind he has come very near to the model branch library. I submit his plans for a branch library, proposed by the board of Det Deichmanske Bibliothek, Kristiania, to be erected on the "Place of justice," where the gallows used to stand in the Kristiania of bygone days.

By glancing at the plan it will be understood that our arrangement is intended to secure the greatest economy with regard to assistants. Entering the hall the visitors will find washstands and cloakrooms. The coats are to be hung on iron crosses with attached chains fitted with locks (the idea being taken from second-hand clothing stores in the United States), and the visitor takes his key into the reading rooms. Of the periodical reading room little is to be said. It seats 28 readers, and is fitted with the most recent type of periodical racks. No newspapers are to be read. The general reading room, with the same seating capacity, has shelving for 2000 selected books on open shelves: encyclopædias, dictionaries, standard reference books and the best possible handbooks in useful arts, history, language, literature, etc. There are to be good, practical catalogs both of the books in the branch and at the central library, from which books can be sent, possibly by street car. The inner, curved plate glass wall of both reading rooms makes inspection easy and protects from noise from the people in line for or leaving the delivery room. The librarian and his assistant overlook the whole library from the "desk," an elevated platform with counter. The turnstile moves by pressing a knob in the floor, the librarian thus being enabled to regulate the access to the delivery room. During busy

hours the librarian has to receive the books. No one is admitted into the open shelf delivery room with parcels; these are taken into custody by the librarian, who puts numbered labels on them and gives duplicate numbers as checks to the owners. The librarian hands the parcels over on the assistant's side (the exit), where they remain until called for, when the visitors pass the assistant on their way out.

Visitors in the open access delivery room are always under the closest inspection from librarian and assistant, and, not least, from the boy, who puts the returned books back upon the shelves. The latter will constantly be occupied arranging books on the table in the center of the room, guiding the visitors, etc. The assistant will charge the books selected by readers. Another turnstile guards the exit. When the charging is properly done and parcels delivered, the assistant presses the knob, and the visitor is allowed to depart.

The library régime will not, however, be quite as automatic as this description would suggest. Under ordinary circumstances the librarian will have plenty of time to walk around and acquaint himself with the wants of the public and the needs of the library. The assistant will be able both to receive and charge the books, except during the Saturday night rush. The library is expected to issue 100,000 books a year for home use without the aid of extra assistants. Situated in a workingmen's quarter, the library will be open from three to 10 p.m., and run by one force.

The rear of the building is set apart for the juvenile department. The room, which has its own entrance, is partitioned by a counter on which bookcases guarded with wire screens are standing. The young folks, who come only to exchange books, are not admitted inside of the counter. The assistant receives their books and puts them directly into the guarded bookcases, where the gilt titles can be read through the wire network. The reading room, seating 42, is behind the counter, where a reference library in miniature, juvenile magazines, etc., are to be found. A glass door connects the open shelf delivery room with the juvenile room.

The building is to be plastered outside and the roof covered with red Norwegian tiles. A hot water heating apparatus will be placed in the basement; all floors will be laid with inlaid linoleum. The estimated cost is \$15,000, exclusive of books.

I am sorry to say, in conclusion, that our plans were not passed by the city council. Nevertheless, I have thought it worth while to present them in detail, believing that criticism from American librarians will open our eyes to recent progress and modern improvements, and make us the stronger for our next fight for the development of the public library in Kristiania.

HAAKON NYHUUS,  
*Det Deichmanske Bibliothek.*

## LIBRARY BUILDINGS.

THE subject of library architecture has recently had consideration from several points of view. From the standpoint of the architect it was presented at the Lake Placid meeting of the New York Library Association by Edward B. Green, of Buffalo, of the firm of Green & Wicks, architects, whose paper is here given in summary.\*

Mr. Green touched first upon the ideal of the library building, and the interest that it excites in the community. A library building, if well and honestly done and built in good taste and with becoming dignity and grace, leaves a lasting effect upon the mind of the public and stimulates its artistic appreciation and civic pride. From the fact of its being a library, the greatest care should be exercised in the design. It stands perhaps for more than any other building in the community, and so should have its purpose clearly set forth and defined in its elevation, in its refinement of detail, and in its well studied plan, for a fine and noble building affects unconsciously the character and intellect of the public. The building should be erected by good, honest, workmanlike methods, with no shams, and no striving to make cheap material represent substantial and costly ones.

The lot, which is an important factor, is often selected before the architect, though there is no one whose judgment or experience can better be relied upon than his in determining the size of the lot, its possibilities for affording an artistic setting as well as future extensions of the building, and of advising on the questions of light and air, and other surroundings. Given a certain sum of money, Mr. Green said that he would rather reduce somewhat the portion set aside for the building and use this portion in getting a larger and better situated lot; for a building of less cost will produce a better result on an appropriate and fitting lot than an elegant building on a small and inappropriate site.

In selecting the building committee, make it small, for the decisions of a large committee are usually a matter of compromise, while a smaller number, even a committee of one, feel the responsibility resting upon them, and are apt to be more direct and businesslike.

In the selection of an architect Mr. Green named the two methods in general use—first by direct selection, and second by a limited competition; and called attention to the fact that the point was the selection of an architect, not the selection of a plan, for the architect is much more important than the plan.

Mr. Green dwelt at length upon the different ways the mind of an architect is affected and stimulated by the two methods of his choosing. By the first method he feels that he is trusted, and goes to work at the design know-

ing that his work is to count for something. He studies the problem with his client, who tells him of his ideals and desires, and there is an interchange of confidence, the good results of which will show in the completed building. The limited competition, on the other hand, really descends into a guessing match, the competitors trying to guess what will please the committee and the expert. There is no interchange of confidence, no consultation as to details, but a working and guessing to win. While he did not claim that competitions are all evil, yet he found little good in them. The architect directly selected "grows up" with his committee, he educates them, and he in turn learns from them.

If a competition must be had, start by engaging an expert to assist in formulating the program and in advising as to the decision. The competition should be limited to a few, each competitor to be paid the same amount, except the one who finally receives the commission. Select as competitors only architects so good that you would be glad to give the work to any one of them. The architect once selected, either directly or by competition, have confidence in him, and show him that you have. Make your wants known, and it is his duty to work them out as far as possible—but have confidence in the architect, or get another.

As to the matter of interior arrangement, the librarian is supreme. In the clothing, or outer structure, the architect should understand that he is alone responsible, and should be given full power. Each building is a problem different from all others. Its cost, its object, its surroundings, and the ambitions of its builders, are all to be considered. It is difficult therefore to state general principles covering the planning of libraries, for each particular one furnishes a distinct and different problem.

"A library building, however well arranged, will be out of date in an amazingly short time, on account of the progressive nature of the work. The stack and open shelves are only late innovations, and who will dare to predict what is to come next? I would, therefore, advise the building, perhaps, of only the exterior walls, leaving the interior to be arranged and rearranged as often as is seen fit. If it were possible, I would suggest putting the stacks on wheels, or the use of some such flexible arrangement; also the use of movable partitions, glass or otherwise, which could be shifted at any time, and entirely change the arrangement, as convenience required."

Library architecture, as a whole, is presented in the compact and comprehensive article contributed by C. C. Soule to the Sturgis "Dictionary of architecture and building."† Opening with the definition of "library" as "any place provided for the keeping and ar-

\* Summary prepared by Miss M. E. Hazeltine, as secretary New York Library Association.

† Soule, C. C. Library. (*In Sturgis' "Dictionary of architecture and building," v. 2, p. 749-759. Macmillan.*)

rangement of a collection of books, for continual public or private use," a brief survey is given of the historical development of library architecture and of the succession of types of building. The Vatican and the Bodleian may be regarded as typical of library buildings from the 15th to the middle of the 19th centuries, although in 1740 the Radcliffe Library of Oxford gave an example of the central circular reading room, later so familiar. American libraries noted as typical of styles of architecture are Gore Hall (1837), Boston Athenæum (1849), and Astor (1851), the latter setting the model of the first "conventional plan," later followed by the Boston Public, Peabody Institute, and other large libraries. The schedule of requirements approved by the American Library Association is given, and excellent practical suggestions are made for the planning of buildings to meet varying conditions of use. Especially useful is a summary, setting forth 16 "features in which library buildings need special study and treatment," as shelving and book cases, stack, alcoves, delivery room, catalogs, admission and supply of light, etc. Appended is a brief reference list of literature of the subject, and descriptive paragraphs on the Bodleian, Congressional, Laurentian, and Radcliffe libraries.

"The planning of small libraries" was considered by Charles Knowles Bolton in *The Brickbuilder* for August. These ranged from the village library costing from \$5000 to \$15,000 to buildings costing from \$15,000 to \$50,000, and the illustrations given include plans of the Lawrenceville branch of the Pittsburgh Carnegie Library, the libraries of Champaign, Ill., Plymouth, Mass., and Wayland, Mass., and the Fogg Library at South Weymouth, Mass. In noting the requirements of a small building, Mr. Bolton says: "In the ordinary arrangement of space, the reading room is on one side of the entrance. There is a children's room on the other side, and the delivery desk is opposite the front door. Back of the desk is a stack, which forms an ell or projection. All persons passing to and from the stack must go by the attendant at the desk. In branch libraries, or in libraries having collections which grow very slowly, a semi-circular wing is attractive. The cases radiate from the delivery desk, and the windows throw light between them. The spread of the cases may allow space between their outer ends for small study tables and chairs. The stack itself should have aisles at least 30 inches wide; the top shelf of each case, on which the books rest, should be not over 6½ feet above the floor, although in the alcoves one or two higher shelves may be used to advantage, because a step or ladder will be at hand. A shelf eight inches wide is all that is necessary.

"Provision for a stack should be insisted upon in every library plan, as a means of escape from the pressure which inevitably comes upon a growing collection of books. It may

be unimportant in extent, but it must be capable of enlargement.

"The delivery desk, which is also an information desk and a vigilance station in a small library, is closely associated with every function of administration, and should be a distinct feature of the plan. It should be near the stack. . . . Finally, the person in charge should be able, if the library cannot afford to have two assistants constantly on duty, to see the greater part of every room which is open to the public—the reading room, the children's room, the reference room, and also the card catalog, which must be well lighted and near a table. It will be seen that much is required of an architect in placing the delivery desk. One is amazed to see in some fine buildings a desk dependent upon artificial light, and so placed that secluded corners (even in small buildings) permit children to romp and commit acts of vandalism beyond the eyes of the attendant."

The various features of an up-to-date small library building are noted as a reading room, children's room, reference room, work room and a conversation room, "which may also be the historical and exhibition room, as well as a meeting place for the trustees." For a larger building bicycle room, librarian's office, unpacking room, etc., are requisites, and a department for school-reference work is desirable.

"It is hardly necessary to say that thought should be given to the position which the library is to occupy in the land. It seems inconceivable that one of the best firms of architects in New York could be guilty of placing a building on a lot in such a way that enlargement is possible on one side only, and then to block that side by an enormous old-fashioned chimney and fireplace. The trustees of that library are now facing a problem that these architects have done their best to make impossible of solution."

Provision for the needs of a college library is made in the "Tentative plan," recently issued by the University of California for its new library building.\* This was prepared with the desire of obtaining from librarians opinions as to best size and arrangement of the various departments of the library, and the ventilation and heating of the building as a whole. The premises upon which the plans are based are: "1, the temperate climate of Berkeley, subject to extremes of neither heat nor cold; 2, a light-giving sky of average extent, limited somewhat only in the north and east; 3, a location facing southerly, with ample space for extension laterally or toward the rear, which a rectangular building permits; 4, a fireproof structure; and 5, practically all money and materials necessary for its construction, equipment and administration." The

\* University of California. Library bulletin, no. 14: Tentative plan proposed for a new library building for the University of California. Berkeley, University Press, September, 1901. 6 p.+4 plans, O.

proposed building is 310 feet by 250 feet in dimensions, three-storied, with a basement. "The entire rear and the center are mere shells of masonry, to be occupied by seven tiers of steel stacks from base to top, which will accommodate 1,000,000 volumes." Examination of the plans is essential to a clear understanding of the arrangements, but the main departments provided for may be briefly noted. In the basement the lower tiers of the rear book stacks will be devoted to the bound newspaper collections, and adjoining the stack on the eastern side is a newspaper room, 525 square feet. There are two receiving rooms, a stack room, workshop, bindery and repair room, rooms for men assistants and for women assistants, and a large room (2345 square feet) to be devoted to storage and mailing of the university publications. Ventilating and heating apparatus are to be installed in the sub-basement, over which is the lowest tier of the central stack, the floor of which is  $7\frac{1}{2}$  feet below the floor of the main reading rooms. Power and heat will be derived from a central station outside the library. The two courts on either side of the central stack will have a ceiling of cement and glass, and will give storage for duplicates and for unbound periodicals. On the first or main floor cloak rooms respectively for men and women flank a spacious entrance to a vestibule, beyond which is the general delivery counter. "Behind the counter is the terminal of the book-carriers connected with all the floors of the center and rear stacks; an elevator as well as stairs; space for reserved books; and a tier of the central stack for the commonly used periodical sets, to which all persons in either reading room have free access." On this floor are two reading rooms, affording space for over 600 readers, with 140 linear feet for catalogs and wall cases for reference books. The eastern wing is devoted to seminar rooms, and in the southeast corner is a bibliothecal museum for exhibition purposes. The librarian's room is in the southwest corner, and the western wing contains catalog and accession departments.

"An unusual amount of glass is recommended in this construction. The floors of the reading rooms are largely of clear glass. Prismatic glass in the arches collects light in the day time and illuminates the corridors, while at night the same will disperse upward in the reading rooms the electric light from the corridors. The inner walls of the seminars, as well as of other rooms, on all floors, to consist of plain glass from about five feet upward."

The second floor, in addition to seminar rooms, contains a library school room, directly over the catalog and accession departments. The California historical seminar room adjoins that portion of the stack to be devoted to California history and literature. The third floor is also mainly devoted to seminar rooms, with rooms for the university archives

for prints and engravings, and for maps and charts. "The uppermost story of the central book stack may be finished as an integral portion of the stack, or may be floored over and utilized as a lecture room. Space is obtained here for photographic rooms.

"From the floor line of the third story, at a height of about 30 feet, spring the glass roofs over the main reading rooms. Such an expanse of glass might be unwise in a latitude where the snowfall is heavy, or where summer's unrelenting heat would be too oppressive. But in Berkeley a glass-covered court, measuring 100 by 63 feet, in the Mechanical and Electrical building, has proved a success, and this problem here is reduced simply to adjustment of height of ceiling, with a view toward economy of artificial heat, sufficient ventilation, the prevention of echo, and architectural effect." The "tentative plan" is worthy of the careful attention of those interested in library architecture.

#### THE CARNEGIE BRANCH, FREE PUBLIC LIBRARY, ST. JOSEPH, MO.

IN developing the plans of the Carnegie Branch Library, special attention was given to the questions of access to everything readable and economy of administration. The building is to be erected in the stock yards district, and will be used almost exclusively by people and children belonging to the working classes, most of whom have never had the advantages to be derived from the use of a library. The contribution of \$25,000 for the erection of the building was secured from Mr. Carnegie by Mr. John Donovan, general manager of the stock yards. This gentleman is also interested in the land company which gave a block of ground 260 x 400 feet on which to place the building. The delay in commencing the building was caused by the failure of the city to establish grades and provide adequate sewerage. These difficulties have now been removed, and the contract for the construction of the building was recently awarded to local contractors for the sum of \$23,050. This does not include book shelves or cork carpet.

The building will be of brick and stone, with slate roof and fireproof construction; steam heat. The plans, given elsewhere, show the arrangement, and are correct with the exception that to the left of the entrance to the rotunda is a locker for the employees.

The basement or ground floor will be five feet below the surface and eight feet above, and is divided into an assembly room 30 x 32 feet, which it is the present intention to use as a men's club room. It is not necessary for one to go into the library proper in order to reach this room. The effort will be to get the men to use this room, in the belief that library use will speedily follow. A pleasant little room for the use of women's clubs or

school classes, as occasion may warrant, is across the hall, being 16 x 18 feet. Adjoining this is the library work room, with shelving for storage of books and periodicals not in use. Under the circular stack are the boiler, fuel rooms and men's toilet. Height of ceiling, 14 feet.

The first, or library, floor will be 32 x 54 feet without the circular stack room, which latter is on a radius of 34 feet. The rotunda is formed by oak and glass railings, extending six feet from the floor. The children's room is to the right, the entire side of the building, with wall shelving, a blackboard being in the center. The tables will vary in height, the little ones being close to the desk. Reading room is on the left, with shelving for certain popular books. The book shelves are in the rear, in circular form. Total book capacity, 10,000 v. As the ceiling in this room is 16 feet high, provisions are made for a two-story stack should use of the library in the future warrant it. The charging desk is octagonal in form, adopted after a talk with Mr. Anderson, of Pittsburgh.

The charging desk contains a card catalog, opening toward the books in the rear, while inside arrangements are made for everything for which a use can be found at this place — supplies of all kinds, application cards and register, charging tray in the center, and the other little things which are looked upon as time-savers if convenient to the hand.

The library has an annual maintenance fund of \$2500. The contract calls for the building to be completed Aug. 15, 1902. This is the first branch library building, erected specifically for such use, to be built in Missouri.

P. B. W.

#### A GERMAN VIEW OF AMERICAN LIBRARIES AND MUSEUMS.\*

AMERICANS are popularly supposed to maintain a peculiar and somewhat touchy interest in the printed opinions of foreigners concerning their country and its institutions. Whether the popular belief is well founded or not, American librarians cannot fail to be interested in the report of a highly trained scientist who has made a special, albeit confessedly hasty, study of their chief buildings. In the summer of 1899 Dr. A. B. Meyer, director of a museum in Dresden, was commissioned to visit the United States and to study museum and library buildings with a view to securing helpful information for the erection of a new structure for the institution over which he presides. The first two portions of his report are now accessible.

\* I. Ueber Museen des Ostens der Vereinigten Staaten von Nord America. Reisestudien von Dr. A. B. Meyer. I. Der Staat New York. 8+72 p. II. Chicago. 6+101 p. Berlin, R. Friedlaender & Sohn., 1900-1901. (Abhandlung und Berichte des Koeniglichen Zoologischen und Anthropologisch-Ethnographischen Museums zu Dresden. Band 9, p. 1. 72, and Beheft.)

At first glance it will perhaps strike some of us as strange that we have not associated libraries closely with museums in our study of the problems of library architecture. They have only to be brought into mental juxtaposition for the reasonableness of their union from this and other points of view to become at once apparent. It will moreover be plain to the readers of Dr. Meyer's pages that the museums which receive his warmest praise for system of arrangement and indexing are those which have copied closest library methods; while the library buildings which seem to meet his highest approval most resemble in structural details those museum buildings which he commends. There is no little matter for reflection in these facts.

In his preface Dr. Meyer tells us that general and searching criticism of what he has observed is to be made in an appendix to his report; hence we must beware of too great certitude as to his conclusions drawn from separate criticisms. He does state, however, in the preface, that from an architectural point of view American libraries are farther advanced and more noteworthy than American museums, and even surpass those of Europe, which is not the case with our museums. It may be said here that the author's spirit is all that could be asked in the way of fairness and good-will.

In his first part the state of New York is treated. It will be seen that only the larger institutions and those possessing new buildings or those of an uncommon size are noticed. The list of libraries and museums described is as follows: in New York City, the American Museum of Natural History, the Museum of the Brooklyn Institute of Arts and Sciences, the Metropolitan Museum of Art, the New York Public Library, Columbia University; in Albany, the State Museum and State Library, together with a description of the University of the State of New York; and in Buffalo, the Public Library and the Buffalo Society of Natural Sciences. The author complains, with reason, of the lack of good photographs of these structures, but carefully gives the sources of the 45 illustrations which accompany his first part.

The buildings of the first two institutions named above are described with scientific details as to manner of heating, ventilating, and lighting, and with careful study of the mode of construction and manner of displaying objects. The last comes in for no little criticism. The New York Public Library receives hardly the attention which its size and importance demands, but the author very properly excuses himself for this on the plea of the unfinished state of the new buildings, whose plans are, however, given in some detail.

As Columbia University is the first American university of which the author treats, he describes for his German readers, with a remarkably clear understanding of the subject,

the character, history, and scope of the American college and university. The library of Columbia is fully treated. Dr. Meyer approves most highly the arrangement of seminar and stack rooms in this structure, and grows enthusiastic over the steel stacks. German thoroughness and the theorists's point of view are shown in the objection made here, and with regard to almost all other buildings, to the wooden furniture and office fittings on the score that by their use the danger from fire is greatly increased.

Steel stacks, steel office furniture, and fire-proof buildings other than museums and libraries, also receive considerable attention in this first part. The structure of these buildings receives no greater attention than the methods of heating and ventilation, the latter of which the author finds generally absolutely wanting. In discussing the institutions at Albany the State Library and the Library School receive the major part of Dr. Meyer's description. He describes at some length the decimal system of classification and the travelling libraries so familiar to us all. The Buffalo libraries also receive considerable space. Eighteen pages of notes, mostly of a bibliographical character, conclude the first part of the report.

It is significant that the city of Chicago occupies the whole of the second part of this study, and receives some thirty pages more space than the whole state of New York. Here also the author has omitted small libraries from his consideration. The Field Columbian Museum, better known, as a building, as the Art Palace at the Columbian Exposition, is the first institution described. Here the want of efficient protection against fire is condemned as vigorously as the admirable system of cataloging material—a combination of card catalog and accessions record in effect, if not in name—is praised. In connection with his account of the museum of the Chicago Academy of Sciences, the author takes occasion to give a long description of American steel structures and of the hollow tile system used to insure fireproof walls and floors. He finds the structural details and plan of this building to be the best which he has described in America, both in respect to economy of space and general design. The building of the Art Institute is also described with fulness, and the work of its schools outlined. Its system of protection against fire is warmly commended.

With the building of the Chicago Historical Society the libraries of the city begin to receive consideration. The absolute absence of inflammable material from this building meets with the author's highest approval. He inclines to the view, however, that in doing away with wood the requirements of elegance and lightness in the steel furniture, etc., have not been met.

When the John Crerar Library comes up for treatment the notable compact with the

other large libraries of the city for dividing the field of books in such a manner as to secure the largest possible results from the funds of all the libraries is outlined and highly praised, being termed "as wise as it is rare." In connection with this particular library—perhaps because its building is not yet begun—the system of administration, the printed card catalog, its binding, etc., are described at length. The final verdict will hardly be disputed: "mir imponirte die Organisation der John Crerar Library als ebenso musterhaft wie originell."

The architectural features of the Newberry Library, especially its long interior corridors, resounding floors, and absence of private work rooms for the staff, are unsparingly condemned. So also the defective ventilation and the system of housing books in departments without any general author catalog for the entire library in an accessible place are strongly criticised. The "Rudolph Indexer" in its several forms is described and illustrated.

The artistic and decorative features of the Chicago Public Library, the arrangement of its circulation department, and the general plan of the building appear to have impressed Dr. Meyer most favorably. With his cordial approval of the plans, aside from those of the circulation department, few librarians will agree. He criticises severely the plan of placing the heating apparatus in the structure itself, and contrasts the failure of the ventilation system with its successful manipulation in the building of the Chicago Telephone Co.

This portion of Dr. Meyer's report closes with the best description of the University of Chicago known to me. His account is now two years old, and that means a good deal in the history of an institution which has accomplished so much in a decade. But for catholicity, accuracy, and strictly impartial, though cordially sympathetic, criticism this account is both noteworthy and commendable.

In conclusion it may be fairly said that Dr. Meyer has shown remarkably good judgment and sense in his descriptions. By strictly limiting himself to institutions, with one exception, which have large and fine buildings, which was entirely justifiable in view of the purpose of his visit, he has necessarily shut himself off from much of the freshness, vigor, and peculiar enthusiasm which differentiate library work in our small cities and towns from similar work anywhere else. But at the same time he has performed a signal service to American librarians by recording with painstaking accuracy the details of our larger structures, and showing that in his search for information after the purely material he has found it impossible to neglect the vital elements in our work. We shall await with great interest the two forthcoming portions which will treat of the libraries and museums of Washington and of Boston.

WM. WARNER BISHOP.

## DOCUMENT COLLECTIONS OF THE LIBRARY OF CONGRESS.\*

THE wealth of matter which is published by governments — national, state and local — together with the kindred publications of quasi-public corporations, all of which must be considered as documents, perplexes and embarrasses the librarian. So great is the extent of this literature that no library can aim to comprise it all. Few are so free from restriction as the Library of Congress. Yet to attempt to collect every document issued by every government body in the United States alone would drain the resources of the Library of Congress and soon overcrowd its shelves. The place, circumstances and contemplated use of a library must determine the scope of its document collection. For the Library of Congress the determining characteristic has been the fact that it is the legislative library. In the Library of Congress, which of necessity comprises primarily the aim of collecting all material tributary to the work of legislation, the document collections have a wider scope than could be expected elsewhere.

The Library of Congress can hardly "point with pride" to the fact that its collections of documents published by the United States government are extensive and possibly more complete than those to be found elsewhere. For the Library of Congress nothing short of a complete collection of these documents is a fitting ideal. The documents bearing the Congressional number in the familiar sheep-bound sets have been given abundantly to the Library of Congress by law, and apart from a few losses which have arisen through the disappearance of particular volumes the set is quite complete. But the documents issued by the departments, both those which duplicate the Congressional sets and those which were wholly independent of it, have in times past been received by the Library of Congress in a most haphazard fashion. No law existed before March 3, 1901, authorizing the Government Printing Office to furnish these documents to the Library of Congress. These, since 1895 at least, had been furnished to depository libraries throughout the country. The executive departments and offices have been most willing to present their documents and have indeed responded to appeals with the most cheerful alacrity, but those in charge of them have, as a rule, been unaware of the fact that their publications were not currently received at the Library of Congress.

If it be the proper ideal for the Library of Congress to collect all printed matter published by the federal government, it cannot be deemed equally important that all the publications issued by the separate states of the Union should be included within its collections. It has, of course, a primary interest in all legislative matters, and collects the records

of proceedings of the state legislatures and the papers printed by order of the legislature and bound together as collected documents. Of these volumes there are some 7000, exclusive of all duplicates, in the Library of Congress. Separate issues of the states are collected only when they touch upon matters of the first importance, and no attempt is made to have complete collections of the purely administrative reports of state institutions generally.

As we pass from the consideration of state to that of local documents we seem to get further from the immediate purpose of the Library of Congress, and the problem of selection becomes more difficult. In view of the interest in municipal government at the present time, and in view perhaps of the functions of Congress as the governing body of the District of Columbia, the Library of Congress cannot overlook this field of literature, nor can it attempt a collection of all the local documents published in the United States. The present collection, confined almost exclusively to the large states, numbers some 1300 v. Little has, to my knowledge, been done to develop this field of literature or to establish the principles upon which the acquisition of material should proceed. It is one of the problems which we have thus far been obliged to postpone.

The most distinctive feature of the document collections of the Library of Congress is undoubtedly the wealth of foreign material which they contain. Since 1867 a regular exchange of government documents between the United States and foreign governments has taken place. Through the agents of the Smithsonian Institution some 45 sets of the publications of the United States are sent to as many foreign governments, from whom the Library of Congress receives a more or less adequate equivalent. In arranging this exchange it has been deemed important that the libraries of Europe should contain the public documents of the United States, and whether located in large or small countries, with a large or small number of publications of their own, the full sets of the United States Government have been sent. Yet the return which has been made to the Library of Congress does not depend alone upon the number of works published by the different governments, but frequently upon fortuitous circumstances. The regularity of receipts depends much upon the concentration or lack of concentration in the method of publishing documents. Where they are printed by order of the legislature, and numbered consecutively in series, as in the Parliamentary papers of Great Britain, the receipts are large, but where they are printed by several ministries, and where there are several special agents to forget the transmission, the receipts are less satisfactory. Yet the collection as a whole is a remarkable one. The documents which may be classed as legislative documents and

\* Read before District of Columbia Library Association, Nov. 13, 1901.

correspond for foreign governments to our Congressional sets number over 20,000 for Great Britain and her colonies, and the European nations. There is still much unsorted material relating especially to South America in the Library of Congress.

In relation to other libraries it may be stated that the aggregate number of volumes in the Library of Congress, exclusive of duplicates, is about 87,500 volumes. The New York Public Library, where special attention is given to documents, had in 1900 65,575 volumes of this class. The other large libraries of the United States fall much below these figures, so far as their contents can be inferred from their reports.

ROLAND P. FALKNER,

Chief Documents Division, Library of Congress.

#### LIBRARY HELPS—INDEXES.\*

EVERY person with a well-ordered mind classifies more or less closely for himself, and feels the need of indexes as guides to his classification. Indexing then follows close upon the heels of classification. An index made for one person may well include only those topics which are of interest to that person, but an index for the general public should be a guide to every topic in the matter indexed. The indexer must put himself into sympathy with minds of varied interests.

The librarian should have the instincts of an indexer, if she is to be successful in reference work, and should make herself thoroughly familiar with her bibliographic tools. One who knows the scope and arrangement of her reference books, (using the term reference in a broad sense,) can make her library of tenfold more service to the readers than it would otherwise be. Whether the library has many or few indexes and bibliographies, the librarian must be the index of indexes.

The simplest index to consider is that for a single work, in one volume or especially in several. Many readers have not formed the habit of using such indexes. It is true that some are unsatisfactory, but others are of great value. The "Riverside edition" of Lowell's prose works has a very full index to volumes 1-6 in vol. 6, while vol. 7, published later, is indexed by itself. This irregularity should be noted in the volumes on the first page of index, and on the catalog cards. Schouler's "History of the United States" has in vol. 5 an index for the first five volumes, while in each of the other volumes, *i.e.*, 1-4 and 6, there is an index for that particular volume. The worker who becomes familiar with these peculiarities will save much time.

There are some collections which are made very valuable by good indexing. Such a set is Stedman and Hutchinson's "Library of American literature." Its subject side is often

overlooked, because it is classed as literature and its first interest is on the author side, but the general index is worth careful consideration in the small library. The titles of all the poems in the work are given under the head *poetry*; a collection of *noted sayings* is indexed; under *humor* are listed selections from many authors. Such subjects as *slavery* and *temperance*, which are of great interest historically, are brought out by the index. Some of our students are studying, in connection with early American literature, such topics as the New England Divine, Religious sects in New England, Religious dissension in New England in colonial times, etc. We have found some illuminating material here in selections from contemporary writers. There are contemporary documents relating to *witchcraft* which the small library would be unlikely to have in any other form.

Curtis's "Orations and addresses" touch many subjects of general interest, to which there is a key in the index. The same is true of Brewer's "World's best orations."

The "Messages and papers of the Presidents," edited by Richardson, contains an index, so-called, which is really a dictionary of United States history combined with the index proper of the volumes. One finds there in a nutshell the story of the old Northwest Territory; the leading facts and dates in the woman suffrage movement; the provisions of the stamp act, and like material.

The "Old South leaflets," which have brought within the reach of very small libraries the most important documents in the history of our country, have been indexed on cards by the A. L. A. Publishing Board. The card index of Massachusetts public documents, prepared by the Massachusetts Library Club, was also valuable.

The indexes already referred to are limited in their range, but almost every subject is included in the periodical indexes. The first and greatest of these is "Poole's," which has been beyond the reach of many small libraries, but now in its consolidated and abridged edition is better suited to their purposes and purses. The several indexes to current periodicals allow a choice of supplements to "Poole." First is the "Annual literary index," which appears shortly after the close of the year; second, the "Cumulative index to periodicals," published monthly and cumulating to the quarterly numbers, covering a smaller list of periodicals than the former, but including authors as well as subjects, in dictionary form. The third, which is new and not yet well known, meets the needs of very small libraries which have only a few periodicals. This is the "Readers' guide to periodical literature," published by H. W. Wilson, of Minneapolis, the publisher of the "Cumulative book index," and costing \$1 a year. Fifteen periodicals are now indexed, and it is stated that the number will be increased to 20 or more before the end of the year. Both authors and subjects are in-

\* Part of talk given before Western Massachusetts Library Club, Huntington, Oct. 18.

cluded. The monthly index in the *Review of Reviews* is useful for those who have no better one. The "Index to *St. Nicholas*," compiled by Harriet Goss and Gertrude A. Baker, and published by the Cumulative Index Co., is proving a great boon to those who work with children. It is a dictionary index to the first 27 volumes of the magazine.

The "A. L. A. index to general literature" represents a vast amount of analytical cataloging by co-operating libraries. The new edition is greatly enlarged, and is a guide not only to essays and monographs on a great variety of subjects, but refers also to reading lists and bibliographies.

BERTHA BLAKELY,  
Mt. Holyoke College Library.

### PRESERVATION AND USE OF NEWS-PAPER CLIPPINGS.

*Henry J. Carr, in Our Journal (Penn Yan, N. Y.).*

DURING the past 30 years I have had experience with and made trial of various methods for utilizing scraps and clippings, and have, as far as possible, learned of all labor-saving devices for that purpose, both patented and others. As a result I am confident that the use of cards or envelopes (or both combined if need be) will best serve the purpose.

#### THE CARD METHOD.

The average single column newspaper clipping is scarcely two and a half inches wide, while column widths exceeding three inches are not numerous. Taking the latter as a maximum, it will be found that a method similar to the card catalog, customary in public libraries, can be carried out with ease and a moderate degree of expense. Standard size catalog cards are cut a fraction scant of three by five inches, and are used standing on their longer edges in drawers or boxes so as to be readily turned forward or back for reading the entries on the face of the cards. A subject name or some leading word of the catalog entry is written at the upper left-hand corner of each card, *e. g.*, "Death penalty," "Future life," "Temperance," "Roosevelt, Theodore."

For filing clippings, if one will procure a supply of like sized cards (and for this purpose they may be of a cheaper quality or material than is at all desirable for library cataloging) it becomes no difficult matter to indicate by a word or more the subject, or topic, of any clippings; and, folding each clipping to a length of a little less than five inches, to place it on edge just behind the card which thus serves as an index guide to it.

Subsequent clippings on the same topic, as they come to hand, are dropped into place in like manner behind the guide, alongside of their predecessors; and those on yet other subjects, behind corresponding cards bearing respective topic word or words. A guide

card once prepared serves its purpose for any number of clippings relating to that particular topic that may be placed in their order behind it; hence the ease of filing is increased with the growth of the collection and extent of the guides previously made ready.

The various indicating cards are arranged in the filing drawers or boxes in due alphabetical order, after the manner of the words in a dictionary or an encyclopedia. Care being taken to select abstract or specific subject headings rather than general or inclusive class names, it becomes possible to decide upon a suitable term, or word, that will serve for both the first filing and later as the head under which to look for it among the guide cards when occasion arises for subsequent use of a clipping.

Should two or more designations, or somewhat synonymous terms, seem applicable, which is not infrequently the case, one can be adopted and a cross-reference to that term entered on another card bearing the diverse heading. One inclined to go into this matter fully would do well to consult the "List of subject headings" prepared by a committee of the American Library Association. For a less elaborate code of headings and cross-references one may refer to and follow the alphabetical subject order of a good encyclopedia, such as Johnson's and others of its grade.

In addition to the clippings as such, notes or memoranda on the subject, or from one's reading, may be made on slips of paper and filed in similar manner behind the cards. The practice of taking all notes of reading on uniform size slips is one to be commended whether they be filed in this manner or kept together in a bunch in alphabetical or other order, and they will usually prove more satisfactory than the use of a book for such purpose.

#### THE ENVELOPE METHOD.

The envelope may be large or small, to meet individual preference, or as may be deemed as best adapted to the size of the respective clippings or articles that are to be filed. Ordinary commercial sizes are always to be had at no more cost than cards if bought in thousand lots, and need not be gummed. In either case envelopes will be best used in much the same way as described for cards; indicating words or terms to be written in the upper left-hand corner of the envelopes, and the latter placed on edge in boxes or drawers. If the clippings are few or small they can be placed within the envelopes. If numerous, it will be found full easier to file and find them behind the envelopes, which then serve as guide cards; and thus the envelopes can be reserved for holding, separate from the clippings, any references to books, or memoranda of kindred material elsewhere, of which it may be thought desirable to make and keep a note.

As regards special clippings of extra size, or illustrations not desirable to fold, etc., all

such had better be placed in suitable large portfolio envelopes, or else flatwise in drawers; and a memorandum of each showing where placed, filed along with the ordinary clippings, or reference slips, behind the guide cards or envelopes of corresponding topic.

In using envelopes as suggested, some have undertaken to write thereon the title of each clipping filed in or behind it. That practice is not to be commended, as a rule, for it requires additional labor, and labor-saving is one of the objects always to be sought in handling clippings. One should be particular, however, to minute on each clipping the date and name of the publication from which it is taken. Such data may serve to identify or mark the value of authenticity of the clipping afterwards, and yet will take but a moment to jot down when first in hand.

Over-abundance of clippings may prove more of a drawback, at times, than a dearth in the supply. Therefore do not aim to save everything that is valuable, but rather that which probably will be of future use or interest. Clip freely, but do not file the clippings at once. Let them accumulate a bit and "season," as it were; and, at a convenient time afterwards, sort them over and discard with discretion. Later consideration of an article may enable one to derive a more judicious opinion of its value than that formed in the glow of its first hasty reading.

#### A MODIFICATION OF THE BROWNE CHARGING SYSTEM.

IN THE LIBRARY JOURNAL for May, 1899, there appeared an article by L. P. Lane entitled "The Browne charging system; possible improvements suggested," which proposed, as the essential feature, "the substitution of a reader's card for the reader's library pocket of the Browne system, and of a book-charge envelope or card case, instead of the book card of the Browne system"; in other words, the Browne system reversed. Having tested this system by eight months' use, a sketch of its practical workings may be of interest.

The borrower's card, which is held by the library when in use, and by the borrower when not in use, is 7 x 11.8 cm. in size, and bears the number, name, and address of borrower, with date of expiration of his privileges on one side and a few important rules on the other. The book envelope is a common coin envelope (with the flaps turned in) 7.5 x 12 cm. in size, made of the stoutest stock which could be secured. On the envelopes are written the call numbers, etc., as on the book cards of the Browne and Newark systems. Formerly using the latter system, all circulating books were supplied with pockets and dating slips.

In charging a book, the assistant at the issue desk stamps date on dating slip, takes the book-envelope and borrower's card, issues the

book and slips card in the envelope. Before closing at night the envelopes are counted and arranged, and placed in the charging tray, with a tin date guide in front of them. No date is stamped on the book-envelope, unless the book becomes overdue, when the date of issue is written on, or if renewed, it is stamped renewed with date. In discharging, the book-envelope is found by the date on the dating slip, the card is taken from the envelope, returned to borrower, and the envelope placed in book, which is ready for circulation. The card is always returned to the borrower and never held when not in use (except in case of fines, or if left for the reservation of a book). The possession of it by the borrower proves that there are no charges whatever against him.

The advantages of this system are of course true of the Browne system, if the borrower carries the pocket when not in use; but the substitution of the small card, which can be easily carried in a purse or card case, is a great convenience to borrowers. Like the Browne, this system is speedy, and is so simple that the chances of error are very slight; there is a great saving of time in having the borrower's cards at hand for the notification of overdues, and for the changing of addresses; and also a great saving of stationery and of time formerly used in renewing this stationery. Of course some dating slips will have to be renewed; and it cannot be said that some of the envelopes will not wear out, but from the present outlook it seems that these will last the lifetime of the ordinary book.

One must be careful in taking a book-envelope from the charging tray for any reason, as they are not dated, and could be easily misplaced. This could be called a disadvantage, but constant practice will make one cautious. Another feature of the system which might be considered a disadvantage is, that although the number of issues of a book may be found by the dating slip, there is no record of the borrowers to whom it has been issued; but, as suggested by Mr. Lane, this could be had by adding the borrower's number on the dating slip. However, it is believed that this record is not worth the additional labor, especially in an open shelf library, where, in case a book is found mutilated or injured in any way after it had been discharged, it would be a difficult matter to place the damage where it belonged. Of course, a rule holding the last borrower responsible unless reported would to a certain extent overcome this, but as yet such a rule has not been necessary.

As it may seem strange that a library such as this (*i.e.*, with small income, long hours, small force, etc.) should change from one of the best-known charging systems, to a new system which required an envelope for every circulating book, and new cards for all borrowers, it may be well to add the reasons for changing.

At the time the changes were made the library numbered nearly 20,000 v. The work in all departments was increasing, and there was much to be done in the way of extending the library's usefulness. The cataloging was incomplete; a re-registration of borrowers and an inventory of the library were needed. Naturally, essentials had to be studied, and efforts made to eliminate all work not absolutely necessary.

In using the former charging system, it seemed that the time spent in the writing of numbers could be used to much better advantage, as the record they gave us was of but little service. With that system our work was increased by holding borrower's cards when they were in use; but this was worth while in order to correct irregularities in the borrower's register. I mention this, for it demonstrated the many advantages of having these cards at hand, and led us to favor a system incorporating that feature. Naturally, when the plans for the re-registration and the inventory showed how easily a change from the old system could be made, the opportunity was immediately embraced.

The re-registration of borrowers had been put off at different times, but could not be delayed longer. It had been the custom of the library to issue cards with no time limit, and as might be expected the register was filled with what might be called "dead cards," though in reality they were not. Many errors had crept in, and in addition there were many protests from guarantors who were called on to reimburse the library for the failure of some one for whom they had endorsed years before.

The inventory was much needed, as it had been some time since one had been made. Our shelves were open to all, and probably with less safeguards than in most libraries. We wanted to know if additional safeguards were necessary. To make this inventory the accession catalog would have to be used, as the shelf list was not yet complete. It seemed that the speediest way of doing the work would be to number (with the aid of an automatic numbering machine) a slip for every book accessioned, and after comparing these with the books on the shelves, charged out, condemned, etc., the remaining slips would show the missing books.

Now, as a slip for every book was necessary, we simply substituted envelopes in their place; and as new cards would have to be written for the majority of borrowers, the size of the cards was changed, and new cards written for all. In considerable less time than was expected the inventory and re-registration were completed, and with but little additional labor a simple, accurate, speedy charging system put in operation. We are pleased with its workings in every way, and consider it a decided improvement over the one formerly used.

CHARLES D. JOHNSTON,

*Cossit Library, Memphis, Tenn.*

## AN EXTENSION OF THE PICTURE BULLETIN.

"You are invited to view a collection of North American Indian curios and pictures in the reference room of this library. This collection has been loaned by several friends, and is designed to give the boys and girls of the public schools a clearer conception of the Indians and their manner of living than is usually obtained from books." In red ink on the card of invitation appeared the words teepee, loom, costumes, blankets, weapons, games, pictures, books, baskets, pottery and canoe model.

At this season of the year a great many children are obliged to study the early history of our country, and incidentally about Indians. To interest children, and to give reality and life to the historical work, it was decided to have in the Webster Free Library of New York City a little collection of things Indian. The work of gathering and preparing the exhibit was given to the junior member of the staff, Miss Eva L. Boggan, to whom all credit is due. Miss Boggan immediately put herself in touch with persons interested in Indians and Indian affairs—authors, artists, anthropologists, ethnologists, librarians, Indians, merchants and publishers. All were very kind and helpful. Private collections of considerable value were gladly loaned, and in some cases personal assistance was given in arranging the exhibit.

On entering the main room the casual visitor is startled by seeing a regular buffalo hide teepee. This teepee was used by the Sioux Indians about the time of the Wounded Knee fight, and in it is the war sheet of Rain-in-the-Face, and also several blankets. On the outside is a buffalo calf skin with curious pictorial decorations. Various storage baskets, moccasins, etc., are included in the little enclosure made by a horse hair lariat supported by snow shoes and lacrosse sticks. On the woodwork of the corner is arranged a collection of casts of American prehistoric implements, donated by the Smithsonian Institution. The stairway is draped with blankets of brilliant hues. The mass and warmth of color is, perhaps, the first thing to strike a visitor on entering the reference room. From the picture moulding to the floor the walls are completely hidden by Indian blankets of many kinds and colors. Above the blankets is a frieze formed of baskets, cooking baskets, mealing baskets, carrying baskets of various kinds and a papoose basket. On the blanket background are arranged in various interesting positions portions of many buckskin costumes, a bow and a quiver full of stone and steel tipped arrows, flint-lock muskets, and many water colors, originals of the Deming illustrations. A nearly finished blanket is still in the loom, which is set up in a corner ready for use, just as it once was in New Mexico, with wools and implements awaiting

the Navajo weaver. The head dress of eagle feathers has been placed well out of reach, for its preservation's sake. On six book-cases sheets of glass have been temporarily screwed, and behind the glass are the many small and unusual objects—the silver tribal brooches, doll papooses, bead work, ornamented war clubs, games, toys and relics. In the center of the room one show case contains an exhibit designed to show method and material necessary to produce fine Indian pottery. Other cases contain books and manuscripts in the language of the Micmac, Seneca, Mohawk, Sioux and Cree tribes.

Some weeks before the opening of the exhibit all books in the library which related to Indians were set aside, and a good many more were purchased for the occasion. These books, for circulation, are placed on a table in the middle of the room under a sign in large type, suitably displayed, which reads: "Books about Indians. Stories, very entertaining; charming biography; really interesting histories." The sign is under a large canoe model, and is supported by flint-head hunting arrows. It is hardly needful to say that the table is nearly empty.

In accordance with the views of the New York Library Association on the subject of publicity, invitations were sent to the city papers, teachers, librarians, library school students and the trustees of the library.

Perhaps a word as to the results of this exhibit may not be out of place. At this writing it is impossible to give all results, as the collection has been on view only three weeks, and it will continue three weeks longer. However, in the three weeks about 2200 children have been required to write compositions on the subject of this collection, and about 500 must make drawings of Indian things for illustrations to use in their "Hiawatha" lessons. Six thousand persons have visited the library, and on two occasions it was necessary on account of the crowds to refuse admittance to many children. The local press has treated the effort kindly; teachers, trustees and librarians have come in numbers to help and to hinder, to praise and to criticise. The circulation of books is very largely increased, and the reference work was never so great.

This library is situated on the great East Side. It is an East Side crowd which has been and is coming here. The objects are partly under glass, but mostly open for inspection. Many of the things are costly and some very fragile. Nothing has been lost, stolen or broken. Voices are instinctively lowered, and, considering the crowds, the atmosphere is one of quiet and order. The ready response to confidence placed in the public during the past few weeks cannot but cause one to marvel that the feasibility of the open-shelf system should in some minds be still a matter of doubt.

EDWIN WHITE GAILLARD,  
Librarian Webster Free Library.

## LIBRARY APPROPRIATIONS IN NEW YORK CITY.

THE municipal appropriations made for 1902 for library purposes in New York City are \$65,180.50 in excess of the amount granted for the year 1901. A table showing the appropriations in comparison is as follows:

	1902.	1901.
New York Public Library, Astor, Lenox and Tilden Foundations.....	\$85,650.00	\$81,850.00*
Aguilar Free Library Society.....	38,000.00	32,350.00
Webster Free Library.....	6,800.00	5,300.00
Cathedral Free Circulating Library.....	17,275.00	13,150.00
Free Library of the University Settlement Society...	4,500.00	5,750.00
Washington Heights Free Library.....	5,500.00	4,500.00
Maimonides Free Library of District No. 1 of the Independent Order of Benai Berith.....	10,000.00	9,500.00
Young Women's Christian Association Library.....	5,900.00	5,500.00
Harlem Library.....	8,300.00	7,750.00
General Society of Mechanics and Tradesmen of the City of New York.....	6,150.00	7,000.00
Tenement-house Chapter Library.....	950.00	1,020.00
Public Library, Brooklyn...	150,000.00	100,000.00
Queens Borough Library.....	\$17,500.00	15,000.00
For maintenance of established free circulating libraries when acquired as branches.....	2,500.00	
	20,000.00	
New York Free Circulating Library for the Blind.....	677.70	455.80
Young Men's Benevolent Association Library.....	4,025.00	2,060.00
Tottenville (S. I.) Library.....	1,116.10	727.00
	364,843.80	

The total amount granted for 1901 was \$214,779.30, including appropriation for the St. Agnes Library, later merged with the New York Public Library.

## THE LIBRARY OF CONGRESS PRINTED CATALOG CARDS.

THE Librarian of Congress has issued a second circular regarding the issue of printed catalog cards to libraries. Information regarding the ordering of cards, price, etc., is again fully given, and further details of the proposed method are touched upon. It is stated that "the classification scheme of the Library of Congress, in so far as it is finished, viz., for Bibliography (including Library science) and American history, will be printed by the end of 1901 and a copy furnished to all subscribers for cards who desire it. An advance edition of the A. L. A. cataloging rules, as far as revised by the advisory committee of the Association and approved by the Publishing Board, will be printed by

\* Granted to the New York Free Circulating Library, not then merged in Public Library.

the Library of Congress for distribution to subscribers to catalog cards. The cataloging rules of the Library of Congress agree with these in all essential points. Variations will be pointed out. These rules will be ready for distribution, it is expected, in the early part of 1902."

The clipping of cards from the 33 or "standard," to the 32 or "index" size must be done by the subscribing library and will not — at least for the present — be attempted at the Library of Congress. "It is believed that a satisfactory cutting and punching outfit for doing the work by hand will be found comparatively inexpensive and a desirable acquisition for any library."

"The demands for the proof sheets of catalog cards in the course of printing at the Library of Congress have been so numerous and urgent that it is very probable that, in addition to the copies distributed to libraries subscribing largely to the cards, other copies will be issued at a subscription price. Possibly the whole distribution, except by way of exchange, may have to be placed on a priced basis. The arrangement for subscriptions cannot be effected at once, but will probably be by the first of January next."

Orders for the cards have already been invited, but it is pointed out that there is likely to be delay in filling early orders, "which must not be regarded as necessarily incident to the system of distribution." Full directions and sample forms for ordering are given and in the case of titles not yet printed orders will be held if desired and filled when cards are issued. A tabulated statement is given of the series of catalog cards now in print at the Library of Congress.

#### LIBRARY EXHIBIT AT LOUISIANA PURCHASE EXPOSITION.

THE plan to establish a "model library" exhibit at the Louisiana Purchase Exposition of 1903 is taking definite form, in accord with the resolution passed at the recent meeting of the Missouri Library Association, and committees are being formed with the purpose of interesting prominent men in the states included in the Louisiana purchase. It is expected soon to secure the indorsement of the St. Louis Commercial Club, and similar steps will be taken in all the large cities. The resolutions signed by the committee, together with all the other signatures, will then be sent to the executive committee of the exposition at St. Louis. General Milton Moore, of St. Louis, is chairman of the first committee, the other members of which are Reuben Gold Thwaites, secretary and superintendent of the State Historical Society of Wisconsin, Madison, Wis.; Edward Wilder, trustee of the Topeka, Kan., Public Library; Purd B. Wright, librarian of the St. Joseph

Public Library, and James I. Wyer, librarian of the Nebraska State University.

The stipulations are that the building shall not cost less than \$50,000, and shall afterward be used as a branch library. It is to contain not less than 5000 volumes and there shall be a competent librarian in charge of it. The equipment and books are to be given to the library at the close of the exposition. It is hoped that the Library of Congress will make an interesting loan exhibit of maps, charts, and documents relating to the Louisiana purchase and the history of the region.

---

#### American Library Association.

---

*President:* Dr. J. S. Billings, New York Public Library.

*Secretary:* F. W. Faxon, 108 Glenway St., Dorchester, Mass.

*Treasurer:* G. M. Jones, Public Library, Salem, Mass.

#### COMMITTEE APPOINTMENTS, ETC.

*Committee on Library Training:* A. E. Böstwick has accepted the chairmanship of the committee on library training, *vice* Mrs. Elmendorf, resigned.

*Committee on Relations with the Book Trade:* H. L. Elmendorf has accepted membership upon the committee on relations with the book trade, *vice* R. R. Bowker, resigned.

*Registrar:* Miss N. E. Browne is reappointed registrar.

---

#### State Library Commissions.

---

NEW JERSEY P. L. COMMISSION: H. B. Buchanan, secretary, State Library, Trenton.

The commission has issued an excellent "Handbook" for the current year, devoted to "Libraries and library laws of the state," and similar in form and arrangement to the "red book" which preceded it. It contains an account of the duties and objects of the commission, simple directions for establishing public libraries, the library laws in full, tabulated library statutes for the state, and descriptions of New Jersey libraries, accompanied by illustrations. There are 102 libraries in the state, of which 51 are entirely free; 38 are subscription libraries; five are school libraries, three are college libraries and one is a seminary library; three are society libraries, while one is both free and subscription; 37 own their own buildings; 59 use a card catalog, though not all are complete and modern; of the 95 which report on the subject, 77 permit public access to their shelves in whole or in part.

The next publication of the commission will probably be a list of books recommended for purchase by small libraries.

## State Library Associations.

### DISTRICT OF COLUMBIA LIBRARY ASSOCIATION.

*President:* F. A. Crandall, Office of Documents.

*Secretary:* Hugh Williams, Library of Congress.

*Treasurer:* F. E. Woodward, 11th and F sts., N. W.

The 58th regular meeting of the association was held at the Columbian University, Wednesday evening, Nov. 13, at eight o'clock. Thirteen persons were elected to membership.

The program of the evening consisted of a paper by Dr. Roland P. Falkner, chief of the Documents Division of the Library of Congress, on the "Document collections of the Library of Congress (*see* p. 870), and a discussion on "Subject catalogs versus bibliographies," opened by Mr. W. S. Burns, of the Public Documents Library.

The discussion on "Subject catalogs versus bibliographies" had been postponed from the March meeting. Mr. Burns, in reopening this discussion, presented the same arguments as at that meeting. The discussion was entered into by J. C. M. Hanson, W. D. Johnston, David Hutcheson, Miss Alice Fichtenkam, Thomas H. Clark, Bernard Green and B. P. Mann.

The meeting adjourned at 9.30. There were 85 present. HUGH WILLIAMS, *Secretary*.

### KEYSTONE STATE LIBRARY ASSOCIATION.

*President:* E. H. Anderson, Carnegie Library, Pittsburgh.

*Secretary-treasurer:* Miss H. P. James, Osterhout Free Library, Wilkes-Barre.

The first annual meeting of the state library association of Pennsylvania, organized at Atlantic City in March last, under the name of the Keystone State Library Association, was held at Harrisburg, Nov. 13 and 14. It brought together an attendance of about 75 and proved in every way enjoyable and satisfactory. Sessions were held in the state library, the state librarian, Dr. G. E. Reed, the first president of the association, presiding.

The meeting opened with a reception at the state library on the evening of Wednesday, Nov. 13, tendered by the Pennsylvania Free Library Commission. The guests were received by Dr. and Mrs. Reed, and Mr. John Thomson, and there was delightful music, after which the party adjourned to the newspaper room, where supper was served and speechmaking was indulged in.

The business session of Thursday morning was opened with an address by Mr. Thomson, setting forth the reasons for the formation of the Keystone State Library Association, showing how necessary it is for libraries to come in touch with each other, and that the design of the association is to bring, if

possible, all the libraries of the state into sympathy and co-operation. The meetings of the society are limited to one a year, to be held at such time and place as the executive committee shall appoint. By this arrangement it is hoped that all the libraries will be represented and those in charge of the 150 or 200 libraries of the state be enabled to gather together annually and discuss some of the important problems that are continually arising in the conduct of libraries.

Herbert Putnam, Librarian of Congress, followed with an address on the proposed distribution to libraries of printed catalog cards from the Library of Congress. A committee on nominations was appointed, and then arose an interesting discussion on the quality of the fiction which it is the duty of libraries to furnish, or to refrain from furnishing. Some were in favor of Howells' recent dictum that all works of fiction should wait a year before being placed upon the library shelves, thus eliminating the great amount of sensational trash which is heralded one year as phenomenally good, and the next sinks down to its own level. All were in favor of a careful examination of works of fiction before admitting them to the library.

At the afternoon session officers were elected as follows: President, Edwin H. Anderson, librarian of the Carnegie Library, Pittsburgh; vice-president, Miss Isabel Ely Lord, librarian at Bryn Mawr College; secretary-treasurer, Miss Hannah P. James, Osterhout Free Library, Wilkes-Barre. Executive committee, H. R. Hartwick, assistant librarian, State Library, Harrisburg; Miss Wolle, trustee of Public Library, Bethlehem.

A paper on "The differentiation of fiction" was read by John Thomson. He said that at present libraries note in their tables of circulation the broad classes of religion, sociology, fine arts, biography, travels and so on, all the rest being put in one lump figure as fiction. This gives no idea of the real character of the reading pursued by patrons of free libraries. Mr. Thomson stated that he had notes prepared on nearly 2000 volumes of fiction, indicating their value as preliminary reading on historical matters. Of these he had caused 650 to be more closely analyzed and arranged in 23 classes. In these were found admirable accounts of revolutions, sieges, battles, discoveries and expeditions, colonial life, customs, biography, reformations, inquisitions. Before dealing with these finally the accepted authorities in English, French and German were consulted to verify the principal points brought out by the writers. He therefore suggested that statistics of the different kinds of fiction circulated be kept, as for example, standard, historical, descriptive, sociological, etc., in order that the large per cent. given in the yearly reports may not be classed as trash by the public, and especially by the city fathers. An interesting discussion ensued, and the subject was referred

to a committee of three to be appointed by the president, who were requested to report on the whole matter of fiction in public libraries at the next meeting.

The question of the place for the next meeting was informally discussed, the general sentiment being in favor of some summer resort as near as possible to some of the smaller libraries, rather than in a large town. A paper by J. G. Rosengarten describing a visit to some of the great European libraries, which in Mr. Rosengarten's absence was read by Mr. Thomson, closed the session, and the members adjourned, feeling that the meeting had presaged well for the library interests of the state.

#### MICHIGAN LIBRARY ASSOCIATION.

*President:* H. M. Utley, Public Library, Detroit.

*Secretary:* Miss Margaret C. Upleger, Mt. Clemens.

*Treasurer:* Mrs. Margaret F. Jewell, Public Library, Adrian.

The 11th annual meeting of the Michigan Library Association was held at Adrian, on Friday and Saturday, Nov. 8 and 9. The Adrian Public Library, Mrs. Margaret F. Jewell, librarian, occupies the entire first floor of the city hall, and the meetings of the association were all held in the council chamber in the second floor of the same building.

The first session, on Friday afternoon, was called promptly to order, and Mr. G. Milo Dole, a member of the Adrian library committee, in a most graceful address, cordially welcomed the association to the city and to the library. He urged most earnestly three points: 1. All librarians should feel and maintain their dignity; 2. Avoid ruts; 3. Guard the position of librarian in its responsible office as a moulder of public opinion.

Mr. Henry M. Utley, president of the association, responded. Thanking Mr. Dole for his very kind and pleasant greetings, Mr. Utley stated the object of the meetings to be always in line with the remarks of welcome, to discuss the problems which daily confront us in our profession, which we believe to be a noble and holy mission.

Ex-Governor Luce, president of the state library commission, was called upon for a speech, and urged with his wonted zeal the work of the commission, which in such large measure owed its organization to the efforts of the state association.

The regular program followed. Miss Rosenberg, of the Grand Rapids Public Library, presented the "Problems of a reference librarian"—the selection of books, their arrangement, and the constant vigilance and endless patient research which alone can make their contents available through the librarian to the public. The necessity for a bibliographical sense, and the qualities and characteristics necessary to right and successful work, among which must rank endless pa-

tiency, sound learning and high ideals, were, in brief, the points touched upon. Mr. F. L. D. Goodrich, of the State Normal College Library, Ypsilanti, gave a five-minute talk on "Public documents in small libraries," emphasizing the necessity of discrimination in their selection and their inestimable value, suggesting their being cataloged and classified like other books, and placed on the shelves beside others of their kind, and not relegated to a limbo unknown and unknowable to the patron of the library; and specifying some of those indispensable to the smaller library. Miss Swartwout, of the Three Rivers Public Library, followed with another five-minute talk on "Winning the public to the library." Among other very practical methods was that of personally enlisting the interest of the mercantile, manufacturing and professional men of the community (speaking particularly of small towns), and emphasizing what physicians and clergymen could do to suggest reading to many whom they minister to.

Mrs. Priddy, of the Adrian Woman's Club, gave the last talk of the session—on "Woman's clubs and the library," and between her sound sense and keen satire little was left behind. Much discussion followed each paper, "short papers and much discussion" being the rule of the meeting.

The Friday evening session, following precedent, was social rather than professional. The Rev. H. P. Collin, of Coldwater, read a layman's paper on "The library and the librarian as an organ in the social organism," and then followed in the library and reading room a delightful reception, with music and refreshments.

Saturday morning Miss Mildred Smith, of the Ypsilanti High School Library, gave an admirable address on "High school library work," speaking of small libraries, her own numbering about 5000 vol., well classified and cataloged. The catholicity of library work was constantly manifest in that the methods of most diverse libraries seemed adaptable to one another.

The final paper, "Fads, fallacies and faults in library work," was by Miss Corwin, of the State Library, Lansing. With delicate humor and sound judgment Miss Corwin scored those librarians who lose sight of their work in the multiplicity of methodic detail; whose tools are perfection, but are of little absolute service; who, in seeking after signs and symbols, forget the broad outlook and the strong mental grasp necessary to the larger meaning of our high calling.

The question box was of unusual practical interest.

The final session at two o'clock was given over exclusively to business. Reports were read. Officers were elected as follows: President, Henry M. Utley, Detroit; vice-presidents: H. O. Severance, University Library, Ann Arbor; Miss Phoebe Parker, West Bay City; secretary, Miss Margaret C. Upleger,

Mt. Clemens; treasurer, Mrs. Margaret F. Jewell, Adrian.

The next meeting is to be held in Detroit, in October, 1902.

In addition to a vote of thanks for the cordial local hospitality received, the association passed the following resolutions:

"Resolved, That the Michigan Library Association, on the suggestion of ex-Governor Luce, president of the library commission, recommend to the commission that they make as easy terms as possible to district schools by which they may receive books from the state library, and that they send printed circulars of information, stating the conditions under which books may be received, to all the county school commissioners to be distributed by them to the district school teachers in their respective counties.

"Resolved, That the Michigan Library Association ask for a library section in the State Teachers' Association.

"Resolved, That the Michigan Library Association recommend to the State Board of Library Commissioners that they prepare and publish a paper, or booklet, on the condition and progress of the libraries of the state to 1902.

"Resolved, That we favor the enactment by Congress of legislation authorizing books belonging to and circulated by public libraries to be entered as second-class mail matter when addressed from or to a public library. That would give us a rate of a cent a pound. And that a marked copy of this resolution when printed be sent to each of our Representatives and Senators in Congress."

MARGARET C. UPLEGER, *Secretary*.

#### OHIO LIBRARY ASSOCIATION.

*President*: S. L. Wicoff, Sidney.

*Secretary*: E. C. Williams, Cleveland.

*Treasurer*: Miss Grace Prince, Springfield.

The vice-presidents elected at the annual meeting at Sandusky in October were as follows: 1st vice-president, Martin Hensel, Columbus; 2d vice-president, N. D. C. Hodges, Cincinnati; 3d vice-president, Mrs. I. F. Mack, Sandusky.

### Library Clubs.

#### LIBRARY CLUB OF BUFFALO.

*President*: H. L. Elmendorf, Public Library.

*Secretary-treasurer*: R. F. Morgan, Grosvenor Public Library.

A meeting of the Library Club of Buffalo was held in the rooms of the Buffalo Historical Society, Nov. 20, 1901. Miss Mary Campbell resigned her position as chairman of the home library committee because of failing health. Mr. Walter Brown was chosen to succeed her. The committee on library institutes made a gratifying report. After the reading of the reports the club was entertained by a literary and social program.

RICHARD F. MORGAN, *Secretary*.

#### CHICAGO LIBRARY CLUB.

*President*: A. G. S. Josephson, John Crerar Library.

*Secretary*: C. R. Perry, Public Library.

*Treasurer*: C. A. Torrey, University of Chicago.

The meeting of the Chicago Library Club,

held Nov. 15, was wholly a business meeting. Mrs. John M. Grant, Miss Evelyn H. Walker, Miss Metta Loomis and Miss D. B. Crandall were elected to membership. Mr. Andrews presented a report of progress from the committee on the distribution of the union list of periodicals. The total cost of publication was \$588, divided as follows: John Crerar Library, \$238; Chicago Public Library, \$150; University of Chicago Library, \$75; Newberry Library, \$75; Chicago Library Club, \$50. (The John Crerar Library also had guaranteed anything beyond the above total.) The distribution gave to the Newberry Library 100 copies, to the University of Chicago Library 100 copies, to the Chicago Public Library 200 copies, to the John Crerar Library 350 copies, to the Chicago Library Club 100 copies, and 150 copies were set aside for complimentary distribution to the press, committees, collaborators, etc. The revised constitution was a special order, and after much debate and several amendments was adopted. A letter from Mr. E. W. Blatchford (now in England), a member of the club and a trustee of the Newberry and John Crerar libraries, was read by the secretary.

The following resolutions were introduced by Miss M. E. Ahern, seconded by Miss M. E. Hawley, and unanimously adopted by a rising vote of the club:

*Whereas*, Mrs. T. B. Blackstone has founded the T. B. Blackstone Memorial Branch Library, a gift to the Chicago Public Library, and

*Whereas*, This is the first gift of the kind received by the Public Library of this city, therefore be it

*Resolved*, That this club make known to Mrs. Blackstone its high appreciation of her action, and be it further

*Resolved*, That the club extend to the board of directors, and to the librarian of the Chicago Public Library, its congratulations and its hope that the example thus set may be followed by other citizens of Chicago.

CHESLEY R. PERRY, *Secretary*.

#### LIBRARY CLUB OF EASTERN MAINE.

*President*: Ralph K. Jones, University of Maine, Orono.

*Secretary-treasurer*: J. H. Winchester, Stewart Memorial Library, Corinna.

The fourth quarterly meeting of the Eastern Maine Library Club was held at the Stewart Memorial Library, Corinna, Oct. 26. Nine libraries were represented in the attendance, and the program proved most interesting. The meeting was called to order at 10 a.m. by the president, Ralph K. Jones. After reading of the minutes prayer was offered by Rev. D. A. Boatwright, after which an address of welcome was spoken by C. L. Jones, one of the trustees of the Stewart Library, to which George T. Little, of Bowdoin College, responded in behalf of the club and the visitors.

A paper on "Some advantages of library training," by Miss C. S. Green, librarian of Bangor Theological Seminary, was followed by general discussion on the following topics:

Should small libraries try to collect local history; should librarians endeavor to answer all inquiries; branch libraries or delivery stations for towns containing several villages, and how to make the library accessible to people in remote sections of the town; should the transfer of books to members of the same family be allowed; should new books be renewed to the same person. The closing paper on the morning's program was by Rev. J. G. Fisher, of Dexter, on "The library as an aid to the pulpit."

A delightful luncheon was served at noon by Corinna hostesses, in the basement of the library building, and an inspection of the beautiful building followed. At the afternoon session papers were read as follows: "The librarian and his duties," by G. T. Little, librarian of Bowdoin College; "Types of libraries and their relations," by Miss Josephine Beard, of Fairfield; "The reference and question department of a free library," by Hon. L. D. Carver, state librarian, read, in Mr. Carver's absence, by the secretary. There was informal and general discussion of the work to be done by libraries with schools, the children's department, the preparation of a subject list for the use of the schools of the town, methods of creating an interest in the public library, and town appropriations for the maintenance of the library.

The passage of the usual resolutions of thanks, and adjournment, followed.

#### LONG ISLAND LIBRARY CLUB.

*President:* Miss M. W. Plummer, Pratt Institute Free Library.

*Secretary:* Miss M. S. Draper, Children's Museum Library.

*Treasurer:* Miss Mabel Farr, Adelphi College Library.

The December meeting of the Long Island Library Club was held at Packer Collegiate Institute, Brooklyn, on Thursday, Dec. 5, at 3.30 p.m. There was a full attendance of members, about 85 persons being present. The program of the afternoon was so full, and proved to be so interesting, that a portion was necessarily deferred until the next meeting.

The committee on co-operation between libraries and schools reported that seven letters had been received from school principals since the presentation of their report in October, but no new information concerning the library facilities of the public schools was furnished. The committee asked to be released from further service, and suggested that a copy of the tabulation furnished by the committee, together with the papers from which the report was made, should be turned over to the Brooklyn Public Library.

It was voted that the committee be released, with thanks for its efficient service.

The committee on co-operation between Brooklyn libraries reported that the Brooklyn

Public Library board is willing to consider the application of any other Brooklyn library for space in its *Bulletin* for a monthly list of accessions, and that the Pratt Institute Free Library has made arrangements to print its accessions in this way, until further notice.

The subject announced for discussion was "Library regulations," and was opened by Miss Helen E. Haines, managing editor of the LIBRARY JOURNAL. The speaker stated that the information received from about 10 public libraries in answer to certain questions addressed to them had furnished the basis of her notes. The questions covered the ground of how libraries decide upon their regulations, the matters of difference and common agreement, the general practice as to revision, enforcement of regulations, etc. The regulations which affect the public may be divided into three classes: those relating to membership, to the circulation of books, and the reference use of books. In each case the object should be to obtain as full a degree of security of books and ease of administration as is consistent with the convenience of the public. Until recently nearly all public libraries have required each borrower to furnish a guarantor as security for books withdrawn, but this provision is gradually being abolished. Some libraries require the name of a responsible person as reference, while at least one simply requires the filling out of an application by the borrower.

The question of "lost cards" is a perennial source of vexation to borrowers and to librarians. There is always a penalty attached to the loss of cards, but it varies in different libraries. Most libraries will not permit a borrower to make an exchange of books on the day of taking; as mistakes are frequently made when the selection is made from a card catalog, this regulation seems to demand frequent exceptions.

The form in which library regulations are presented to the public varies from little book-marks, containing a few simple statements of notes and suggestions, to little leaflets of information; while other libraries issue a sizable pamphlet of "Rules and regulations." A more responsive attitude on the part of librarians towards those who object to library rules would make the atmosphere of a public library more sympathetic and agreeable.

The discussion of the paper brought out many interesting points. One speaker suggested the advantage of a library starting with a few simple rules, which could be modified and added to as occasion demanded. Another speaker replied that this course had been pursued in one city, and that the frequent loss of books necessitated a more strict code of rules. Another suggested the use in reference rooms of printed guide cards which would enable readers to quickly ascertain in what part of the room the books on different subjects were shelved. One point on which all the speak-

ers agreed was that the rules adopted by public libraries should be made as simple as possible. The persons taking part in the discussion were as follows: Miss Hawley, Brooklyn Public Library; Miss Rathbone, Pratt Institute Free Library; Miss Burt, Des Moines (Ia.) Library; Mrs. Hartich, Bushwick Branch Brooklyn Public Library; Miss McMillan, South Branch Brooklyn Public Library; and Miss Pospishil, Cedar Rapids (Ia.) Public Library. Miss Weeks, of Pratt Institute, Mrs. Wm. M. Thornton, and Mr. Hermann Meyer made suggestions from the standpoint of the public.

A letter was then read by the secretary from Mrs. Elmendorf, secretary of the New York Library Association, on the subject of districting the state in the interest of libraries. Dr. James H. Canfield, librarian of Columbia University, and chairman of the committee, was called upon to present the subject more fully to the club. Owing to the lateness of the hour and another engagement, he asked to have his remarks postponed until another meeting, which was granted.

It was voted, that a committee be appointed to consider the districting of Long Island in accordance with the general plan suggested, this committee to consist of the executive committee of the club, with power to add two or three to the number. The meeting then adjourned.

MIRIAM S. DRAPER, *Secretary.*

#### NEW YORK LIBRARY CLUB.

*President:* Dr. H. M. Leipziger, Aguilar Library.

*Secretary:* Miss E. L. Foote, New York Public Library.

*Treasurer:* Miss Theresa Hitchler, Brooklyn Public Library.

A meeting of the New York Library Club was held in the Y. M. C. A. building, 4th avenue and 23d street, Nov. 14, 1901, about 200 being present.

The meeting was called to order at 3:10 by the president. Minutes and reports of the executive committee were read and approved. The committee also announced that cards of invitation to the regular meetings of the club would be sent to all librarians in the vicinity whose names can be secured by the secretary.

The treasurer's report was read and approved, showing a balance of \$346.71.

The following letter from Mrs. Elmendorf, secretary of the New York Library Association, was read and a motion to refer it to the institute committee carried:

"For a long time the New York Library Association has realized that it gathers into its membership too few of those who are interested in public libraries throughout the state. It is only through the cordial interest and intelligent co-operation of all library workers in the state that the association can help to bring to every citizen of our great common-

wealth that happiness and intelligence of which well administered public libraries are reservoirs.

"The association also realizes that it is very difficult for many library workers to come to its annual meetings, and that many of those who find it almost impossible to come most need the encouragement and stimulus which we all gain from a sense of companionship in the ideals and difficulties of our work.

"The work of the association is inadequate and incomplete so long as it unites only the great libraries of the state. For its own sake, the association needs to be in touch with every library. After a most interesting discussion, following the report on library institutes made by the executive board, the association voted, at its recent meeting at Lake Placid, to begin a definite co-operative movement for the assistance and advancement of public libraries in all parts of the state. For the current library year, the matter was placed in the hands of the following committee: James H. Canfield, librarian of Columbia University, New York City, chairman; W. R. Eastman, state library inspector, Albany; A. L. Peck, librarian of the Free Public Library, Gloversville; and, *ex-officio*, the secretary of the New York Library Association, Mrs. H. L. Elmendorf, 319 Norwood avenue, Buffalo.

"The general report on the subject, under which this committee is working, contemplates a division of the state into not less than six, nor more than 10, districts, exclusive of the cities of New York, Brooklyn and Buffalo, and the country naturally tributary to each. In each of these several districts it is planned to gather, once a year, all local library workers who are, or can be, interested, for a meeting which, for the present, will be called a library institute. During these institutes, which will be held under the auspices of the state association, through its committee, there will be offered to the local librarians not only conference and suggestion, but definite instruction along practical lines; and one public evening meeting, in the interests of general library intelligence and enthusiasm, will be held. The first institute will be held not earlier than April, 1902, which will allow ample time to complete all preliminary arrangements.

"In all districts save those formed about the three cities mentioned above the committee will appoint local secretaries, through whom it hopes to work, but in these cities it is the policy of the association to leave all co-operative work of this kind to the strong and efficient local library clubs.

"The district which the committee hopes that your club will cover consists of New York, Richmond and Westchester counties.

"The association's committee will gladly cooperate with your club at any time, upon request; and, in any event, hopes to have full information as to your work, by correspondence or otherwise."

The committee on institutes reported that it is inexpedient at present to hold public meetings in Greater New York. The work will be limited to instruction and aid given to such individuals as request it, and circulars are being prepared to send to librarians in Greater New York, stating the plans of the committee and inviting such requests. In Westchester county outside city limits such institutes may be held, and to that end a circular will be sent to librarians in that district.

Announcement was made that the next meeting, Jan. 9, 1902, will be held by invitation of the Grolier Club, at their rooms, 29 E. 32d street.

Mr. Eastman then gave his illustrated lecture on library buildings, to the enjoyment of all present.

Mr. Bostwick reviewed progress of plans for Carnegie libraries. No definite plans of buildings are as yet completed. Moreover, many delays occur in the technical details of securing sites. It is recognized that the most desirable plans have all the rooms on the ground floor, but the price of land in New York City necessitates the piling of rooms one above another in a narrow lot. The general plan will be reading, delivery and children's rooms on three separate floors. The drawing of plans is at present in the hands of the following architectural firms: Carrere & Hastings, McKim, Mead & White, Babb, Cook & Willard. In regard to the selection of sites, no general plan has been formulated, as such a plan would have to be revised continually. The order of acquiring sites is as follows: General regions are marked out and referred to experts, who report on lots and prices. Lots are then recommended by executive committee to the Board of Estimate and Apportionment. Sites may be acquired by condemnation process, if necessary, but this should be avoided on account of the delay. Only one site has been approved, namely, the one previously purchased by the New York Public Library at 79th street, between Second and Third avenues. Five others have been recommended to the board and six more are under consideration.

After completion of the program, a general social hour was enjoyed.

ELIZABETH L. FOOTE, *Secretary.*

WESTERN MASSACHUSETTS LIBRARY CLUB.

*President:* George Stockwell, Westfield Athenæum.

*Secretary:* Miss Ida Farrar, City Library, Springfield.

*Treasurer:* Mrs. A. J. Hawks, Meekins Memorial Library, Williamsburg.

Charlemont was the center of a library institute under the auspices of the Western Massachusetts Library Club on Nov. 9. Teachers and library trustees were present from the towns of Buckland, Colrain, East Charlemont, Conway, Heath, Rowe, Shelburne Falls and West Hawley. Members of

the club were present from Springfield, Northampton, Amherst, Westfield, Williamsburg and Sunderland. One teacher drove alone seven miles over the hills in order to be present. Dinner was served by the women's society in the town hall, and after looking over the well-selected library in the same building, the people assembled in the audience room above for the meeting, which was very informal in its nature.

The program was opened by Miss Cornelia Thompson, of Springfield, a district school teacher, who spoke of what the rural school teacher may do to arouse an interest in books in the community in which her work centers. Superintendent George H. Danforth, of Greenfield, continued the discussion along educational lines, putting special emphasis on the necessity of laying the foundation for a love of good reading when people are young.

One of the problems Charlemont faces is as to whether or not it shall have a reading room. Miss F. Mabel Winchell, of Forbes Library, at Northampton, spoke along that line, saying a reading room is useful in every town to keep boys off the street and men from loafing in corner stores. When the farmers come in from a long distance to change their books it is a boon to them to be able to stop and rest and entertain themselves. The room should be made attractive with plants and pictures, which can be obtained at a very slight expense. Special attention should be paid to the children, picture books provided if possible; if not, scrap books may be made. Simple games, such as authors and literature, games which provoke thought and research, may be placed upon the tables. Mrs. A. J. Hawks, of Williamsburg, told of her experience in establishing a reading room, how glad the boys are to use it, and urged librarians to secure the co-operation of the different organizations in town in starting any broad movement.

W. I. Fletcher, of Amherst College, followed with a talk on the public library in the hill town. This talk was followed by a warm discussion on some of the points made in the afternoon session.

The last institute of the fall was held in Chester, Nov. 22. Mr. O. H. Adams, superintendent of schools in Chester, Middlefield, Becket and Washington, had aroused interest in the town, and teachers under his jurisdiction were present, some of them coming several miles from snow-covered hills. Mr. Adams has been unusually successful in securing college bred women as teachers for ungraded schools away off from centers of population. These women are doing much to instill a love of good literature in the little communities. A member of Mr. Adams' family, Miss Sinsabaugh, has recently reclassified the little town library by a modified Dewey system; the book covers have been removed, new furniture purchased, a new libra-

rian appointed, and consequently conditions were ripe for the institute. Although members of the club were present from Holyoke, Westfield, Northampton and Springfield, and library trustees from Huntington and Otis, the program had been made a special study with reference to Chester. The following circular was distributed very freely as a preliminary announcement.

#### Books.

*"In the Library, the School and the Home.*

"People from Chester and surrounding towns are to meet in the Congregational Church, Chester, Friday, Nov. 22, to talk about the use of books.

"The sessions will be held at 3.45 and 7 p.m. Supper will be served at the church by the ladies of Chester at 15 cents a plate.

"This meeting may be called a library institute.

"Rev. W. S. Walker, of Chester; J. C. Dana, of the City Library, Springfield; Miss Cornelia Thompson, a Springfield teacher, and J. T. Bowne, librarian Y. M. C. A. Training School, will lead the discussion on such subjects as:

"What we can discover in books."

"The personality of books."

"The library as the teacher's storehouse."

"Should a town like Chester have a reading room?"

"All who are interested in the library or who love books are invited to be present and take part in the discussion. Teachers, pupils, parents, librarians and all readers will find something in it to interest them."

In the unavoidable absence of Mr. Dana, the secretary spoke on "What we can discover in books." Copies of the library catalog were distributed among the people in the audience, many of whom were children, and attention was called to the best books and why we enjoy them.

Mr. Bowne talked on the "Personality of books," dwelling on the thought that books are our friends, and we would not ill-treat our friends. He read the story told by the Cleveland book mark, slowly and impressively bringing out the different ways in which books may be injured.

Miss Thompson told what a bright, energetic teacher may do, and emphasized the need of making the children independent in their use of books.

Mr. Walker, as one of the town pastors, understood conditions, and led a warm discussion as to the needs of the country town and the possibility of opening a reading room.

Mr. Stockwell, the president of the club, presided in the afternoon, Mr. Adams in the evening, and people took part freely in the discussion during both sessions. Although it takes time to measure results, there can be no doubt but that something of an impetus was gained from the meeting.

IDA F. FARRAR, *Secretary.*

## Library Schools and Training Classes.

### NEW YORK STATE LIBRARY SCHOOL.

*Calendar for 16th school year, 1901-02.*

School opens Wednesday, a.m., Oct. 2.

Election day, holiday, Tuesday, Nov. 5.

Thanksgiving recess begins Wednesday noon, Nov. 27.

Thanksgiving recess ends Monday noon, Dec. 2.

Lectures begin Monday, p.m., Dec. 2.

Christmas recess begins Saturday, a.m., Dec. 21.

Christmas recess ends Thursday, p.m., Jan. 2, 1902.

Lectures begin Friday, a.m., Jan. 3.

Lincoln's birthday, holiday, Wednesday, Feb. 12.

Washington's birthday, holiday, Saturday, Feb. 22.

Decoration day, holiday, Friday, May 30.

Summer course begins Tuesday, a. m., June 3.

Visit to New England libraries, followed by American Library Association meeting, Thursday, June 12-Friday, June 20.

Entrance examinations, June 17-20.

School closes Friday, p.m., June 20.

Summer course closes Friday, p.m., July 11.

### 020 Club.

A very successful meeting of the club took place Saturday evening, Dec. 7, Mr. B. A. Whittemore (1902) presiding. About 55 members of the staff and school were present. Miss Florence B. Whittier (1902) read a paper on Roman libraries. Mr. W. F. Yust (1901), assistant library inspector of the University of the State of New York, spoke on library legislation in 1901. The main subject of the evening was the following debate: "Resolved, that the Booklovers' Library is antagonistic to the best interests of the public library." Miss Ella R. Seligsberg (1903) and Mr. W. F. Yust (1901) supported the affirmative; Miss Alice M. Burnham (1902) and Mr. Malcolm G. Wyer (1903) maintained the negative. The Library Glee Club delighted the audience with two musical selections.

SALOME CUTLER FAIRCHILD.

## Reviews.

KOCH, Theodore Wesley, *comp.* A list of Danteiana in American libraries, supplementing the catalog of the Cornell collection. Boston, Ginn & Co., (for the Dante Society,) 1901. 67 p. O.

This work, a reprint from the volume containing the 18th and 19th annual reports of the Dante Society, Cambridge, Mass., is arranged upon the same plan as that employed in Mr. Koch's other Dante bibliographies.

Most of the titles are also accompanied by the name of the library in which each is to be found, the Harvard College Library and the Boston Public Library naturally predominating. The material here contained, though embracing a good many literary curiosities, is in itself mostly of meagre value to the student of Dante. This, indeed, could not be counted a fault, and any list of books is likely to prove unexpectedly useful. Mr. Koch's list, however, shows marks of haste, perhaps even of carelessness. It is, indeed, taken from a card-catalog which he had made for a different purpose, and it has not been revised as thoroughly as it should have been. The notes are rather desultory. Some contain matter but indirectly connected with Dante, and others are decidedly insignificant. Moreover, many articles in periodicals and in proceedings of societies are mentioned without reference to the library in which they are to be found (e.g., Cram, Darling, Ferrai). A goodly number, on the other hand, are referred to one library alone when they are to be found in several, an article by Carducci in the *Nuova Antologia* being referred only to Harvard, one in the *Gentleman's Magazine* only to Harvard and the Boston Public Library, and a poem in *St. Nicholas* only to the Boston Public Library. On the whole, while there is abundant room for improvement, the list is of considerable interest. L. F. M.

LIBRARY OF CONGRESS, *Division of Maps and Charts*. A list of maps of America in the Library of Congress; preceded by a list of works relating to cartography; by P. Lee Phillips, F.R.G.S., Chief of Division of Maps and Charts. Washington, Gov. Printing Office, 1901. 1137 p. O.

This is a notable catalog in more terms than one, and reflects credit on its compiler, Mr. P. Lee Phillips, if only for the orderly manner in which he has arranged his voluminous facts.

In the first place it is notable by virtue of its 1137 pages with an average of 13 entries to each page, or nearly 15,000 entries in all; but as many of these are in duplicate (and some are even repeated sixfold) it is fair to assume a record of 10,000 original maps referring to this continent, the West Indies and Bermuda. We do not know of so ponderous a work devoted exclusively to maps of this country, though the British Museum map catalog of 1885 contains 4648 cols. in describing approximately 100,000 pieces relating to every part of the world, and the "Ordnance survey of England and Wales" catalog of 863 pages describes clearly and precisely nearly 250,000 different sheets, devoted solely to that region.

In the present work the system of arrangement is strictly alphabetical, and this is the second point that makes this a notable cata-

log; for it is no easy task to classify so large a collection on a scientific basis which is of unquestionable value. For instance, the catalog does not begin, as one might naturally suppose it would, with maps of America as a whole, and then giving its great component parts (as the British Museum catalog does), but its first entry is a modest atlas of Abington, Mass., and America is not reached until another unassuming place is passed, *viz.*, Amelia Harbor and Bar, Fla., which is its immediate predecessor.

Even then, the great component parts of this continent, North and South and Central, do not appear here, but follow on in their regular A B C sequence, as also do the United States, etc. Although this undoubtedly breaks up the geographical or topographical unity, it is probably the better plan, notwithstanding the fact that we have to look for the two Carolinas in two different places, Virginia and West Virginia in the same way, and so on.

That such a vast collection should contain many rare and valuable maps was only to be expected, and under the heads of America, North America, South America, Canada, Louisiana, New England, New York State, and Virginia, most interesting reading will be found. It may be noted that maps of the world are included in this catalog. Of course in so far as they contain a representation of the whole or portion of the American continent, these maps in the early years of the discovery thereof possess a specific interest, otherwise it would seem somewhat out of place to devote 44 pages to a series of maps which would be as reasonably included in collections of maps of each of the other continents. The title page reads "A list of maps of America" only; it does not refer to atlases, charts or views, and yet all of these are described, particularly the former and latter; but only a few charts, with occasional reference to "[United States, Treasury Department, Coast Survey]." No explanation accompanies such reference, nor is any reason assigned for the practical omission of all details of this extremely valuable collection, which assuredly deserves as much notice in this place as the maps themselves. We note also that brief mention is made under the respective states of the beautiful series of maps on the scales of 1, 2 and 4 miles to the inch, produced by the Geological Department of the United States; though the two series—Topographical (of which over 1000 are issued) and Geological folios (of which about 70 or 80 are published, many of them before the year 1897)—will challenge comparison with the best maps of European governments. Perhaps these omissions are intentional and the consultant is supposed to refer to the fully detailed catalog of the two departments mentioned; but if so, a statement to that effect in the preface would have thrown that light on the subject which it at present needs, though even then the pres-

ence of that information would have seemed justifiable and preferable. And one must again express disappointment at the omission of the scale on which the maps are drawn. We have on previous occasions noticed this defect in the otherwise very interesting monographs issued by Mr. Phillips' department, and we cannot but think this a very serious defect in so important a work. One very obvious use of a catalog is to enable the consultant to form a correct mental picture of the article described; how can an army officer, for instance, ascertain without this detail which map here set forth is most likely to meet his requirements? The civil engineer, the bicyclist, or ordinary pedestrian would find the same difficulty. There is also a criticism to be made as to the indication of size. What is the standard of measurement? Do the figures refer to the bare map itself, or do they include also the descriptive notes frequently placed around the margins of maps? Do they include the engraved borders (which are sometimes two inches or more all around) or do they mean the sheet of paper on which the map itself is printed? Neither are we told whether the measurement is to read first across from left to right (as the horizon) or from top to bottom. This is vexatious, and a grand opportunity has been lost of establishing some sort of precedent. It is the more to be regretted as so many different plans are adopted in our own government departments, as well as by those of other governments and publishers all over the world. A great institution like the Library of Congress justifies us in expecting the best possible work from it, and it is therefore distinctly disappointing to find that with a little more trouble and care, it could have produced something infinitely better, and more worthy of its origin.

RICHARDSON, Ernest Cushing. *Classification, theoretical and practical; together with an appendix containing an essay towards a bibliographical history of systems of classification.* The New York State Library School Association Alumni Lectures, 1900-1901. New York, Scribner, 1901. 14+248 p. 12°.

The two lectures in this book were given before the New York State Library School Alumni Association, on Jan. 31 and Feb. 1 last. A synopsis of the first and four-fifths of the second were published in the *LIBRARY JOURNAL* for March. The present volume is the outcome of the vote at the Montreal meeting of the alumni that future addresses be printed after delivery.

The first lecture is a philosophical treatment of the order of the sciences, and is a contribution to the theory of library science. Starting with the axiom that the order of the sciences is the order of things, Dr. Richard-

son deals with the nature, kinds, and laws of classification, and ends with the hypothesis that the order of things is lifeless, living, human, superhuman, and the corresponding order of the sciences Hyology, Biology, Anthropology, Theology. The second lecture is on the classification of books, and aims at adjusting the strictly logical order to the requirements of every-day use. A good classification, we are told, should follow as nearly as possible the order of things; be carried out in minute detail; have a notation allowing of indefinite subdivision; and be provided with a detailed and specific index. The remainder of the book (p. 91-236) is a fairly complete enumeration of theoretical and practical systems from Plato to the present year.

Dr. Richardson's work has a four-fold value. It insists, first of all, on the necessity for a scientific attitude on the part of the librarian towards problems of classification. Too little attention is given to the cultivation of such a spirit, and the insistence is needed. Secondly, it forms an historical and philosophical introduction to the art of classification. In our judgment the relations between theoretical and practical classification have never been so clearly shown, nor the distinctions so clearly made. Thirdly, it applies principles in a stimulating manner. Dr. Richardson lays down the theoretical order as the rule by which every application is tested, yet at times he does not hesitate to subordinate this order to the law of use. That he does not overvalue theory we know from his own practice, for in the guide to the Princeton Library issued in May last he says that the evolutionary order of subjects is there "unscrupulously violated wherever practical considerations seem to make it advisable." Finally, the book is a valuable bibliographical guide to the student of classification. Of the 320 systems listed outlines are given of 54, and in every case reference is made to sources where outlines or notices may be found.

Works on the history and practice of classification are numerous and increasing. Nevertheless, Dr. Richardson's essay finds a distinct place, for it is the best short monograph on the subject. A. K.

WIESELGREN, Harald. *Drottning Kristinas bibliotek och bibliotekarier före hennes bosättning i Rom.* Stockholm: P. A. Novstedt & Söner, 1901. 102 p. O. (K. Vitterhets historie och antiqvitets akademien handlingar. N. F. 13:2.)

The first to be appointed a royal librarian at Stockholm was Lars Fornelius, who was appointed in 1634 by the regents during Cristina's minority to be librarian at "our and the crown's library, both the old and the new." Books were mentioned among the belongings of the kings of Sweden as far back as the 14th century. Gustavus Wasa, al-

though more interested in the destroying of "unsound" literature than in the collecting of books, as the author of the book before us remarks, had a librarian. His sons were among the most learned monarchs of their time, and especially Johan III. had a not inconsiderable library. But most of his books went to Poland with his son, Sigismund. There is not much mention of a royal library during Gustavus Adolphus' reign; this king was more interested in building up the university at Upsala, and presented to the university library in 1620 a collection that seems to have been his inheritance from his father.

Gustavus Adolphus' daughter, Cristina, was highly educated, even learned in the classics, and collected books from all parts of Europe. While one of her librarians was in Stockholm, arranging and cataloging her books, the other was travelling in Holland, France and Italy, collecting books, both printed and manuscript. It was the ambition of the queen to collect at Stockholm an extensive library that would draw to her court learned men of all nationalities. Descartes was there, and died at Stockholm. Isac Voss and N. Heinsius were her principal librarians. Gabriel Naudé and Samuel Bochart were occasionally engaged in the library; Salmasius made a visit to Stockholm. At one time a suite of rooms were set aside for the library, and Bochart worked day and night at the arranging of the books in their new quarters, but suddenly the queen wanted these very rooms for the ladies of her court, and the books were thrown in heaps on the floor and in boxes. Isac Voss had his own books in the palace, and when the queen's library, at the occasion of her abdication and departure from Stockholm, was packed up for shipping, Voss' books got mixed in with them, and he had great difficulties in separating them. Some of them he got back; for others he seems to have been permitted to take books belonging to the queen. From this the story came out that he had used his trust to steal the queen's books. This story is, however, entirely unfounded, as Dr. Wieselgren shows. Cristina had bought his father's — Gerard Voss' — library, and apparently he never received any money for it. And all the librarians had difficulty in getting their salaries paid. The queen was extravagant, and the treasury of the kingdom was soon emptied. Many of the books collected for Cristina were paid for by the librarians from their own pockets, and when the queen could not pay they remained in many cases in the agents' possession.

This book is a remarkable story of extravagance and erudition, devoted fidelity and misplaced confidence. It is an interesting picture of the life among the world of scholars in the 17th century. The 40 pages of letters in Latin and French make the result of the author's labor available also for those who have not mastered the Swedish language.

A. G. S. J.

## Library Economy and History.

### GENERAL.

*Association Men*, the magazine of the International Y. M. C. A., for December, is a "book number," mainly devoted to reports and suggestions upon books read by men and boys.

FOOTE, Elizabeth L. A successful Sunday-school library. (*In Sunday-school Times*, Nov. 9, 1901. 43:736.)

This, the second of Miss Foote's series on the Sunday-school library, discusses classification and the mechanical preparation of books for use.

*The Library* for October opens with an excellent portrait of Melvil Dewey and a short biographical sketch. Its contents are of much bibliographical interest, including papers on "Irish provincial printing prior to 1701," by E. R. McC. Dix; "The king's printing house under the Stuarts," by Henry R. Plomer; "Lessing as a librarian," by Archibald Clarke; and "A famous printer, Samuel Richardson," by W. B. Thorne; "Impressions of the Library Association conference," at Plymouth, are, on the whole favorable; and the "notes" and "reviews" are interesting.

### NATIONAL ASSOCIATION OF STATE LIBRARIANS.

Proceedings and addresses, fourth convention, Waukesha, July 5, 1901. [Chicago, Library Bureau.] 36 p. O.

Reprinted by *Public Libraries* for the association in a neat pamphlet.

The *Public Library Bulletin* for November contains a short sketch of Andrew Carnegie's life, by Mrs. M. E. Craigie, and an illustrated description of the first Carnegie library, at Braddock, Pa.; with the usual reports and miscellaneous notes.

### LOCAL.

*Allegheny, Pa. Carnegie F. L.* (11th rpt. — year ending Feb. 28, 1901.) Added 3435; total 45,181. Issued, home use (nine months) 91,864 (fict. 63.66%; juv. 19.01%); ref. use (nine months) 48,921. Receipts \$18,000; expenses \$16,924.84. Present no. of cardholders is not stated.

"The new reference room was ready for occupancy and the work of removing books began March 4, 1901, almost on the 10th anniversary (March 2, 1891) of the opening of the circulating department of the library.

"On the 14th of March the room was thrown open to the public, and already a decided increase in the use of books in this department of the library is shown. The room has a seating capacity for almost 100 persons, and a shelving capacity of 5000 volumes, not counting maps, art books, folios and the like, which are kept in special cases."

The report contains an historical sketch of the library, illustrated with numerous views

and plans. It is prefaced by a portrait of Mr. Carnegie.

*Atlantic City, N. J.* At the city elections on Nov. 4 it was voted to establish a free public library. Appointment of five trustees will shortly be made by the mayor, and rooms will be secured in the new city hall. The library now maintained by the Women's Research Club will form the nucleus of the new library.

*Brooklyn, N. Y. Pratt Institute F. L.* An exhibition of books suitable for Christmas gifts for children and young people has been placed in the children's room, to remain during December. The books range in price from 25 cents upward, and a full list of them, with publishers, prices, etc., accompany the exhibition.

*Brooklyn (N. Y.) P. L.* At the November meeting of the directors the committee having in charge the matter of Carnegie branches submitted a report of work on sites and methods. It was in part as follows:

"The committee will select and appoint five architects (or firms of architects, each represented by one member thereof) to serve as an advisory commission, to prepare plans and make recommendations with respect to the first five libraries to be erected, and with respect to such other matters relating to the further conduct of the enterprise as may be referred to them. Each of the five will prepare a design for one specific library. Each of the five designs will, however, represent the collective wisdom and judgment of the whole commission, working in collaboration and consulting freely with the librarian and with the professional adviser of the committee [Prof. A. D. F. Hamlin, of Columbia]. The designs will be submitted to the committee with the recommendations of the commission to serve as preliminary and suggestive sketches, to assist the committee in reaching definite conclusions regarding the type or types of the proposed libraries, and in determining as to what features and requirements should be insisted upon uniformly for all the libraries. The committee, with the assistance of their adviser, after studying these designs, will then frame their final instructions and the five architects will then prepare the working plans, each for his respective library upon the basis of these instructions. The committee reserve decision as to whether the remaining 15 libraries or any part of them shall be assigned to the members of the advisory commission, the decision depending largely upon the results of the work of the commission upon the five first erected, and partly also on possible unforeseen contingencies. The rates of compensation will be those authorized by the American Institute of Architects, except that for two or more buildings erected from substantially the same plans the rates will be somewhat reduced substantially as provided

by the agreement between the Manhattan committee and their architects.

"Upon the recommendation of the sites committee of the library the Carnegie committee decided to erect, as soon as possible, five buildings to be located as follows:

"Williamsburgh, included within the following boundaries: Union and Havemeyer streets, Broadway and Grand street.

"Fulton, included within the following boundaries: Oxford and Third avenue, Lafayette avenue and Dean street.

"Stuyvesant, included within the following boundaries: Bushwick avenue and Broadway, Myrtle and Central avenues.

"Carroll Park, included within the following boundaries: Union and Luqueer streets, Hoyt street and Central avenue.

"Bedford, included within the following boundaries: Dean street and Putnam avenue, Franklin and Nostrand avenues.

"In consultation with the chairman of the sites committee, it was decided to ask the board of estimate to secure property, when possible, 100 x 100 feet, in order to have light and air on at least three sides of a building. At a meeting held Nov. 15 it was unanimously voted to appoint the following architects under the proposed scheme; these architects to prepare plans for the first five buildings and act as an advisory commission: Lord & Hewlett, J. Monroe Hewlett, representative; W. B. Tubby & Brother, W. B. Tubby, representative; R. L. Daus; Walker & Morris, R. A. Walker, representative; R. F. Almirall."

The report was unanimously approved. It was recommended that a number of travelling libraries be made up for the exclusive use of hospitals, the books used in connection therewith not to be circulated elsewhere.

The motion adopted at the September meeting of the board, that representatives of the institution—the executive committee and the librarian—should visit at the library's expense such cities as Philadelphia, Cleveland, Buffalo and Boston, with a view of studying the public library systems of those cities, was adopted.

*Chattanooga, Tenn.* The matter of the Carnegie library was brought up at the meeting of the city council on Nov. 20. A letter was submitted from the library committee of the Chamber of Commerce requesting passage of the ordinance approved by that committee for the establishment of the Carnegie library. The ordinance, which was then introduced, recites Mr. Carnegie's offer of \$50,000, on condition that the city appropriate \$5,000 annually for maintenance, and provides (1) for the establishment by the city of a free public library and reading room; (2) for the acceptance of Mr. Carnegie's offer; (3) that a library tax be levied, to realize the sum of \$5,000 for library maintenance for one year, and that the city "ever thereafter make suitable provision for proper support and main-

tenance of the library"; (4) that the library be known as "The Carnegie Library of Chattanooga, Tennessee." The ordinance passed its first reading and was referred to a special committee of three, to report at the next meeting.

*Cleveland, O. Case L.* The removal of the books to the library's new quarters in the Caxton building was begun on Nov. 13. Here the library is established in well equipped rooms, taking up the entire eighth floor, and giving over 10,000 square feet of floor space.

*Cleveland (O.) P. L.* An opening reception was held in the children's department of the library on Nov. 30, from 10 a.m. to 8.30 p.m. The room, which is in the basement of the new library building, was decorated with palms and cut flowers, and was visited by hundreds of children, their mothers and their friends. The department contains about 12,000 v., and over 3500 children are registered borrowers. An attractive announcement circular of the reception was issued, containing also a message from the librarian "to the friends of the children," setting forth the aim and methods of the library in its work with children.

*Columbia Univ. L.* The annual report of Dr. J. H. Canfield, the librarian, as noted in the local press, shows that during the year 17,559 books were added, of which 6352 were received by gift, 1258 by exchange, 2151 by the binding of pamphlets and 7645 by purchase. The library now contains nearly 315,000 volumes. During the year 70,624 cards were added to the catalog and 1300 different periodicals were received regularly; 87,848 volumes were issued for use out of the building. The number of persons who borrowed books was 3133, of whom 2023 were undergraduates, 694 graduates, and 404 officers of instruction. A total of 184 volumes were loaned in 35 libraries in 16 different states, and 59 volumes were borrowed by the library from 10 institutions in six states. From the reference department 72,133 books were issued, besides 10,000 volumes which are on open shelves in the general reading room. The aggregate loss of the entire library was but a trifle more than one-third of 1 per cent. of the entire contents.

An experiment is to be made during the current year in the division of history. By the generosity of an unnamed friend of the university, that division will expend between \$3000 and \$4000 in the equipment of a laboratory library in history for undergraduate students. "It is not known that an experiment of this kind and of this magnitude has been made in any educational institution in this country, and the results are awaited with great interest by other departments."

*Evanston (Ill.) F. P. L.* (28th rpt. — year ending May 31, 1901.) Added 2557; total 27,100. Issued, home use 88,533 (fict. 64.4%):

ref. use 22,758; school use 26,018. New registration 2114; total cards in force 4104. Receipts \$15,128.64; expenses \$6503.21.

Much further extension of the library's activities "is seriously hampered by lack of room and facilities for work which are impossible in our present limited quarters. The single problem of shelving our regular monthly accessions of new books is becoming a serious one, and the need of separate children's and adult's reading rooms is growing more and more apparent."

The opening of the library on holidays and Sundays was inaugurated, and has been greatly appreciated. The duplicate collection of popular books (265 v.) installed in October has also been acceptable to the public; its total cost was \$252.67, and the total receipts amounted to \$254.21.

About one-third of the amount required to purchase "an acceptable site" for the new library building offered by Charles F. Grey, of Evanston, has been pledged, and "it is believed that the balance of the funds required will be forthcoming." Separate reports are presented from the librarian, the assistant librarian for reference and school work, the cataloger, and the head of the circulating department.

*Galveston, Tex. Rosenberg L.* The library directors have accepted the building plan submitted in competition by Eames & Young, architects, of St. Louis. The building will be of stone, two-storied, in the Renaissance style, furnished inside in marble and bronze.

*Guthrie (O. T.) P. L.* The annual report of the library was submitted to the meeting of the city federation of women's clubs, in Guthrie, in October. The library dates its inception with the organization of the federation, the library committee having been appointed Feb. 14, 1900, at the first meeting of the federation after its organization. During the 19 months of its existence the library receipts amounted to \$1555.01; expenses to \$1275.11. On Sept. 25 the library was formally transferred by the federation to the city of Guthrie, "for the use and benefit of all citizens." At the time of the transfer the library contained 1310 v.

*Hampton (Va.) Normal and Agricultural Institute L.* "The report of the librarian shows that the school is not only creating in our own students a real love for books, and training librarians for other colored schools in the south, but that the immediate community, both white and colored, is availing itself of the library. The school children of Hampton, as well as their parents, have drawn books, and quite a number have come from Newport News. It is desirable that the school's equipment should be thrown open just as far as possible to the people of both races.

"More travelling libraries have been sent out into the country districts, where there is great dearth of books, and where the teach-

ers of the public schools labor under great disadvantages. Our present building is altogether inadequate for this growing department of the school's work. Mrs. Huntington, the widow of the late Collis P. Huntington, who was one of the school's trustees, has offered to give \$100,000 for the erection and equipment of a building to be known as the C. P. Huntington Library. This sum will not only provide a suitable building for enlarged work along the lines already started, but will provide a fund for carrying on such work, so that it shall not be an increased drain upon the school's resources."—*From 33d report of the Institute.*

*Memphis, Tenn. Cossitt L.* (8th rpt.—year ending Nov. 30, 1901.) Added 3356; total 20,539. Issued, home use, 64,799 (fict. 67%; juv. fict. 14%). New cards issued 1285; cards in use 3014.

The circulation shows an increase of 13,772 v. over that of 1900, and a decrease of six per cent. in the issue of fiction. A re-registration of borrowers was begun in March. The classified catalog of the library is now complete, with the exception of a few odds and ends, principally public documents. "The completion of this work leaves the library with an author catalog, a classified subject catalog, and separate author and title catalog of fiction and juveniles. These are the essentials."

*Milwaukee (Wis.) P. L.* (24th rpt.) Added 9914; total 126,236. Issued, home use 495,376 (fict. 38.7%; juv. fict. 27.3%). New registration 13,717; total cards in use 26,073.

"During the year 22,541 books were issued 102,564 times by 336 teachers in 45 graded public schools, 1 state normal school, 3 high schools, 1 school for the deaf, 4 parochial schools, 9 Sunday-schools, 1 vacation school and 1 teachers' institute."

From Mrs. Antoinette Keenan the library received the gift of \$10,000, which has been devoted to a special collection of works on literature, kept in a separate room and known as the Matthew H. Keenan Memorial Collection.

*Nashville, Tenn.* At a meeting of the city council, on Nov. 14, a resolution was passed authorizing the mayor to accept Mr. Carnegie's offer of \$100,000 to the city for a public library building.

*New Haven (Ct.) Y. M. Institute L.* (Rpt.) The library contains in its main collection 22,755 v. In addition it has a special loan collection of 144 v. and a delivery collection of 136, the books in the latter department being delivered to members at their homes. The membership is given as 447, and the circulation was 46,590, fiction being about 64 per cent.

*New York, Women's clubs and libraries.* At the convention of the State Federation of Women's Clubs, held in Buffalo in October,

an entire session was devoted to the subject of libraries. A report for the Library Section, made by Mrs. Mary E. Craigie, of Brooklyn, was followed by papers on "How to stimulate interest in libraries," by Mrs. Frances Edgerton; "Some suggestions for those starting libraries," by Miss Theresa Hitchler; "The choice of books," by Mrs. S. Stephens; "The value of libraries for the preservation of historical records," by Mrs. S. R. Weed; "Modern progress of the card catalog principle," by Miss M. S. R. James; "Should the public library board include women," by Mrs. I. H. Cary; and "What public libraries might do for boys," by Mrs. M. E. Craigie.

*Richmond, Va.* An ordinance providing for the administration of the Carnegie Library by a board of nine trustees was adopted by the city council on Dec. 2. The library board is to consist of two members from the board of aldermen, three from the common council, the superintendent of city schools, and three private citizens, to be chosen one from each of the three school districts of the city. The ordinance was made effective in January, 1902.

*San Francisco (Cal.) P. L.* (Rpt.—year ending June 30, 1901.) Added 14,323, of which 3800 were accessions to branches; total 136,395 (24,203 in branches). Issued, home use 711,409 (fict. 41.38%; juv. fict. 12.15%), of which 335,308 were drawn from the branches; lib. use 231,514 (69,739 from branches). New cards issued 17,550; cards in use 33,249. Receipts \$71,839.50; expenses \$61,392.35.

The number of cardholders is 9.7 per cent. of the city's population. "A careful study of the localities represented by the cardholders shows that a majority of the people do not find it convenient to use a library situated at a greater distance than one-half or three-quarters of a mile." An extension of the library system to these outlying districts is therefore regarded as most desirable.

At the branch libraries "a system has been adopted which will permit us to supply a larger selection to the smaller branches than has been possible heretofore. A 'deposit collection' has been formed from which books will be sent to each of these branches. When a given lot has been at one branch for a sufficient length of time it will be transferred to another branch, and another lot will take its place at the first branch. These transfers will be made from time to time, so that eventually all the books in the collection will have made the rounds of the branches."

*University of Texas. Course in library training.* The university has established a course in library science, which opened Nov. 11, 1901, and will end with the college year, June 11, 1902. The course will be under direction of Benjamin Wyche, the librarian, assisted by Miss Caroline Waudell, of the library staff, a graduate of the University of Illinois Library School, who will devote her-

self especially to cataloging instruction. The class this first year will be limited in number, and no entrance examination will be required. The only charges are the annual fee of \$10, a library fee of \$1, and a deposit of \$4, returnable at the end of the year, less the amount of any fines or damages for books lost or injured. Expenses for supplies and text-books will not exceed \$10. Students taking the course will be allowed remuneration for their services to the extent of the matriculation fee of \$10, when they shall have become sufficiently trained. "The course of instruction will be along the lines followed in the leading library schools, and will include selection of books, ordering, accessioning, classifying, cataloging, bibliography and reference work; and will be supplemented by a course of collateral reading, so that students may become familiar with the history of the library movement in this country, and with methods other than those employed in the university library. As proficiency can be attained only by experience, each student will be required to work six hours a week in the various departments of the library under the direction of the members of the library staff."

*Washington (D. C.) P. L.* (4th rpt.—year ending June 30, 1901.) Added 2072; total 22,811. Issued, home use 123,555 (fict. and juv. 97,899). New registration 2871; total registration 13,328.

This report is largely devoted to plans and estimates for work and administration in the new Carnegie building, which it is expected will be open to the public before the close of next year. In its present inadequate quarters the work of the library has largely increased, and its opportunities are many. Urgent plea is made for an appropriation from Congress that will insure its development and usefulness. Interesting comparisons are given of income and expenses of half a dozen of the larger public libraries of the country.

The "duplicate collection of popular books, issued at a charge of 10 cents a week, has proved satisfactory to borrowers, and self-supporting. It is pointed out that the library, for its small size, "is fairly well supplied with general works, language and literature, and has proportionally an excess of fiction; it is very weak in other classes. That it should fall below the average in books treating of the useful arts, such as mining, engineering, electricity, etc., is quite natural, for each library tries to adapt itself to the local needs, and there are probably fewer mechanics in Washington than in any other city of the same size. The demand for books on the social and natural sciences is probably largely met by the technical libraries in the different departments. The library need only provide the more popular works such as would be used by the general public and by school children, and should refer specialists to other sources of information in the district."

*Wesleyan Univ. L., Middletown, Ct.* The university *Bulletin*, no. 29, for November, notes the bequest to the library of \$20,000, left by the will of Mrs. Stephen Wilcox, of Brooklyn, who died Aug. 21, 1901. This "is the most notable gift to the library since the receipt of the Hunt bequest." Additions from June 1, 1900, to May 31, 1901, are given as 2023; "the total number of volumes in the library at the present time is 61,000." "The reclassification work of the past year, done for the most part during the summer, covered general periodicals, church history, and biography, about 6000 volumes in all. The total number of volumes classified is 30,000. Of the 31,000 volumes unclassified about one-half are in urgent need of classification."

*Wilmington (Del.) Institute F. L.* John Hall Rollo, indicted for stealing books and parts of books from the library, was brought up for trial in the General Sessions Court on Nov. 26, his lawyer withdrawing the plea of not guilty for one of guilty. George F. Bowerman, librarian of the Institute Free Library, appeared as witness for the state, and described the mutilation of the library volumes, and the manner in which articles and illustrations were ruthlessly clipped from the books. He displayed some of the volumes offered in evidence, and pointed out how Rollo had constructed a book on "Bibliomania" out of clippings from library volumes. Mr. Bowerman said he understood Rollo had formerly been employed in the library, and was an habitué and constant reader there. He doubted if \$2500 would cover the damage done to library property, and he stated that in most cases Rollo had removed the library imprint by means of acid, and had either sold or kept the books. It was shown that the accused was a man of considerable literary attainments and a close student, but that he had become a mental and physical wreck through continued use of opium. He has been in an enfeebled condition ever since his arrest. He was sentenced to three years' imprisonment, and the payment of \$68 restitution money, and costs.

*Wisconsin, Women's clubs and libraries.* The Wisconsin Federation of Women's Clubs at their annual convention, at Madison, in October, devoted an entire session to the subject of libraries. The program included an address on "What can club women do for the country schools," by J. W. Stearns, of the State University; the report of the library committee of the federation, by Mrs. R. G. Thwaites, chairman; and addresses by F. A. Hutchins on "What clubs can do for our travelling libraries"; and Mrs. Edward Porter on "The result of one travelling library."

#### FOREIGN.

*Ireland, Department of Agriculture and Technical Instruction.* The department has arranged to aid approved village and workmen's libraries by donations of books on

economic, industrial and allied subjects. The books must not exceed £3 in total value, and are to be selected from a list furnished by the department.

*Northern Counties L. Assoc., England.* The first annual report of the executive committee of the Northern Counties Library Association, presented at the Plymouth meeting of the Library Association of the United Kingdom, is issued in pamphlet form by the honorable secretary and treasurer, J. W. C. Purves, of the Public Library of Workington. The association was organized "to unite all persons engaged or interested in the work of libraries, both public and private; to promote or assist local authorities in bringing about the adoption of the public libraries act; to hold quarterly meetings in different towns for the reading and discussion of papers and subjects; to assist in promoting bills to be presented to Parliament affecting public libraries; and to do something to improve the status and education of assistants by holding competitive examinations." There are 51 members, representing 37 libraries, and the association is formally affiliated with the parent body, the L. A. U. K.

*Vancouver, B. C.* The contract for the \$50,000 Carnegie library building was signed on Nov. 12.

*Workington (Eng.) P. L. and Reading room.* (Rpt.—year ending Oct. 31, 1901.) Added lending lib. 408; total 7638. At the beginning of the year the ref. library contained 1050 v., but owing to lack of room liberal transfers had to be made to the lending library, the total number reserved for reference being 868 v. New cards issued 389; cards in use 2339. Issued 47,277 (fict. 23,089; juv. 10,537).

Residents of the suburb of Harrington are allowed the use of the library "in return for a subscription equivalent to a half-penny rate on the rateable value of Harrington." 4052 v. were sent to Harrington by carrier during the year. The Workington Book Club, established in connection with the library, is in a way an application of the "duplicate collection" plan, in use in various American libraries. The object of the club is to purchase new books in all classes of literature and present them to the Public Library after 12 months' exclusive use by the club members. Members pay an annual subscription of 10s. 6d. for one volume, 15s. for two volumes, and £1 1s. for four volumes. The books in the club collection are kept on separate shelves during the club ownership, directly accessible to members; they may be reserved for one day by postal notification, and they will be exchanged as often as required during the hours that the library is open. The club has a membership of 55; the subscriptions received during the year amounted to £27 1s., which was spent in the purchase of 241 v., each volume being issued on an average of 22 times.

## Gifts and Bequests.

*Lake Charles, Ia.* On Nov. 20 it was announced that Andrew Carnegie had offered to give \$10,000 for a public library, on the usual conditions that \$1000 annually be guaranteed for maintenance.

*Meriden (Ct.) F. P. L.* In response to an appeal for aid from the trustees, the library has received the sum of \$4115 in public contributions and subscriptions. Of this amount there were four separate gifts of \$1000 each from George A. Fay, Francis Atwater, J. D. Billard, and Mrs. E. H. White.

*Passaic (N. J.) P. L.* On Nov. 19 it was announced that Peter Reid, of Passaic, had offered to give a public library building to cost \$50,000 to the Passaic suburb of Dundee. This section is almost wholly devoted to mills and factories and their operatives, and the public library has maintained a branch there for two years or more. Mr. Reid's gift is made with two conditions: that the building shall be known as the Jane Watson Reid Memorial Free Library, in memory of his wife; and that "the city shall use and maintain the building for free public library purposes, having suitable rooms for the proper assistance and instruction of the young people in that rapidly growing section of the city." It is intended to perfect all plans for the building at once, and to begin building operations early in the spring.

*Plainfield (N. J.) P. L.* The library has received the gift of a very valuable collection of butterflies from ex-Mayor Alexander Gilbert. The collection, which is valued at over \$10,000, contains in all more than 5000 butterflies, at least 2000 being distinct specimens, varying greatly in size and coloring. It has been arranged by Professor George Franck, of the American Entomological Company, of New York, who classified and labelled each specimen. The rarest part of the collection is that comprising the North American specimens. The New Jersey specimens are exceptionally complete. Six cases are devoted to the North American collection, which is said to be even more valuable and complete than that on exhibition at the American Museum of Natural History, in New York. Some of them are natives of Colorado, some of Florida, others of Texas, and still others of the New England states. The collection is arranged in eight cases, and it will later be placed on public exhibition in the art gallery.

*Springfield (Mass.) City L. A.* By the will of the late Charles M. Kirkham the library receives a bequest of \$10,000, of which \$5000 is to be devoted to purchase of books and \$5000 to beautifying the grounds.

*West Swansey, N. H.* By the will of the late George W. Stratton, of Boston, the "Strat-

ton Free Library," of West Swanzey, with its contents and the land on which it stands is bequeathed to Dr. G. I. Cutler, F. L. Snow, Obadiah Sprague, A. J. Day and N. C. Carter, of West Swanzey, to be held by them, and their successors as trustees, as a library and art gallery, for the free use of the inhabitants of West Swanzey, forever. To the trustees is also given \$5000, which is to be invested, the income to be used for repairs to the library building, for rebinding books and for maintenance. The following conditions are included in the will: "Cumbersome books of no interest to the general reader, such as Congressional or Patent Office reports, and the like, and pictures of artists without real talent and education and not in themselves educational, or of general interest to the young people of the town of Swanzey, whom this institution was principally designated to benefit, should not be allowed places in the building; nor should portraits, photographs or pictures of any kind, of people of Swanzey, or elsewhere, who are not distinguished enough to be known out of their own country for learning, talent, good works or services, find a place in the building."

*Wilmington (Del.) Institute F. L.* The library has recently received several gifts of portraits and photographs. These include a handsome portrait of Longfellow, presented to the children's room; the gift from Howard Pyle, also for the children's room, of a set of photographs of his Washington pictures; and 23 portraits of Delaware jurists, from W. F. Smalley.

---

### Librarians.

---

ASHHURST, John, assistant librarian of the Free Library of Philadelphia, has been appointed librarian of the Philadelphia Mercantile Library, succeeding John Edmands, for nearly half a century in charge of that institution. Mr. Ashhurst, who is the son of the late John Ashhurst, Jr., of Philadelphia, and a graduate of the University of Pennsylvania, entered the service of the Free Library of Philadelphia, as head of its West Philadelphia branch, in January, 1896, and since 1897 has been a member of the staff of the central library. He is secretary of the Philobiblon Club, and has been a member of the American Library Association since 1897. A dinner in honor of Mr. Ashhurst on the occasion of his appointment was given by Joseph G. Rosen-garten, of the board of trustees of the Free Library of Philadelphia, at the University Club, on Nov. 30. Mr. Ashhurst entered upon his new duties on Dec. 2.

BARTLETT, Miss Louise Leffingwell, for ten years past librarian of the St. Johnsbury (Vt.) Athenæum, has resigned that position. Miss Bartlett was formerly librarian of Atlanta University. During her connection with the St. Johnsbury Athenæum she was one of

the most earnest and effective workers for the library advancement of the state. In 1894 she was appointed one of the original board of state commissioners, and in 1895 was reappointed for five years. She has been a member of the American Library Association since 1892.

DANA, John Cotton, librarian of the Springfield (Mass.) City Library Association, has been appointed librarian of the Free Public Library of Newark, N. J., succeeding Frank P. Hill. Mr. Dana came to Springfield from the Denver Public Library in January, 1898, as successor to the late Dr. William Rice. During the four years of his administration the usefulness of the library has been largely developed, and it has been brought into close touch with the public through the establishment of a children's department, circulation of books through schools and from branches, home delivery, and like means. The library has also been a center of helpfulness in the work of the Western Massachusetts Library Club, in which Mr. Dana has been actively interested. Mr. Dana's resignation has been received with general expressions of regret at Springfield, and the library staff in a formal resolution says: "During the four years of his incumbency he has proved himself an able and wise leader in all departments of library work, and a courteous and considerate head to his corps of assistants, treating them one and all as fellow-workers in the great field of education through the 'people's university.' What the loss is to the city of Springfield, time will not fail to show; what the loss is to his fellow-workers in the state and community we deeply realize."

Mr. Dana will enter upon his work at Newark on Jan. 15.

EDMANDS, John, the veteran librarian of the Mercantile Library, of Philadelphia, has been made librarian *emeritus* of that institution, and on Dec. 2 was succeeded in its active administration by John Ashhurst. In June last Mr. Edmands completed his 45th year as librarian of the Mercantile Library, but his library record runs back to 1846, when he became librarian of the Society of Brothers in Unity, in his senior year at Yale, while for six years before he accepted the call to Philadelphia, in 1856, Mr. Edmands was assistant librarian of Yale College Library. At the time he assumed charge of it the Mercantile Library contained but 13,000 v.; at the present time its collection numbers 185,000. Mr. Edmands has always been deeply interested in the bibliographical side of library work, and his "Junius bibliography," his "Bibliography of *Dies iræ*," and his "List of historical novels up to 1889" are well-known contributions in this field. In 1877 he devised and put into operation the system of classification, since continued at the Mercantile Library. Mr. Edmands has always been interested and active in library affairs, and is

a fellow of the American Library Association, of which he was one of the earliest members and supporters.

HAYS, Miss Alice Newman, N. Y. State Library School, class of 1901, has been appointed assistant in charge of periodicals at Leland Stanford Jr. University Library.

McCLURE, Miss Margaret J., for 17 years past librarian of the McKeesport (Pa.) Free Library, died at her home in McKeesport on Nov. 23, aged 52 years. Miss McClure had served as librarian ever since the organization of the library.

MALTBIE, Miss Anne L., New York State Library School, 1899-1900, has been appointed cataloger in the Connecticut State Library.

WALRATH, Miss Belle, assistant librarian of the Chippewa Falls (Wis.) Public Library, has been appointed librarian of that library, succeeding Miss Maude Early, resigned.

WHITE, Miss Caroline, for 28 years librarian of the Western College for Women, at Oxford, O., and a senior member of the faculty, died at Oxford on Nov. 21.

WILLIAMS, Miss Mary, Pratt Institute Library School, class of '98, assistant in the Hampton Institute Library, has been appointed librarian of the Public Library, Nee-nah, Wisconsin. The appointment takes effect January 1.

WINCHELL, Miss F. Mabel, assistant librarian at the Forbes Library, Northampton, Mass., has been appointed librarian of the Manchester (N. H.) Public Library.

WOOD, Miss Harriet A., N. Y. State Library School, 1897-98, assistant in reference department of the Cincinnati Public Library, has been appointed chief cataloger at the State University of Iowa, Iowa City.

---

## Cataloging and Classification.

---

CHICAGO (*Ill.*) P. L. Special bulletin no. 2: Hallowe'en, Thanksgiving day, Christmas. November, 1901. 36 p. D.

An unusually full classed list of books and magazine articles, which should be useful in many libraries.

CINCINNATI (*O.*) P. L. Quarterly bulletin, July-August-September, 1901. 22 p. 1. O.

The NEW BEDFORD (*Mass.*) F. P. L. Bulletin for November contains reference list no. 58, devoted to "The whaling industry." It covers six pages, and includes a goodly array of log books, and over a dozen titles representing "whaling fiction."

The NEW YORK LIBRARY ASSOCIATION has issued the first of the short reading lists in leaflet form, as discussed at its Lake Placid meeting. This is on "The United States government and its administration," and is similar to the list on this subject printed in L. J., October, p. 745, except that it contains ten titles instead of eight — these being Dole's "American citizen," Fiske's "Civil government" and "American political ideas," Harrison's "This country of ours," Wilson's "Congressional government," Bryce's "American commonwealth," Goldwin Smith's "United States," Goodnow's "Politics and administration," and "Great words from great Americans." The second list will be on "Debating." These lists will be furnished to libraries at 15 c. per hundred, in any quantity, and may be obtained by application to the secretary of the association, Mrs. H. L. El-mendorf, 319 Norwood ave., Buffalo, N. Y.

The NEW YORK P. L. *Bulletin* for November contains a compact "Check list of American county and state histories in the library," in two lists, arranged alphabetically by states.

OTLET, Paul. Comment classer les pièces et documents des sociétés industrielles: résumé d'une causerie faite aux membrés de l'Unité Sténographique de Belgique, dans la Salle des Répertoires de l'Institut International de Bibliographie. Brussels, Imprimerie de l'Institut Internat. de Bibliographie, 1901. 40 p. O.

Reprinted from *L'Okygraphe*.

SALEM (*Mass.*) P. L. Class list no. 8: Supplement, completing all class lists to August 1, 1901. Salem, Mass., August, 1901. 8+171 p. O.

This, with the preceding five class lists, completes the printed catalog to Aug. 1. 1901.

The SALEM (*Mass.*) P. L. *Bulletin* for November devotes its special reading list to the record of a good collection of short stories.

SAN FRANCISCO (*Cal.*) P. L. Catalogue no. 11: Periodicals, newspapers, and other serial publications, and books in the reference room. San Francisco, 1901. 63+4 p. O.

The list of periodicals and newspapers is alphabetical under class; reference books are arranged by subject, and an author index is appended.

U. S. DEPARTMENT OF AGRICULTURE L. Accessions to the department library, July-September, 1901. 35 p. (printed on one side) O.

## CHANGED TITLES.

"Nanna, a story of Danish love" . . . from the Danish of Holger Draehmann, rewritten in English by Francis F. Browne, Chicago, A. C. McClurg & Co., 1901. c. A. C. McClurg & Co., 1901, is the same as "Paul and Virginia of a northern zone" . . . from Danish of Holger Draehmann, Chicago, Way & Williams, 1895. c. Way & Williams, 1895. The introductory note signed by Francis F. Browne is dated Sept., 1895, in the early edition and Sept., 1901, in the later edition. It seems to me this is a particularly offensive example of palming off an old book as a new one.  
W. K. STETSON.

"Dorothy Marlow," by A. W. Marchmont, published in 1900 by Rand, McNally & Co. is the same book published under the title of "Heritage of Peril," by the New Amsterdam Book Company in 1901.

## FULL NAMES.

*The following are supplied by Catalogue Division, Library of Congress:*

- Adams, Washington Irving Lincoln (Woodland and meadow);  
 Allen, William Cicero (North Carolina history stories);  
 Bailey, Edgar Henry Summerfield, and Cady, Hamilton Perkins (A laboratory guide to the study of qualitative analysis);

 Hotchkiss, Willis Ray (Sketches from the dark continent);  
 Hughes, Robert Morton (Handbook of admiralty law);  
 Huntington, Harry Woodworth (The show dog . . .);  
 Irvine, Leigh Hadley (An affair in the South Seas . . .);  
 Johnson, William Henry, 1858- (A sketch of the life of Rev. Henry Williams . . .);  
 Jones, Allen Bailey (The spiritual side of our plea);  
 King, George Washington (The moral universe);  
 Loomis, Elisha Scott (Original investigation; or, How to attack an exercise in geometry);  
 Macfarlane, John James (Commercial and industrial geography);  
 Marton, Albert Martin (The photo-oleograph process);  
 Massey, Wilbur Fisk (Crop growing and crop feeding . . .);  
 Mayne, Dexter Dwight (The modern business speller);  
 Mechem, Floyd Russell (A treatise on the law of sale of personal property);  
 Mills, Jared Warner (Mills' Colorado digest . . . 2 v.);  
 Morris, Isaac Marion (Footsteps of truth);  
 Peebles, Isaac Lockhart (Spiritualism, or spiritism . . .);  
 Pershing, Howell Terry (The diagnosis of nervous and mental diseases);  
 Peters, Percy Bysse Shelley (Shorthand dictionary . . . Isaac Pitman system, prefaced by P. B. S. Peters);  
 Pickett, Leander Lycurgus (The blessed hope of His glorious appearing . . .);  
 Pieper, Ludwig Reinhold Paul (Der kleine katechismus Luthers);  
 Pitzer, George Calvin (Therapeutic suggestion applied . . .);  
 Polhamus, William Henry Harrison (Cedar Creek: a poem);

- Purdy, Charles Wesley (Practical uranalysis and urinary diagnosis . . .);  
 Reading, Joseph Hankinson (A voyage along the western coast; or, Newest Africa);  
 Reed, Eleanor Caroline (Gross) (The battle invisible, and other stories);  
 Reed, Lucas Albert (The scriptural foundations of science);  
 Rhodes, Christian Kline (The stock owner's adviser);  
 Rider, Joseph Benjamin (Rider's little engineer . . .);  
 Rogers, Winfield Scott (Intermediate lessons in Pitmanic shorthand);  
 Shiels, George Charles (Spanish in a nutshell . . .);  
 Sibley, Frederick Orrin (Zanee Kooran . . .);  
 Southworth, Gordon Augustus (English grammar and composition for higher grades);  
 Stewart, William Peter (Concrete identities);  
 Terborg, Johannes Emelius (Der Heidelberger katechismus . . .);  
 Tyrrell, Henry Grattan (Mill building construction);  
 Webb, Frank Rush (Manual of the canvas canoe);  
 Williams, Herbert Upham (A manual of bacteriology . . .);  
 Williams, William Orson (An old dusty's story);  
 Willoughby, Edwin Clifford Holland (Immortality; or, The hope beyond the grave);  
 Wilson, Fred Allan (Bible conundrums);  
 Wohlers, Henry George, *comp.* (The general cotton code for actual cotton and futures);  
 Wyer, Henry Sherman (Nantucket, picturesque and historic);  
 Wyman, Willy Edward Alexander, *tr.* of Bruin, M. G. de (Bovine obstetrics).

### Bibliography.

- "ALBATROSS" expedition. Chronological bibliography relative to the work of the *Albatross*. (In U. S. Commissioner of Fish and Fisheries, rpt. for 1900, p. 501-502.)
- ARABIAN NIGHTS. Chauvin, Victor. Bibliographie des ouvrages arabes ou relatifs aux Arabes, publiés dans l'Europe chrétienne de 1810 à 1885. tome v: Les mille et une nuits. Partie 2. Liège, 1901. 12+296 p. 8°.
- ASSE, Eugène. Les Bourbons bibliophiles; rois et princes, reines et princesses; avant-propos par G. Vicaire. Paris, H. Daragon, 1901. 8°, 4 fr.
- BELGIUM. Pirenne, Henri. Bibliographie de l'histoire de Belgique: catalogue méthodique

et chronologique des sources et des ouvrages principaux relatifs à l'histoire de tous les Pays-Bas jusqu'en 1598, et à l'histoire de Belgique jusqu'en 1830. 2me édition. Bruxelles, H. Lamertin, 1901. 8°.

BERMUDA. Cole, G: W. Bermuda and the *Challenger* expedition: a bibliography giving a summary of the scientific results obtained by that expedition at and near Bermuda in 1873. Boston, Printed for private distribution, 1901. 16 p. O.

Mr. Cole says, in a prefatory note: "The principal object in printing these pages separately is to invite criticism in order that a more extended bibliography of the subject, now in hand, may be made as complete and serviceable as possible." A careful piece of work, almost every entry being fully annotated.

*The Bibliographer* is the title of a periodical to be issued by Dodd, Mead & Co. early next year. It is to be devoted to scientific bibliography and to notes of interest to book collectors, and will be published monthly, except during July, August, and September.

COLONIES AND COLONIZATION. Appended to a comprehensive survey of colonial administration from 1800-1900, in the October issue of the "Monthly summary of commerce and finance of the United States," (No. 4, series 1901-1902,) published by the Treasury Department, is a "Bibliography of colonies and colonization," prepared by the Library of Congress.

FINANCE. Oberlin (O.) College L. Bulletin 5: Trial bibliography and outline of lectures on the financial history of the United States; by E. L. Bogart and W. A. Rawles. Oberlin, 1901.

GAUSSERON, B. H. Bouquiniana. Notes et notules d'un bibliologue. Paris, H. Daragon, 1901. 8°.

GEORGIA. Smith, George Gillman. The story of Georgia and the Georgia people, 1732 to 1860. Macon, Ga., by the author, 1900 [2d ed., 1901]. 20+664 p. 8°. Contains a five-page annotated bibliography.

GIRY, Arthur. Notices bibliographiques sur les archives des églises et des monastères de l'époque carolingienne. Paris, Bouillon, 1901. 110 p. 8°.

The *Literary Collector* begins its third volume, with the October number, under the direction of Frederick W. Bursch, who is now proprietor as well as editor. It is hoped to make the magazine bibliographically use-

ful to librarians and book buyers generally as well as to private collectors, and the issues for October and November contain contributions from W. J. Hardy, H. Pène du Bois, A. W. Pollard, and others. In the October number appears a memoir and bibliography of George Catlin, by W. H. Miner. The *Collector* is published from 33 W. 42d st., New York. Mr. Bursch, its new owner, is a graduate of the Pratt Institute Library School, and has for some time past been engaged in literary work.

MARYLAND. Mereness, Newton D. Maryland as a proprietary province. New York, The Macmillan Co., 1901. 20+530 p. 12°, net, \$3.

Contains a four-page bibliography relating to the proprietary period.

MILK. Rothschild, Henri de. Bibliographia lactaria: premier supplément (année 1900) à la bibliographie générale des travaux parus sur le lait et sur l'allaitement jusqu'en 1899. Paris, O. Doin, 1901. 6+98 p. 8°.

NAPOLÉON I. Lumbroso, Alberto. Dei principali repertori bibliografici per la storia del direttorio, del consolato, e dell'impero. (*In Rivista delle biblioteche*, v. 12, no. 9-10.)

A full and critical survey of the bibliographies of Napoleon and his times.

PALESTINE. Paton, Lewis Bayles. The early history of Syria and Palestine. (The Semitic ser., no. 8.) New York, Charles Scribner's Sons, 1901. 36+302 p. 12°, net, \$1.25.

Contains a classified bibliography of 16 pages.

PROTOZOA. Calkins, G. N. The protozoa. New York, The Macmillan Co., 1901. 8°, (Columbia Univ. biological ser., no. 6.) net, \$3.

Contains a bibliography, p. 311-314.

PYROMETRY. Le Chatelier, H., and Bondonard, O. High temperature measurements; tr. by G. K. Burgess. New York, Wiley, 1901. 12°, \$3.

Contains a bibliographical index, p. 215-223.

RENOUARD, Ph. Documents sur les imprimeurs, libraires, cartiers, graveurs, fondeurs de lettres, relieurs, doreurs de livres, faiseurs de fermoirs, enlumineurs, parcheminiers et papetiers ayant exercé à Paris de 1450 à 1600, recueillis aux Archives nationales et au Département des Manuscrits de la Bibliothèque nationale. Paris, H. Champion, 1901. 11+368 p. 8°.

RUGS. Holt, Rosa Belle. Rugs: oriental and occidental, antique and modern: a handbook for ready reference. Chicago, A. C. McClurg & Co., 1901. 8+167 p. 4°.

Contains a 5-page bibliography.

SLAVERY. Locke, Mary Stoughton. Anti-slavery in America, from the introduction of African slaves to the prohibition of the slave trade, 1619-1808. (Radcliffe College monographs.) Boston, Ginn & Co., 1901. 15+255 p. 8°.

Contains a chapter on anti-slavery literature after the Revolution, 1783-1808 (p. 166-197), and a bibliography (p. 199-231). For the bibliography no library south of Philadelphia was consulted.

STEEL WORKS. Brearley, Harry. A bibliography of steel works analysis. Pt. 10: Aluminium, concluded. (*In Chemical News*, Nov. 22, 1901. 84:249-250.)

VALUE. Sewall, Hannah Robie. The theory of value before Adam Smith. (*In Publications of the American Economic Association*, August, 1901. 3d series 2, no. 3.) 128 p.

Contains a 3-page bibliography.

#### INDEXES.

HILL, Edwin A. On a system of indexing chemical literature, adapted to the classification division of the U. S. Patent Office, concluded. (*In Chemical News*, Nov. 1, 1901. 84:210-213.)

As the conclusion of his paper Mr. Hill favors a general scheme of indexing current chemical literature, carried out at some future time for the benefit of American chemists, under the auspices of the Smithsonian Institution.

# THE AMERICAN NEWS COMPANY,

## BOOK DEPARTMENT.

HAVING successfully conducted an extensive Library Department for the past several years, handling with complete satisfaction the entire library business of some of the largest libraries of the country, we call to your attention the elaborate facilities at our disposal ; not only as to the prompt and complete despatch of all such business, but the great saving to the library in the matter of receiving exceptional discount. A request for estimate on any miscellaneous list of publications will receive the same painstaking care and minute attention that an order involving thousands of dollars would receive. Books published abroad are secured within a very short time after order is placed—our own branch houses in London, Paris, Berlin, as well as two Canadian houses, enable us to accomplish this.

We solicit correspondence, and extend a most cordial invitation to all interested in the Free Public, School, Circulating, or Private Libraries to visit our mammoth establishment, where the thousand upon thousands of miscellaneous volumes are at your full access.

Yours very respectfully,

THE AMERICAN NEWS COMPANY,

39-41 CHAMBERS STREET, NEW YORK.

BENJAMIN FRANKLIN STEVENS.

HENRY JOHN BROWN.

**B. F. STEVENS & BROWN,**

American Library and Literary Agents,  
4 TRAFALGAR SQUARE, CHARING CROSS, LONDON.

**T**HIS Agency was established in 1864 for supplying American Public Libraries, Institutions, and Book Collectors, with English and Continental Books, Manuscripts, Drawings, Philosophical Apparatus, etc., at the lowest London prices.

Special attention is paid to the selection and purchase of rare old books and manuscripts. Auction sales are carefully watched and good knowledge kept of the stocks of the old Booksellers of Europe.

Lists of Desiderata have the best attention and Librarians are respectfully requested to test the value of the Agency by sending trial orders on by submitting lists for Estimates for goods to be delivered, either free in London or New York, as desired.

Auction Catalogues when printed in advance and Catalogues issued by Publishers and Second-hand Booksellers are mailed to Customers when desired.

Large shipments are sent by cheapest and quickest route, or as ordered. Small shipments are made weekly through our New York Agency, at a minimum of expense and trouble to purchasers, or single books are sent by mail on receipt of order.

Special attention is given to Bindings in all styles.

Periodicals are supplied either direct by mail from London or by mail from New York Agency at lowest rates for prompt and efficient service. Send for Lists.

Payments may be made either direct to London or in U. S. Currency through our New York Agency.

*Just Ready. 100 Copies Printed for Subscribers Only.*

**B. F. STEVENS'S**

## Facsimile of the Unpublished British Headquarters Coloured Manuscript Map of New York and Environs (1782)

Reproduced from the Original Drawing in the War Office, London.

24 sheets. Scale,  $6\frac{1}{2}$  inches to a mile. 10 feet by 4 feet. . . .

The successive British Commanders-in-Chief in America, Generals Sir William Howe, Sir Henry Clinton, and Sir Guy Carleton, during their respective occupations of New York and Environs in the Revolution, caused this manuscript plan from time to time to be kept up.

The plan extends from below Guanas Bay to the Heights of Spikendevil, a distance of about eighteen or nineteen miles. It shows the Fortifications, Defences, Topography, Streets, Roads, etc., of the whole of the Island of New York with the Harbor, Islands, Water Ways, and River Frontages on the Hudson and East Rivers, the Military Works on Long Island including Brooklyn, the Works in Paulus Hook and parts of the Jersey Shore. It has a copious Table of References to various works (British and American), some of them with notes as to the time of their construction or destruction.

The Original Drawing, ten feet by four feet, is on a scale of about six and a half inches to a mile. It is hand-somely reproduced for subscribers only, in careful facsimile on 24 sheets which can be joined up and mounted like the original as a Wall Map or mounted on linen if desired. It will be issued either mounted on linen to fold in book form with leather (slip) case, 13 x 10 inches, or the 24 sheets (22 x 15 inches each), will be supplied in a portfolio.

No more than 100 copies have been printed and the engravings were erased as each sheet was printed off.

A few extra copies of sheet 8 have been printed so that it can be sent as a specimen on application from intending subscribers.

**Prices to Subscribers**

Mounted on linen to fold in book form with leather (slip) case. . . \$30 net.

Unmounted, on 24 sheets in portfolio. . . . . \$25 net.

The above prices include delivery to any Public Library or Institute in the United States or Canada, but private subscribers must also pay the duty.

BOOKSELLER { Library Books,  
Reference Books,  
Belles-Lettres.

AND

BOOKBINDER { Duro-Flexile,  
Vellucent,  
Reliure de Luxe.

*“Buy Your Popular Books and Your Costly Books  
in Duro-Flexile Binding.”*

I OBTAIN books from the publishers in sheets and bind them “ONCE FOR ALL.” This binding lasts longer than the leaves of the book, and the leaves of the book are preserved and their life immeasurably lengthened by this binding. Librarians cannot persuade publishers to print special editions for them, but I supply books specially bound for them.

If the paper is bad I sew and forward the book so that the leaves are subject to no strain and are indeed strengthened in the folds. If the paper is very stout I sew the book and forward it in a special manner adapted to the thickness of the paper, in other words I adapt Duro-Flexile binding to both good and bad paper with the results that the utmost service and the longest possible life are obtained for both.

No binding in the world is adapted to the varied qualities of the paper as is Duro-Flexile.

The service obtained from a book of bad paper when supplied bound in this way will surprise you.

A papier maché box and a steel safe are not hinged in the same way. Thin tough paper and thick spongy paper also require very different treatment, and with Duro-Flexile they get it.

**TIGHT BACKS** are used for books of a thickness and quality of paper best suited for such treatment.

**LOOSE BACKS** are given where such are better suited.

My bookbinding is in short adapted in its every detail, both of material and method, to the requirements of a Public Library Book.

500 Public Librarians in all parts of the English speaking world buy these books.

## POPULAR BOOKS AND COSTLY BOOKS

bought of me, bound from the quires, give 50% more service.

*A catalogue of Standard Fiction and popular recent books priced net delivered free to your Library will be sent on application.*

**We Say It,** and with some emphasis because true, that THE RAPID GUIDE is the best and most economical Library Guide in the world. It is substantially made of pressed cardboard with metal projection in which a removable label is used. It thus provides for the exchange of one heading or title for another. THE RAPID GUIDE is practically indestructible, although very light in weight. There is no pasting, no breaking down, no wearing out, no rough edges. It is compact, economical, and was designed for the special requirements of the Library. It so far excels other known guides as to leave no room for comparison.

We shall gladly forward a sample of THE RAPID GUIDE to any Librarian making the request.

Also Manufacturers  
Complete Filing Systems,  
Cabinets, Cards, Etc.

Incorporated,  
280 Broadway, New York.

# HENRY MALKAN,

## Library Department.

This being the busiest season of the year in the book trade, Librarians, as a rule, hesitate to place orders of any magnitude, fearing that in the great rush they will be neglected by the bookseller, that the latter may "Make hay while the sun shines."

Our Library customers continue sending in their orders, knowing that our Library department—being conducted as a separate department, and under the management of an experienced bookman, assisted by a corps of efficient young men—is not affected, no matter how busy our mail order and retail departments may be, so that we can guarantee prompt shipments, and lowest prices.

All information regarding books and quotations on lists, large and small, furnished with despatch.

We have a few sets of the EDINBURGH EDITION ENCYCLOPEDIA BRITANNICA—25 vols. in half morocco and full-sheep—which we quote at \$65.00 net.

## HENRY MALKAN,

## **G. P. Putnam's Sons, LIBRARY AGENTS.**

LONDON:  
24 Bedford St., Strand.

**M**ESSRS. PUTNAM have peculiar facilities for handling all library business intelligently and to the best advantage of their customers.

Their Branch House in London (through which they receive English orders for American books) enables them to supply, promptly, English books, without the commission usually paid by American dealers.

Their extensive miscellaneous and retail business makes it practicable to buy all books at the lowest prices, to carry a large stock of standard books in every department of literature, and to keep in touch with the current publications of the day. Their business experience covers more than half a century.

### **THE BAKER @ TAYLOR CO. LIBRARY DEPARTMENT**

We have sold books to librarians for fifty years.

We have the largest stock in the largest book market of the country.

We fill orders promptly, completely, and intelligently.

We have classified our stock of books and knowledge, FOR YOUR CONVENIENCE, into

- (1) A Standard Library Catalogue of 2500 Books—a model library.
- (2) Semi-Annual Clearance Catalogues of Book Bargains.

We Make a Specialty of Pricing Lists.

33-37 East 17th Street, Union Square, North, New York

## **H. SOTHERAN & Co.,**

*Booksellers, Bookbinders, and Publishers, and General Agents in Europe for Private Bookbuyers and Public Institutions in America.*

WITH exceptionally long experience in Library Agency, they can promise the best care, diligence, and discretion in everything relating to it, and in small matters as well as great. Established 1816.

*A Monthly Catalogue of Second-Hand Books ("Sotheran's Price-Current of Literature,") post free.*

140 Strand, W. C., and 37 Piccadilly, W.: London.

*Telegraphic Address: BOOKMEN, LONDON. Codes: UNICODE and A B O.*

## **CHARLES SCRIBNER'S SONS, 153-157 Fifth Avenue, New York**

Librarians and others will do well to communicate with us before placing their orders.

The latest publications of all the leading American and English publishers are kept in stock, thereby enabling us to fill orders with utmost despatch.

Special attention is asked to our facilities for importing books free of duty.

Correspondence solicited. Send for catalogues and specimen copy of **THE BOOK BUYER**, a monthly magazine devoted to books, authors, and literary affairs.

<sup>BSTATE</sup>  
GUSTAV E. STECHERT.

BOOKS AND PERIODICALS.

ALFRED HAFNER.

# G. E. STECHERT.

The **only Importers** in America who employ **no Agents**, but have their **own** offices at :

**LONDON:** . . . . . **2 Star Yard, Carey St., W. C.**  
**PARIS:** . . . . . **76 Rue de Rennes.**  
**LEIPZIG:** . . . . . **Hospital Str. 10.**

where experienced clerks and assistants attend carefully to the orders from New York.

That such orders can be filled **better, cheaper** and **quicker** and with less trouble and work to the Librarian, than if the books were ordered from European Agents, a trial order will convince.

We carry in New York a very large and well selected stock of **German Books**, always including a number of copies each of the latest important works, and thus we are enabled to fill at once a large part of the orders that daily come to us.

**French, Italian, and Spanish** books and publications in any other language supplied with great promptness. Binding done abroad in any style at very low rates.

**Books published in England** imported duty free for libraries upon the shortest notice.

**Rare Books** searched for with greatest care and orders kept on file until the books are found.

**New York auctions regularly attended; bids solicited.**

The following catalogues of second-hand books have been issued by us during the present year and will be sent upon request.

- |  |   |
|--|---|
| <b>New Series, No. 1. Philosophy, Theology, History.</b> | <b>No. 5. Natural Science, including Astronomy and Mathematics.</b>   |
| <b>No. 2. Art and Architecture.</b>                      | <b>No. 6. Sets of Periodicals and Serials.</b>  |
| <b>No. 3. History, Geography, Biography, and Travel.</b> | <b>No. 7. (In Press.) Books in every branch of literature, comprising our present large stock of second-hand books and remainders not included in Catalogues Nos. 1 to 6.</b> |
| <b>No. 4. Classical Philology.</b>                       |   |

At this season we wish to draw special attention to our perfect system of supplying current periodicals upon subscription orders. *We guarantee delivery in good condition of all the numbers, with titles and indexes.*

**G. E. STECHERT, 9 East 16th Street, NEW YORK.**  
**BOOKS AND PERIODICALS.**

# INDEX.

LIBRARY JOURNAL, v. 26. JAN.-DEC., 1901.

The colon after an initial of a given name means that is the most common name beginning with that initial, e.g., A: means Augustus; B: Benjamin; C: Charles; D: David; E: Edward; F: Frederick; G: George; H: Henry; I: Isaac; J: John; K: Karl; L: Louis; M: Mark; N: Nicholas; O: Otto; P: Peter; R: Richard; S: Samuel; T: Thomas; V: Victor; W: William.

## PSEUDONYMS AND ANONYMS.

## PSEUDONYMS.

- Ackworth, John — Rev. Frederick R. Smith, 302.  
 Allston, Margaret — Anna Farquhar, 360.  
 Bee, Polly — Pauline Brent, 422.  
 Bickerdyke, John — C. H. Cook, 302.  
 Brooke, Magdalen — M. H. M. Capes, 302.  
 Brown, Caroline — Caroline Virginia Krout, 44.  
 Calderford, M. — William Ford Robertson, 302.  
 Carolus — Charles Didier, 44.  
 Chester, Norley — Emily Underdown, 302.  
 Cleeve, Lucas — Mrs. Howard Kingscote, 302.  
 Colmore, G. — Mrs. Gertrude Colmore Dunn, 302.  
 Cromarty, Deas — Mrs. Watson, 302.  
 Cusack, George — Grace Carter-Smith, 302.  
 Cushing, Paul — Roland Alexander Wood-Seys, 302.  
 Douglas, George — G. B. Brown, 896.  
 Dale, Darley — Francesca Maria Steele, 302.  
 De Burgh, A. — Edward Morgan Alborough, 302.  
 Dexter, Almon — Frederick Storer Dickson, 896.  
 Fane, Violet — Lady Currie, 302.  
 Fielding, Howard — Charles W. Hooke, 896.  
 Forbes, Athol — Rev. F. A. Phillips, 302.  
 Forsslund, M. Louise — Mary Louise Foster, 360.  
 4-19-69 — Philip Verrill Mighels, 776.  
 Fraser, Norman — David Cuthbertson, 302.  
 Gerard, Morice — Rev. J. Jessop Teague, 302.  
 Gorky, Maxim — Alexiei Maximovitch Pieshkov, 776.  
 Gray, Colin — Charles Edmund Hall, 302.  
 Grey, Rowland — Lillian Rowland-Brown, 302.  
 Grier, Sydney C. — Miss Gregg, 302.

- Haliburton, Hugh — J. L. Robertson, 302.  
 Hall, Owen — James Davis, 302.  
 Hawser, A. B., master — Julius W. Muller, 360.  
 Hickson, Mrs. Murray — Mrs. S. A. P. Kitcat, 302.  
 Hill, Headon — F. Grainger, 302.  
 Kankakee, June — Mrs. E. R. Turner, 422.  
 Keith, Leslie — Miss G. L. Keith-Johnston, 302.  
 King, W. Scott — Rev. W. Kingscote Greenland, 236.  
 Law, Hyram S. — Mary Catherine Frances Walsh, 360.  
 Leigh-Fry, E. N. — Mrs. Ella Napier Lefroy, 302.  
 Lys, Christian — Percy J. Brehner, 302.  
 M. Y. T. H. — Ludwig Nicholovius, 422.  
 MacDermott, B. — Robert M. Silard, 302.  
 McHugh, Hugh — George V. Hobart, 360.  
 MacKenzie, Fergus — James Anderson, 302.  
 MacNab, Frances — Agnes Fraser, 302.  
 Marchant, Bessie — Mrs. J. A. Comfort, 302.  
 Meredith, Ellis — Mrs. L. M. Stansbury, 422.  
 Montbard, Georges — Charles Auguste Loyes, 302.  
 Muir, Law — Robert Granger, 236.  
 Murray, Alice E. — Susan Eliz. McAleese, 896.  
 Niall, Mical ui — P. J. Moroney, 236.  
 Paston, George — Miss E. M. Symonds, 302.  
 Patton, J. B. — Edmund White, 302.  
 Perceval, George — George Procter, 776.  
 Prescott, E. Livingstone — Edith Katharine Spicer-Jay, 302.  
 Prevost, Francis — Harry F. R. Battersby, 302.  
 Prune, Nat. — John Weymouth, 422.  
 Raine, Allen — Mrs. Beynon Puddicombe, 302.  
 Romney, A. B. — A. Beatrice Ram-baut, 302.  
 Ross, Martin — Violet Martin, 302.  
 St. Aubyn, Alan — Frances Marshall, 302.  
 Saladin — William Stewart Ross, 302.  
 Salvarona — Harry Guy Waters, 776.  
 Sinjohn, John — John Galsworthy, 302.  
 Spinner, Alice — Mrs. A. Fraser.  
 Stitson, J. R. — Joseph Scott Stillwell, 106.  
 Sum Quod Sum — James N. Anderson, 236.  
 Symington, Maggie — Mrs. Sarah Margaret Blathwayt, 302.  
 Thompson, Ernest Seton — Ernest Evan Seton, 776.  
 Thompson, Mrs. Ernest Seton — Grace Gallatin Seton, 776.  
 Thorn, Margaret — Ethel S. Cann, 302.  
 Vars, Michon de — Arthur Wellington Brown, 360.  
 Vere, Percy — John Thomas Hudde, 896.  
 Webb, Virginia — Hattie H. Rhodes, 360.  
 White, Roma — Mrs. Blanche Winder, 302.  
 Williams, F. Harald — Rev. F. W. Orde Ward, 302.
